Branen Salmon — Jul 10, 2026
Subject: File No. S7-2026-15 From: Branen Salmon The transparency of US markets is a source of strength, and reducing transparency, as this rule change would, will only make US markets and the US economy weaker. Don't be penny-wise and pound-foolish: keep mandatory quarterly reporting.

Christopher Utter — Jul 10, 2026
Subject: File No. S7-2026-15 From: Christopher Utter Stock investors need more transparency, not less. Stock investor are owners, and should be regularly updated regarding the metrics of the business. Twice a year is simply not enough information for investors.

David — Jul 10, 2026
Subject: File No. S7-2026-15 From: David I oppose the proposed reporting change. Financial reports provide potential investors with information and shareholders with accountability. By effectively cutting this flow of information in half, you reduce the ability of investors to appropriately manage our investments. Please maintain the current reporting requirements.

JoVel Corp. — Jul 10, 2026
Subject: File No. S7-2026-15 From: JoVel Corp. In business cycles that can see a corporation formed, operate, deteriorate and go insolvent within a year, investors must know that timely oversight exists that can reveal problems with companies before symptoms become full-blown issues. Evidence abounds that transparency leads to more robust and *trustworthy* markets. The US economy includes substantial foreign investments because its information and regulatory disclosure rules lend credibility to the declared safety of the US marketplace. ANY policy or regulatory change that undermines this faith risks crashing -- literally - the most successful market-based economy in human history. S7-2026-15 is such a change: it could trigger a major US -- and possibly global - market collapse. The SEC need only look at the recent history of economic loss in the wake of Enron, FTX, Theranos, Worldcom, Waste Management, LTCM, PG&E, Refco, Bear Sterns, Lehman Brothers, Bristol-Myers Squibb and others to see that *more* information submitted *more* frequently - and analyzed by *more* SEC experts - keeps markets safer, better underpinning investor faith. In a world where billions of investment transactions happen in seconds, information is needed.

Ken Siyaka — Jul 10, 2026
Subject: S7-2026-15 Comments From: Ken Siyaka Affiliation: Jul. 10, 2026 I want to know whats happening so i can make the right choices at thr right time.

once or twice a year does not give me insight on whats happenig to my assets.

knowing if i should shift them, buy or sell. so no changes. keep businesses and large i vestors honest

keep the current quarterly reporting..

Marius Ciortea — Jul 10, 2026
Subject: S7-2026-15 Comments From: Marius Ciortea Affiliation: Jul. 10, 2026 As an investor, I believe the current emphasis on quarterly reporting incentivizes companies to optimize for the next 90 days rather than the next 10 years. Too often, management teams delay investments in innovation, employees, research, and long-term strategy to avoid missing quarterly expectations. This short-term focus can ultimately reduce shareholder value instead of creating it. Quarterly financial transparency should remain available to investors, but mandatory reporting requirements should be modernized to encourage long-term capital allocation and sustainable value creation. The SEC should prioritize a regulatory framework that rewards durable business performance over quarter-to-quarter earnings management.

Michael Ryan — Jul 10, 2026
Subject: File No. S7-2026-15 From: Michael Ryan As a newer retail investor, I find quarterly reports to be one of the most valuable sources of information available when deciding where to invest my family’s money. There is no shortage of opinions, speculation, and social media hype surrounding individual stocks. Quarterly reports provide something much more important: actual financial performance, management's discussion of results, and insight into the commitments and direction of the company. They help individual investors like me make decisions based on facts rather than rumors, headlines, or online speculation. Regular quarterly reporting also encourages accountability. Knowing that companies must routinely report their financial results and discuss their performance helps keep management focused on executing their plans and communicating openly with shareholders. Transparency benefits both investors and well-managed companies. These reports have helped me become a more informed investor and given me greater confidence in making long-term investment decisions for my family's future. Reducing the frequency of required reporting would make it more difficult for retail investors to evaluate companies and would reduce transparency at a time when trustworthy information is more important than ever. Please continue requiring quarterly reporting so that individual investors have regular access to timely, consistent, and reliable information. As someone who is trying to build long-term financial security for my family, I believe these reports are an essential part of fair and transparent markets.

Nilesh Patel — Jul 10, 2026
Subject: File No. S7-2026-15 From: Nilesh Patel It does not make sense as an owner of a company only getting reports two times a year. Transparency is of upmost importance. You already see even with current reporting there are so many class action lawsuits for publicly traded companies for not providing correct data.

Allen Nunley — Jul 9, 2026
Subject: File No. S7-2026-15 From: Allen Nunley I would like to keep the filing interval at 3 months. If it goes to 6 months, that may encourage folks to pursue insider trading, which from my viewpoint is not fair to me (and many others). Bad actors can be goaded onto violating insider trading regulations.

Carla Mohlstrom — Jul 9, 2026
Subject: S7-2026-15 Comment From: Carla Mohlstrom Affiliation: Jul. 9, 2026 Keep it Quarterly! There is so much insider trading and fraud happening within these companies. They are over valued and they need to be transparent and held to account. If anything as fast as technology is changing there needs to be more reporting not less. With the Government insider trading this needs to be regulated and mandatory reporting! Thank you for your consideration!

Derek Young — Jul 9, 2026
Subject: S7-2026-15 Comments From: Derek Young Affiliation: Jul. 9, 2026 I am writing to express profound apprehension regarding potential adjustments to corporate reporting requirements and their implications for market integrity and accountability.

As an individual investor who meticulously researches and maintains a vigilant eye on market dynamics, I am deeply concerned that such changes could inadvertently undermine the very transparency crucial for informed decision-making and robust capital allocation.

The foundational premise guiding these proposed changes - that a reduction in disclosure frequency will inherently cultivate a more long-term corporate focus - appears fundamentally misaligned with both empirical evidence and established market behavior. International precedents offer compelling counter-arguments that demand careful consideration. Comprehensive studies conducted across the United Kingdom and the European Union, following their shift to semi-annual reporting,

consistently demonstrated no discernible improvement in long-term investment strategies or corporate planning. Instead, these markets experienced heightened stock-price volatility and often irrational overreactions in the limited periods when financial information was eventually released, creating an information vacuum that destabilized rather than steadied the market.

Furthermore, the recent experience in Singapore provides a stark cautionary tale. Having experimented with reduced reporting frequency, Singaporean regulators are now actively reversing course. Their experience unequivocally revealed a detrimental impact on both the quality of corporate disclosures and overall trading volume, directly undermining market efficiency and investor confidence.

It is critical to recognize that the pervasive issue of "short-termism" is not a function of reporting cadence. Rather, it is intrinsically linked to the architecture of executive compensation packages and the specific metrics boards employ to gauge corporate success and executive performance. These internal drivers, far more than external reporting schedules, dictate a company's strategic horizon. Consequently, obfuscating critical financial data through less frequent reporting does not address the root causes of short-term behavior. Instead, it merely conceals the symptoms, potentially fostering an environment ripe for information asymmetries, misallocation of capital, and ultimately, erosion of trust in market transparency.

I urge a reevaluation of these proposed changes, advocating instead for initiatives that genuinely tackle the structural incentives driving short-term decision-making, while preserving and enhancing the robust disclosure framework essential for a healthy, efficient, and investor-protective capital market.

Sincerely,

Derek Young

Elizabeth Wiese — Jul 9, 2026
Subject: S7-2026-15 Comment From: Elizabeth Wiese Affiliation: Jul. 9, 2026 Absolutely needs to be at least quarterly reporting. The lack of accountability that we're sliding into is distressing and we're going backwards. The people deserve at least a small part of transparency in the market.

Do the right thing and continue at least quarterly reporting.

Elizabeth Wiese

Gretchen Hagle — Jul 9, 2026
Subject: S7-2026-15 Comment From: Gretchen Hagle Affiliation: Jul. 9, 2026 I oppose the change, and ask the SEC to continue quarterly reporting. Companies still have to keep their books. They still have to brief their boards. The actual savings from skipping a public filing are modest legal and accounting fees, and those savings flow to the company and its executives. The cost of worse information falls on me/the investor, the person whose 401(k), IRA, or college fund holds the stock. Thank you, Gretchen, Development Manager.

Marc Schiavone — Jul 9, 2026
Subject: S7-2026-15 From: Marc Schiavone Affiliation: Jul. 9, 2026 Keep quarterly reporting: if a company is properly managed, the updated information and the signature of a responsible CEO are always available. If there is pressure to file verification documents less frequently in the age of AI, ,efficiency is not the reason.
"A job worth doing is worth doing well." If someone wants to make shortcuts in reporting, then something won't be reported. America counts on sober and responsible leadership.

Thank you.

Marc Schiavone,

Onya Sterling — Jul 9, 2026
Subject: S7-2026-15 Comment From: Onya Sterling Affiliation: Jul. 9, 2026 Onya Sterling, Legal Operations Specialist. It matters for the SEC to require companies to continue reporting quarterly as it is one of the primary consumer protections allowing for investors to ensure they are making secure investments. Without reporting there is no way for investors to know if they are actually investing in a company where they are able to make a profitable ROI (Return on Investment). Furthermore, quarterly reporting ensures compliance and accountability for companies which forces them to keep their operations and functioning above-board. We know through historical context that companies without accountability regularly take advantage of the system and act unethically which directly harms consumers. Mandatory Quarterly Functioning is ESSENTIAL to the functioning and stability of the US economy.

Patrice Crocevera — Jul 9, 2026
Subject: S7-2026-15 Comment From: Patrice Crocevera Affiliation: Jul. 9, 2026 Keep quarterly reporting. Changes to small businesses come at a real, disproportionate cost to a small team's time and money, and the UK data also found reporting frequency didn't meaningfully change actual investment outcomes.

Thank you,

Patrice

Ryan Dow — Jul 9, 2026
Subject: File No. S7-2026-15 From: Ryan Dow I respectfully oppose the proposal to reduce public company reporting from quarterly to semi-annual. Quarterly reporting is critical in maintaining transparent and efficient markets. Investors of all sizes rely on timely financial information to make informed investment decisions. Reducing the reporting frequency to every six months would increase the amount of time investors must rely on outdated, stale information increasing uncertainty and reducing market transparency. Quarterly reporting also promotes accountability by encouraging management to communicate regularly about financial performance, risks and significant changes in business conditions. The current reporting framework has served the U.S. capital markets well by

supporting investor confidence and helping ensure that securities prices reflect current conditions. Thank you for considering my comments.

Story Stephenson — Jul 9, 2026
Subject: S7-2026-15 Comments From: Story Stephenson Affiliation: Jul. 9, 2026 Quarterly reporting is ESSENTIAL to reduce the likelihood of fraud, and keep our holdings safe. I am retired, and I really depend on the companies I invest in to maintain quarterly reporting. quarterly reporting increases transparency, which is very very important to this investor retiree.

David Salzberg — Jul 8, 2026
Subject: S7-2026-15 Comments From: David Salzberg Affiliation: Jul. 8, 2026 Please continue to require that public companies report QUARTERLY. This flow of information is necessary for investors (and regulators) to properly scrutinize the activities of these companies. 6 month intervals are too long between reports and might allow company problems to fly under the radar for too long. Please do NOT adopt a semi-annual reporting requirement. Thank yoiu for your consideration.

David Salzberg

Diane Roy — Jul 8, 2026
Subject: Quarterly reporting From: Diane Roy Affiliation: Jul. 8, 2026 Quarterly reporting needs to stay in place to keep the companies accountable to their stock holders. I am a stay at home mom and we will be relying on our investments for when my husband retires. Don't turn your backs on the majority of hard working families. Do what is right and keep it quarterly.

John Thurman — Jul 8, 2026
Subject: S7-2026-15 From: John Thurman Affiliation: Jul. 9, 2026 Keep quarterly reporting. For my family's financial health and future, we must know what companies are doing to protect and grow our investments. My family needs to make informed decisions, and doing away with quarterly reporting reduces our visibility and greatly increases our financial risk. Doing away with quarterly reports as a terrible idea and gives increases the likelihood of nefarious and or neglectful actions by those who hold my family's financial future in their hands. KEEP QUARTERLY REPORTS!!!

John T.

Mary Louise Veremeychik — Jul 8, 2026
Subject: Keep quarterly reporting From: Mary Louise Veremeychik Affiliation: Jul. 8, 2026 Sec.gov

Please keep quarterly reporting . This is what you must do to support the millions of average Americans whose savings for retirement are invested. We saved. We need to have quarterly reporting to assure our savings are safe. Years ago, reporting was changed from semi-annually to quarterly to help assure savers were not robbed of their savings. Keep the quarterly reports. It is

sorely needed
Mary L Veremeychik

Susan Vaillancourt — Jul 8, 2026
Subject: S7-2026-15 Comment From: Susan Vaillancourt Affiliation: Jul. 8, 2026 The more transparency, the stronger the protections for investors and members of the public. Reducing the frequency of reporting is a move in the wrong direction. Less frequent reporting allows fraud and problems to be hidden. We should keep reporting on a quarterly basis.
Susan Vaillancourt

Travis Winn — Jul 8, 2026
Subject: S7-2026-15 From: Travis Winn Affiliation: Jul. 8, 2026 As an investor, I need to have quality information quarterly. These sorts of regulations always result in issues later on. While working at a large financial institution, I discovered the importance of regulations and feel that the SEC needs to continue in its obligations to the American people by continuing quarterly reporting.

Trey Jackson — Jul 8, 2026
Subject: S7-2026-15 Comments From: Trey JACKSON Affiliation: Jul. 8, 2026 Quarterly reports are an important tool for investors as well as taxpayers. They must be kept as is to maintain openness and transparency and accountability. Anything else would be a travesty of major proportions.

Washington, DC 20549
RE: SEC Proposed Rule File Number S7-2026-15, Semiannual Reporting (the Proposal)
To the SEC Commissioners:
Thank you for the opportunity to provide comments on the Proposal. My observations and recommendations reflect my experience and perspective as an individual investor, a retired CPA who worked with public companies for more than 40 years, and a former member and Chair of the SEC Regulations Committee.
I believe US capital markets are the deepest, healthiest, most robust capital markets in the world. This is due in no small part to the dedication of SEC Commissioners and SEC staff over the decades.
I also believe that the SEC's longstanding quarterly reporting framework has been foundational to the efficiency of our capital markets. It assures investors that they will receive fulsome, reliable, relevant and timely updates about each issuer's operations, cash flows and financial viability.
For this simple reason, I strongly object to the Proposal. No amount of cost savings or increased IPO
activity can justify the loss of such vital, material information.

As discussed further below, I believe the Proposal contains several fatal flaws. First, the proposed framework for interim reporting would replace a rigorous market-driven cadence with a less rigorous one that is not grounded in economic data or analysis. Second, the proposed amendments would allow companies to withhold material information from investors in order to reduce compliance costs. Third, the optionality in the proposed framework can reasonably be expected to inject information asymmetries and volatility into our capital markets. And finally, lowering the barrier to going public does not enhance capital formation if the end result is a capital market that is less efficient.

In the following sections, I discuss my concerns related to the effects of the Proposal on capital formation and investor protection as well as the effects of optionality on market efficiency. Last but not least, should the Commission decide to move forward, I offer an alternative approach to the cadence of interim reporting that I believe would be less disruptive and I provide a few detailed observations about specific elements of the proposed amendments.

Capital Formation

One goal of the Proposal is to facilitate capital formation by lowering the costs of interim reporting, thereby incentivizing companies to go and/or remain public.i I believe the Proposal will fail to achieve that goal.

Efficient capital formation requires informed investors. It also requires a reasonably level playing field both for issuers and investors. A quarterly reporting schedule that applies to substantially all issuers meets both requirements.

The Proposal's central failure, in my view, is that it reduces the reliability and frequency of information provided to investors by letting each issuer decide what information to provide when. It not only reintroduces information asymmetries and market inefficiencies that were eliminated more than 50 years ago, it replaces a rigorous market-based solution to those problems with a less rigorous regulatory one.

Today's US capital markets are built on a quarterly reporting schedule because that is where investors and issuers landed after their long tug of war over the timing of interim updates. The discussion in the Proposal implies that our quarterly reporting timeframe was dictated by the SEC. However, a more fulsome exploration of the history of interim reporting demonstrates that it was not. The stock exchanges mediated the interim reporting debate between companies and investors, and the SEC incorporated the market's agreed-upon interim reporting cadence into its rules.ii The SEC's rule making added a disciplined uniformity to interim reporting. But the market had already decided to make that reporting quarterly rather than every two, four or six months.

As early as the 1920's, more than half the listed companies on the NYSE were providing quarterly or semiannual information to investors.iii By 1939, the NYSE's listing agreement had been amended to require quarterly reports.iv Eventually, after some fits and starts, including experimentation with semiannual reporting, the American Stock Exchange and regional exchanges adopted a quarterly reporting framework.v By the time the SEC finally mandated quarterly reports on Form 10-Q, more than 70% of all public companies were issuing some type of quarterly report.vi

Unfortunately, the market forces that drove the stock exchanges to act on behalf of investors 50-plus years ago would not have the same effect today. As the Proposal notes, US stock exchanges have long since modified their listing requirements to simply require compliance with the SEC's reporting schedule. Once the SEC accepts semiannual reporting, no stock exchange will raise the bar to quarterly. And the Proposal's premise – or more accurately, its hope – that management will act in the owners' best interest by providing more timely information, seems unfounded. If companies weren't motivated to provide more timely information before the stock exchanges began mandating it, what would motivate them once the SEC says semiannual is sufficient?

The Proposal offers no evidence that the cost of quarterly reporting is a significant factor in a company's decision to go or remain public, nor does it cite any research to demonstrate the optimal interim reporting frequency for capital market efficiency.
vii The Proposal provides no economic
analysis similar to the work done in connection with the June 2025 Concept Release on foreign private issuers (FPI). The SEC staff performed research to inform the Commission and the public about the need for potential changes to the substance and reporting frequency of FPI disclosures, changes also aimed at promoting capital formation.
viii
While my experience is purely anecdotal, in more than 40 years of working with public and private companies, I cannot recall management or Board members pointing to the cost of quarterly reporting as an important consideration in going or remaining public.
ix Nor would I expect them to.
Whether a US company is public or private, quarterly periods meet the Goldilocks test of being just right: a quarterly period is not so short that it is difficult to spot a trend, but not so long that the window to address a problem or trend has closed.
Investor Perspective
The Commission appears to conclude that the proposed amendments will reduce the regulatory burden of being a reporting company "without undermining fundamental investor protections."x

I am unsure as to which investor protections are fundamental and which are not. But I am certain that the Proposal is likely to reduce the amount of material information available to investors. I am equally certain that some investors will receive different amounts of material information than others. In my view, those outcomes harm investors.
The Proposal states that "interim reports provide investors with material information" about a company's performance during a fiscal year. It then continues by saying that "quarterly reporting may not be the ideal interim reporting frequency" for every company.xi If interim reports provide investors with material information, what would make semiannual reporting more ideal than quarterly?
Moreover, shouldn't materiality be the principal factor a company uses to determine the ideal disclosure frequency? Isn't materiality the overarching principle to determine the adequacy of disclosure? Why do the proposed amendments permit any company to elect semiannual reporting, even in the context of a registration statement, without considering whether the quarterly information it is opting to exclude is immaterial?
To evaluate the "ideal frequency" of reporting, the Commission suggests that the company consider factors such as the cost of preparing quarterly vs semiannual reports; investor expectations; effects on its cost of capital; the stage of its business development; the nature of its business model; its financing needs; and other sources of disclosure that are available to investors. For example, the Proposal points out that Form 8-K will continue to require companies to report certain material events. But how does a company's business model or stage of development or financing needs predict whether a particular quarter's financial results will be material to investors? If management needs financial reports more than twice a year to evaluate operating performance or cash needs, why don't investors need financial reports more than twice a year to evaluate a buy/sell/hold decision?
Perhaps even more significant to the question of investor protection is the Proposal's statement that opting for semiannual reporting could benefit a company by reducing both compliance costs and the "disclosure of competitive sensitive information.
"xii Investors may have different views of the
importance of fair value disclosures, but they are highly unlikely to disagree about the significance of competitive sensitive information.
The Proposal offer no insight into how the Commission determined that the loss of quarterly information would not undermine fundamental investor protections. It also seems to acknowledge

that companies that opt for semiannual reporting are unlikely to voluntarily provide first and third quarter data that meets investors' needs. This is discussed further below.

Selective Disclosures

Under the proposed amendments, companies could (a) continue with the status quo, i.e., file quarterly reports Form 10-Q supplemented by a voluntary earnings release and earnings call; (b) eliminate all reporting in the first and third quarter and provide a semiannual report on Form 10-S supplemented by a voluntary earnings release and earnings call; or (c) provide selective information in the first and third quarter along with the required semiannual report on Form 10-S. xiii The Proposal refers to this last approach as a hybrid.

The Proposal acknowledges that the ability of companies to elect semiannual reporting and then select which information, if any, to voluntarily disclose in other periods could harm investors in numerous ways.

xiv That discussion also makes it clear that, when provided with options, "there are various reasons why issuers may be likely to provide less disclosure … than would be optimal for

investors and the market as a whole. For example, there is substantial literature discussing circumstances in which the incentives of managers are not perfectly aligned with those of their shareholders.

"xv

Yet the Proposal also presumes that issuers will select an interim reporting framework based on a fulsome analysis of "the relative costs and benefits in their particular circumstances" that include investor expectations.

Both cannot be true. If issuers are likely to provide less disclosure when given a choice, then a shift from quarterly reporting to semiannual reporting should establish a required reporting framework for the first and third quarter. Allowing companies to cherry pick what they report and when they report it is essentially a throwback to a fragmented, uneven reporting framework that misses the mark on all three elements of the SEC's mission: investor protection, efficient markets, and capital formation. Absent a required reporting framework for the "off" quarters, the only way to maintain a level playing field is to prohibit disclosures that go beyond the requirements of Form 8-K.

Options are great for pizza toppings and ice cream flavors. They do not work well if the goal is efficient, orderly capital markets.

Alternatives

The Proposal identifies, analyzes and rejects five alternatives:

1. 2. Changing the interim reporting timetable to semiannual for all companies.

Limiting the semiannual reporting option to certain types of registrants, e.g., smaller reporting companies and/or emerging growth companies.

3. Requiring a Form 8-K when a company decides to change reporting frequency for the next fiscal year.

4. 5. Providing a longer filing deadline for Form 10-S than Form 10-Q.

Revising the disclosure requirements of Form 10-Q.

For the reasons stated above, I do not support either of the first two alternatives. As the Proposal notes, Reg A offers small to mid-size companies a vehicle for capital raising if semiannual reporting is better suited to a company

's stage of development, business model or resource constraints.

The third item on the list does not provide an alternative approach to interim reporting. It deals with investor notification of changes in frequency. As to the question of providing more than 40 or 45 days for filing a Form 10-S, although the investor in me says "no," I will leave it to issuers and audit firms to comment on whether practical issues might affect timing.

It appears that the fifth alternative – reducing costs by revising the existing quarterly disclosure requirements –was rejected because either (a) the cost reductions would be less than the Proposal or

(b) the loss of reliable information to shareholders would be more than the Proposal. In other words,

the Commission considered only two ways to approach revisions to Form 10-Q: small tweaks that would produce limited cost savings or radical changes that would reduce the reliability or comprehensiveness of the information.

I think this analysis is shortsighted. Various Commissioners are already on record regarding the need to address the costs of generic risk factor disclosures. Fixing that problem plus eliminating redundancies with the requirements of Form 8-K might achieve measurable cost reductions without creating all the asymmetries and information loss that result from the Proposal.

I believe there is a sixth alternative that also involves revising the disclosure requirements in Form 10-Q: the "Form 10-S/Form 10-Q Hybrid Reporting Alternative." It was not outlined in the Proposal but if the Commission insists upon permitting a semiannual reporting option, it deserves consideration.

Specifically, under the Form 10-S/Form 10-Q Hybrid Reporting Alternative, companies would be required to file full interim reports on Form 10-S at the six-month mark and summary (i.e., truly condensed) financial reports on Form 10-Q at the three- and nine-month marks. This would involve changes to both the information content and the timing of Form 10-Q for all reporting companies. Decades ago, the Commission discussed the possibility of a "summary annual report" as a way to reduce the printing and postage costs associated with providing annual financial statements to shareholders.

xvi There was extensive debate about exactly what financial information would be in the summary and how much auditor association would be accorded to the information. Eventually, technology resolved the problem. But the idea bears reconsideration, if only because receiving standardized summary information in the "off quarters" would be preferable to the Proposal's approach to semiannual reporting.

I firmly believe that interim financial statements prepared in accordance with US GAAP are the best way to update investors on a company's liquidity and operating results. But I also believe the FASB is capable of developing a condensed or summary financial reporting presentation that would be more useful to investors than the highly abbreviated information that is typically included in an earnings release. I also believe the PCAOB is capable of adapting its existing interim review standards to allow auditors to provide a reduced but still meaningful level of assurance on condensed or summary interim reports. And, to compensate investors for the loss of the detail disclosures provided in these "off quarters,
" the SEC would require companies to deliver the
condensed or summary interim report more quickly, e.g., within 30 or 35 days of quarter end.

I strongly encourage the Commission to explore this Form 10-S/Form 10-Q Hybrid Reporting Alternative before reaching a final decision on the proposed amendments. Efficient capital markets require reliable quarterly financial data about a company's operating results and financial position. Letting companies cherry-pick what to disclose and when to disclose it is not a sound approach to deregulation.

Other Observations

This section presents a handful of more granular issues that are relevant should the Commission decide to move forward with its Proposal.

• Cost/benefit analysis: I encourage the Commission to consider how rapid changes in technology are affecting the costs of preparing quarterly filings. It appears that the underlying data for the estimated $330,000 annual per registrant quarterly reporting cost is based on a 2019 survey of approximately 180 companies, indexed for inflation.xvii Although I am no longer a practicing accountant, the articles, newsletters and CPE course offerings that cross my desk point to cost reductions resulting from the use of artificial intelligence/large language models in the preparation of financial statements. In this regard, it is worth nothing that the historical argument against "disclosure overload" may also be largely negated by the development of this technology. While there may have been some validity to the question of whether the benefit to

investors of lengthy quarterly filings merits the preparation cost, that concern is becoming as technologically obsolete as concerns about printing and mailing costs.

• Earnings releases: As the Proposal notes, earnings releases submitted to the Commission on Form 8-K are considered furnished, not filed. As such, that information is not incorporated by reference into registration statements and different liability rules apply. That approach is reasonable in light of the "filed" status of the comprehensive financial information included in Form 10-Q. It is not reasonable if the earnings release is provided to investors in lieu of quarterly financial statements.

• Earnings calls: Existing SEC rules do not require companies to furnish a transcript of earnings calls on Form 8-K. The Proposal notes that many companies make that information available on their websites. However, there is no regulatory requirement to do so. As with the existing rules for earnings releases, that regulatory approach is reasonable when companies are required to file comprehensive quarterly financial information on Form 10-Q. It is not reasonable if companies deliver updated operating and financing information to investors via earnings calls rather than via a Form 10-Q.

• NonGAAP information: Various aspects of the SEC's rules on nonGAAP measures apply only to information presented in Forms 10-K and 10-Q. The rules for nonGAAP measures are less stringent for earnings releases and even further relaxed for nonGAAP measures on company websites and in analyst presentations. xviii Again, as with earnings releases and earnings calls, when investors have access to full or condensed financial statements prepared in accordance with GAAP, that approach is reasonable. However, if the Commission allows companies to free-form the information content of first and third quarter results, the nonGAAP rules should be revised to protect against the type of materially misleading disclosures that led to those rules in the first place.xix

• Registration statements on Form S-1: Under the Proposal, a company would indicate its election of the semiannual reporting framework via a checkbox on the cover page of Form S-1. That election would apply to the financial statements included in the registration statement and the time frame for its first interim report following effectiveness. However, the amended rules would not preclude a registrant from providing financial statements that are more current than otherwise required by the semiannual election.xx I have one question and one observation about this aspect of the Proposal. My question is whether those "more current" financial statements would have to comply with the rules for interim financial statements that apply to a Form 10-Q. Perhaps this is addressed somewhere in the complexities of the amendments to the age of financial statement rules, but the answer to this question was not clear to me. My observation is that allowing companies to present more current financial statements in Form S-1 than will be provided thereafter treats different investors differently. That is at odds with the Commission's commitment to protect all investors equally. If the issuer has decided that quarterly information is not ideal in its circumstances, that conclusion should apply to all its investors, both the ones being solicited for the shares being registered on Form S-1 and for the ones who will buy and sell thereafter. Said more bluntly, either quarterly financial statements are material to investors or they are not. I certainly appreciate that investment bankers and underwriters may want to mitigate risk by insisting that the Form S-1 include more current financial statements. But that should be prima facie evidence that semiannual reporting is, in fact, NOT ideal for this issuer.

* * * * * * * *

I would like to raise one additional concern regarding the Proposal that is perhaps more procedural in nature.

Congress intended for regulatory actions of the Securities and Exchange Commission to be informed

by a full complement of commissioners, representing a balance of views from both major political parties. As is evident from past history, that design does not prevent the "majority" party from

moving the meter in a particular direction. Rather, it facilitates questions and debates that are likely to improve regulations. Informed debates among smart people with different perspectives ensure that adequate consideration is given to all three “legs” of the SEC’s mission. Such debates also have the potential to reduce the risk of wild swings in regulations that make capital markets jittery and inefficient. Thus, even when a final rule does not receive the support of all five commissioners, the end result better balances benefits with costs and adds stability to the regulatory framework.
xxi
Currently, the SEC lacks a full complement of Commissioners. The three Commissioners share the same party affiliation and, perhaps more importantly to market participants, appear to share very similar regulatory views. That unanimity seems to extend to senior SEC staff, assuming that the views expressed in their public remarks are indeed their own. That raises the question of how effective internal debates are at tempering changes to regulations.
A related procedural concern relates to the apparent priority being given to the topic of quarterly reporting. The demand for substantive change does not appear to be driven by market forces. The merits of interim reporting were discussed in 2008 by an SEC Advisory Committee and then explored in more detail in both 2016 and 2019 without generating much interest in change.
xxii
Yet the lead time from “first mention” to “rule proposal” took a mere seven months,
xxiii even as
reductions in staffing and furloughs of remaining staff during government shutdowns caused the Commission to seek extensions for various deadlines.
xxiv And despite Commissioner Peirce’s past
advice that lengthy, complicated rulemaking “in the context of intricate markets and an already complicated set of securities and other relevant laws” should receive 90-day comment periods, particularly in light of the Commission’s nearly contemporaneous other proposals,
xxv the comment
period for this proposal is limited to 60 days.xxvi
The combination of all these factors may leave market participants wondering whether the SEC has the resources to fully consider and objectively evaluate the merits of this Proposal.
I can only hope that it does. As Commissioner Peirce wisely noted:
negative consequences. Such unintended consequences sometimes overwhelm the rules’ worthy objectives.
”xxvii
Sincerely,
“Rules can have unintended,
Amy Ripepi
Retired CPA, Former Member and Chair, SEC Regulations Committee

i Chair Atkins states that the proposed amendments are “aimed at incentivizing companies to go and stay public.”
https://www.sec.gov/newsroom/speeches-statements/atkins-statement-proposing-release-semiannual-reporting-
050526
ii The discussion that follows is derived from background information contained in the SEC’s 2016 Concept Release
Nos. 33-10064; 34-77599, Business and Financial Disclosure Required by Regulation S-K, and its 2018 Concept Release
Nos. 33-10588; 34-84842, Request for Comment on Earnings Releases and Quarterly Reports.
iii The New York Stock Exchange (NYSE) began requiring some newly listed firms to periodically report profit and
balance sheet information as early as 1900. While many listed companies resisted publishing reports, by 1927, 37% of

NYSE listed firms were providing some financial data quarterly and 15% were releasing data semi-annually. See
Voluntary Corporate Disclosure: The Case of Interim Reporting, Richard W. Leftwich, Ross L. Watts and Jerold L.
Zimmerman, Journal of Accounting Research Vol. 19 (1981).
iv Ibid.
v Competition from unregulated over-the-counter markets were a significant factor in delaying the adoption of
quarterly reporting requirements by the American Stock Exchange and other regional exchanges, although data
indicate that despite the lack of a listing requirement, a sizeable number of companies on the ASE were voluntarily
providing quarterly or semiannual reports by the time it implemented its listing requirements.
vi SEC Concept Release No. 33-10064; 34-77599, Business and Financial Disclosure Required by Regulation S-K, page 281
states that "prior to adopting Form 10-Q, more than seventy percent of public produced quarterly reports.
" Support
for that statement can be found in the academic paper published by Butler et al referred to in footnote 935 of that
release. According to that academic paper, by 1967, 95% of the companies listed on the NYSE and 83% of the
companies listed on the American Stock Exchange were publishing quarterly information.
https://www.sec.gov/newsroom/speeches-statements/uyeda-statement-foreign-private-issuer-eligibility-060425
vii The Proposal cites an academic paper that surveys over 100 research papers written between 1961 and 2020 related
to the capital market effects of the frequency, content and assurance of interim reports. But the article forms no
opinions and concludes that by calling for "additional research" because "the liquidity effects of reporting frequency
are not adequately explored." It also notes that "most studies on the consequences of interim reporting …do not
weight different benefits and costs." See footnote 257's reference to the paper authored by Peter Kajüter et al.,
Consequences of Interim Reporting: A Literature Review and Future Research Directions, 31 Eur. Acct. Rev. 209 (2022).
viii As Commissioner Uyeda noted in connection with Concept Release: "As a proponent of data-based policymaking,
I find the work of the SEC economists helpful, and that data is included in the concept release. Such data analysis
provides a good reason to reassess the FPI definition and the current regulatory regime… Staff in the Division of
Economic and Risk Analysis, the Office of International Corporate Finance, and the Office of International Affairs
have analyzed market data and legal requirements to inform the discussion in this concept release—with a view to
re-thinking the regulatory framework for U.S. investors and foreign issuers that are traded in U.S. capital markets."
ix In my experience, management and controlling shareholders often raise concerns about disclosing information that
they believe is "proprietary,

“sensitive,
” or “competitive.” But that concern is not unique or specific to quarterly
reporting.
x Proposal, Section I. Introduction, page 7.
xi Proposal, Section III. Discussion of Proposed Amendments, page 16.
xii Proposal, Section V.A. Economic Analysis – Introduction, page 69 which states: “It is unclear what frequency of
periodic reporting would strike the best balance between the potential benefits related to lower company reporting
burdens and reduced disclosure of competitive sensitive information on the one hand, and the potential costs related to a
reduction or delay of information to investors on the other hand, and such an optimal frequency may vary across
issuers.
” (emphasis added)
xiii Because Form 8-K would apply equally to all three options, the reporting of material events required by that form
are not mentioned here.
xiv Proposal, Section V.B. Economic Analysis – Broad Economic Considerations, pages 71-77
xv Proposal, Section V.B. Economic Analysis – Broad Economic Considerations, page 71.
xvi My memory is foggy on the exact reasons for and timing of these discussions. However, it pre-dated the ability to
electronically file and transmit information to shareholders.
xvii Proposal, footnotes 230 through 233 and footnote 260.
xviii Compare the rule requirements in Regulation S-K Item 10(e); Regulation S-K Item 10(e)(1)(i); and Regulation G.
xix See SEC Accounting and Enforcement Release No. 1499 dated January 16, 2002, against Trump Hotels & Casino
Resorts Inc. In that fact pattern, the company released nonGAAP quarterly results via a press release and earnings
call on October 25, 1999 resulting in a stock price increase because those results exceeded investor expectations. When

investors subsequently became aware of results on a GAAP basis, the stock price dropped. As noted in the SEC
Enforcement Release, “[t]he Earnings Release was materially misleading because it created the false and misleading
impression that the Company had exceeded earnings expectations primarily through operational improvements,
when in fact it had not. (The Form 10-Q was not filed until November 4, 1999.) https://www.sec.gov/enforcement-
litigation/administrative-proceedings/34-45287
xx Proposal, footnote 73.
xxi For example, see comments from Commissioner Hester M. Peirce regarding changes made to the proposal on
climate-related disclosures. Commissioner Peirce objects to the final rule on the basis that its anticipated benefits do
not outweigh the costs. However, she acknowledges that the final rule differs in significant ways from the proposal.
It “eliminates the Scope 3 reporting requirements, reworks the financial statement disclosures and removes some of
the other overly granular disclosures, all of which she describes as “cost-saving changes.

”
https://www.sec.gov/newsroom/speeches-statements/peirce-statement-mandatory-climate-risk-disclosures-030624
xxii Those who expressed some support for semiannual reporting in lieu of quarterly reporting primarily focused on
the needs of smaller public companies.
xxiii Chair Atkins appears to have first mentioned the topic of quarterly reporting on September 19, 2025 during an
interview on CNBC’s Squawk Box, followed by a September 28, 2025 opinion piece in the Financial Times entitled “Let
the market decide how often companies report.” The Proposal was published on May 5, 2026.
xxiv See, for example, various filings in which the SEC requested extensions to submit a plan of distribution which the
Commission deemed necessary because of “reassignments due to staff departures” and a nearly 45 days lapse in the
appropriations resulting in SEC staff furloughs. One such example can be found at
https://www.sec.gov/files/litigation/admin/2025/34-104419.pdf
xxv This Proposal was released on May 5, 2026. On May 19, 2026, the SEC released two other rule proposals that also
have the potential to significantly affect the same population of SEC registrants and their investors.
xxvi See Rat Farms and Rule Comments – Statement on Comment Period Lengths dated December 10, 2021.

xxvii Ibid.

An Walton — Jul 7, 2026
Subject: File No. S7-2026-15 From: An Walton This rule will not help retail investors like myself make informed decisions; it will only benefit insiders who already have an information advantage. Please keep quarterly reporting requirements as they help retail investors like myself to manage our portfolios. If companies wish to access the public market, then they should be required to report publicly in a timely fashion (which is quarterly). I don't invest in foreign companies whose reporting requirements are only twice a year. There already is an option for companies that don't wish to disclose, and that is to remain private.

Anonymous — Jul 7, 2026
Subject: File No. S7-2026-15 From: Anonymous I am opposed to the proposed switch from quarterly to twice a year. Quarterly information is important to anyone making financial decisions. Longer gaps create an unfair advantage for corporate insiders. The savings to companies aren't worth the cost to individual investors.

Anonymous — Jul 7, 2026
Subject: File No. S7-2026-15 From: Anonymous This proposal is going to only reduce transparency for individual investors and concentrate volatility around The semi-annual reports. Studies show it and I as many other retail investors belive that this is not The right way to push investors to think long term

---

Anonymous — Jul 7, 2026
Subject: File No. S7-2026-15 From: Anonymous Please keep the reporting quarterly for economic transparency for publicly traded companies as they are relied upon for 401ks and Roth-IRAs for the average American to have a secure retirement in the future.

Anonymous — Jul 7, 2026
Subject: File No. S7-2026-15 From: Anonymous As a Millennial trying to build my nest egg for retirement, I have lived through multiple economic downturns. Without quarterly reports there is a lack of consistent information that the public relies on and will impact how the public and trading desks buy & sell stocks. Removing consistency only permits doubt, caution and fear into the stock market — something we have experienced due to bad decisions and bad actors (or Great Recession). Don’t let lack of information impact the norm of the stock market — you may not be able to reverse the economic consequences.

Anonymous None — Jul 7, 2026
Subject: File No. S7-2026-15 From: Anonymous Dear Secretary, I am writing to express my strong opposition to the Securities and Exchange Commission’s proposed rule that would allow public companies to opt out of quarterly reporting in favor of semiannual reporting. I believe this change will benefit large investors and disadvantage smaller investors such as myself. We don’t have the time or resources to find and analyze the information that will not longer be available to us, creating a much higher level of risk.

B Moffitt — Jul 7, 2026
Subject: File No. S7-2026-15 From: B Moffitt I am writing to express my disapproval of this proposed rule. Quarterly reporting is important for investors and for public companies. I am a licensed attorney (currently not actively practicing) who previously practiced securities law in law firms for nine years, and I write on my own behalf based on my own experience, and not for or at the request of anyone else. In my previous roles, I worked with public company clients on their 1934 Exchange Act filings, including 10-Qs, 8-Ks, 10-K, proxy statements, etc. Most of the companies I worked with were smaller cap companies listed on a national stock exchange and many of them experienced industry-based stock price volatility, depending on the trendiness of the industry. Quarterly reports are important for companies and investors because it makes sure there are regular internal checks on what is happening financially. Especially for smaller public companies, or companies that aren't regularly going into the market to raise additional money, it is important that the financial side of the company is regularly checked on and held accountable. The audit committee has an important role here, but if a CFO is only giving them the most optimistic A budget for 6 months, it can be quite the unpleasant shock when the financial statements and outlook actually reflect the B budget where the deals didn't happen and the company is now getting a going concern letter from the auditors. Investors deserve transparency. Each company that goes public knows that it has to report quarterly and that is a cost of doing business, just as buying new computers or a security system or any other regular cost is baked into the budget.

Beth Lofgren — Jul 7, 2026
Subject: File No. S7-2026-15 From: Beth Lofgren Opposition to Proposed Optional Semiannual Reporting Framework I respectfully oppose the Commission's proposal to permit public companies to satisfy their interim reporting obligations through semiannual reporting on Form 10-S in lieu of quarterly reporting on Form 10-Q. While reducing compliance burdens is a worthwhile objective, the proposed rule would likely diminish transparency, impair market efficiency, and increase risk for investors. [sec . gov], [sec . gov] Quarterly reporting has long served as a foundational component of the U.S. disclosure regime. Investors, analysts, advisors, and other market participants rely on timely, standardized financial information to evaluate company performance, assess risks, and make informed capital allocation decisions. Extending the reporting interval from three months to six months would substantially increase the period during which investors operate with incomplete information. [sec . gov], [investopedia . com] The proposal may disproportionately harm retail investors. Large institutional investors often have access to extensive research resources, industry contacts, and alternative sources of information. Retail investors, however, depend heavily on SEC filings as an authoritative and consistent source of corporate disclosures. Reducing the frequency of those disclosures could widen the information gap between institutional and individual investors and undermine confidence in the fairness of the public markets. More frequent reporting also promotes accountability. Quarterly filings provide regular opportunities for management to explain operating results, liquidity conditions, changes in risk factors, and emerging trends. A six-month reporting interval may delay the identification of deteriorating business fundamentals, accounting concerns, or other material developments that investors deserve to know in a timely manner. While supporters of the proposal argue that quarterly reporting encourages short-term decision-making, there is limited evidence that reducing transparency will improve long-term corporate performance. Companies already possess substantial flexibility to communicate long-term strategies while continuing to provide quarterly financial information. Reducing the frequency of required reporting may instead increase uncertainty, market volatility around reporting periods, and the potential for information asymmetry. As a financial professional, I believe quarterly reporting provides important insight into business performance and risk management and remains critical to protecting investors and supporting efficient capital markets. The benefits of timely disclosure outweigh the compliance costs associated with the current reporting framework. Therefore, I urge the Commission to retain the existing quarterly reporting requirements under Form 10-Q and not adopt the proposed optional semiannual reporting regime. Thank you for your consideration. Sincerely, Beth Lofgren

---

Beth Loven — Jul 7, 2026
Subject: File No. S7-2026-15 From: Beth Loven As an investor, I know that corporate accountability is essential. It based on regular checks, such as quarterly reporting, which should not be cut back. Thank you.

Brian Tighe Individual stock investor — Jul 7, 2026
Subject: File No. S7-2026-15 From: Brian Tighe I am part of The Motley Fool Community of individual investors investing in individual stocks. We deserve transparent information on a quarterly basis (or more frequently) from public companies. The United States stock market is the most transparent in the world, creating trust that leads to greater conviction and longer hold times for stocks than anywhere else in the world.

Bryan Thao Worra n/a — Jul 7, 2026
Subject: File No. S7-2026-15 From: Bryan Thao Worra I disagree strongly to the SEC proposal to allow semiannual filing. Quarterly filing is essential for active and prospective investors to have a clear understanding of issues facing various companies especially in the present economic environment. The logic of this should be inherent in itself in order to create a fair and balanced market. Thank you for listening to this request

---

Caden I — Jul 7, 2026
Subject: File No. S7-2026-15 From: Caden I With semiannual reporting being optional, it provides more flexibility for reporting companies. Companies can still release relevant and material information via 8-Ks or elect to release quarterly reports via 10-Q. The option to report on a semi-annual basis allows for companies to focus on longer term growth rather than quarterly metrics/ shorter term goals and increases the valuableness of qualitative information; such as news articles or press releases. I am in support of the semiannual reporting option.

CB — Jul 7, 2026
Subject: File No. S7-2026-15 From: CB SEC, Keep Quarterly Reporting requirements. With current technology, quarterly reporting should be easier and less time consuming to produce. As a former finance person, I managed to meet Quarterly reporting deadlines with important disclosures and projections as well as financials, even prior to major technology advances. The public and investors need to be kept informed on major events and projected changes as often as possible. I believe this helps reduce fraud and hidden problems in publicly traded companies.

Chau Quynh Pham — Jul 7, 2026
Subject: File No. S7-2026-15 From: Chau Quynh Pham Please keep the requirement for quarterly reports, semiannual reporting hurts external investors and enriches insiders.

Cherie Quincieu — Jul 7, 2026
Subject: File No. S7-2026-15 From: Cherie Quincieu I respectfully OPPOSE eliminating mandatory quarterly reporting requirements. Regular financial disclosures provide essential transparency and accountability for investors, employees, and the public. While I recognize that reporting creates costs for companies, the solution should be to streamline unnecessary burden, not reduce access to timely and comparable information. Strong disclosure requirements help maintain fair and trustworthy markets, and I encourage the SEC to preserve quarterly reporting.

Dave — Jul 7, 2026
Subject: File No. S7-2026-15 From: Dave I'm Dave, local truck driver here and I dream of the day I'll finally be able to retire and enjoy life while focusing on giving back to my community. Investing is the key to achieving that dream and success is dependent upon company transparency and regular reporting of earnings. Let's keep this transparency quarterly so everyday people can stay informed on a consistent basis. The wealthy already have the edge over us, let us keep our chance at the American dream!

David Garner — Jul 7, 2026
Subject: File No. S7-2026-15 From: David Garner I rely on quarterly reporting as a window on how companies I invest in are (or are not) making progress in their stated objectives and how they align with my investment objectives; I fully understand that 90 days in the scheme of things does not in and of itself guarantee full transparency but collectively it can reveal trends that are fundamentally necessary to monitor corporate leadership, behavior and the effectiveness up or down of an adopted strategy. Keep the quarterly 10-Q report as a corporate requirement so that I can continue to monitor if they are maintaining their progress that align w my investment objectives.

David Pearsall — Jul 7, 2026
Subject: File No. S7-2026-15 From: David Pearsall Comments attached

---

Derrick Terrell — Jul 7, 2026
Subject: File No. S7-2026-15 From: Derrick Terrell The number should be increased,not cut in half, because there are to many crooks, thieves,and, criminals in wall street as is,and if it's cut in half,the number of crooks, thieves,and criminals would increase, because in the past there have been to many companies (not just eron) collapse because of greed,and mismanagement of money.

Donald E Neville Citizen — Jul 7, 2026
Subject: File No. S7-2026-15 From: Donald E Neville Please please please do not reduce compliance for elites...no peace for criminals. I never knew that signing their financial statements made the top executive criminally liable for lies. Maybe because I have never heard of anyone being prosecuted for this crime...is it a felony or just a misdemeanor? I am 80 years old...has anyone ever been prosecuted in my lifetime? No enforcement ever? How about someone in government actually do their job...just once? How about prosecuting instead of reducing regulation you idiots prosecute TRUMP...He obviously lied/lies/is a criminal. Please enforce the law you bunch of faceless bureaucracy!!!

Donna — Jul 7, 2026
Subject: File No. S7-2026-15 From: Donna Keep the 10-Q. The unintended consequences of a shift to semiannual reporting will severely impact corporate lending, which relies heavily on 10Qs for timely public information throughout the underwriting process and throughout the lending lifecycle.

Eric Lad — Jul 7, 2026
Subject: File No. S7-2026-15 From: Eric Lad Do not reduce quarterly filings to twice annually, do not reduce transparency for the average investor. Do not reduce 10q filings for publicly traded companies.

Greg Carlson Disabled retired private citizen — Jul 7, 2026
Subject: File No. S7-2026-15 From: Greg Carlson Hello, being an individual investor I have to do my own research before I buy shares of a company. I rely on every piece of available information before I spend my money on any stock but if that information becomes scarce I cannot make informed decisions. Please do not pass this new legislation. infinitelyNQ hyper scalper — Jul 7, 2026
Subject: File No. S7-2026-15 From: infinitelyNQ This is not ok, 6 months for them to scam us all like Trump really likes? Grow a brain, protect the usa. Oh and thanks so much for forcing me to trade small caps offshore (pdt was abusive to scalpers)... the cost of the software kept me unprofitable for over 5 yeas! Rot in hell scum sucking leaches.

J . Kent williams Investor — Jul 7, 2026
Subject: File No. S7-2026-15 From: J . Kent williams Quarterly reports are essential to any business for growth and development. Even more essential for its investors to see if the decisions of its ownership/board are headed in the right direction. Keep quarterly reports mandatory.

Jacob Barzee Founder — Jul 7, 2026
Subject: File No. S7-2026-15 From: Jacob Barzee This rule loosens requirements on public companies. Short term incentives connected to executive compensation structures will collaborate with the loosened requirements to further deceive and disadvantage the average shareholder. Point blank: this enables fraud and corruption. There is a world-class reason these rules were created in the first place - we often consider ourselves wiser than those who came before us, history taught them of their foolishness, let us not be taught again. These rules were written in blood the first time, let us keep them, and not require fresh ink.

James Hare None — Jul 7, 2026
Subject: File No. S7-2026-15 From: James Hare As someone who pulled more than one all-nighter preparing for quarterly earnings reports, I learned to detest the process. But there was no doubt in my mind then or now that it’s an absolute necessity. Quarterly reporting, along with annual reports and shareowner meetings, are among the legal necessities that help maintain a business’s credibility in a competitive marketplace. They aren’t always successful. The people I worked with spent years chasing Worldcom’s results, until they discovered they were a complete fraud. But reporting results on a regular basis is a giant step in the right direction. And the more often a business has to take that step, the more valuable it becomes. Reducing reporting by a half would be a step in the wrong direction and a serious mistake. Do not do away with quarterly earnings reporting.

James Riggins — Jul 7, 2026
Subject: File No. S7-2026-15 From: James Riggins I would like to express my opposition to allowing companies to report financial only twice per year. Transparency is key for us stock holders (owners)

to understand how we are investing our money. With the accounting and other software available to companies it is not an undo hardship to provide financial data 4 time per year.

Jude Melen — Jul 7, 2026
Subject: File No. S7-2026-15 From: Jude Melen Do not change filings from quarterly.

Karen M. Torino — Jul 7, 2026
Subject: File No. S7-2026-15 From: Karen M. Torino Quarterly reporting must remain in effect. My family was personally affected by the Enron fiasco. Money invested for my diagnosed schizophrenic sister's care was lost as well as personal money invested by my eldest brother who was in charge of handling the money left by my parents when they died for my sister. That was criminal and the loss a heavy burden for all of us. This type of occurrence must never happen to anyone else again so must remain closely vigilant to assure it does not.

Kelly Shannon — Jul 7, 2026
Subject: File No. S7-2026-15 From: Kelly Shannon Keep quarterly reporting. Financial transparency is vital to balance the interests of employees, investors, and consumers and assure some accountability. Anything less is a step backwards.

Kevin Boggus — Jul 7, 2026
Subject: File No. S7-2026-15 From: Kevin Boggus Dear Secretary, I am writing as an individual investor to express my strong opposition to the SEC's proposal to allow public companies to opt out of quarterly reporting in favor of semiannual reporting. While I understand the Commission's desire to reduce compliance costs and administrative burdens for businesses, I believe this change poses significant risks to market transparency, investor protection, and corporate accountability for the following reasons: Increased Risk of Fraud and Manipulation: A six-month gap between mandatory financial disclosures creates a dangerous blind spot. Companies facing internal trouble or engaging in bad business practices will have far more time to obscure financial deterioration or manipulate data before it is legally required to be made public. Insider Trading Windows: With fewer formal blackout periods tied to quarterly reports, insiders may have wider windows to trade on material, non-public information, leaving retail investors at a severe informational disadvantage. Asymmetry of Voluntary Disclosures: The proposal allows companies to selectively issue voluntary earnings releases in the off-quarters. This creates an uneven playing field where healthy companies will boast about good quarters, while struggling companies can simply remain silent for half a year. For more than 50 years, the quarterly reporting framework has been the bedrock of trust in the U.S. financial system. Moving to a semiannual model compromises the timely flow of information that regular investors rely on to make informed decisions. I strongly urge the Commission to withdraw this proposal and maintain the mandatory quarterly reporting framework (Form 10-Q) for all domestic public companies. Thank you for considering my comments. Sincerely, Kevin Boggus

---

LEE FALARDEAU — Jul 7, 2026
Subject: File No. S7-2026-15 From: LEE FALARDEAU I would like to be more informed about my

investments then less informed. The reduced filing would allow for less up to date information for regular investors and provide more benefits to bad actors and inside traders. With advancement in Ai and other technologies we should actually have more real time data on publicly traded companies and not less. We are better then this.

Lily Chin — Jul 7, 2026
Subject: File No. S7-2026-15 From: Lily Chin Semiannual reporting is not enough information for individual investors from the public to make informed decisions on stock purchases, sales or holds. Changing to semiannual reporting increases chances of insider trading that will negatively impact public investors who do not have the information insiders have. Reporting should follow quarterly schedule. Please reconsider and or dismiss this proposal. Thank you.

Linda Latch Retired — Jul 7, 2026
Subject: File No. S7-2026-15 From: Linda Latch Why on God's green earth would you think that it's ok and appropriate to hide actions from investors and investigators for 6 months?? That's absurd. Quarterly reports are much more conducive to transparency in the market.

Lisa West — Jul 7, 2026
Subject: File No. S7-2026-15 From: Lisa West I do not support reducing the reporting periods. They were put in place to protect the consumer from fraud. This will impact the transparency of reporting of profits/loss which will negatively impact investors. This decision will open the door for insider trading. We do not need to return to a system that was changed because it failed. You serve to protect a fair trade system.

Lori Amann Teacher — Jul 7, 2026
Subject: File No. S7-26-18 From: Lori Amann Dear Friends at the SEC: As a public school teacher, I am required to submit a final grade every quarter in addition to having enough graded assignments submitted for interims (the halfway point of each quarter) so that parents can better track their child's progress. If you have school age children, based on your request to reduce the paperwork burden of US corporations, I can only conclude that you wouldn't mind if your child's teachers only reported out twice a year. I suspect you would mind, given such infrequent reports would keep parents from responding to their children's struggles in a timely manner. American investors and those professionals they trust to manage their money deserve timely and accurate information. Please keep the reports quarterly. Best regards, Lori Amann

---

Lydia Hawthorne — Jul 7, 2026
Subject: File No. S7-2026-15 From: Lydia Hawthorne Quarterly reporting provides better financial transparency, along with more precise revenue patterns relevant to each industry's peak season. if you take, let's say, fedex ground, we all know peak season is Christmas, right? imagine if they only did semiannual reports where it just shows one season sucked and the next season thrived, like no duh, you don't need a report and numbers to say that, but it's everything in between that matters. broken down into quarters, you can do deeper analytic dives and use that data to better extrapolate

and game plan. Not only that, but semiannual reports would allow for better corruption cover up, because you have a longer period of time to conduct corruption in a more precise matter. Financial transparency matters, we can't let these corporations get away with more than they already have

---

M. Massey — Jul 7, 2026
Subject: File No. S7-2026-15 From: M. Massey M. Massey (Retired) Tennessee. Enron is one perfect example for which Quarterly Reports are absolutely necessary. I, personally, will not invest in any company who does not provide quarterly financial reports to their shareholders and investors. Do not allow history to repeat itself. Enough said.

Marcia Condrey Public school teacher — Jul 7, 2026

Re: File No. S7-2026-15; Release Nos. 33-11414; 34-105368; 39-2563; IC-36140 — Semiannual Reporting (Proposed Rule)

Dear Secretary Countryman:

Thank you for the opportunity to comment on the Commission's proposal to allow Exchange Act reporting companies to file one semiannual report on a Form 10-S in lieu of the current requirement to file three quarterly reports on Form 10-Q.

I am the Marriner S. Eccles Professor of Accounting at Stanford Graduate School of Business, and much of my research has focused on the role of accounting information and corporate disclosure in capital markets. This research, and that of colleagues in accounting, finance and law, shows that financial statements play a vital role in informing investors about corporate performance and financial position. Over the past two decades, improved financial reporting and widespread access to financial statements have been critical to rebuilding trust in the integrity of our capital markets, which are widely viewed as the deepest, most liquid and efficient in the world. I believe the Commission's proposal will diminish access to information that many capital market participants rely on and put investor trust in the transparency and fairness of our capital markets at risk for the promise of highly uncertain gains. I therefore am opposed to the proposal. My letter provides further context for my views.

1. Investors have increasingly found corporate quarterly earnings announcements informative.

Stock prices and trading volume at earnings announcements have increased significantly over the past three decades, making clear that quarterly earnings announcements are a key source of information to investors.1 An important element of the increasing price response is the greater disclosure at the earnings press release of financial statement line items, making clear that investors use this information in valuing companies. In 2016, the last year of our most recent study, the average squared price change at earnings dates was 12 times greater than at non-earnings announcement dates and the single day earnings announcement return explained 13% of the return for the quarter. The takeaway is that quarterly earnings announcements are a significant source of information to investors.

2. Studies of annual and semiannual reporting indicate that prices are less informed than in quarterly reporting regimes.

Earlier periods in the US and international settings afford tests of the informativeness of prices when corporate reporting frequency is varied. My 1983 study of AMEX-listed firms moving from annual to quarterly reporting examines the market response to annual earnings in each reporting regime.2 The market response to annual earnings that was preceded by interim earnings reports was significantly smaller than the response in the annual reporting regime. In other words, quarterly earnings preempted some of the information in the annual report. Furthermore, information generated by private information seekers in the annual only regime did not fully substitute for the information firms disclosed in the quarterly reporting regime. Stoumbos (2023) examines a sample of US and European firms over the more current 1992-2019 sample period, and documents greater increases in information asymmetry between earnings reports for semiannual reporters, also highlighting that other information sources do not preempt the news released through quarterly reporting.3 We should thus expect prices to be less informed and to lead to less efficient allocations of resources if firms were to report semiannually reporting.

3. There is no reason to expect that firms will voluntarily disclose the information that they would have disclosed under quarterly reporting, especially unfavorable information.

While one might conjecture that firms just disclose a little less or do so in a less timely way under the SEC's proposal, the disclosures outside the semiannual reporting period are subject to considerable discretion. Studies in the accounting literature examine voluntary disclosure and document that firms are more likely to reveal good news than bad news in many contexts. Evidence of this tendency comes in many forms, from direct focus on management earnings forecasts and guidance, to securities return behavior at the time of disclosures that reveal previously undisclosed information.4 The proposal likely exacerbates this because firms can

voluntarily disclose some (and potentially more favorable) quarterly information and not voluntarily disclose when information is less favorable.
It is also important to clarify that firms are not obligated to disclose all material information and therefore 8-Ks are not a close substitute for routine Form 10-Q filings. As Former SEC Commissioner Allison Herren Lee notes:
There is no general requirement under the securities laws to reveal all material information. Rather, disclosure is only required when a specific duty to disclose exists.[5] In a seminal Supreme Court case on materiality, Basic v. Levinson, the court found that preliminary merger negotiations may be material, affirming that materiality is to be gauged through the eyes of the “reasonable investor.”[6] But Basic also acknowledged the fundamental principle that, under the securities laws, an omission of information – even material information – is not actionable absent a duty to disclose.[7] In Basic, the duty to disclose the pre-merger negotiations arose out of public statements the company made asserting that it was unaware of any developments that might explain high trading volumes and price fluctuations in its shares.[8]
So, what are the possible sources of a duty to disclose? A duty may arise by virtue of an explicit SEC disclosure requirement, such as those set forth in Regulation S-K.[9] A duty may also arise, as it did in Basic, in order to make other statements made by a company materially accurate or not misleading.5
It is exactly for this reason that mandatory quarterly reporting benefits investors, by causing disclosure of specific information in a timely way.
4. Absent quarterly reporting by public companies, investors will seek out alternative sources of information about corporate performance to a greater degree.
The incentive to become informed about ongoing corporate performance will be increased by a move to semiannual reporting, as it means there is a greater amount of information that is unknown but knowable and more time to execute trades. Well-resourced investors will likely have greater incentives to purchase information that allows them to predict corporate performance, for example, satellite data to scrutinize corporate parking lots or credit card data on retail sales. Savings to the economy from less frequent reporting that could accrue to public

companies may well be offset by increased costs incurred by investors who seek substitutes for quarterly information, which will likely be more expensive than information reported by the company directly.6 The strength of this incentive suggests the SEC's proposal will not lead to more capital deployed to productive uses. Furthermore, retail investors will be especially disadvantaged as the gap between their information based on public sources and that of other

investors grows.

5. Insiders will be especially advantaged if they are in possession of superior information for longer periods.

The role financial statements play in "cleansing" the markets of material nonpublic information by allowing investors to access current information has long been recognized. In his 1973 discussion of the FASB's objectives, Stanford accounting professor Bill Beaver argued:

The role of financial statement data is essentially a preemptive one- that is to prevent abnormal returns accruing to individuals by trading upon inside information. If there are no additional costs of disclosure to the firm, there is prima facie evidence that the item in question ought to be disclosed.

… Merely because prices reflect publicly available information in no way implies that they also fully reflect inside information. One information cost that investors may be incurring currently is abnormal returns earned by those who have monopolistic access to inside information. Opponents of greater disclosure bear the burden of proof of showing that individuals can be prevented from earning excess returns with the undisclosed information or that the cost of disclosure exceeds the excess returns. Given the private incentives to trade on inside information, such a condition is very difficult to ensure.7

Academic research on insider trading suggests there is substantial undeterred insider trading in the current reporting regime, which is only likely to increase if quarterly reporting requirements are removed.8 Furthermore, recent staff departures at the SEC raise the question of what additional resources and penalties might be needed to deter the more lucrative insider trading opportunities semiannual reporting could present.

6. A quarterly earnings update without a related 10-Q filing is likely less reliable than a quarterly earnings announcement disclosed with a 10-Q.

Research suggests optional quarterly earnings updates would be of lower quality than current earnings announcements for two reasons. First, the proposal does not require auditor review of a quarterly earnings update. Several studies document that annual earnings announcements made prior to completion of an audit are more likely to contain errors and lead to restatements.10 I

for Financial Reporting Quality and the Market's Response to Earnings, 36 Contemp. Account. Res. 2035 (2019).,4
would similarly expect quarterly updates without auditor review would similarly be less reliable than those with auditor review.
Second, a subsequent more comprehensive filing provides greater assurance that the earnings announcement is reliably produced and is a form of precommitment to meet reporting quality standards at the time of the press release. Investors and preparers currently know that earnings announcements stem from a process that will result in a reviewed and more comprehensive disclosure. While the price response to the 10-Q disclosure is generally smaller than to the earnings news, this does not imply that the quality of the quarterly earnings information would remain the same if a 10-Q were no longer required.
7. The SEC's proposal is likely to significantly increase the costs investors incur to process corporate disclosures.
Blankespoor, deHaan, and Marinovic (2020) characterize three forms of processing costs that investors incur: awareness of information, acquisition of it, and integration costs to interpret and analyze it.11 Moving from the current quarterly reporting system to one where each issuer makes a choice about their disclosures and reporting cadence poses significant challenges to many investors to understand the choices of each issuer, when to look for disclosures, where to acquire the disclosures and how to interpret them. Challenges are significant for each of these steps but perhaps are greatest for interpretation, as investors would need to consider what inference to draw about the reporting cadence and disclosure choices each firm makes and what that implies for the risk and returns of their equity. Comparability of information across companies would likely be eroded significantly as well.
8. In addition to informing investors, financial reporting is a key tool for holding corporate managers accountable to investors.
The separation of ownership from control in corporations is managed through a cascade of agency relationships, whereby shareholders delegate responsibility to the board of directors to hire and oversee management. In each link there is the potential for less than perfect alignment of incentives.12 A key role for periodic financial statements is to inform investors about the firms' performance to allow them to assess how well the board and management are carrying out their responsibilities. The proposed move to optional quarterly reporting is likely to weaken investors' oversight of management and increase their cost of monitoring their investment. At the same time, the SEC proposes to transfer the decision of corporate reporting frequency to corporate boards and management, thereby reducing the potential for financial reporting to

mitigate agency costs that investors would bear. It seems that at a minimum, before moving to semiannual reporting, issuers should seek input from their shareholders.

9. Adding it all up, the potential benefits to public companies beyond cost savings in reporting are unclear and the cost savings to companies pale in comparison to the magnitude of potential harms to the investing public through erosion of the transparency and credibility of our capital markets.
The arguments that semiannual reporting will reduce myopia or increase public listings are not persuasive. The most current evidence on myopic behavior comes from Pozen, Nallareddy and Rajgopal's study of the UK's experiment with quarterly reporting.13 They find no support for the argument that quarterly reporting caused myopic decision making.
Regarding the attractiveness of US public markets, there is substantial evidence that lower costs to access capital in private markets and merger and acquisition activity have played a significant role in the reduced number of US public companies.14 2026 will be a record year for capital raised on NYSE and NASDAQ, suggesting that the exchanges have never been more attractive.15 Furthermore, some companies that are expected to list are likely to have sizable market capitalizations despite being only a few years old, such as OpenAI and Anthropic. The innovations in AI companies are leading to very significant capital expenditures that will motivate IPOs, and their businesses are evolving at a pace of change that is ill-suited to semiannual reporting.
In conclusion, plausible estimates of the harm to investors and the shared public good of our capital markets are large relative to possible savings accruing to companies. As the market capitalization of NYSE and NASDAQ companies passes $70 trillion, the potential magnitude of losses to investors from less timely information swamps the 10-year net benefit estimates of $1.7 to $2.3 billion the proposal presents in Table 4. I believe this is why no group of letter writers commenting on the proposal, individuals, investors, academics, accountants or issuers, is in favor of the proposal.
16 I therefore request that this proposal be withdrawn.
Respectfully submitted,

60,000 submitted form letters at the time of this writing, with less than 1% supporting the proposal.6

Nadira Long Human Resources Professional — Jul 7, 2026
Subject: File No. S7-2026-15 From: Nadira Long Introducing a semi-annual cadence for reporting is foolhardy, and we all already know why. Fraud is a rampant practice in business, and without quarterly reporting it is likelier to go undetected for longer periods of time. Think about Sam Bankman-Fried, Charlie Javitz and Elizabeth Holmes. While all of these examples weren't necessarily undone by quarterly reporting, in many cases they were cooking the books!! Why would we allow companies who have proven that they self-regulate and report only insofar as to not run afoul of the govt to have more leeway to defraud investors? We're also in a moment economically where we're on the precipice of an economic downturn. If anything, now is the moment to buckle down on quarterly reporting lest we enable Enron level fraud go undetected for longer periods of time.

Patrick McCarty — Jul 7, 2026
Subject: File No. S7-2026-15 From: Patrick McCarty As a Software Developer and retail investor with the vast majority of my wealth invested in the stock market in big tech companies, I rely on seeing quarterly information about those companies' financial health so I know whether my investments are still sound and whether I should be increasing or trimming my holdings. Dropping reporting to just twice a years gives fraud more time to fester, or poor sales/bad news more time to accumulate before a dramatic change in market price. A LOT can change in a half a year, and I'd be the last to know, so that only helps insiders and big finance. Skipping two filings a year provides only tiny savings for the companies but the increased risk and volatility has major negative consequences for regular investors like me with a brokerage account, Roth IRA, and 401(k) - we need regular quarterly information that we can rely on. Less reporting has never worked out well before and investors don't want that - quarterly is already the optimal timeframe - don't change it!

Rachel Lang — Jul 7, 2026
Subject: File No. S7-2026-15 From: Rachel Lang We cannot allow companies to report less information. The people do not want this rule. Please continue to require quarterly reporting.

RALPH DILEMMO — Jul 7, 2026
Subject: File No. S7-2026-15 From: RALPH DILEMMO We must keep quarterly reporting in all of these public companies. The investors need to know what is going on within the companies to make solid decisions about investments. There have been plenty of hidden agendas within these companies and we cannot allow them to hide the information for 6 months before its released.

Richard Grant Washington Adventist University — Jul 7, 2026
Subject: File No. S7-2026-15 From: Richard Grant It is incumbent upon you to continue reporting requirements on a quarterly basis. We already know how the alternative goes. Do the right thing, and serve the interests of all, not just a select few.

Shane Wilkins — Jul 7, 2026
Subject: File No. S7-2026-15 From: Shane Wilkins This is a ridiculous rule, plain and simple. Why would you allow companies to be LESS transparent about their financial dealings and create GREATER risk for investors? I vehemently OPPOSE the implementation of this proposed rule and would instead suggest that the SEC require MORE information to be published by companies to decrease risk to investors.

Shar O'Nallen Retired — Jul 7, 2026
Subject: File No. S7-2026-15 From: Shar O'Nallen Keep these reports Quarterly In todays GOP Administration, watching these politicians STEAL and WASTE tax payers monies on Vanity projects while cutting funds to people in need (SNAP, Cancer Research, Medicaid, etc.) Totally enrages me. If reports are only done twice a year. I am not able to monitor my 401K retirement funds which I have paid into for over 55 years. The reports have been quarterly since 1970. Why is there a need to change it now? I have not seen one good reason quoted. I suspect that players are seeing / making opportunities to ROB working class people and have a longer time for it to go unnoticed. Keep these SEC reports QUARTER

Solomon Chang — Jul 7, 2026
Subject: File No. S7-2026-15 From: Solomon Chang I honestly don't see how going from quarterly reporting to semiannual reporting is a cost and time saving effort worth pursuing to beef up the bottomline. Sounds more like a greedy corporation maneuver to hide some shady deals from retail investors, you know the kind of stupid moves that resulted in the subprime crisis. if anything, with all the AI infrastructure that companies are investing in and mass firing of entry level business analyst, investors should be entitled to financial reporting at any time of the year. just a simple command to an agentic bot and the bot delivers the report i need and want to see, 24/7. so yes to abolishing quarterly reporting, only if companies in turn institute agentic automation that allow any investor to get any financial data they would normally get at quarterly reporting.

Stan McGehee None — Jul 7, 2026
Subject: File No. S7-2026-15 From: Stan McGehee Require all insider trading to be declared with financial reports. Insiders would have to disclose their intentions to sell stock when the financials are released. They have a dead period of one week after financial reports are released that the insiders can’t sell. After that they can sell the stated volume over the next three to six months. Transparency is the key. Now if we could figure out some way to control our Congress with restrictions also would be welcomed as well!

Steven Bryan — Jul 7, 2026
Subject: File No. S7-2026-15 From: Steven Bryan This proposal reduces transparency between company executives and the rightful owners of the company they work for. The natural outcome of reduced communication is uncertainty, which leads to increasingly volatile markets. An argument of cost savings should not override the natural effects of this proposal--especially when technology increasingly enables executives and their teams ability to gather and present disclosures. Please strike this proposal down.

Steven D SCHOHAN None — Jul 7, 2026
Subject: File No. S7-2026-15 From: Steven D SCHOHAN File Number: S7-2026-15Proposed Rule: Semiannual Reporting (Form 10-S)Position: Strongly OpposeSubject: Dissenting Comment on the Proposed Elimination of Quarterly Reporting (Form 10-Q)To the Securities and Exchange Commission:I am writing to express my vehement opposition to the proposed rule allowing public companies to replace quarterly Form 10-Q filings with semiannual Form 10-S filings. While framed as a "modernization" effort to cut compliance costs and curb short-termism, this proposal represents a dangerous rollback of transparency that fundamentally undermines the SEC's core mission: protecting investors and maintaining fair, orderly, and efficient markets . Reducing the frequency of mandatory reporting is a step backward for the following critical reasons:Creates Dangerous Information Asymmetries: Six months is an eternity in the modern digital economy. Depriving retail investors of verified, audited quarterly data for half a year creates an information vacuum. This vacuum will inevitably be filled by unregulated corporate press releases, insider leaks, and speculative rumors, giving institutional insiders an unfair advantage over the public . Degrades Market Discovery and Pricing Efficiency: The quarterly reporting cycle is the bedrock of modern market valuation. Transitioning to a 180-day reporting blackout period will lead to severe market volatility when data is finally released. Investors will be forced to price assets based on outdated information, impairing capital allocation across the entire economy . Weakens Fraud Detection and Corporate Governance: Quarterly filings act as a vital, regular check on corporate wrongdoing, forcing executives to sign off on financial health four times a year. Extending this window to six months gives struggling or fraudulent management teams twice as much time to hide material weaknesses, burn through capital, or manipulate books before triggering regulatory oversight . Fails to Cure Corporate Short-Termism: Corporate short-termism is driven by executive compensation structures and macroeconomic pressures—not the mere existence of disclosure forms. Sacrificing investor transparency will not alter corporate culture; it will only blindfold the investors who fund these companies . The SEC was founded on the principle that "sunlight is said to be the best of disinfectants." This proposal deliberately pulls the blinds. The compliance costs saved by corporations under this rule are trivial compared to the immense cost of lost investor confidence and heightened market volatility.I urge the Commission to withdraw this proposal in its entirety and maintain the quarterly reporting framework that has made U.S. capital markets the safest and most resilient in the world.

Steven Graebner — Jul 7, 2026
Subject: File No. S7-2026-15 From: Steven Graebner In our relationships with each other, we are told in the Bible to speak the truth with love (Ephesians 4). As we strive to be a Christian nation, this command covers all our relationships—personal, professional, and business. It the case of the proposed reporting change, it has to do with sharing information that accurately guides decisions people in our country use to manage their money (or of money entrusted to their care). It is absolutely necessary that this information is provided in a timely and frequent manner. If we take the care of our neighbor seriously, then we really must direct our corporations to share their information

truthfully and frequently. In fact, given how quickly situations can change in business in this modern world, we should be asking corporations to provide this information more frequently — every two months, say, and less less frequently. By allowing this information to be shared only every six months, corporations are being allowed to hide the truth, not speak it, and this could certainly open the door to fraud and financial abuse. This increases the risk to investors beyond what, in my mind, is acceptable. I would never invest in any corporation or business that only shared this information every six months. It would be wholly reckless. This could lead to the demise of the reputation of the whole American financial system, and certainly put it on a non-Christian footing. I urge you at the very least to keep reporting requirements quarterly, if not actually require these reports every teo months, not every three.

Susan Slivka Retired Healthcare Professional — Jul 7, 2026
Subject: File No. S7-2026-15 From: Susan Slivka Susan Slivka Retired Healthcare Administrator Any CEO, anywhere, not willing to document operational knowledge of the organization is in no way qualified to receive a paycheck. I've have one direct experience with the SEC, and I was quite impressed by the knowledge and agility clearly demonstrated in response to the concern. I strongly urge you to be that knowledgeable and agile SEC. Hold CEO's accountable for quarterly reporting. Is responsibility and accountability no longer the role of a chief executive officer?

Tracy Gill — Jul 7, 2026
Subject: File No. S7-2026-15 From: Tracy Gill I am a retail investor and I always use the quarterly reports to make my decisions about my various investments and my varios retirement savings.

Victor DesRoches — Jul 7, 2026
Subject: File No. S7-2026-15 From: Victor DesRoches As a retired investor, I rely on quarterly reports for my investing decisions. Also, I previously worked for publicly traded companies, and quarterly reports help expose bad decisions and other shenanigans that impact the health of companies. I fear, semi-annual reports would allow bad management to remain hidden longer and do more damage to companies. Please keep reporting requirements quarterly.

William Weisinger — Jul 7, 2026
Subject: File No. S7-2026-15 From: William Weisinger At its heart, investing is ownership. When you own a piece of a business, you deserve regular, transparent communication from that business. Reducing reporting requirements weakens the connection between companies and their owners. Taking the reports away just makes everyone less informed. Some argue that fewer reports would reduce costs. In an age of AI and increasingly efficient disclosure tools, that point is debatable. Others argue it would ease the pressure to manage quarter to quarter. But short-termism comes from how people react to information, not from the information itself. Taking the reports away doesn't make anyone more patient. It just makes everyone less informed.

Zachary Beaudoin The Public Ledgers — Jul 7, 2026
Subject: File No. S7-2026-15 From: Zachary Beaudoin I write in opposition. The proposal is framed

as "flexibility," but the flexibility runs one direction. A company's management checks a box on its Form 10-K and cuts the interim financial reports its investors receive from three a year to one — replacing three quarterly 10-Qs with a single semiannual Form 10-S. There is no shareholder vote on that election and no opt-out for the investors who lose the information. The people gaining the discretion and the people losing the disclosure are not the same people. Reducing reporting frequency doesn't reduce how often reality changes — only how often the public gets to see it. Management and insiders still track results in real time. Every additional month between disclosures widens the gap between what insiders know and what ordinary investors know, and with it the room to sell into bad news before it is public. That asymmetry is exactly what the post-Depression disclosure system was built to close. The rule's own justification cuts against it. When U.S. companies moved toward more frequent reporting across the 1950s–1970 period — the era that culminated in mandatory quarterly filing — firms that reported more often faced lower information asymmetry and a lower cost of equity capital (Fu, Kraft & Zhang, Journal of Accounting and Economics, 2012). Investors demand a discount for opacity and pay a premium for visibility. A rule sold as helping companies raise capital may raise the cost of capital for the firms that elect it. Proponents point to research that more frequent reporting can dampen corporate investment. But that literature measures managers' spending choices, not the price investors pay for opacity — and its own authors have separately documented the cost-of-capital benefit of frequent disclosure. The two findings do not conflict; only one of them speaks to what investors are owed. The "you'll still get 8-Ks and earnings releases" answer doesn't hold either. 8-Ks are event-triggered, not a full financial picture; earnings releases are unaudited, unreviewed, and framed by management. Neither replaces a reviewed interim report with real MD&A. The election trades a document investors can rely on for one the issuer controls. The benefits of this rule accrue to management and insiders — less disclosure, more discretion, more time. The costs fall on retail holders and index investors, who cannot demand the missing information and cannot easily exit. Keep interim reporting quarterly.

Charlene — Jul 6, 2026
Subject: File No. S7-2026-15 From: Charlene I strongly disagree with making quarterly reporting optional. I believe that quarterly reports me gives timely info to make changes to my portfolio as needed. I'm concerned that less oversight may lead to fraud.

Colleen Coxe — Jul 6, 2026
Subject: File No. S7-2026-15 From: Colleen Coxe Why would you change this rule, which was implemented after Enron as a safeguard for all stockholders? Corporations already have too much influence in retirement and personal investments. Reducing accountability exposes our 401Ks and other savings to potentially devastating impacts on individuals

Aaliyah de Toeni Zhu, Financial Literacy Diaries — Jul 6, 2026
Re: File No. S7-2026-15 — Semiannual Reporting (Release No. 33-11414)
Dear Ms. Countryman,
I write to comment on the proposed amendments that would permit public companies to elect semiannual reporting on Form 10-S in lieu of quarterly reporting on Form 10-Q. I submit this comment
both as an individual advocate for consumer financial protection and financial inclusion, and as founder
of Financial Literacy Diaries, a platform focused on expanding financial access and literacy for underserved investors.
I do not oppose reporting flexibility outright. But I urge the Commission to preserve quarterly reporting
as the default and to narrow any optional semiannual regime, because the proposal as drafted risks widening the information gap between professional and non-professional investors.
Retail investors depend on the mandatory quarterly cadence in ways professionals do not. Institutional investors have direct access to management, sell-side research, alternative data, and the
staff to model a company between filings. The retail investor — the first-generation investor, the retirement saver contributing to a 401(k) or IRA, the person building wealth through a brokerage app — largely does not. For that investor, the mandatory Form 10-Q is one of the few standardized, audited-framework, legally-accountable disclosures they can rely on at a predictable interval. Removing two of four such disclosures per year removes a floor of protection that falls hardest on those
with the least access to substitutes.
The Commission's own proposing release acknowledges evidence that issuers moving to semiannual
reporting without voluntary quarterly supplements experienced reduced analyst coverage and a weaker
overall information environment. Reduced analyst coverage does not affect all investors equally. It disproportionately harms holders of smaller and less-followed issuers — precisely the companies where
independent, periodic disclosure matters most to a non-professional shareholder, and precisely where
financial inclusion gains have been concentrated as retail participation has broadened.
The proposal's reliance on voluntary quarterly information deepens, rather than solves, information asymmetry.
The release notes that electing companies could still furnish first- and third-quarter information through
earnings releases on Form 8-K. But voluntary, furnished (not filed) information is not equivalent to a mandatory 10-Q. It carries different liability treatment, is not subject to the same disclosure-controls

certifications, and can be discontinued at the company's discretion. Sophisticated investors are equipped to parse these distinctions and to price the gaps. The everyday investor is not. A regime in which the quality and frequency of interim information varies company-by-company, and can change annually by a check-the-box election, shifts real cost onto exactly the investors least able to bear it. That is the definition of an information asymmetry problem, and it runs against the Commission's investor-protection mandate.
Recommendations.
1. Retain quarterly reporting on Form 10-Q as the default for all reporting companies.
2. If the Commission proceeds with an optional semiannual regime, narrow eligibility — for example, by excluding smaller reporting companies and less-followed issuers, where the loss of analyst coverage and independent interim disclosure would most acutely harm retail holders.
3. Condition any semiannual election on mandatory (filed, not furnished) first- and third-quarter financial information subject to the same certification requirements, so that electing does not degrade the reliability of what retail investors receive.
4. Require clear, plain-language disclosure to investors when a company elects semiannual reporting, so retail shareholders can knowingly account for the reduced cadence.
Reporting frequency is not merely a compliance-cost question for issuers. It is a question of who gets
timely, reliable, standardized information about the companies they own — and who is left to rely on whatever the market chooses to provide. I urge the Commission to weigh the interests of the non-professional investor, and to keep the quarterly report as the protected baseline of American market
participation.
Respectfully submitted,
Aaliyah de Toeni Zhu

Allison M. Henry, Pennsylvania Institute of CPAs — Jul 6, 2026
July 06, 2026
U.S. Securities and Exchange Commission
100 F Street, NE
Washington, DC 20549
rule-comments@sec.gov
Re: Proposed Rule on Semiannual Reporting; File Number S7-2026-15
Dear Office of the Secretary:
The Pennsylvania Institute of Certified Public Accountants (PICPA) appreciates the opportunity to provide input on n the Securities and Exchange Commission's ("Commission" or "SEC") File No. S7-2026-15, Proposed Rule on Semiannual Reporting (the "Proposed Rule" or "Proposal"). The PICPA

is a
CPA association of about 18,000 members working to improve the profession and better serve the public interest. Founded in 1897, the PICPA is the second-oldest CPA organization in the United States. Membership includes practitioners in public accounting, education, government, and industry.
To help inform our response to the Commission's proposal, the PICPA surveyed members representing a broad cross-section of the profession, including corporate finance and accounting professionals, public accounting practitioners across audit, tax, and advisory, academics, government
professionals, and retired CPAs. Respondents also represented organizations of varying sizes—from
privately held companies with less than $100 million in annual revenue to large accelerated filers and
private companies with more than $1 billion in revenue. The survey, which is available on our website
at picpa.org, was designed to capture both the diversity of perspectives within the profession and the practical implications of the proposed reporting flexibility.
The results reveal a profession that recognizes the potential operational benefits of reducing reporting
frequency but remains concerned that those benefits may come at the expense of investor transparency and confidence.
On the fundamental question of whether companies should be permitted to choose between quarterly
and semiannual reporting, respondents leaned toward opposition. Fifty percent opposed the proposal, including 51% who oppose the proposal (34% who strongly opposed it, and 17% who somewhat oppose it), while 34% expressed support and 15% were neutral. Perhaps more telling than
the overall split is the intensity of opinion: respondents on both sides tended to hold their views strongly, underscoring that the proposal raises significant policy questions rather than representing a modest procedural change.
Members acknowledged that the proposal offers meaningful opportunities to reduce regulatory burden. Among the potential benefits identified (respondents could select multiple responses), 62% cited a reduction in administrative and reporting burden, making it the most frequently selected benefit. More than half (54%) identified reduced compliance costs, while 46% pointed to lower external auditor costs and 45% cited reduced finance and accounting costs. Nearly one-third (30%) believed the proposal would provide greater flexibility for companies of different sizes and complexity.
These findings suggest that many members agree that the existing reporting framework imposes real
costs that merit consideration.
At the same time, the survey demonstrates that members believe the investor protection implications outweigh those operational efficiencies. The most frequently identified drawback—selected by 69% of
respondents—was that investors would receive less timely financial information. Closely behind, 66%
expressed concern that optional reporting would reduce transparency for investors and other stakeholders. Fifty-eight percent anticipated greater earnings volatility or unexpected market reactions
resulting from less frequent reporting, while 54% warned that optional reporting could create incentives for companies to elect semiannual reporting during periods of weaker financial performance. Nearly half (49%) believed the proposal would weaken market discipline and corporate accountability, and 42% expressed concern that allowing companies to choose their reporting

frequency would itself reduce comparability and consistency across the public markets.
The written comments reinforce these concerns. One respondent observed that the proposal could "inherently create a two-class market for trading purposes," while another cautioned that "management will select the least frequent filing so that they don't have to make appropriate timely disclosures." Another respondent raised concerns that differing reporting frequencies could increase opportunities for insider trading by extending periods during which material nonpublic information remains undisclosed.
Taken together, the survey results suggest that PICPA members do not dismiss the SEC's objective of
reducing unnecessary regulatory burden. On the contrary, respondents clearly recognize that
2
quarterly reporting entails meaningful costs and administrative demands. However, they also believe that any reduction in reporting obligations must be carefully balanced against the foundational objectives of the federal securities laws: timely disclosure, transparency, market integrity, and investor
confidence.
The survey also suggests that members are not simply choosing between "more reporting" or "less reporting." Many respondents simultaneously acknowledged the operational benefits of semiannual reporting while expressing significant reservations about the potential consequences for investors, market transparency, and the comparability of financial information. This tension points to an important policy consideration for the Commission. Rather than framing the issue as a binary choice between quarterly and semiannual reporting, the Commission should consider whether more targeted
reforms could reduce compliance costs without diminishing the frequency or quality of information available to investors.
Accordingly, the Commission may wish to explore alternatives such as modernizing and streamlining filing requirements, eliminating duplicative disclosures, leveraging advances in technology and digital
reporting, or providing targeted relief for smaller reporting companies and emerging growth companies. Such approaches could achieve many of the proposal's burden-reduction objectives while
preserving the timely and consistent financial reporting framework upon which investors and the capital markets have long relied.
We appreciate your consideration of our comments. Please reach out to me by email at ahenry@picpa.org or by phone at (215) 972 - 6187 to discuss any of these comments with you at your
convenience.
Sincerely,
Allison M. Henry, CPA

Re: Semiannual Reporting (File No. S7-2026-15)
Dear Secretary Countryman:
The undersigned 24 investors, labor unions, and public interest organizations write to urge the Securities and Exchange Commission (SEC) to refrain from allowing companies to opt into filing semiannual reports in lieu of mandatory quarterly reports. Contrary to the SEC's contentions, finalizing this proposed rule would not result in more companies going public or encourage more focus on long-term strategy. Instead, the proposed reforms would impose unwarranted significant new costs on investors and make markets less transparent and less efficient, thereby undermining capital formation.
Allowing Companies to Opt Into Semiannual Reporting Would Not Further The SEC's Stated Goals
While the stated justification of this proposal is the SEC's goal of increasing the number of companies that go public each year, the central reason for the decline in initial public offerings has been the deregulation of private markets, not the costs associated with public company disclosure requirements. Over the years, both the SEC and Congress have expanded the number of investors eligible to purchase securities in unregistered transactions, the number shareholders a company can have while remaining private, liberalized the methods private companies can use to solicit investors, and eased restrictions on the ability of investors in private companies to resell their securities in unregistered transactions.
1 These changes in law and regulations have allowed many
private companies to meet their capital and liquidity needs without accessing the public markets for longer periods of time.
Meanwhile, the role of regulatory costs in the decline of initial public offerings is minimal. Indeed, a 2021 study found that "[r]emoving all estimated regulatory costs increases the average IPO likelihood after 2000 from 0.95% to 1.4%, which explains only 7.4% of the decline in IPO likelihood
1 Jones, Renee M. Boston College Law School.
"Congressional Testimony: Examining Private Market Exemptions as a
Barrier to IPOs and Retail Investment.
" September 11, 2019; Renee M. Jones, Untamed Unicorns: Why Startup Finance
is Broken and How to Fix It. Harvard University Press. August 4, 2026.

from pre-2000 to post-2000."2 Additionally, changes in Europe and the UK allowing companies to file semiannual instead of quarterly reports have not increased the number of public companies in those jurisdictions. Moreover, the approach ignores what is likely the single most significant cost impeding public offerings, the commission imposed by investment banks, a charge that falls disproportionately on smaller issuers.
3 Lastly, while quarterly reporting may become optional after
this proposed rule takes effect, an issuer's duty to disclose is not. Issuers still have an obligation to accurately and fully report material information under the federal securities laws, necessitating additional disclosures and filings. Therefore, the elimination of quarterly reporting is very unlikely to have a real impact on costs for issuers.
The SEC also contends that allowing companies to opt to file semiannual instead of quarterly reports would encourage corporate managers to focus more on long-term strategy. While we believe it is important for companies to focus on the long term, this proposal would not address the real

drivers of short-termism, which include incentives baked into executive pay packages and the threat of becoming a target of an activist hedge fund seeking to extract short-term value from a company. Indeed, a study of the effects of changes in reporting frequency requirements on UK companies concluded that "moving from quarterly to semiannual reporting is not an effective remedy for undue corporate emphasis on short-termism."4

Allowing Companies to Opt Into Semiannual Reporting Would Harm Investors

While allowing companies to report semiannually would not likely result in the benefits that the SEC has predicted, the proposed changes would harm investors in numerous ways. The proposed reforms would impose additional costs on investors. Optional quarterly reporting will not reduce investors' need for the information contained in current quarterly reports. Instead, the proposed rules would shift the costs of producing such information from the issuers who have easy access to the required information to investors who will be forced to purchase such information from private data providers. Such information will be less complete and less reliable than SEC-mandated disclosures.

The quality of any quarterly financial information voluntarily provided will also be impaired. Where issuers opt into semiannual reporting but choose to voluntarily provide quarterly earnings, as a number are likely to do,

5 the information will be less reliable. Earnings releases will only need to be

2

furnished to the SEC, not filed, will not be required to be reviewed by independent auditors, and will not be subject to certification by the CEO and CFO.

6

Elimination of quarterly reports will result in a reduction in the detection of errors in earnings releases and eliminate the common mechanisms for correcting such errors. Earnings releases issued
before financial statements are filed with the SEC sometimes contain material errors.

7 Presumably
these errors in some cases are identified by the outside auditor during the review of the financial statements and corrected when the quarterly report is filed.8 Elimination of quarterly reports and the required auditor reviews will likely reduce both the discovery of errors and the most common means

of correcting the errors.
Voluntary disclosure of earnings will also reduce comparability of financial performance across companies. Unlike quarterly financial statements, the contents of earnings releases are largely unregulated.9 Managers decide on the contents of these releases, which can vary widely from company to company and quarter to quarter. Nor must the financial statements included in earnings releases conform with GAAP .

Allowing Companies to Opt Into Semiannual Reporting Would Harm Market Integrity and Undermine Capital Formation

Semiannual reporting will have grave impacts on market integrity, as the current proposal would weaken corporate accountability. Eliminating quarterly reporting means there will be fewer checkpoints and reduced discipline on management. The proposal would also limit investors' ability to monitor performance and strategy execution as a check on management.
Semiannual reporting would also make markets less transparent, and less efficient, thereby undermining capital formation. Extended periods of time without full financial reporting will increase the value of material nonpublic information about a company's performance and the potential for its misuse. This change would tilt the playing field in favor of corporate insiders and others with access to material nonpublic information through business or personal relationships, at the expense of retail and index fund investors. Semiannual reporting would also likely increase

6 This can impair the quality of the releases and reporting quality. See Cicone, Nicholas, W . Robert Knechel, and Hyun
Jong Park. Do Reviews Improve Interim Financial Reporting Quality? March 2026. (suggesting that "interim reviews can
enhance the reliability of interim financial reporting by constraining managerial overconfidence or manipulation" and
can "improve[] quarterly financial reporting quality.
").

7 Bronson, S., C. Hogan, M. Johnson, and K. Ramesh. 2011. The unintended consequences of PCAOB Auditing
Standards Nos. 2 and 3 on the reliability of preliminary earnings releases. Journal of Accounting and Economics 51 (1–2):
95–114 (analyzing revisions in 544 preliminary earnings announcements).

8 The method of correcting errors in earnings announcements is not regulated. In some cases, issuers make the revisions
in an amended 8-K. In other instances, revisions are presumably included in the quarterly financial statements. See Hills,
Robert, Matthew Kubic and Mikhail Sterin. Do Managers Transparently Disclose Earnings Announcement Revisions?
May 2025. ("Regarding disclosure practices, 46.9% of firms transparently disclose revisions by filing an amended 8-K . . .
The remaining 53.1% . . . do not issue a separate 8-K for the revision.
").

9 See Item 2.02, Regulation FD.

volatility, decrease liquidity, and make markets less efficient because markets would be less able to price in reliable financial information in a timely manner. Additionally, a decrease in reporting frequency leads to less informed investment decisions, greater market mispricing, and misallocation of capital across the economy. This is because less frequent disclosures reduce the timeliness and comparability of information, weakening valuation decisions and leading to less efficient allocation of capital across companies and sectors.
Lastly, semiannual reporting could also undermine capital formation, as reduced transparency may result in investors seeking a higher risk premium or avoiding investments in companies that opt for semiannual reporting. Transparency is critical to forming and maintaining investments. The

reduced visibility from the significant decrease in reporting frequency elevates risk and widens information gaps, which can deter long-term institutional capital investment. Additionally, a study of UK companies found that those that opted into semiannual reporting tended to see a decline in analyst coverage,
10 which can result in an increase in the cost of capital.
The proposal to allow for semiannual reporting is fundamentally inconsistent with the Commission's mission under the federal securities laws. While the SEC often describes its mission as three part,11 investor protection remains preeminent.12 The SEC's proposal clearly benefits issuers by transferring
to management the discretion over the disclosure of highly material information, an approach that permits opportunistic behavior.
13 The proposal just as clearly harms investors by reducing the
information needed to make informed investment decisions and monitor management. While the

Institute. March 2017.
11 See Securities and Exchange Commission. Mission. Accessed on June 23, 2026.
12 In 1996, Congress required the SEC to consider competition, efficiency and capital formation when engaging in
rulemaking. 15 U.S.C. 78c(f). In doing so, however, Congress made absolutely clear that the "foremost mission"
was
investor protection.. H. Rept. 104-622. 104th Congress. 1996. ("For 62 years, the foremost mission of the Commission
has been investor protection, and this section does not alter the Commission's mission. In considering efficiency,
competition, and capital formation, the Commission shall analyze the potential costs and benefits of any rulemaking
initiative, including, whenever practicable, specific analysis of such costs and benefits.
").
13 See Ebert, Michael, Dirk Simons, and Jack D. Stecher. Discretionary Aggregation. 92 The Accounting Review 73. 2017.
(discussing the opportunistic use of aggregation by management "as a way of hiding information").

SEC has set out some purported benefits, they are highly speculative and largely unsupported.14 This
is not enough to offset the obvious harm.
We are further concerned that the Commission has chosen to move forward with a reduction in material disclosure at a time when developments in technology have facilitated the ability of investors to analyze larger volumes of information in an efficient and cost-effective manner. Finally, we are also concerned that the Commission has proposed these changes at a time when the agency
lacks the political balance mandated by the Securities Exchange Act of 1934 and has not met the statutory requirement that appointments to the Commission alternate by party.
15
We see no middle ground with respect to this proposal. We ask the Commission to refrain from adopting the proposals in their entirety and maintain the current system of mandatory quarterly reporting for all reporting companies.
Thank you for the opportunity to comment on this proposal. For further discussion, please contact Natalia Renta at natalia@ourfinancialsecurity.org.

14 In quantifying the savings to issuers, the release relies on questionable data. For example, for the costs associated with
conforming to quarterly reports, the SEC discussed a 2019 survey by NASDAQ that involved answers from what appear
to be 187 random listed issuers. The information is selective and dated. Moreover, the SEC adjusted the amounts
upward for inflation, something that ignored technological changes that likely reduce the costs associated with periodic
reporting. Thus, the SEC adjusted upward the costs associated with XBRL and data tagging despite indications that
these costs are declining, particularly for smaller public companies. In other parts of the analysis, the SEC estimated that
each quarterly report engendered average compliance costs of $110,000. See note 260. The calculation appears arbitrary,
does not break out the purported cost savings for smaller and mid-size companies, the companies most likely to be cost
sensitive with respect to public offerings, and does not take into account compliance costs that will continue because the
issuer continues to determine earnings on a quarterly basis and issues earnings releases. Thus, companies not filing
quarterly reports will incur some savings such as the elimination of costs associated with XBRL compliance. With
respect to other costs, however, the savings are far less clear. Issuers will still need to expend internal resources on
determining the content of the earnings release, including time spent by employees and board members, will need to
incur the expenses associated with a quarterly closing, and will incur the distraction and opportunity costs that come
with the disclosure. Moreover, issuers issuing earnings releases may still seek auditor review and consult with outside
counsel, a common cost when public companies file reports with the SEC.
15 15 U.S.C. 78d(a) (providing that no more than three commissioners shall be members of the same political party and
that “in making appointments members of different political parties shall be appointed alternately as nearly as may be
practicable”).

Amy C. McGarrity, Chief Investment Officer/Chief Operating Officer, Colorado Public Employees' Retirement Association — Jul 6, 2026
July 6, 2026
Vanessa A. Countryman
Secretary
Securities and Exchange Commission
100 F Street NE
Washington, DC 20549-1090
Re: File No. S7-2026-15 Semiannual Reporting
Dear Madam Secretary:
On behalf of the Colorado Public Employees' Retirement Association (Colorado PERA or PERA), thank you for the opportunity to comment regarding the U.S. Security and Exchange Commission's (the Commission or SEC) proposal to allow semiannual reporting for companies.1 While PERA agrees that companies should be focused on long-term strategy and performance, we respectfully disagree that short-termism is appropriately addressed through reduced frequency of financial reporting. We ask that the Commission maintain existing requirements for companies to report quarterly.
Colorado PERA is the state's largest public pension plan, managing approximately $75 billion on behalf of more than 730,000 current and former public employees and their beneficiaries. In fulfillment of our fiduciary duty, we prioritize the maximization of long-term, risk-adjusted returns in our investment decisions. We internally manage approximately 62% of PERA's Collective Investment Fund, including active management of 100% of fixed income and 73% of public equity assets held. As an institutional investor, PERA relies on timely, accurate information from listed companies about their financial and operational results. Our professional investors utilize quarterly filings to analyze the intrinsic value of companies and make informed investment decisions on behalf of the members we serve.
The board and staff of Colorado PERA have long advocated for market transparency and audit integrity and deeply value the regulatory oversight that underpins the strength of the U.S. capital markets. This framework has lowered the cost of capital for companies while increasing risk-adjusted value for investors. We believe the most robust and investable markets are those that protect long-term investor interests by holding companies accountable to fair and transparent dealings, including through

timely,
audited, and decision-useful disclosures about financial and operational performance.
From this position, we assert that quarterly, rather than semiannual, filing is most appropriate for both
corporations and their investors. Corporate boards owe fiduciary duty to the company's shareholders,
and fulfillment thereof may be compromised if the board itself does not have access to, and oversight
of, accurate and audited quarterly financial and operational information. Semiannual reporting would
also reduce the frequency of information that is publicly available, increasing informational asymmetry,

volatility of valuations and trading, and illiquidity in the market. These effects may create short-term
shocks that can distort long-term views, incentivize bad actors to participate in market manipulation or
conceal poor performance, and erode trust in the U.S. capital markets, leading to higher costs of capital
for companies and reduced value for investors.
The option for companies to elect quarterly or semiannual reporting would bifurcate information
available to investors, reducing comparability. PERA believes comparable information is decision-useful
because it allows investors to accurately assess performance of a company relative to its industry peers
and understand how the company's metrics may impact competitive advantages and shareholder
returns over the long run. If companies elect a different reporting cadence from their peers, investors
may be disadvantaged through less comparable and timely information. Principal-agent conflicts may
also arise in companies exercising the choice to elect semiannual reporting, due to challenges for
corporate boards in effectively understanding their many investors' diverse needs when deciding filing
periodicity.
The proposed rule may exacerbate, rather than alleviate, short-termism. Longer periods between filings
may motivate executives to emphasize "quick fixes" when near-term financial or operational issues
arise. Reacting to such matters with a short-term tactical correction instead of long-term strategic
objectivity could lead to compounded problems with greater negative financial impacts in the future. A
long-term view may be better motivated through executive compensation that is aligned with long-term
competitive advantages, financial performance, and shareholder returns.
Lastly, while the Commission cites costly compliance burdens as partial support for the changes in the
proposed reporting frequency, we view technology as an appropriate solution to overcome such
challenges.2 Companies are already leveraging artificial intelligence to reduce costs and enhance
efficiencies associated with mandatory filings. Technology advances exponentially, and we expect
companies will continue to increase their use of AI and other technologies, facilitating faster and more
resource-efficient quarterly reporting going forward.
Thank you for soliciting feedback on the proposed revisions to financial reporting frequency. We
appreciate the Commission's consideration of Colorado PERA's perspective as an institutional investor.
Sincerely,

Amy C. McGarrity
Chief Investment Officer/Chief Operating Officer
Colorado Public Employees' Retirement Association
2 Proposed rule: Semiannual Reporting, see Section III. Discussion of Proposed Amendments.

Amy Frances Ershler — Jul 6, 2026
Subject: File No. S7-2026-15 From: Amy Frances Ershler Please keep the guardrails in place that we already have. Reducing reporting only helps those with money and power and will hurt the average person. Maintain the market accountability that is in place now. Without this, ordinary working people will be the ones to suffer.

Amy Nerenberg — Jul 6, 2026
Subject: File No. S7-2026-15 From: Amy Nerenberg I oppose this proposed rule. Allowing corporations to reduce the frequency of their financial disclosures is ill-advised in a world where information and disinformation is available on a 24/7 basis. Decreased frequency of publicly-available corporate financial information prevents markets, shareholders, governmental entities and the public from making decisions based on real, timely information. Aside from the real possibilities of corporate wrong-doing, semi-annual disclosure also allows the possibility that errors in financial information would not be caught or revealed in time to correct.

Amy Zavadil Individual — Jul 6, 2026
Subject: File No. S7-2026-15 From: Amy Zavadil I am writing in response to public comment for SEC File Number S7-2026-15 I am opposed to this change and do not see sufficient rationale or public dialogue to support making this change. The SEC should keep the current regulation the requires Companies subject to the reporting obligations of Exchange Act Sections 13(a) and 15(d) (reporting companies) to file quartlerly reports as currently required by the Commission's rules. Keep in tact Exchange Act Rules 13a-13 and 15d-13 require reporting companies to file quarterly reports on Form 10-Q, with certain exceptions (e.g., certain foreign private issuers, investment companies, and asset-backed issuers). Pursuant to these rules, reporting companies currently file with the Commission three quarterly reports on Form 10-Q each fiscal year, with the fourth fiscal quarter subsumed within the reporting company's annual report on Form 10-K. This quarterly reporting supports market transparency and protects individuals / retail investors - we the people who the government is to serve. Do not proceed with this proposed rule change, it does not serve the people.

Anand Desai — Jul 6, 2026
Subject: File No. S7-2026-15 From: Anand Desai I'm inclined to oppose the SEC's May 2026 "semiannual reporting" proposal - i.e., I'd prefer mandatory quarterly reporting - and ask that you consider the following: 1. The proposal's quantified benefits appear relatively minimal, and would be greatly overshadowed by even modest securities-price depression due to diminished confidence in the markets. 2. Technological advancement likely makes periodic financial snapshots much easier and cheaper than historically, while increasing the rate of change in business that makes more-frequent information important to investment decisions and nipping mischief in the bud. 3. There are more and more ways to invest directly or indirectly (for instance, due to one's pension plan) in non-public markets. Many savers could be helped to confidently invest in securities, including equities, to

better build wealth, and capital-formation would not be hurt due to many other investors in alternatives, if the public markets continued to require at least historical levels of transparency and other investor protections. 4. It has been said that less-frequent reporting would protect confidential business strategies. That could facilitate innovation in American business and competitiveness of American exchanges. But I see that the SEC and its rules already provide for "Confidential Treatment" exceptions for disclosure which would seem to be a much better fit - more limited to the trade secrets and particular firms, and not limited to one extra quarter. And I do not recall seeing an explanation of why they wouldn't be a good alternative to less frequent reporting requirements overall. Respectfully submitted, /s/ Anand Desai July 6, 2026

Andrea Harrison — Jul 6, 2026
Subject: File No. S7-2026-15 From: Andrea Harrison Dear Secretary, I am writing to express my strong opposition to the SEC's proposed rule (File No. S7-2026-15) that would allow public companies to reduce their periodic financial reporting from four times a year to just twice a year. The foundation of our public markets relies on fair, equal, and consistent access to material information. Reducing mandatory disclosures to only two updates a year will severely handicap investors' ability to monitor the health of the companies they own. My specific objections to this proposal are: Increased Volatility and Negative Surprises: Without regular, quarterly visibility into corporate financials, the gaps between reporting periods are simply too long. Rather than reducing volatility, this lack of transparency will ensure that when material events, shifts in performance, or operational issues are finally disclosed, investors will face much larger, more abrupt surprises that violently swing stock prices. Information Asymmetry: While individual and retail investors will be kept in the dark for six months at a time, institutional players and insiders may find ways to gather private data or read between the lines. This puts retail investors at a severe and unfair disadvantage. Reduced Market Efficiency: Well-informed markets are critical for healthy price discovery. Stripping away standardized quarterly data reduces the continuous flow of objective financial metrics that keep our markets efficient and reliable. If the Commission truly wishes to ease reporting burdens on smaller or developing businesses, it should explore streamlining the content within existing quarterly filings rather than completely eliminating the frequency of reporting. I urge the SEC to reject this rule and maintain the quarterly reporting standard so that all market participants remain well-informed. Sincerely, Andrea Harrison

---

Andrea Leeman — Jul 6, 2026
Subject: File No. S7-2026-15 From: Andrea Leeman I oppose the proposed rule change to semi-annual rather than quarterly reporting. This change holds no benefit for those who rely on earliest indicators of performance. Beyond "reducing paperwork" at the expense of the investor, the proposal is yet another 'tiny' change that spells loss for the little guy while - through sheer scale - tips favor to the industry itself. Reject this proposed change.

Andrew Schnell — Jul 6, 2026
Subject: File No. S7-2026-15 From: Andrew Schnell Companies will not change their focus from short term gains because the SEC changes its reporting requirements. They will just have longer to hide what they are doing from average investors and 401k holders. The report from the SEC that states they found no real value in quarterly reporting is on brand for an administration that isn't concerned with Americans. This is solely for the benefit of the company with blatant disregard for the average American. This should absolutely not happen.

Angela O'Brien private investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Angela O'Brien Sirs: I am vehemently AGAINST proposal S-72026-15. Were this proposal be approved it would adversely affect a private citizens management of their own retirement investments. In this day and age most reporting is generated by Artificial Intelligence, therefore the "Argument" that it would be too expensive does not hold water. Reporting quarterly allows better control on the ability to plan for the long term. Please reconsider this dangerous proposal.

Angela Soto Cerros — Jul 6, 2026
Subject: File No. S7-2026-15 From: Angela Soto Cerros To the Securities and Exchange Commission: I work in the non profit field and I absolutely cannot afford to place my hard earned money, leave it somewhere, and would be incredibly distressed not knowing how its being invested until 6 months later. Let say my money is my baby, id rather go to the babysitter, who will let me know how my baby is doing every three hours RATHER than a babysitter who lets me know how my baby is doing every six hours. With everyday living costs skyrocketing each month, every cent of mine counts. I am trusting companies to return my money and let me know how its going MINIMUM quarterly EVERY THREE MONTHS!!! Not having quarterly reportings is a really good recipe for any error and/or fraud to not only ruin my financial future, but ruining hundreds of thousands of people's financial futures and the next couple of generations too. Overall, this could fester an enormous amount of distrust, resentment, and tainting their overall reputation for years. A lack of transparency that twice a year reporting would do is see less investments from and by the people in the long run. Just keep the quarterly reports!!! SURELY these companies have nothing to hide and do everything by the books just as expected from the law for everyday folks like me, right?

Anielka Andrade — Jul 6, 2026
Subject: File No. S7-2026-15 From: Anielka Andrade Cutting investors information in half is the wrong direction and reduces transparecy. I wouldn't feel comfortable investing in the stock market with only semi-annual reports. The quarterly reports helps me make timely and informed decisions to protect my investments.

Ann Kreamer — Jul 6, 2026
Subject: File No. S7-2026-15 From: Ann Kreamer As an investor, I need as much information as possible about my investments. There is no reason to cut in half the amount of information that we have been receiving. Please do not continue with this reduction in the reporting that companies are required to do.

Annabel Gardner — Jul 6, 2026
Subject: File No. S7-2026-15 From: Annabel Gardner Hello, I am a member of the Motley Fool community. I believe public company shareholders benefit from regular, transparent communication from the businesses they own. Quarterly reporting helps investors stay informed about company performance, strategy, risks, and opportunities throughout the year. Reducing required reporting

from four times annually to two would provide shareholders with less information and potentially increase uncertainty between reporting periods. While I appreciate efforts to reduce unnecessary regulatory burdens, I do not believe reducing transparency is the right solution. Access to timely and consistent information is an important part of ownership and helps individual investors make informed decisions. I respectfully encourage the SEC to maintain quarterly reporting requirements for public companies. Thank you for considering my comment, and the comments of all concerned investors.

Annette Rose Church The Wild West Conservative — Jul 6, 2026
Subject: File No. S7-2026-15 From: Annette Rose Church There needs to be accountability, every quarter, not less! If you want to argue with - we the people - on this, we will demand even more accountability than this! We are tired of the deception & the theft! Signed by: one of we the people of the re-constituted Republic of Texas, sui juris, jus soli.

Annette Schumacher, Center for Audit Quality — Jul 6, 2026

Re: Proposed Rule on Semiannual Reporting; File Number S7-2026-15
Dear Office of the Secretary:
The Center for Audit Quality (CAQ) is a nonpartisan public policy organization serving as the voice of US
public company auditors and in respect of matters related to the audits of public companies. The CAQ
promotes high-quality performance by US public company auditors; 1 convenes capital market stakeholders to advance the discussion of critical issues affecting audit quality, US public company reporting, and investor trust in the capital markets; and using independent research and analyses, champions policies and standards that bolster and support the effectiveness and responsiveness to dynamic market conditions of US public company auditors and audits. This letter represents the observations of the CAQ based upon feedback and discussions with certain of our member firms, but not
necessarily the views of any specific firm, individual, or CAQ Governing Board member.
The CAQ appreciates the opportunity to share our views and provide input on the Securities and Exchange
Commission's ("Commission" or "SEC") File No. S7-2026-15, Proposed Rule on Semiannual Reporting (the
"Proposed Rule" or "Proposal")2, which would provide all companies subject to reporting obligations under Exchange Act Section 13(a) or 15(d) ("Exchange Act reporting companies") that file quarterly reports the option to file interim reports on a semiannual basis.
Auditors support strong capital markets by serving an important role in enhancing the quality and reliability of certain financial information disclosed in Commission filings to enhance investor protection.
In this letter, we comment through the lens of the public company auditor, providing a number of overarching observations and responding to certain specific questions and matters raised in the Proposal.
1 Referred to throughout this letter as "public company auditor," "independent public company

accountant” or
“independent public company auditor.”
2 Proposed Rule on Semiannual Reporting; Release Nos. 33-11414; 34-105368; 39-2563; IC-36140; File No. S7-2026-
15) [hereinafter “Proposed Rule” or “Proposal”].

Overarching Observations
 The CAQ supports the Commission’s efforts to reduce the unnecessary regulatory burdens of being a reporting company and encourage more companies to go and remain public. In this effort, we believe that the Commission should further consider the root cause of the reporting burden associated with the current quarterly reporting framework. As discussed in more detail below, we recommend the Commission further study the root cause related to interim reporting burdens to determine whether, or to what extent, the problem is primarily a function of the reporting frequency, the level of disclosure required in interim financial statements and/or the Form 10-Q, or other reasons. By considering input from users and preparers, the Commission may conclude that paring down the vast quantity of information currently required may be the most responsive and effective path forward.
 A choice to elect semiannual reporting would rest with management, guided by input from investors, boards of directors and audit committees. We believe that investors and preparers are in the best position to determine the frequency of reporting and the contents of such reporting based on their particular needs, preferences or circumstances. If the Commission decides to permit semiannual reporting in its final rules, we support the flexibility contemplated by the Proposal that would allow registrants to continue to file Forms 10Q on a quarterly basis if that best aligns with their investors’ needs and preferences or otherwise meets management’s operational, financial or decision-making needs. We believe that optionality is consistent with the Commission’s stated objective to establish minimum requirements and allow market participants to dictate reporting beyond those baseline standards.
For example, management may opt to continue its quarterly cadence of reporting due to the discipline it instills in its reporting processes and the value it lends to corporate decision-making efforts. As stated in the Proposal, other factors that may lead a registrant to favor quarterly disclosure include perceived limited compliance cost savings or investor, contractual, or other regulatory expectations. They may also view more frequent reporting as a factor in improving the liquidity (i.e., trading volume) of their stock, the valuation of their stock or their access to capital. Similarly, investors and other market participants may desire quarterly reporting in the belief that less frequent periodic disclosures may hamper their ability to make informed investing decisions based on timely, reliable and complete financial information or to hold corporate management accountable.
 The reliability of financial information provided to the investing public is of paramount importance. Reliable financial reporting is the bedrock of investor confidence in the US capital markets. Recent CAQ survey data indicate that investors overwhelmingly trust audited financial statements and view rigor, independence, and comparability as essential to that confidence.3 Although interim financial statements filed in a quarterly report on Form 10-Q are not audited, investors know that Regulation S-X requires registrants to have those interim financial statements
3 See CAQ 2026 Institutional Investor Survey.

reviewed by an independent public company auditor in accordance with PCAOB standards prior to filing. We believe that quarterly auditor assurance furthers investor confidence in the US capital markets. In contrast, there are no current rules that require the independent public company auditor’s involvement with earnings releases. While auditors may read a company’s earnings release, auditors are not required to do so under professional standards. Any auditor involvement in the earnings release is generally informal, incidental to, and informed by, the auditor’s required quarterly review of the interim financial statements to be included in the Form 10-Q. Auditor

involvement is most meaningful when anchored to management's completion of the broader financial statement close process and preparation of a complete set of interim financial statements. If only selected information is prepared or finalized for purposes of an earnings release, differences may later be identified as the complete set of financial statements is prepared, with inconsistent approaches to whether and how information already released to the market is corrected. Auditor involvement in earnings releases is limited and the actual extent of involvement is opaque to market participants, which may create or broaden an expectations gap under the proposed semiannual reporting framework and/or lead to less reliable financial reporting.

 Regardless of the reporting decision made by any company, public company auditors will continue to apply applicable professional standards and exercise independent professional judgment in serving the public interest as companies continue to seek to provide reliable financial information that meets the needs of investors and other stakeholders. The Proposal distinguishes among three categories of issuers based on how they could respond to the proposed rules: semiannual (on Form 10-S), quarterly (on Form 10-Q) and hybrid reporters (on Form 10-S or other channels). Independent public company auditors would continue to be required by Rule 10-01(d) of Regulation S-X to perform reviews of interim financial statements filed on either Form 10-Q or Form 10-S in accordance with PCAOB Auditing Standard 4105, Reviews of Interim Financial Information ("AS 4105"). We believe that investors and other stakeholders currently derive a significant benefit from the performance of an AS 4105 review on interim financial statements filed on Form 10-Q. As currently proposed, an AS 4105 review of interim financial statements published outside of a Form 10-Q or Form 10-S (for example, voluntarily furnished on Form 8-K) would not be required.

For hybrid reporters, where companies may provide financial information outside of Commission filings or present information that is not a full set of interim financial statements, investors and other stakeholders may expect or assume a level of auditor involvement over that information given the historical requirements of Form 10-Q. If assurance is desired in response to stakeholder preferences, underwriter needs or Commission requirements, the current PCAOB standards do not permit the provision of attest services (i.e., audit or review) over financial information that does not contain a complete set of interim financial statements and disclosures required by generally accepted accounting principles (GAAP) (or financial information presented in a summarized form that purports to conform with GAAP) and SEC regulations. We anticipate that companies and their audit committees may request auditors to perform procedures akin to AS 4105 reviews over their quarterly earnings releases or continue to perform AS 4105 reviews over interim financial statements that exclude all or some disclosures required by ASC 270, Interim

Reporting, which is not currently permitted under AS 4105 or other frameworks available to an auditor.4

Regardless of the reporting framework ultimately adopted by an issuer, auditors will continue to work with companies and audit committees to appropriately plan and sequence audit procedures in a manner that supports quality outcomes and complies with professional standards. Based on our experience, the timing of audit work is an important consideration in supporting audit quality. Academic research 5 also indicates that concentrated periods of audit activity during peak reporting cycles can place significant demands on audit teams and, if not properly managed, may adversely affect audit quality. Conversely, appropriately allocating audit effort throughout the year, including performing procedures prior to period end, can enhance audit effectiveness and provide greater opportunity to identify and address issues on a timely basis. Often these procedures are performed on financial information produced through the company's application of its full suite of internal control over financial reporting (ICFR), which heretofore has occurred on a quarterly basis coincident with Form 10-Q preparation and filing.

 The Commission has recently issued three significant proposals aimed at reducing the regulatory burden on public companies.6 The Commission should consider evaluating these

proposals on an aggregate basis to reveal where the often-compounding impacts of the proposed rules may overlap and help identify whether further changes are needed to strike the right balance between supporting capital formation and protecting investors. The Proposal's economic analysis primarily examines the shift to semiannual reporting on a stand-alone basis. All three initiatives have similar objectives and are intended to reduce compliance costs, improve access to capital, and maintain important protections for investors. In its economic analysis, we recommend the Commission consider evaluating the aggregated impact of the three proposals to get a clearer picture of their economic impact on both preparers and investors.

Responses to Specific Questions Raised in the Proposal

Our responses to various questions raised in the Proposal can be found in Appendix A.

APPENDIX A
Responses to Specific Questions Raised in the Proposal
In addition to the above observations, we offer the following responses to various aspects of the following
questions through the lens of the public company auditing profession:
15. As an alternative to the proposal for optional semiannual reporting, should we instead revise the disclosure requirements of Form 10-Q to reduce the burden on reporting companies of filing this form,
such as amending the current rules for the required interim financial statement review by an independent public accountant, XBRL data tagging, MD&A, information about unregistered sales of registrant securities pursuant to 17 CFR 229.701 (Item 701 of Regulation S-K), or year-to-date comparisons involving financial statements and MD&A? How should these requirements, or any other
requirements of Form 10-Q, be revised? What aspects of Form 10-Q's current reporting framework are
most burdensome for reporting companies?
As it relates to the financial information required by Form 10-Q, we believe that the reliability, transparency and timeliness of financial information provided by public companies is a bedrock to investor
confidence and protection. In addition, we believe that the current requirements for interim reporting on
Form 10-Q, including, but not limited to, (1) interim financial statements including required footnotes prepared under a consistent, comparable financial reporting framework, (2) AS 4105 reviews on interim
financial statements, and (3) management certifications instill discipline, rigor, and accountability in the
financial reporting process.
More broadly, we believe that the Commission should further consider the root cause(s) of the reporting
burden associated with the current quarterly reporting framework. For example, is the primary driver (i)
the frequency of interim reporting on Form 10-Q, (ii) the volume of financial statement disclosures required (or otherwise interpreted by management to be material 7 and therefore perceived to be necessary) for a complete set of interim financial statements,(iii) the nature and volume of disclosures
required to be included in a Form 10-Q more broadly (outside of the financial statements), or other reasons?8
Depending on registrants' circumstances, they might prefer to continue to report on the quarterly cadence that investors and analysts have become accustomed to if the broader reporting burden (interim
financial statement disclosures and/or non-financial statement components of Form 10-Q more broadly)
was reduced.
7 A registrant may also determine that it is less costly to include a disclosure than to demonstrate that the
disclosure is not material.
8 See remarks made by Commissioner Hester M. Peirce at the June 4, 2026 SEC Investor Advisory Committee
Meeting, asking whether the Commission should streamline the reporting burden rather than

adjusting whether
that burden is quarterly.

Accordingly, as part of disclosure effectiveness and streamlining objectives more broadly, we recommend
the Commission consider input from investors, registrants and other stakeholders to determine if and how the additional disclosure requirements can be revised or otherwise pared down to focus on material
disclosure. For example, we recommend that the Commission work with (or enlist) the FASB to holistically
review and improve the effectiveness and efficiency of interim disclosures required by US GAAP. As accounting standards have been revised or updated throughout the years, disclosure requirements for
interim periods have expanded significantly. In a number of situations, the volume of disclosures required
for interim periods is extensive and duplicative of that required for annual periods. This may at times be
inconsistent with the underlying principle in Rule 10-01(a)(5) of Regulation S-X that permits the omission
of certain footnote disclosures that substantially duplicate the disclosure contained in the most recent
audited financial statements and instead focuses on disclosures where events subsequent to the end of
the most recent fiscal year have occurred which have a significant impact on the company. Rule 10-01(a)(5) also includes a presumption that users of the interim financial information have read or have access to the audited annual financial statements for the preceding fiscal year. In that regard, we suggest
that consideration be given to limiting interim financial statement disclosure requirements (consistent with Rule 10-01(a)(5)) to 1) items that have changed materially since year-end and 2) material transactions
occurring during the interim period.
20. In connection with any adoption of the proposal, should there be a new requirement for semiannual
filers that announce or release earnings for the first or third quarters of their fiscal year (i.e., the periods
that would later be subsumed in Forms 10-S and 10-K but for which there would be no quarterly report
filed with the Commission)—that financial information in any first or third quarter earnings releases be reviewed by an independent public accountant? If so, would any changes to current auditing standards (e.g., governing reviews) be required?
There is currently wide diversity in the information that is provided by issuers in earnings releases and the
timing in which earnings releases are issued in relation to the filing of the Form 10-Q. In addition, because
there is no requirement for auditors to review or perform any procedures on information within earnings
releases, there may be diversity in the level of independent public accountants' involvement and procedures (if any) performed thereon. While auditors may read a company's earnings release for consistency of understanding, any auditor involvement in the earnings release process generally is incidental to the required review of the interim financial statements to be included in Form 10-Q. However,
because certain information included in earnings releases is generally derived from draft interim

financial
statements expected to be included in the Form 10-Q, we believe that investors indirectly derive a significant benefit from the performance of an AS 4105 review on the interim financial statements that
will eventually be filed on Form 10-Q even though the auditor's review of the interim financial statements
may not be complete at the date of the earnings release.
If the semiannual reporting framework is adopted as proposed, we anticipate that companies and their
audit committees may request auditors to perform procedures akin to AS 4105 reviews over their quarterly earnings releases or continue to perform AS 4105 reviews over interim financial statements that
exclude all or some disclosures required by ASC 270, which is not currently permitted under AS 4105 or
other frameworks available to an auditor. As we noted above, the current PCAOB review standard used
in reviews of interim financial statements included on Form 10-Q is AS 4105, which provides guidance on
the nature, timing and extent of procedures to be performed by an independent public accountant when

conducting a review of interim financial information. This interim financial information includes the financial statements and disclosures required by GAAP (or financial information presented in a summarized form that purports to conform with GAAP) and SEC regulations. Accordingly, if the SEC decides to require a review of (or some other level of auditor involvement with respect to) financial information included in earnings releases, the staff should consider what changes would be needed to
audit and/or accounting standards to facilitate a framework that would standardize the nature and extent
of auditor involvement.
24. Would the nature and extent of procedures that an independent public accountant performs during
a review change depending upon whether the independent public accountant is performing a review over a fiscal semiannual period or a fiscal quarterly period? Would independent public accountants conducting reviews do the same amount of work for a fiscal semiannual period as they currently do for
two quarterly fiscal periods on a combined basis? Would an independent public accountant experience
any impact on efficiency or economies of scale when conducting reviews and annual audits under semiannual reporting versus under quarterly reporting for the same company? Would any changes to
independent public accountants' review or audit procedures or any impact on efficiency or economies
of scale result in changes in costs to companies? If so, describe the impact and whether the impact could
vary depending upon the size of the registrant subject to the review.
AS 4105.07 indicates that "a review consists principally of performing analytical procedures and making
inquiries of persons responsible for financial and accounting matters, and does not contemplate (a) tests
of accounting records through inspection, observation, or confirmation; (b) tests of controls to evaluate

their effectiveness; (c) obtaining corroborating evidence in response to inquiries; or (d) performing certain
other procedures ordinarily performed in an audit." The objective of a review of interim financial information, which differs significantly from that of an audit, is to "provide the accountant with a basis for
communicating whether he or she is aware of any material modifications that should be made to the interim financial information in order for it to conform with generally accepted accounting principles."
While the impact on any individual registrant will be facts and circumstances specific (and partially dependent on the volume and timing of non-recurring transactions that are typically assessed at an audit
scope level in connection with quarterly reviews), we would generally expect that:
(i) while the nature of the work is the same and the overall volume of work performed in connection with one semiannual review would likely be less than the aggregate volume of work performed in connection with two individual quarterly reviews, certain quarterly procedures would be deferred and cumulatively performed in connection with the semiannual review or year-end audit (e.g., review of board minutes, internal audit reports, etc.); and
(ii) there is a potential reduction in the efficiency traditionally gained in the annual audit from the performance of quarterly reviews (i.e., if there is no involvement of independent public accountants in connection with the first and third fiscal quarters there will be less work performed in connection with the review that will be available to leverage in the semiannual review or the annual audit) which is particularly notable for non-recurring transactions (and certain other procedures such as those articulated in the preceding

paragraph), as well as more broadly from a more regular cadence of interactions with management (and audit committees) throughout the year.
More frequent interim reporting encourages registrants to perform full or substantially complete financial
statement close processes throughout the year. The current quarterly reporting cadence also provides a
well-defined structure for auditor and company/audit committee interactions and is leveraged into the performance of audit procedures. We expect that auditors and companies would need to work together
to find a cadence for interactions that would continue to phase audit work throughout the year for maximum benefit to the quality of the audit as well as efficiency.
Finally, it should be noted that certain conforming updates would be required to AS 4105 to accommodate
a semiannual reporting framework on Form 10-S (for example, updating references to "quarter" and/or
"quarterly").
26. For semiannual filers, what impact would a shift to semiannual reporting have on: (1) companies' disclosure controls and procedures, (2) companies' internal control over financial reporting, and (3) independent public accountants' strategy and approach for the annual audit of companies' internal control over financial reporting or financial statements? With semiannual reporting, is there a potential
for a material increase in the risk that material misstatements (either due to error or fraud) or control deficiencies are not timely detected by or communicated to the independent public accountant thereby
limiting potential remediation of these issues by the issuer? Please provide any data related to these questions.
As detailed below, a shift to semiannual reporting would likely have impacts on the execution of certain

controls underlying disclosure controls and procedures and ICFR, as well as the independent public accountant's strategy.
Disclosure controls and procedures. These controls are designed to ensure that information required to be disclosed by the issuer in the report that it files or submits under the Securities Exchange Act of 1934 is accurately recorded, processed, summarized and reported, within the time periods specified in the Commission's rules and forms. While the frequency of the operation of these controls may change (semiannual vs. quarterly), the general nature of design and operating effectiveness of these controls is likely not impacted by a change from quarterly to semiannual reporting.
Internal Control over Financial Reporting (ICFR). As these controls are designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with GAAP, the frequency of the operation of certain of these controls may change (e.g., from quarterly to semiannually). The general nature of the design and implementation of these controls is not likely impacted by a change in reporting frequency.
There may, however, be a risk that a change in the operational frequency of interim reporting controls could result in an impact to a company's ability to test for remediation of the operating effectiveness of controls associated with identified deficiencies in internal control. Consequently,

this could result in the reporting of more material weaknesses, or in material weaknesses being reported for a longer period of time than under the current quarterly reporting framework.
However, even if a company shifts to semiannual reporting, management may still elect to continue performing its period-end financial reporting controls on a more frequent basis, such as monthly or quarterly.
Independent public accountant's strategy and approach for the annual audit of the company's financial statements. We expect auditors will continue to seek opportunities to test transactions throughout the year (for example, by auditing non-recurring transactions throughout the year versus waiting until year-end procedures), which will generally result in more timely identification of issues and enhanced quality of annual audits. The timing of these procedures is generally dictated by when the transactions are recorded within a company's accounting books and records and subjected to a company's system of internal controls, not necessarily the date of an interim filing with the SEC. The ability of auditors to perform meaningful interim audit procedures throughout the year – such as testing non-recurring transactions as they occur and performing analytical procedures for risk assessments — is fundamentally dependent on the company maintaining a sufficiently complete and reliable set of books and records at those interim points. For semiannual reporters that do not perform a full financial statement close at Q1 or Q3, the absence of period-end adjustments at those dates may limit the auditor's ability to execute interim substantive procedures with a sufficient degree of precision.
The Proposal also asks whether there is a potential for a material increase in the risk that material misstatements (either due to error or fraud) or control deficiencies are not timely detected by or communicated to the independent public accountant, thereby limiting potential remediation of these issues by the issuer. If interim review procedures under AS 41059 and the financial statement close process
including related controls are performed less frequently (e.g., every six months instead of every three
months), there is risk that it may take longer to detect material misstatements and control deficiencies.
However, as discussed above, auditors will continue to seek opportunities, in consultation with management, to perform interim procedures that support their annual audit(s) and these procedures could occur within a semiannual reporting period. This continuation of interim testing could result in timely detection of the control deficiencies and material misstatements. Regardless of the auditor's role,

the ability of management to remediate control deficiencies is based on the timing and frequency of their
controls. For example, in instances where relevant controls fail and there are no compensating controls
in place, there may be fewer opportunities for management to timely identify or remediate control deficiencies if their controls are performed less frequently.
27. Would there be reduced securities analyst coverage of Exchange Act reporting companies that elect
the semiannual reporting option as compared to quarterly filers? Would underwriters' requests for independent public accountants to provide "comfort letters" in securities offerings (to support potential due diligence defenses) lead semiannual filers to continue to retain independent public accountants to conduct quarterly financial statement reviews? If so, are changes needed to PCAOB
9 Interim review procedures under AS 4105 are designed to provide the auditor with a basis for communication
whether he or she is aware of any material modifications that should be made to the interim financial information
for it to conform with GAAP.

Auditing Standards (regarding reviews by independent public accountants)? For example, to comport
with semiannual reporting, are changes needed to PCAOB Auditing Standard 6101, Letters for Underwriters and Certain Other Requesting Parties, to permit independent public accountants to provide comfort letters expressing negative assurance on changes subsequent to the date and period
of the latest financial statements included (or incorporated by reference) in the registration statement?
If semiannual filers would continue to prepare quarterly financial information or to retain independent public accountants to conduct quarterly reviews, should the Commission make any rule changes or take
any other steps to address this issue?
While market participants other than the public accounting profession are best suited to respond more
comprehensively to certain aspects of this question (e.g., with respect to analyst coverage and expectations of a registrant's response to underwriter requests), we believe that it is important to differentiate between (i) the ability of the accountants to issue a comfort letter and (ii) the scope and nature of the procedures and the results that accountants are able to communicate in any comfort letter
issued. As the question itself highlights, one of the most often-cited potential implications of a migration
to a semiannual reporting framework is in regard to the ability of accountants to provide "negative assurance" (in contrast with the alternative, which contemplates simply reporting procedures and findings) on changes in specified financial statement items10 as of a date 135 days or more subsequent to
the end of the most recent financial statement period for which the accountants have performed an audit
or review ("subsequent change period comfort").
For context, AS 6101.4611 states the following:
"If the underwriter requests negative assurance as to subsequent changes in specified financial statement items as of a date less than 135 days from the end of the most recent period for which the accountants have performed an audit or a review, the accountants may provide such negative assurance in the comfort letter."
In contrast, AS 6101.4712 states the following:

“However, if the underwriter requests negative assurance as to subsequent changes in specified financial statement items as of a date 135 days or more subsequent to the end of the most recent period for which the accountants have performed an audit or a review, the accountants may not provide negative assurance but are limited to reporting procedures performed and findings obtained.”

It is possible that underwriters’ requests for comfort letters in connection with securities offerings will lead semiannual filers to continue to retain independent public accountants to conduct quarterly financial statement reviews (whether to facilitate a specific capital raising undertaking or more broadly). AS 6101 in its current form accommodates both a quarterly and semiannual reporting framework and is currently

10 May include common stock, long-term debt, net current assets (working capital), net assets (total equity), net sales, net income, income attributable to the parent, and relevant per share amounts. Most commonly, negative assurance is provided on a limited subset of the aforementioned captions.

11 Similar guidance is contained in AU-C 920.59 for engagements conducted in accordance with AICPA standards

12 Similar guidance is contained in AU-C 920.60 for engagements conducted in accordance with AICPA standards

operational in certain similar fact patterns (see foreign private issuer discussion in next paragraph). In other words, the current framework would continue to establish a baseline requirement with respect to subsequent change period comfort and would continue to allow the market to determine what, if anything, is required above and beyond the baseline regulatory requirement in a semiannual reporting framework.

We already observe similar dynamics in practice today. For example, it is customary for underwriters to suggest and for issuers to include financial information for periods that are otherwise not required (from a regulatory standpoint) in registration statements prepared in connection with public offerings (e.g., selected quarterly data for certain required annual periods or capsule financial information for more recent periods than are otherwise required by rule) to enhance marketability, meet investor demands, etc. Similarly, for foreign private issuers, we observe that issuers generally prepare and include interim financial statements – whether regularly or episodically in connection with a contemplated transaction – for periods that are otherwise not required (from a regulatory standpoint) in response to their individual underlying risk and market-based dynamics. Again, in each of these instances, the ultimate outcome is determined by the participants to the transaction against the backdrop of a well understood framework, after considering risk and market-related considerations. Accordingly, we do not believe that changes are required to the existing PCAOB auditing standards governing issuance of letters to underwriters to accommodate the proposed semiannual reporting framework.

28. Would our proposal have any impact on a semiannual filer's application of relevant accounting standards to prepare financial statements in accordance with U.S. GAAP, IFRS, or home-country GAAP?
How? Are any changes to accounting standards, including U.S. GAAP or IFRS, necessary or appropriate
to effectuate semiannual reporting (e.g., changes to the guidance on annual impairment testing, lag reporting, earnings per share, or other topics of authoritative guidance)?
We believe the Proposal would require both domestic and, potentially, international accounting standard
setters to consider targeted amendments to existing guidance. Examples of existing standards that are
either premised on or contain measures that refer to quarterly data points include:
 Earnings Per Share (EPS), (ASC 260) – Is generally premised on annual or quarterly EPS (e.g. in certain year-to-date treasury stock method calculations).
 Interim Reporting (ASC 270) – Is generally aligned to quarterly (not semiannual) reporting, requires disclosure of material fourth quarter matters in the annual financial statements and includes certain excerpts from Article 10 of Regulation S-X, which would require conforming changes.
 Segments (ASC 280) – Requires certain segment information for both the current quarter and year-to-date periods.
 Subsequent Events (ASC 855) – Requires SEC filers to evaluate subsequent events through the date the financial statements are issued pursuant to ASC 855-10-25-1A, ASC 855-10-20 and ASC 855-10-S99-2. We recommend that the SEC consider evaluating how a longer interim period would interact with the subsequent events guidance in US GAAP.
These examples are illustrative, not exhaustive. If the Commission proceeds with offering a semiannual
reporting option, we recommend that the FASB, and international standard setters as appropriate,

undertake a comprehensive review of accounting standards and related practice issues to consider any
amendments that may be needed.
35. Should the Commission adopt the proposed amendments to Regulation S-X to effectuate semiannual reporting? Are there any other changes beyond those proposed that the Commission should make to Regulation S-X to effectuate semiannual reporting?
The Proposal does not address how the semiannual reporting election would interact with the financial
statement requirements for acquired businesses under Rule 3-05 and acquired real estate operations
under Rule 3-14. Specifically, it is unclear whether a Rule 3-05 or Rule 3-14 acquiree would be required to
provide interim financial statements on a semiannual basis simply because the registrant has elected
semiannual reporting, or whether the registrant may make a separate determination for each acquisition.
We recommend that the Commission clarify this point in the final rule and, in doing so, consider permitting
registrants to make an acquisition-by-acquisition election, as the circumstances surrounding each transaction — including the nature of the acquired business or real estate operation, the availability of its
financial information, and the significance of the acquisition — may vary considerably and do not always
align neatly with the registrant's own reporting cadence. Absent such clarification, registrants and

their
advisors will face significant uncertainty in determining the appropriate form and timing of Rule 3-05 and
Rule 3-14 financial statements in Securities Act filings and interpretations may vary.

Anonymous — Jul 6, 2026
Subject: File No. S7-2026-15 From: Anonymous As an individual investor, I rely on timely and consistent information to make informed decisions. Quarterly reporting is essential for maintaining transparency, accountability, and trust between companies and their shareholders. Bi-annual reporting creates long gaps where material changes can go unnoticed, leaving retail investors at a disadvantage compared to institutional investors with greater access to internal or real-time data. Continuing quarterly reports ensures that all investors—large and small—have equal visibility into a company's performance, risks, and strategic direction. I strongly urge the company to maintain quarterly reporting practices to support transparency, protect shareholder confidence, and uphold fair market participation.

Anonymous — Jul 6, 2026

Subject: File No. S7-2026-15 From: Anonymous Its important to me to see regular quarterly reporting for all publicly traded companies. Reducing the requirement is contrary to the public good, will not serve businesses or private citizens who use this information for investing, purposes, and as far as I can see only serves to relieve company's of their obligations, while only slightly reducing their operating costs. In summary, this rule change only benefits the companies who can take advantage or it without offering any benefit to the public. This is a windfall for big companies at the expense of smaller companies and the public. Make them pay their share and provide this already minimal obligation to the public good.

Anonymous — Jul 6, 2026
Subject: File No. S7-2026-15 From: Anonymous I am writing to express my strong opposition to any amendment to allow companies to file semiannual reports on new Form 10-S in lieu of quarterly reports on Form 10-Q to meet their interim reporting obligations under the Securities Exchange Act of 1934. I believe that investors need the transparency inherent in quarterly reporting in order to make informed choices about the companies they invest in. It is alarming to think about the impact such an amendment could have on the millions of Americans who rely on investing as the primary vehicle to earn/fund their retirement savings.

Anonymous — Jul 6, 2026
Subject: File No. S7-2026-15 From: Anonymous The proposed change gives less timely information to investors of a company's performance. Keep quarterly reporting for transparency. No other means to be aware of how a company is doing.

Anonymous — Jul 6, 2026
Subject: File No. S7-2026-15 From: Anonymous Please keep quarterly reporting - 6 months is too long a time. Investors and the public need to know as things changes quickly

Subject: File No. S7-2026-15 From: Anonymous Getting rid of the quarterly results hurts the individual investor and puts them at a disadvantage.

---

anonymous — Jul 6, 2026
Subject: File No. S7-2026-15 From: anonymous Absolutely NOT. This proposed rule would widen the information gap between retail investors and insiders. Quarterly reporting is 100% necessary given the rampant perceptions of abuse and market manipulation going on with Wall Street. The purpose of the SEC is not to legalize the gambling of equity markets but to stabilize and ensure trust in the system, by the masses. Once a corporation has IPO'd, all "us" outsider secondary investors have is the smoke and mirrors of the quarterly and annual reporting to backup the price valuations available on the secondary market. Slackening of the reporting responsibilities would unduly enrich the corporations and lead to additional loss of employees, adding to C suite salaries at the burden of middle class. This proposed rule does little to safeguard markets, but much to enrich the corporate executives and private equity firms. Its really a shame the rule is proposed in the first place.

Anonymous — Jul 6, 2026
Subject: File No. S7-2026-15 From: Anonymous We need more transparency, not less. Companies are used to making the reports and use quarterly information to make their own decisions, so investors should continue to receive that information too. Company executives cannot be trusted to act in the best interests of the general population and need continued oversight. Keep quarterly reporting!

Anonymous — Jul 6, 2026
Subject: File No. S7-2026-15 From: Anonymous Dear Commissioners, Please keep quarterly reporting requirements in place to continue to keep businesses honest. Thank you, An American Citizen

Anonymous Citizen — Jul 6, 2026
Subject: File No. S7-2026-15 From: Anonymous Please see the letter attached

---

Anonymous None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Anonymous Quarterly reporting allows investors to monitor the status of a company that they are investing in. It lessens the ability of insiders or others connected to those companies of pulling out their stock when a company is struggling and putting the losses on the common person who relies on the SEC to monitor companies. The quarterly reporting is not difficult in a well-run company. Quarterly reporting protects the common American investor from fraud and greed from corporations and their leaders.

Anonymous Private investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Anonymous Public Comment on File No. S7-2026-15: Opposition to Proposal Reducing Reporting FrequencyTo: Vanessa A. Countryman, SecretaryU.S. Securities and Exchange Commission100 F Street NEWashington, DC 20549-1090 To the Secretary Countryman, I am writing as an individual retail investor to strongly oppose the Commission's proposal to eliminate mandatory quarterly reporting and move to a semiannual disclosure framework. As a retail investor, I do not have access to the proprietary data networks or corporate insider access that large institutional firms enjoy. I rely entirely on public, standardized SEC disclosures to make informed decisions about where to risk my hard-earned capital. Reducing financial reporting to twice a year will severely harm the public markets in the following ways:Creates Dangerous Information Blindspots: Waiting six months for financial updates makes it impossible to track rapidly changing corporate health, leaving retail investors exposed to sudden, unexpected market downturns . Destroys Market Comparability: If companies are allowed to choose different reporting intervals, retail investors will no longer be able to accurately evaluate and compare competitors within the same sector. Increases the Window for Corporate Malfeasance: A longer gap between audited financial updates gives underperforming or fraudulent corporate actors a massive window to hide mismanagement from shareholders. Favors Wall Street Over Main Street: This shift heavily penalizes everyday investors while institutional firms continue to extract real-time insights

through alternative data and private access, widening the wealth and information gap. The SEC's primary mission is to protect investors and maintain fair, orderly, and efficient markets. This proposal actively contradicts that mandate by prioritizing corporate convenience over investor protection and market transparency.I urge the Commission to withdraw this proposal and maintain the current quarterly reporting framework. Please make the right decision on behalf of the citizens you are meant to protect.

Anonymous Accredited Investment Fiduciary, (AIF) — Jul 6, 2026
Subject: File No. S7-2026-15 From: Anonymous As an independent financial advisor and accredited investment fiduciary, I am deeply opposed to this proposed change to quarterly reporting of public companies' financial information. I rely on accurate, up to date and audited information on publicly traded companies in all decisions that I make regarding my clients' portfolios. I have been in finance for many years and know that this quarterly requirement enables me and my clients to make the best possible decisions. We all rely on the accuracy and honesty of these filings. To deny us access to this information will make our decisions much more difficult and risky. It will also affect the operations of the market as the trading will become even more speculative. An honest and fair marketplace needs accurate, up to date financial information. Please do NOT put this proposed change in to effect. Thank you, Iliza Bartels

Antanese Nolan Realtor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Antanese Nolan My name is Antanese Nolan. I am a real estate agent. It is very important that we keep quarterly reporting to sustain accountability. Your greed is disgraceful and you’re ruining America. I implore you to do better!

Anthony G. Brown, Maryland Attorney General; Leitia James, New York Attorney General; Andrea Joy Campbell, Massachusetts Attorney General — Jul 6, 2026
NEW YORK STATE
OFFICE OF THE ATTORNEY GENERAL
July 6, 2026
Vanessa A. Countryman
Secretary
U.S. Securities and Exchange Commission
100 F Street, NE
Washington, DC 20549-1090
Re: Request for Public Input on Semiannual Reporting
Dear Secretary Countryman:
The Offices of the New York Attorney General (“OAG”), the Massachusetts Attorney General, and the Maryland Office of the Attorney General submit this comment in opposition to the Securities and Exchange Commission’s (the “Commission” or “SEC”) proposed rule eliminating mandatory quarterly reporting on Form 10-Q for all publicly listed companies (“Proposed Rule”).
1 The Commission anticipates its Proposed Rule will create three types of issuers: those that provide only the semiannual reports, those that continue to file quarterly reports, and those that file semiannual reports but continue to provide voluntary disclosures through other channels like earnings releases and conference calls.2 While the Proposed Rule emphasizes the benefits for emerging growth companies and smaller reporting companies, the Commission

nonetheless proposes that its amendment apply to provide “all Exchange Act reporting companies” the discretion to choose their filing regime.3 As detailed below, we oppose the Proposed Rule because: (i) the Proposed Rule would harm investors rather than help or protect them; (ii) the Proposed Rule deprives law enforcement of essential information used in the investigation of securities fraud; and (iii) the Proposed Rule provides little support or analysis justifying the change to reduce disclosures.

1 While this comment opposes the Proposed Rule, 60 days is insufficient time to properly allow the public to provide
comments regarding this significant change to the SEC’s disclosure regime. See Estate of Smith v Bowen, 656 F.
Supp. 1093, 1099 (D Colo 1987) (“[A] comment period of 60 days was inadequate. The Secretary's failure to extend
that period pursuant to the numerous requests to do so was arbitrary and capricious.”)

3 Id. at 25000.

A. The Proposed Rule Undermines Investor Protection by Denying Investors
Timely Information

The current Form 10-Q was adopted in 1970.4 Over the last 55 years, the quarterly report has become ingrained in the American financial system and in that time, the financial system has significantly expanded to include the retirements, savings, and investments of a greater share of the American public.5 Individual and institutional investors alike have come to rely on the timely disclosure of information required by 10-Q reports in making investment decisions and evaluating public companies. In stark contrast to the Commission’s stated benefits of alleviating “disclosure overload,” the Proposed Rule would largely harm investors by decreasing investor access to timely disclosure of key information, including valuations, financials, company acquisitions, litigation, and business risk disclosures - information that frequently drives investment decisions.

The Proposed Rule also would produce a disjointed disclosure landscape that would compromise investors’ ability to meaningfully compare investment opportunities in different companies. Instead of regular mandated quarterly disclosures containing information in predictable, consistent, and comparable formats, investors would receive uneven information due to issuer reporting choices. Even in the case of issuers who choose to make voluntary disclosures, investors would be subject to expanded management discretion over the extent of the information they choose to provide and the format in which they do so. This not only makes investment comparisons more complicated, but also creates information gaps that would shift the burden to investors to fill from other sources.

By placing choice of disclosure frequency in the hands of the management of publicly-traded companies, the Proposed Rule also creates the following potential risks: 1) investors may increasingly rely on the uncertified marketing and promotional material released by companies due to a decrease in disclosure frequency; 2) the information asymmetry will reduce investors’ ability to anticipate performance downturns before they appear on Form 8-Ks; 3) the asymmetry widens the gap between private disclosure agreements and publicly-released information; and 4) the public will increasingly be forced to rely on stale information while waiting for the next semiannual report, potentially delaying or obscuring important decisions on how to reposition their investment capital and depriving companies of access to short-term capital.

The Commission acknowledges the shortcomings created by these asymmetries for market and capital formation, but believes that they “…may be mitigated by the presence of alternate sources of information, including private information collection and analysis or by market discipline.”6 This proposed change would provide a dramatic investment advantage to large wealthy investors who have the resources to pay for information collection. These market actors,

Economy" Boston
University Economics in Context Initiative.
6 See https://www.sec.gov/files/rules/proposed/2026/33-11414.pdf at 74.

who already benefit from substantial disclosure asymmetries, will further benefit from their greater access and resources compared to the rest of the investing public, who will largely be left to rely on a semiannual schedule and less foreseeable material change disclosures on Form 8-K filings. The scope of this information imbalance and whether it creates an incentive for inappropriate trading or market manipulation warrants further scrutiny and research.
The undersigned believe the Commission's justifications are weak and do not stand up to the benefits that regular disclosures of important financial information provide to investors and markets, including transparency, accountability, and fraud prevention.
B. The Proposed Rule Will Negatively Impact the Ability of State Law Enforcement to Detect and Investigate Fraud
For over a hundred years, States have protected investors by bringing enforcement actions under state laws, such as New York's Martin Act, which forbid fraud in the purchase and sale of securities. Federal securities laws, which followed after the states, similarly "seek to regulate parties selling securities and to advance the public's knowledge about the securities offered for sale."7 As both state securities regulators and anti-fraud securities enforcers, our Offices review quarterly filings to identify misrepresentations, projections, misstatements of earnings, fraudulent business practices, insider trading, and other violations of law. Quarterly reports contain flags for these kinds of conduct and aid our work. In the absence of these reports, companies could engage in conduct that would escape detection for months. For example, the Enron fraud in 2001 was discovered when two staff reporters at The Wall Street Journal raised questions after the company posted a third quarter loss. That discovery led the Commission, along with OAG and several other states to bring enforcement actions against several banks and analysts.8
In its analysis of the Proposed Rule, the Commission calls attention to the fact that aggregating information semiannually could "potentially obfuscate information that would have been useful to competitors if disclosed for each quarter."9 Likewise, removing quarterly reports delays the detection of fraud and increases opportunities for companies to hide negative information through misleading statements and/or omissions. The role of the 10-Q is unique. "The Form 10-Q includes unaudited financial statements and provides a continuing view of the company's financial position during the year…[It is intended] to provide shareholders and the investing public with a concise overview of the company's financial results, operations, and
7 People v Landes, 84 NY2d 655, 660 (1994).
8 See, Press Release SEC, OAG, NASD, NASAA, NYSE, and state regulators announce historic settlement (2002).
Regular reporting was also a component of settlements in a number of investigations and cases brought and settled
by States against companies such as State Street, AIG, CBS, and Credit Acceptance Corporation. It was through an
analysis of the quarterly and annual reports that changes in accounting procedure, governance, executive
compensation and misstatements regarding assets were found to be false and misleading in light of other disclosures
issued by those companies.
9 91 FR 24968 at 25001.

management during the preceding fiscal quarter."10 Allowing a company to obfuscate its activities while denying investors timely access to information in making investment decisions, goes against the very core of investor protection.
C. There Is Little Support for Allowing Companies to Opt for Fewer Disclosures

i. The impact of cost savings is overstated

The rationale behind the Proposed Rule for transitioning to a semiannual reporting regime for publicly-traded companies is to encourage more companies to enter and remain in public markets by eliminating the burden of filing 10-Qs. The Commission claims that the savings from the elimination of 10-Q filings will potentially be redirected to shareholders, or to more productive uses "such as strategic planning or capital investments."11 This basis is speculative and unsupported. The Commission forecasts that cost savings will come from reductions in internal staff "devoted to gathering, processing, and presenting interim financial information" and from "lower expenditures on external legal counsel, accounting advisors, and other professional services."12 However, the Commission fails to present facts to support its theory. FINRA reports that market participants are increasingly relying on artificial intelligence to conduct back-office work.13 The rise in the use of artificial intelligence may provide the cost savings the Commission seeks while reducing the burden on issuers and prospective issuers. Additionally, it is common, for example, for companies to conduct valuations, analyze business acquisitions, and maintain financial statements between quarters.14 And the Commission acknowledges capital raising and other contractual obligations may require issuers to continue preparing quarterly financial information, concluding that "reductions in Form 10-Q filing obligations may not translate into commensurate reductions in overall reporting-related costs."15

For the companies that opt to only issue semiannual reports, the amount saved per company is minimal relative to the size of public companies. The Commission estimates that the net savings for the issuers who choose only to file semiannual reports would be on average $198,000 per fiscal year.

16 The Commission adds that there are additional cost savings that "could not reasonably be quantified,

"17 but the Commission fails to show a link between these savings and the Proposed

Rule. Speculative advantages potentially provided to a limited subset of issuers should not justify limiting investors' access to timely financial information.

ii. The impact of the Proposed Rule on capital formation and competition is unsupported

The Commission and proponents of the Proposed Rule attribute the decline in frequency of new public offerings ("IPOs") to the expense of regulatory compliance.

18 However, the

Proposed Rule does not contain enough serious study of whether such attribution is accurate or whether the new rule would encourage more IPOs. While the Commission is tasked with encouraging capital formation and competition, it should not draw conclusions about what will

encourage these activities unless it can show an empirical basis for such conclusions.[19] The existing reporting regime has developed the largest and most reliable public markets in the world and changes should not be made at the cost of investor protections. Moreover, there is little evidence in the Proposed Rule that decreasing the frequency of filing will increase capital formation. According to the Investor Advisory Committee's report on the Proposed Rule, U.S. companies' growth and long-term investing in innovation far exceed that of other wealthy countries' companies on semiannual reporting regimes.[20]

Nor is there evidence that allowing companies to forego filings will increase competition and strategic thinking. The Commission claims that extending the time between mandatory disclosures will somehow encourage long-term strategic thinking by company managers[21] and mitigate "managerial focus on short-term financial metrics at the expense of long-term value creation."[22] But even the Commission recognizes that "academic literature is mixed on whether quarterly reporting is a primary driver of such behavior."[23]

D. Conclusion

Quarterly reporting remains an essential part of the total mix of information available to the market and to law enforcement. Investors, financial analysts, and the general public have

18 There may be other reasons such as an ever greater portion of the nation's assets becoming concentrated among a limited number of sophisticated market actors such as private equity. See https://www.nasdaq.com/articles/how-much-extra-work-10-q-reporting; Ewens, Michael, and Joan Farre-Mensa. "The Deregulation of the Private Equity Markets and the Decline in IPOs." 23 Id. at 25000.

material interests in the continuation of quarterly reporting. Under the Proposed Rule, individual investors would be faced with a higher burden and higher cost of gathering information on actual or prospective investments from various sources in order to analyze and compare company changes. A minimal decrease in disclosure costs has not been shown to increase capital formation or influence companies to think longer term. Rather, the lack of quarterly filings will create gaps in information for investors. The Commission has not adequately considered its investor protection mandate in evaluating the soundness of this Rule. For the reasons discussed above, we encourage the SEC to withdraw the Proposed Rule and continue the current practice of requiring

quarterly reporting so that investors and enforcement agencies alike have access to regular, timely, and material financial information.

Arlene Nykaza Lawyer/Assistant Professor of Business Law — Jul 6, 2026
Subject: File No. S7-2026-15 From: Arlene Nykaza File No. S7-2026-15 Dear Ms. Countryman: I write in my individual capacity to comment on the Commission's proposal to permit reporting companies to file semiannual reports on a new Form 10-S in lieu of quarterly reports on Form 10-Q. Having spent my career as a lawyer, and now professor of business law whose studies include corporate disclosure, I wish to express my conclusion that the proposal, as drafted, should not be adopted. The Commission's economic analysis suffers from several foundational presumptions that individual investors have an inexplicably reduced need for transparency. As an individual investor, let me assure you that I have not forgotten Enron or such similarly avoidable market catastrophes. The Commission proposal directly threatens the public-information investment forums at a time when financial regulation is moving toward more frequent, automated reporting, not reducing fundamental data disclosure by half. In 2019, the Commission considered and rejected this exact policy shift. Nothing has changed to warrant reversing that stance. I respectfully urge the Commission to withdraw the proposed amendments and keep the quarterly disclosures intact. Respectfully submitted, Professor Arlene Nykaza, J.D.

Comment Letter on File Number S7-2026-15 — "Semiannual Reporting"
To:
Securities and Exchange Commission
100 F Street, NE
Washington, DC 20549
From:
Arthur Fliegelman, CFA
Principal, A. Fliegelman & Associates, LLC
Dear Secretary,

I am writing to submit my comments regarding the Securities and Exchange Commission's File Number
S7-2026-15, “Semiannual Reporting.”
By way of background, I hold a Master of Business Administration from the Wharton School, am a lifelong Chartered Financial Analyst, and have worked in investment-related positions for many years. My
professional experience includes roles at a large institutional investor, a major securities firm, a global
credit rating agency, an insurance industry supervisor, and the U.S. Department of the Treasury. I currently serve on the Board of Directors of CFA Society New York, an investment professional organization with over 10,000 members. Within this organization, I chaired the Financial Reporting & Analysis Group for many years, focusing specifically on the quality of issuers’ financial disclosure.
I strongly believe that eliminating the requirement for issuers to publicly file quarterly financial reports on Form 10-Q would be a major mistake and a step backward for the financial disclosure process. Such a
change would disadvantage retail investors, marginally benefit only the largest institutional players, reduce trust in public markets, and yield negligible operating cost savings.
My primary objections to this proposal are detailed below:
 Investors require high-quality, timely information. At no time in my career has the demand for current financial information diminished. Access to reliable, timely data about potential investments is the lifeblood of the investment process; sound decisions cannot be made without it. Any degradation in the quality or frequency of public disclosure will inevitably erode the investment process and hinder investors' ability to make informed decisions. Reducing public reporting from quarterly to semiannual is a step in the wrong direction.
 Reduced public disclosure advantages large institutional investors. Public SEC filings level the playing field by ensuring all market participants receive the same high-quality data simultaneously. If the timeliness of public information deteriorates, sophisticated private investors, such as hedge funds, will use alternative, non-public data sources to expand their informational advantage. Rather than exacerbating this imbalance, the Commission should explore ways to make limited but vital financial metrics available more frequently. For example, The Progressive Corporation successfully publishes key performance metrics on a monthly basis.
 Less frequent reporting favors corporate management and insiders over the public. An efficient and trusted market relies on the principle that public investors receive fair treatment. Corporate management and insiders will always possess more information than external investors, but widening this gap further damages market integrity. Reducing disclosure frequency compromises public trust in market fairness, ultimately harming market liquidity and efficiency.
 Technological advancements continue to reduce compliance and compilation costs. Industry is experiencing remarkable efficiency gains driven by automation, AI, and modern data systems. It is reasonable to expect that the cost of preparing and filing quarterly reports will continue to decline. Furthermore, public investors have never expressed a concern with bearing the indirect costs of robust financial reporting, nor have they indicated any desire to sacrifice information frequency for marginal cost savings. If investors do not value these marginal cost savings, who is the intended beneficiary if this proposal?
Thank you for considering these comments. I would be pleased to elaborate on any of these points should the Commission or staff find it useful.
Respectfully submitted,
Arthur Fliegelman, CFA

Washington, DC 20549
Re: Comment on Semiannual Reporting Proposed Rule - S7-2026-15
Dear Ms. Countryman:
I. Introduction and Summary
We respectfully submit this comment in response to the Commission's proposal S7-2026-15 to permit eligible issuers to elect semiannual rather than quarterly reporting. From the perspective of long-term investors and shareholder representatives, we respectfully oppose the proposed rule because we believe it would reduce transparency, increase information asymmetry, impair shareholder engagement, and shift significant costs from issuers to investors without demonstrating corresponding benefits to investors or the capital markets.
For decades, quarterly reporting has been a cornerstone of the federal securities disclosure system. It provides investors with timely, standardized, and legally accountable information that supports investment decisions, shareholder engagement, proxy voting, and effective oversight of public companies. The proposal would substantially reduce the availability of that information while increasing reliance on voluntary corporate communications and privately sourced information that is less standardized, less comparable, and often less reliable.
The Commission's economic analysis focuses principally on reductions in issuer compliance costs but gives comparatively less attention to the costs that reduced reporting would impose on investors. Investors need timely information. The proposal therefore does not eliminate information costs; it largely transfers those costs from issuers to investors, who will either go without information for six months or, for those investors able to do so, increasingly rely on proprietary research, commercial data providers, and other substitute sources to fill the resulting information gap.
As You Sow has engaged with public companies for more than three decades on issues affecting long-term shareholder value. Our experience demonstrates that meaningful shareholder engagement depends upon regular access to standardized disclosures. Quarterly reports allow investors to monitor corporate performance, evaluate management's response to emerging risks, engage constructively with boards and executives, and assess whether commitments made during shareholder engagement are reflected in a company's operations and financial condition. Reducing the frequency of mandatory reporting would decrease informed decision making, making these activities less effective and increasing costs to investors.

The Commission's mission is to protect investors; maintain fair, orderly, and efficient markets; and facilitate capital formation. Robust disclosure advances each of these objectives. For the reasons discussed below, we respectfully urge the Commission not to adopt the proposed rule.
II. About As You Sow
Founded in 1992, As You Sow is a California based organization, that promotes corporate

responsibility through shareholder advocacy, coalition building, and innovative legal strategies. Our work is grounded in the belief that business risks can be reduced through improved corporate practices and transparency. As shareholders and investor representatives, we engage directly with corporate management to address practices that may expose companies to risk and to encourage strategies that protect long-term company performance and shareholder value. Over more than three decades, we have engaged hundreds of corporations on issues that affect operational resiliency, regulatory exposure, product safety, workforce practices, and long-term business sustainability, with the goal of improving financial performance and safeguarding long-term value.

Timely, standardized disclosure is an important foundation for assuring long-term company performance and shareholder value. Quarterly reports provide an objective basis for evaluating company performance, monitoring changes in risk exposure, assessing management execution, and determining whether commitments made during shareholder engagement are being implemented. They also enable meaningful comparisons across companies and over time, ensuring that capital moves to those companies with the greatest likelihood of long-term outperformance. Without regular periodic reporting, shareholder engagement becomes more difficult, more expensive, and less effective.

III. Quarterly Reporting Advances the Commission's Statutory Mission

The federal securities laws are built on the principle that investors — not regulators or corporate management — should determine the value of securities using complete, timely, and reliable information. Congress adopted a disclosure-based regulatory framework because transparent markets allocate capital more efficiently than opaque ones. Quarterly reporting has become an essential component of that framework by ensuring that investors receive standardized financial information at regular intervals throughout the year. The Commission has presented an insufficient basis for reducing reporting that has served investors for the past 50 years.

The proposed rule must be evaluated not only in terms of any compliance savings it may provide issuers, but also in light of its effects on the Commission's statutory mission to protect investors, maintain fair, orderly, and efficient markets, and facilitate capital formation.

Quarterly reporting advances informed decision making by reducing information asymmetry between corporate insiders and public investors. Public company management continuously receives information regarding financial performance, liquidity, customer demand, litigation,

operational developments, and strategic direction. Mandatory quarterly reporting narrows that informational gap by requiring companies to provide comprehensive updates of material information regarding their financial condition and operations every three months. Extending the interval between mandatory reports would necessarily increase the amount of information known to management but unavailable to investors, thereby increasing uncertainty and the value of material nonpublic information.

Investors rely on these regular disclosures to evaluate corporate performance, compare companies, identify developing risks, and incorporate new information into investment decisions. Academic research has consistently found that higher-quality disclosure reduces information asymmetry, improves liquidity, enhances price discovery, and lowers the cost of capital.

The proposal's economic analysis recognizes costs associated with quarterly reporting but gives less attention to the benefits of quarterly reporting. Reducing reporting frequency may lower compliance expenses for some issuers, but it will also increase investor uncertainty, reduce comparability among companies, impair market efficiency, and increase financing costs if investors demand higher expected returns to compensate for diminished transparency. These costs are especially concerning for retail investors, who tend to rely on public reporting and have less ability than larger market participants to compel or purchase information. Scholarship on retail investor behavior, including the work of Sergio Gramato Ricci, highlights the continued

importance of retail participation in corporate governance through voting, engagement, and market activity. This literature supports the conclusion that retail investors remain dependent on standardized, mandatory disclosure regimes to meaningfully exercise their rights and evaluate corporate performance, reinforcing the importance of periodic reporting. These broader market effects should be considered alongside any reduction in issuer reporting costs.

Finally, quarterly reporting supports capital formation by reinforcing investor confidence in the integrity of the U.S. disclosure system. One of the defining characteristics of U.S. public markets is the availability of timely, standardized, and legally accountable disclosure. Investors throughout the world participate in these markets because they have confidence in the quality of information that public companies are required to provide. Any proposal that substantially reduces mandatory disclosure should therefore be supported by compelling evidence that its benefits outweigh its costs. In our view, the current proposal has not made that showing.

IV. The Proposal Underestimates the Costs Imposed on Investors

The Commission's economic analysis appropriately considers the compliance costs associated with preparing quarterly reports. However, it gives comparatively less attention to the costs that reduced reporting would impose on investors and the capital markets. Investors will continue to require timely information about public companies regardless of whether issuers file Form 10-Q. The proposal therefore does not eliminate the need for information; it largely transfers the costs from issuers to investors of producing and obtaining that information or increases risk for investors of not having such information.

Larger investors may supplement SEC filings with commercially available datasets, regulatory filings, litigation records, industry research, and other information when evaluating portfolio companies. Nevertheless, SEC filings remain the foundation of most investors' analyses because they are standardized, comparable, subject to the federal securities laws, and prepared pursuant to uniform Commission requirements. If quarterly reports become unavailable, investors will increasingly rely on proprietary research, commercial data providers, analyst estimates, and other private sources that are more expensive, less standardized, and often less reliable than Commission-filed disclosures. The proposal does not attempt to quantify these additional costs or evaluate how they may affect shareholder engagement, investment analysis, proxy voting, or corporate monitoring.

These costs are likely to fall disproportionately on retail investors and smaller institutions. Large asset managers may be able to purchase alternative datasets or devote significant resources to gathering additional information, while retail investors generally rely on publicly available SEC filings as their principal source of reliable corporate disclosure. Reducing the availability of those filings risks widening the information gap between sophisticated market participants and ordinary investors, a result that is difficult to reconcile with the Commission's longstanding objective of promoting fair access to material information.

The proposal likewise gives limited attention to debt markets, where lenders, bondholders, and credit analysts routinely rely on quarterly financial reporting to evaluate liquidity, leverage, covenant compliance, and refinancing risk. Less frequent reporting may increase uncertainty regarding issuer financial condition, particularly during periods of market volatility, yet the release does not meaningfully assess whether those effects could increase borrowing costs or otherwise affect capital formation.

The Commission is required to consider the effects of its rules on efficiency, competition, and capital formation. Those objectives are best evaluated by considering the net effect on the market. While issuers may experience reduced reporting costs, investors may incur increased costs in obtaining substitute information and monitoring corporate performance. To the extent those costs exceed the compliance savings realized by issuers—or increase the returns investors demand because of greater uncertainty—the proposal may ultimately increase rather than reduce the overall costs associated with participation in the public markets.

The proposal may also have broader consequences for the market's information

environment. The Commission notes that reporting frequency may influence analyst coverage and forecast accuracy. Independent analysts play an important role in promoting market efficiency by evaluating company disclosures, identifying emerging risks, and disseminating information to investors. More frequent standardized reporting supports this work by providing reliable financial information on a predictable schedule. Less frequent reporting may reduce analyst coverage, particularly for smaller issuers, diminish forecast accuracy, and increase reliance on estimates and informal communications. These effects would reduce independent scrutiny of public companies and further increase the costs investors incur in evaluating corporate performance.

V. Quarterly Reporting Is Essential to Shareholder Engagement and Cannot Be Replaced by Voluntary Disclosures

As You Sow's engagement with public companies depends upon timely, standardized, and comparable information throughout the year. Our work extends well beyond making investment decisions. We engage regularly with boards of directors, senior management, investor relations professionals, and corporate counsel regarding governance, capital allocation, executive compensation, climate-related financial risk, workforce management, plastics, biodiversity, human rights, and other issues affecting long-term shareholder value. Quarterly reports provide the factual foundation for these discussions and allow As You Sow and other investors to evaluate whether commitments made during shareholder engagement are reflected in company performance, financial condition, and strategic decision-making.

As noted, reducing reporting frequency would not reduce investors' need for this information. Rather, it would delay investors' ability to evaluate management's execution of strategy and increase the costs associated with shareholder enagagement. Long-term investors monitor portfolio companies continuously, not simply during proxy season or at the time securities are purchased or sold. Quarterly reporting enables investors to identify developing risks, compare companies over time, evaluate board oversight, and make informed proxy voting decisions. These functions become substantially more difficult when comprehensive disclosures are available only twice each year.

We are also not persuaded that voluntary earnings releases or other corporate communications adequately substitute for Form 10-Q. Companies may continue issuing quarterly earnings releases, conducting earnings calls, and holding investor presentations, but those communications serve a different purpose than mandatory Commission filings. Form 10-Q provides standardized financial statements, Management's Discussion and Analysis, updated disclosure regarding legal proceedings, liquidity, capital resources, internal controls, and known trends and uncertainties pursuant to uniform Commission requirements. It carries a level of legal accountability that voluntary communications generally do not.

By contrast, earnings releases are largely determined by management. Companies decide which metrics to emphasize, how much context to provide, and what operational developments to discuss. As a result, voluntary disclosures vary significantly in scope and presentation, making meaningful comparisons across companies more difficult. Investors benefit not simply from receiving information, but from receiving information that is standardized, comparable, and subject to a common regulatory framework. As important, companies that are facing internal or external distress or difficulties may be reluctant to raise such issues voluntarily, contrasted to those with better information to report. Thus, under the proposed rule, investors are more likely to miss timely information or trends that could have a negative impact on their portfolios and that might have been avoided with more frequent quarterly reporting.

VI. The Proposal Is Unlikely to Achieve Its Stated Objectives

The Commission explains that the proposal is intended to reduce regulatory burdens, encourage long-term decision-making, and make the public markets more attractive to issuers. These are worthwhile objectives. We are not persuaded, however, that reducing the frequency of

mandatory reporting is likely to achieve them, particularly when weighed against the resulting reduction in transparency.

First, while some commentators have argued that quarterly reporting encourages management to focus excessively on short-term financial results, the empirical evidence is mixed. Although certain studies have found an association between more frequent reporting and earnings management or reduced long-term investment, other research finds little or no meaningful relationship between reporting frequency and managerial decision-making. Executive compensation structures, market expectations, activist investor campaigns, debt covenants, and competitive pressures appear to play a far more significant role in shaping corporate behavior than the timing of Form 10-Q filings. Reducing mandatory reporting therefore risks diminishing transparency without meaningfully addressing the underlying causes of short-termism.

Second, it is unlikely that the proposal will materially increase the number of companies entering or remaining in the public markets. The decline in U.S. public companies has generally been attributed to a range of structural developments, including the expansion of private capital markets, the availability of private financing, consolidation, and broader changes in market structure. The proposing release itself acknowledges that reporting costs explain only part of this trend. Moreover, experience in jurisdictions that have eliminated mandatory quarterly reporting has not demonstrated a corresponding increase in public listings.

Even if the suggested cost savings was the correct cost of quarterly reporting, that number is extremely small in comparison to the cost or value of IPO's; it is highly unlikely to be a determining factor in such a weighty decision. While reducing unnecessary compliance costs is a legitimate objective, the evidence does not suggest that quarterly reporting is a principal barrier to becoming or remaining a public company.

Finally, the Commission suggests that the amount of data available in current reporting is more than can be used advantageously by investors. Investors, however, are diverse and use information uniquely. What may not be useful information to one investor is likely useful to others. The Commission further does not suggest why information that is useful every six months is not useful every quarter. Advances in artificial intelligence strengthen rather than weaken the case for maintaining standardized quarterly disclosure. Modern analytical tools allow investors to review and compare large volumes of information more efficiently than ever before. These technologies are most effective when operating on structured, standardized, machine-readable data such as Commission filings. By contrast, information contained in earnings calls, investor presentations, press releases, podcasts, or social media is often inconsistent in format and content, making meaningful comparison more difficult for both investors and AI-based analytical tools. As informal corporate communications continue to expand, standardized SEC

filings become increasingly valuable because they provide the reliable benchmark against which other information can be evaluated. The appropriate response to advances in technology is therefore not to reduce standardized disclosure, but to continue improving its accessibility and usability.

More broadly, the proposal should be viewed within the context of the federal disclosure system as a whole. Periodic reporting, current reporting, proxy disclosures, registration statements, and the anti-fraud provisions of the federal securities laws work together to provide investors with a comprehensive picture of a company's financial condition, governance, and risks. Quarterly reporting is not an isolated requirement but an integral component of that system. Before reducing one of its foundational elements, the Commission should have compelling evidence that doing so will improve investor protection, market efficiency, or capital formation. We do not believe the current record demonstrates that such benefits are likely to outweigh the resulting loss of transparency.

VII. Conclusion

For more than half a century, quarterly reporting has been a defining feature of the

federal securities disclosure regime. It promotes transparency, accountability, comparability, and investor confidence while enabling investors to monitor corporate performance, and allocate capital more efficiently. These benefits extend beyond individual investment decisions. They support shareholder engagement, informed proxy voting, independent market analysis, and the efficient functioning of the public markets.

The proposed rule does not eliminate investors' need for timely information. Instead, it simply reduces the availability of standardized, legally accountable disclosures while shifting the costs of obtaining, or of not being able to obtain, comparable and decision useful information from issuers to investors. Retail investors, long-term shareholders, and organizations engaged in shareholder representation would bear a disproportionate share of those costs. Although issuers may experience reduced compliance expenses, the proposal may also increase information asymmetry, reduce comparability, diminish analyst coverage, and ultimately increase the cost of capital if investors demand higher returns to compensate for greater uncertainty.

As You Sow's experience engaging hundreds of public companies ove 34 years demonstrates that effective shareholder engagement depends upon timely, reliable, and comparable disclosure. Quarterly reports enable investors to identify emerging risks, evaluate management's execution of long-term strategy, assess board oversight, and determine whether commitments made during shareholder engagement are reflected in company performance. Neither voluntary earnings releases nor event-driven Form 8-K disclosures can fully replace these functions.

Further, the information and studies cited by the Commission do not adequately demonstrate that the proposal's anticipated benefits justify these costs. The empirical evidence that reducing reporting frequency will meaningfully reduce short-termism or increase the number of public companies do not support such a conclusion. By contrast, the benefits of standardized

periodic disclosure for investor protection, market efficiency, and capital formation have long been recognized by Congress, the Commission, the courts, and the investment community.

For these reasons, As You Sow respectfully urges the Commission not to adopt the proposed rule. Maintaining quarterly reporting will continue to advance the Commission's statutory mission to protect investors, maintain fair, orderly, and efficient markets, and facilitate capital formation while preserving one of the defining strengths of the U.S. securities markets.

We appreciate the opportunity to submit this comment.

Respectfully submitted,

Danielle Fugere

Ashley Nelle-Davis, Data Foundation — Jul 6, 2026

July 6, 2026

Vanessa Countryman
Secretary
Securities and Exchange Commission
100 F Street, N.E. Washington, D.C. 20549-1090

Dear Ms. Countryman:

RE: Semiannual Reporting File Number S7-2026-15

The Data Foundation (LEI: 254900I43CTC59RFW495) is a non-profit organization that seeks to improve government and society by using data to inform public policymaking. For more than a decade, our Data Coalition community has advocated for responsible policies to make government data high-quality, accessible, and usable. The Data Foundation, and our Data

Coalition partners, have worked with policymakers on bipartisan laws to advance the intentional use of data across government, which includes foundational data modernization and transparency laws like the Digital Accountability and Transparency (DATA) Act of 2014, the Foundations for Evidence-Based Policymaking (Evidence) Act of 2018, and the Financial Data Transparency Act (FDTA) of 2022.

The Data Foundation appreciates the opportunity to comment on the Securities and Exchange Commission's ("Commission") proposal to permit Exchange Act reporting companies to elect semiannual reporting on new Form 10-S in lieu of quarterly reporting on Form 10-Q. The Data Foundation shares the Commission's interest in reducing unnecessary regulatory burden and supports the Commission's general goal of giving reporting companies flexibility that reflects their circumstances. At the same time, the Data Foundation is concerned that the proposal, as an approach to burden reduction, would reduce the volume and frequency of structured, machine-readable financial data available to investors, regulators, and the market while the Commission is actively implementing the FDTA's mandate for interoperable, machine-readable regulatory data. The the Commission acknowledges in the FDTA joint rulemaking, the FDTA is also designed to reduce burden and establish efficiencies for regulated entities. The comments below address the Commission's General Request for Comment, and recommend that the Commission consider a data-standardization path to burden reduction before finalizing the proposed 10-S rule.

Reducing Burden Without Reducing Data: A Structural Alternative Warrants Formal Analysis. In response to the Commission's Reasonable Alternatives, the Data Foundation recommends that the Commission formally analyze a fourth alternative that was not included among the three listed:1 applying FDTA-aligned structured, standardized, machine-readable data submitted in a quarterly report. By emphasizing the structured data for submission, data fields could be reviewed for comparability and accuracy before submission or resubmission. Each of the reasonable alternatives listed by the Commission varies the scope or mandatory nature of reduced reporting frequency, but none tests an alternative that leaves reporting frequency untouched and instead reduces burden by modernizing how data is collected, tagged, and reused. The Data Foundation recommends that the Commission formally analyze a fourth alternative: applying FDTA-aligned data standardization to the interim reporting process itself. This alternative also aligns with recent Congressional intent to ensure improved, accessible, and open, structured data are available for regulators, investors, and markets under the FDTA. Should the Commission analyze this fourth alternative, it would be an opportunity to review duplicative data fields that can be standardized, as well as highlight non-reusable data fields that inadvertently increase burden during submission and review. The burden the Commission seeks to relieve can be addressed at its structural source – fragmented, duplicative, non-reusable data collection – without narrowing the information available to investors and timeliness of data collected or reported.

The NPRM's Economic Analysis Confirms Reduced Frequency Diminishes Structured, Machine-Readable Data. The Commission's economic analysis acknowledges that companies electing semiannual or hybrid reporting would produce less Inline XBRL-tagged data, and that the research literature associates XBRL-tagged, machine-readable data with reduced information asymmetry, greater stock price informativeness, increased liquidity, lower cost of capital, and enhanced artificial intelligence applications. The release further recognizes that "these benefits may be reduced as a whole given the lack of quarterly XBRL-tagged financial data from semiannual and hybrid reporters,
" citing the Commission's own recent report on
machine-readable data.
2

The Data Foundation agrees with the Commission's assessment in the economic analysis. However, the NPRM does not further discuss the Commission's FDTA implementation obligations anywhere in the proposed 10-S rule, despite the direct connection between this

proposal and the FDTA's statutory goal of expanding interoperable, machine-readable financial data. The Data Foundation strongly recommends that the Commission coordinate this rulemaking with its ongoing FDTA joint data standards implementation, so that a rule intended to reduce burden does not work against a parallel statutory mandate to expand structured data availability.

1 Reasonable Alternatives listed include: mandatory semiannual reporting, semiannual reporting limited to
smaller registrant categories, and a Form 8-K trigger for frequency changes (pp. 134–140).

2 U.S. Securities and Exchange Commission, Semiannual Reporting, Release Nos. 33-11414; 34-105368;
39-2563; IC-36140; File No. S7-2026-15 (May 7, 2026), at 119–121 (citing U.S. Sec. & Exch. Comm'n,
Semi-Annual Report to Congress Regarding Public and Internal Use of Machine-Readable Data for Corporate Disclosures (Dec. 2025)).

Investor Timeliness and Price Discovery Deserve Equal Weight in the Cost-Benefit Analysis. The Commission's economic analysis for the NPRM recognizes that less frequent disclosure can increase information asymmetry and reduce the informational efficiency of share prices, and that the extent of price discovery achieved through private information channels may be "less complete" and "less efficient" than price discovery achieved through public disclosure (pp. 74, 119-121). The Data Foundation urges the Commission to weigh these findings on par with the compliance cost savings that motivate the proposal. Timely, comparable, machine-readable data is a public good that benefits the broader market, including analysts, index providers, and long-term investors who rely on comparability across reporting companies, not solely a cost center for individual filers.

Data Foundation Experts Are Prepared to Provide Advice and Consultation

The Data Foundation remains ready and willing to engage with the Commission as it considers this proposal and its interaction with FDTA implementation. The Data Foundation welcomes the opportunity to share further analysis, data, or expert perspectives as the Commission develops the final rule.

Thank you for the opportunity to provide comments on the NPRM.

Sincerely,

Ashley Nelle-Davis
Vice President
Data Foundation

Assured Guaranty Ltd. — Jul 6, 2026

July 6, 2026

Vanessa A. Countryman, Secretary
U.S. Securities and Exchange Commission
100 F Street, NE
Washington, DC 20549-1090

Re: File No. S7-2026-15
Proposed Rule: Semiannual Reporting

Dear Ms. Countryman:

Assured Guaranty Ltd. ("AGL" and, together with its subsidiaries, "Assured Guaranty" or the "Company") appreciates the opportunity to comment on the Securities and Exchange Commission's ("SEC" or the "Commission") proposed amendments that would allow companies subject to reporting

obligations under Section 13(a) or 15(d) of the Securities Exchange Act of 1934, as amended ("Exchange Act"), to elect semiannual reporting on a new Form 10-S in lieu of quarterly reports on Form 10-Q (the "Proposal").

AGL is a holding company whose common shares are listed on the New York Stock Exchange. Through its subsidiaries, Assured Guaranty is the leading provider of financial guaranty insurance that also participates in asset management and annuity reinsurance businesses. Assured Guaranty conducts its business through insurance subsidiaries domiciled in the United States, the United Kingdom, France and Bermuda, and it has an established following among institutional investors and research analysts.

AGL has been an Exchange Act reporting company for more than two decades and files periodic reports under the Exchange Act. Assured Guaranty accesses the capital markets through a universal shelf registration statement. Since AGL's 2004 initial public offering, it has engaged regularly with its investors and analysts and has developed a deep understanding of their information needs. Assured Guaranty is consequently familiar with the costs, benefits and capital markets implications of the current quarterly reporting cadence and with the information most useful to its investor base.

Assured Guaranty supports the Proposal and the Commission's broader effort to modernize the interim reporting framework in a manner that reduces unnecessary cost and rigidity while preserving robust investor protections. As discussed below, Assured Guaranty's long-duration business model is particularly well-suited to semiannual reporting, and Assured Guaranty would give serious consideration to electing to report on Form 10-S if the proposed amendments are adopted. If it were to make that election, Assured Guaranty expects to continue providing investors with material information about its business, financial condition and results of operations on substantially the same cadence as today –

Docusign Envelope ID: 7C2E6C71-075E-8F25-8108-B478D6BB724C

enabling investors to continue to have access to the information they need to make informed decisions, without the additional cost and preparation burden of a Form 10-Q that, given the long-duration nature of Assured Guaranty's business, offers limited additional value beyond Assured Guaranty's voluntary quarterly disclosures.

The balance of this letter explains why Assured Guaranty's business model is well-suited to semiannual reporting, summarizes the voluntary disclosures that Assured Guaranty expects to continue to provide if it elects semiannual reporting, and responds to certain of the specific questions on which the Commission has requested comments.

Assured Guaranty's Business Model Is Well-Suited to Semiannual Reporting

Assured Guaranty writes financial guaranty insurance that is typically of long duration and participates in long-term asset management and annuity reinsurance businesses. Its results are predominantly driven by long-duration exposures rather than by quarter-over-quarter operational fluctuations, and as a result, Assured Guaranty's financial condition and results of operations are more

meaningfully assessed over a longer time horizon than a single fiscal quarter.
If Assured Guaranty were to elect semiannual reporting, it would expect to continue to provide a quarterly summary update on its financial condition and results of operations, focused on the elements of
disclosure most important to its investors, through its quarterly earnings release, financial supplement,
investor presentations and, where appropriate, Form 8-K filings. That quarterly update would include any material developments during the interim period, together with any significant changes to Assured
Guaranty's business, assumptions or methodologies that would be relevant to investors' understanding
of the Company's performance.
Assured Guaranty therefore believes that it could appropriately convey to investors information about its financial condition and results of operations on a semiannual basis through Form 10-S, while
continuing to deliver quarterly targeted disclosure of material information to its investors through the channels described above.
Summary of Voluntary Disclosures Assured Guaranty Expects to Continue
If Assured Guaranty were to elect to report semiannually on Form 10-S, it expects it would continue to provide disclosure of material information on substantially the same cadence that it provides today, so
that the optional framework would preserve investor access to useful, decision-relevant information notwithstanding the elimination of the Form 10-Q. In particular, Assured Guaranty currently expects that
it would continue to:
- furnish its quarterly earnings release and accompanying financial supplement under Item 2.02 of Form 8-K, and make such earnings release and financial supplement available on the Company website;

- hold quarterly earnings calls;
- make available its quarterly investor presentations on the Company website;
- issue company statements as needed; and
- use Form 8-K (including Items 2.02 and 8.01) to provide interim financial information as material events warrant.

In addition, Assured Guaranty's Financial Statements Disclosure Committee would continue to review the earnings release, and Assured Guaranty's internal control over financial reporting and disclosure controls and procedures would remain in place regardless of whether it files a quarterly report. As a result, investors would continue to receive all material, decision-useful information on substantially the same cadence as they do today; the Proposal simply reduces the cost and rigidity associated with the Form 10-Q filing itself.
Responses to Certain Questions Raised by the Commission
Set forth below are Assured Guaranty's responses to certain of the questions on which the Commission has requested comment, focusing on those questions most relevant to its business and the
considerations described above. Each question is identified by the number assigned to it in the Proposal,
followed by Assured Guaranty's response.
Question 1 (Optional Semiannual Reporting). Should companies have the option to file interim

reports on a semiannual basis, or should all companies continue to be required to file quarterly reports
on Form 10-Q?
Yes. Optional semiannual reporting is appropriate, and Assured Guaranty would consider
electing it. However, the proposed requirement that the election remain in place for the entire fiscal year
is unnecessarily rigid and should be modified as described in our response to Question 10 below.
Question 2 (Mandatory Semiannual Reporting). The proposed amendments would permit, but not
require, all Exchange Act reporting companies that file Form 10-Q today to file semiannual reports.
Should the Commission instead require all companies to file semiannual reports?
Assured Guaranty supports the Proposal's optional approach and does not believe that
semiannual reporting should be mandatory. As discussed above, Assured Guaranty believes that the
long-term nature of its business is well-suited to a semiannual reporting cadence, and Assured Guaranty
would give serious consideration to electing it if the rule changes are adopted. An optional framework is
appropriate as reporting frequency should reflect differences among issuers' business models and the
informational needs of their respective investor bases – a determination best made by each issuer rather
than prescribed uniformly by rule. For the same reason, the proposed requirement that an election

Docusign Envelope ID: 7C2E6C71-075E-8F25-8108-B478D6BB724C

remain in place for an entire fiscal year is unnecessarily rigid, as discussed in our response to Question
10 below.
Question 5 (Filing Deadlines). Should the filing deadline for semiannual reports on Form 10-S be
longer or shorter than proposed?
Assured Guaranty believes that the proposed deadline of 40 or 45 days after the end of the first
semiannual period, depending on the company's filer status, is sufficient, and Assured Guaranty does
not believe that a longer or shorter deadline is necessary. While the preparation of a semiannual report
may differ somewhat from the process of preparing quarterly reports, the Company does not expect that
additional time would be needed to prepare the Form 10-S filing. In addition, a semiannual reporting
cadence would give companies like Assured Guaranty greater latitude to schedule board meetings
without the off-quarter compression that the current Form 10-Q cycle imposes, alleviating some of the
deadline pressure.
Question 6 (Comparisons Over Time). If adopted, would semiannual reporting have an impact on
investors' ability to compare same-company performance over time? Why or why not?
Assured Guaranty does not believe that its election of semiannual reporting would impair
investors' ability to compare the Company's performance over time. The Company intends to continue
providing critical information to its investors on a quarterly basis through its earnings releases and
related materials, thereby enabling investors to continue to compare the Company's performance from
period to period. The information provided may vary from period to period based on the materiality of

events occurring during the relevant period.
Question 10 (Changes in Reporting Frequency). Should the Commission allow semiannual filers and quarterly filers to make a change in interim reporting frequency during the fiscal year?
Yes. Assured Guaranty strongly favors flexibility to change reporting frequency during the fiscal year in the direction of more disclosure (i.e., from semiannual to quarterly reporting), such as, for example, in connection with a material development for which additional interim reporting would be appropriate. For instance, an issuer contemplating a debt or equity offering may find it appropriate to file
a Form 10-Q for a particular quarter so that the reviewed interim financial statements can be incorporated by reference into its registration statement and support customary underwriter comfort procedures, a use case that voluntary Form 8-K disclosure alone may not adequately address. The proposed lock-in, under which a company that elects its interim reporting frequency is committed to that
frequency for the remainder of the fiscal year, undermines the flexibility rationale of the Proposal and could deter issuers from electing Form 10-S in the first place.
Question 12 (Correction of Errors). Should correction of errors with respect to the Form 10-K check box be permitted as proposed; are the proposed time limits appropriate; and should a Form 8-K alternative be available?

Yes, error correction should be permitted. To consider a potentially common error: a company believes it checked the Form 10-S box on its Form 10-K and, on that basis, does not file a first-quarter
Form 10-Q – only to discover later that the box was not in fact checked. Because the proposed cure period runs from the due date of that very Form 10-Q, the deadline could easily pass, with serious consequences for that company, before the company even realizes the error. The cure period should therefore run from the filer's discovery of the error through the exercise of reasonable diligence, not from the due date of the missed Form 10-Q.
A Form 8-K alternative should also be available. Correction through a Form 10-K/A is costly, disruptive, and would unnecessarily reopen the audited annual report, whereas a Form 8-K would allow
a timely and proportionate fix.
Separately, the Commission should also consider whether the election mechanism itself could be strengthened to reduce the likelihood of mechanical election errors. A cover-page checkbox on Form 10-
K is an unduly light mechanism for a decision with such significant consequences for interim reporting
cadence, capital markets access and internal control processes. Requiring the election to be made through a distinct, affirmative filing – for example, a short-form filing on Form 8-K under a dedicated item number – would meaningfully reduce the risk of a mechanical failure to elect (or to opt out of) semiannual reporting, provide the market and other stakeholders with a clean and searchable record of
the election, and complement the cure and correction mechanisms discussed above. A distinct, affirmative filing would also assist the Commission, the securities exchanges and other market participants in readily distinguishing between semiannual filers electing Form 10-S and quarterly filers
that have failed to make a required Form 10-Q filing or are otherwise delinquent.
Question 15 (Alternative: Reducing Form 10-Q Requirements). As an alternative to the proposal for optional semiannual reporting, should the Commission instead revise the disclosure requirements of

Form 10-Q to reduce the burden on reporting companies of filing this form? What aspects of Form 10-
Q's current reporting framework are most burdensome for reporting companies?
Assured Guaranty supports both the Proposal and continued Commission attention to the broader disclosure framework applicable to reporting companies. Regulation S-K and Regulation S-X have evolved incrementally over many decades, and periodic-report requirements today include line items that, in many industries, no longer produce disclosure that is meaningfully useful to investors. Assured
Guaranty respectfully suggests that the Commission consider a broader, materiality-focused review of
the existing requirements applicable to Forms 10-K and 10-Q, and extend the results of that review to
any new Form 10-S adopted under the Proposal. A framework that emphasizes principles-based, materiality-focused disclosure, and that reduces duplication among the Business, Risk Factors and MD&A sections, would sharpen the focus of periodic reporting on information that is decision-useful and improve overall disclosure quality.
Assured Guaranty does not, however, believe that adoption of the Proposal should be conditioned on the completion of any such broader review, or presented as an alternative to it. The Proposal is already well-developed, has benefited from significant market engagement, and is positioned

Docusign Envelope ID: 7C2E6C71-075E-8F25-8108-B478D6BB724C

for timely implementation. A sequenced approach – proceeding with adoption of optional semiannual reporting under the Proposal, while continuing the Commission's ongoing review of Regulation S-K and
undertaking further modernization initiatives on a parallel but independent timeline – would provide meaningful near-term relief for reporting companies without foreclosing broader improvements to the disclosure framework over time.
Question 18 (Likelihood of Voluntary Quarterly Reporting). What is the likelihood that companies that elect semiannual reporting will continue to issue quarterly earnings releases?
Assured Guaranty believes that semiannual filers will generally wish to continue keeping investors informed about ongoing business activities, and the Company itself plans to continue issuing
quarterly earnings releases and holding quarterly earnings calls. This practice helps ensure that investors
receive timely and useful information for making informed decisions.
Experience in jurisdictions such as the United Kingdom supports this view: following the removal of mandatory quarterly reporting in 2014, most UK-listed companies have continued to provide
some form of quarterly disclosure, such as management guidance or other interim communications, in
response to investor demand and analyst expectations.1 Empirical evidence indicates that only a small
minority of issuers discontinued quarterly disclosure altogether, and those that did so experienced adverse consequences, including reduced analyst coverage.2
This experience reflects the practical reality that companies continue to operate and make capital allocation decisions on a quarterly basis; for example, companies may approve and pay dividends on a
quarterly cadence, which in turn necessitates the preparation and disclosure of updated financial

and
operating information. Accordingly, the Commission should expect that most issuers electing semiannual reporting will continue to provide quarterly updates voluntarily, albeit in more flexible formats.
Question 21 (Effect on Timing of Earnings Releases). Would the proposed flexible approach have any
effect on how quickly earnings releases would be issued?
Although a semiannual cadence may allow Assured Guaranty to issue its earnings releases more efficiently, Assured Guaranty does not anticipate that the Proposal would materially accelerate or otherwise change the timing of its earnings releases.
Question 22 (Effect on Material Information Available to Investors). Would the option for semiannual reporting result in an overall reduction in the material information available to investors?
1 See, e.g., Robert Pozen, Suresh Nallareddy & Shivaram Rajgopal, Impact of Reporting Frequency on UK Public Companies
(CFA Institute Research Foundation Brief, March 2017).
2 Id.

No. Assured Guaranty's voluntary disclosure package, comprised of its quarterly earnings release, earnings call, financial supplement and investor presentations, combined with its Form 8-K reporting and the requirements of Regulation FD, would continue to provide investors with the material
information they need.
Question 23 (Impact of Fewer Certifications on ICFR and Disclosure Controls). With semiannual reporting, would there be an impact on investors or other market participants as a result of less frequent
management certifications relating to internal control over financial reporting and disclosure controls and procedures, and less frequent disclosure of changes in those controls?
Assured Guaranty intends to continue to maintain its internal control procedures over the information that it releases to investors, regardless of the frequency of management certifications. Although management certifications relating to internal control over financial reporting and disclosure
controls and procedures would be provided less frequently, the reliability of those controls would not be
diminished, because the same controls would remain in operation, the Company's Financial Statements
Disclosure Committee would continue to review the earnings release, and the required certifications would continue to attach to each Form 10-S. Accordingly, Assured Guaranty does not expect a meaningful impact on investors or other market participants.
Question 25 (Auditor Procedures for Semiannual Reports). Would an issuer that elects semiannual reporting retain its external auditor to perform quarterly reviews?
Assured Guaranty does not plan to retain its external auditor to perform a full interim review of its financial statements at the end of each quarter in the absence of a Form 10-Q and footnoted interim
financial statements. The external auditor could perform agreed-upon procedures to support voluntary
disclosure where appropriate, although the scope of any such procedures would differ from a review conducted in connection with a Form 10-Q.
Question 26 (Impact on Disclosure Controls and ICFR). Would semiannual reporting affect an

issuer's disclosure controls and procedures or its internal control over financial reporting?
As noted in response to Question 23 above, Assured Guaranty's internal controls would remain the same regardless of whether a Form 10-Q is filed, and its Financial Statements Disclosure Committee
would continue to review the earnings release.
Question 27 (Impact on Analyst Coverage). Would semiannual reporting affect analyst coverage of an
issuer that elects it?
Assured Guaranty intends to continue holding quarterly earnings calls, so analyst coverage should be largely unaffected. While a semiannual filer that ceased to provide quarterly data could experience reduced analyst coverage, the Company's plan to continue providing supplementary materials and holding quarterly earnings calls mitigates this risk for the Company specifically.

Question 29 (Securities Exchange Rules). Are any changes to the rules of the securities exchanges necessary or appropriate to effectuate semiannual reporting?
Assured Guaranty does not believe that material changes to the rules of the securities exchanges are necessary. Exchange listing standards generally operate by reference to the Exchange Act reporting
requirements, and an issuer that elects to file Form 10-S should be viewed as compliant with those standards. Conforming technical amendments may nonetheless be appropriate to clarify that Form 10-S
satisfies interim reporting obligations and that issuers electing semiannual reporting remain in good standing.
To support continued access to the capital markets, the Commission should also confirm that Form 10-S, and financial statements filed under Form 8-K (for example, under Item 8.01), may be used
interchangeably with Form 10-Q for incorporation-by-reference purposes, so that an issuer electing semiannual reporting may continue to issue debt or equity securities.
Question 30 (Second-Half and Fourth-Quarter Financials). Should the Commission require a break-out of three-month periods within Form 10-S or Form 10-K?
No. Assured Guaranty would plan to voluntarily provide the relevant quarterly data through its earnings release and financial supplement, and mandating a break-out of three-month periods within the
Form 10-S or Form 10-K would undermine the cost-savings rationale of the Proposal, including by increasing the external auditor costs associated with reviewing quarterly break-outs.
Question 31 (Impact on Insider Trading Policies). Would semiannual reporting affect an issuer's insider trading policies or trading windows?
Assured Guaranty would continue to issue sufficient information through its voluntary quarterly disclosures to release material non-public information and, accordingly, expects to be able to maintain
its current trading window practices.

* * *
Assured Guaranty appreciates the opportunity to comment on the Proposal and supports the

Commission's effort to provide reporting companies with greater flexibility in the frequency of their interim reporting. In particular, Assured Guaranty respectfully urges the Commission to (i) adopt semiannual reporting as an optional, rather than mandatory, framework; (ii) permit issuers to change their interim reporting frequency during the fiscal year in the direction of greater disclosure; (iii) provide
that the period for correcting an erroneous election runs from the filer's discovery of the error and may
be effected through a Form 8-K or, alternatively, consider requiring the election to be made through a distinct affirmative filing rather than a Form 10-K cover-page checkbox; and (iv) not require break-out
of three-month period financial information within Form 10-S or Form 10-K, which would undermine the cost-savings rationale of the Proposal without delivering commensurate investor benefit. Assured Guaranty also encourages the Commission to consider the Proposal in the context of a broader, parallel
review of Regulation S-K and Regulation S-X, as described above. Assured Guaranty would welcome
the opportunity to discuss these comments with the Commission or its staff.
Respectfully submitted,
Assured Guaranty Ltd.

Vanessa A. Countryman
Secretary
U.S. Securities and Exchange Commission
100 F Street, NE
Washington, DC 20549-1090
Re: Semiannual Reporting; Release No. 33-11414; File No. S7-2026-15
Dear Ms. Countryman:
Axon Enterprise, Inc. ("Axon" or the "Company") appreciates the opportunity to comment on the rule and form amendments proposed by the U.S. Securities and Exchange Commission (the "Commission") that would permit companies subject to reporting obligations under the Securities Exchange Act of 1934, as amended (the "Exchange Act"), to elect semiannual reporting on new Form 10-S in lieu of quarterly reporting on Form 10-Q (the "Proposal"). Axon is a large accelerated filer, a U.S. domestic issuer in the public-safety technology industry, and has common stock listed on the Nasdaq Global Select Market.
The Company supports the Proposal. It preserves robust interim disclosure while allowing each issuer's board of directors to align reporting frequency with the information needs of the issuer's investors and the operating cadence of its business. We urge the Commission to retain the opt-in structure in any final rule and to resist any default rule that would disadvantage issuers electing either cadence. The following design choices within the Proposal merit particular support and should be preserved in any final rule.
i. Annual Election: Requiring issuers to make their election on the cover page of Form 10-K, binding for the full fiscal year and renewed annually, mitigates the risk of opportunistic mid-year changes in cadence, and gives investors a clear signal of the issuers' reporting timeline at the start of each fiscal year.

ii. Voluntary Quarterly Cadence: Leaving issuers free to furnish voluntary quarterly information on Form 8-K preserves investor access to interim data without imposing a mandatory cadence. We encourage the Commission to confirm in the adopting release that such voluntary furnishing (under Item 2.02 or 7.01) does not, by itself, constitute a de facto Form 10-Q, trigger Section 18 liability, or alter the issuer's elected reporting cadence.

We write to offer four targeted suggestions intended to strengthen the Proposal as drafted, addressed in Sections I–IV below.

I. Confirmation of the Proposed Regulation S-X Amendments to Eliminate Existing Staleness Inconsistencies

We support the Commission's proposal to amend Rules 3-01(c)(2) and 8-08(b)(2) to replace the existing 130- and 135-day staleness construct in Regulation S-X with a framework tied to the required filing deadline for the most recently completed fiscal period. The current construct produces recurring timing inconsistencies that can compel issuers to amend a registration statement or delay a transaction. Aligning staleness to the required interim-period filing deadline restores a coherent rule for both quarterly and semiannual filers and is a meaningful improvement on its own merits.

For a semiannual filer, we recommend that the adopting release confirm that year-end audited financial statements remain current until the next Form 10-S is due, and Form 10-S financial statements remain current until the next Form 10-K is due. Furthermore, we recommend that the adopting release also confirm that a semiannual filer's voluntary furnishing of first- or third-quarter information on Form 8-K (or another mechanism utilized to disclose material information to the public in compliance with Regulation Fair Disclosure) does not accelerate staleness or create a duty to include interim financial statements for those quarters in a subsequent registration or proxy statement. Without that clarification, issuers may forgo voluntary quarterly disclosure contrary to the Proposal's objective to promote flexibility.

II. Coordination with the Public Company Accounting Oversight Board ("PCAOB") on Comfort Letter Standards

Under PCAOB Auditing Standard 6101 ("AS 6101"), an accountant generally may provide negative assurance on specified balance sheet and income statement items up to 134 days after the end of the most recent audited or reviewed period. For a semiannual filer, that window can close before the next periodic report is filed, particularly in connection with shelf takedowns, marketed bond offerings, or other capital markets transactions executed in the latter half of a semiannual period. If comfort letters become routinely unavailable in the latter half of a semiannual period, the cost of accessing the capital markets will increase for semiannual filers in a manner that could materially offset the efficiencies the Proposal is designed to create.

We recommend that the Commission engage with the PCAOB before adopting a final rule to conform AS 6101 to the new framework by extending the window during which an accountant may provide negative assurance for semiannual filers or clarifying the procedures to be performed on a post-audit or post-review interim period to bridge the gap between the end of such window and a transaction date that falls on or after 135 days from the end of the most recent period for which an audit or review was performed. Sequencing the final rule with corresponding PCAOB action would avoid a period of uncertain access to comfort letters for semiannual filers.

III. Coordination with the Financial Accounting Standards Board ("FASB") on Accounting Modification Relief for Conforming Contractual Amendments

Many public companies are party to contractual arrangements (e.g., credit agreements, indentures, preferred stock and warrant terms, equity-linked instruments, and equity compensation awards) that rely upon a quarterly reporting cadence. This cadence includes quarterly financial statement and compliance certificate covenants, as well as vesting, performance, and antidilution mechanics driven by quarterly figures. An issuer electing semiannual reporting may need to amend these arrangements solely to conform the reporting cadence, without any change in the economic substance of the arrangement.

Under the existing United States generally accepted accounting principles, however, such conforming amendments may inadvertently trigger modification accounting with material financial statement consequences. Examples include modification or extinguishment treatment of a debt instrument under Accounting Standards Codification ("ASC") 470-50, modification of a stock-based compensation award under ASC 718, and analogous issues under ASC 480 and ASC 815 for equity-classified or derivative instruments, respectively, whose settlement features reference quarterly periods.

These accounting consequences are unrelated to the substance of the Proposal and would discourage issuers from electing semiannual reporting. We recommend that the Commission coordinate with the FASB to issue conforming guidance (e.g., narrow scope exception or practical expedient) which provides that contractual amendments adopted solely to conform reporting cadence references, and that do not change the underlying economic terms of the arrangement, should not be accounted for as modifications under ASC 470-50, 718, 480, 815, or analogous guidance. Furthermore, additional clarity as to what types of changes would be considered a change in the underlying economic substance of an arrangement would be valuable to allow companies to properly assess potential impacts. Similar to the temporary, optional expedients offered under Accounting Standards Update 2020-04 ("Reference Rate Reform"), which allowed for contract modification relief, the relief applicable for the Proposal could be bounded to administrative amendments executed within a defined transition window concurrent with an issuer's election of semiannual reporting on the cover page of its Form 10-K.

IV. Alignment of Exchange Listing Standards with the Proposal

The Proposal does not amend the listing standards of the national securities exchanges. Nasdaq Rule 5250(d), for example, currently requires listed companies to distribute annual and quarterly reports containing financial statements to shareholders. Absent conforming changes by the exchanges, an issuer electing semiannual reporting would nevertheless remain obligated to disseminate quarterly financial information under the applicable listing standards, substantially negating the Proposal's intended efficiencies.

We recommend that the Commission engage with the national securities exchanges to encourage prompt, conforming rule filings under Section 19(b) of the Exchange Act and Rule 19b-4 thereunder so that the listing standards permit, but do not require, semiannual interim reporting. The Commission could also provide in the adopting release that an election to file on Form 10-S satisfies any exchange requirement to file or distribute quarterly financial information, subject to the rule-filing processes of the respective exchanges.

* * *

The Company appreciates the Commission's consideration of these comments and welcomes the opportunity to discuss any of them further. Please direct any questions to the undersigned at mhaynes@axon.com.

Respectfully submitted,

B Backer — Jul 6, 2026

Subject: File No. S7-2026-15 From: B Backer Current quarterly reporting provides timely, necessary information to assist in evaluation of a company's state of business. In today's environment where variability in markets and individual company valuation can be dramatically affected by sector health, other markets and, often, political speak, expedience of information has become necessary. Moving reporting to less frequent timing will create informational lag in a very dynamic environment and diminish market transparency. Although I am typically a "long-term" investor, I still rely on quarterly results to confirm my positions.

Re: Proposed Rule on Semiannual Reporting, File No.

S7-2026-15

Dear Ms. Countryman:

We are writing in relation to the Securities and Exchange Commission's proposed rule on Semiannual Reporting (File no. S7-2026-15) (the "Proposal").

We applaud the Commission's willingness to explore ways of reducing costs and increasing efficiencies for issuers that are currently registrants or non-registrants considering entering the United States securities market for the first time.

The proposal to allow issuers the choice to either move to semi-annual reporting (by preparing and filing Form 10-S) or to remain in the quarterly filing system and continue to file Form 10-Qs has some attractive elements. Although it is difficult to estimate the aggregate cost savings that would be achieved by issuers that moved to semi-annual reporting, in our view it would be substantial. The direct costs of preparing and filing a Form 10-Q involve, as noted in Section V. D. of the Proposal, the not insignificant costs of outside accountants (and often outside legal counsel and other professionals) reviewing and commenting on the document. The internal costs of the time, focus and attention required from management and other issuer personnel are even more significant in our experience. There is certainly an argument that for some issuers (e.g., those with consistent operations and results) that the filing of a Form 10-Q generates less investor and analyst attention than the costs of the exercise would warrant, particularly if the issuer (as most listed issuers do) puts out an earnings press release and accompanying quarterly financial information that are publicly available.

With these savings of money, time and attention in mind, on balance, we are supportive of the proposal to permit registrants to choose between quarterly and semi-annual reporting, subject to the caveats and comments below.

Baker & McKenzie LLP is a member of Baker & McKenzie International, a Swiss Verein.
516608871-v2\NA_DMS

Will the stock exchanges and other regulators support the proposal and, if so, over what time period?

The Proposal notes that approximately 72% of calendar year 2024 Exchange Act reporting companies had their securities listed on the New York Stock Exchange or the Nasdaq Stock Market. At this time (and until regulatory action is taken to make changes), the applicable listing standards of the two exchanges require quarterly reporting. In addition, state laws and certain federal agencies have requirements that reference quarterly Commission reporting1. The usefulness of the Proposal, in the first instance, will depend upon securing the agreement of the stock exchanges (at the very least) and an agreed time frame for the changes required to confirm the listing rules with the optional semi-annual reporting regime.

Having an option between semi-annual and quarterly reporting increases issuer choice but is likely to result in confusion and perhaps volatility in the short term.

We do not support a mandatory shift to semi-annual reporting. However, there is a possibility that a new system in which some issuers are reporting quarterly and others (perhaps a peer group company) are reporting semi-annually will reduce market transparency. While markets will adjust over time, it is possible that there will be investor and analyst confusion and uncertainty, at least initially, as certain comparisons become more difficult or impossible.

Continued quarterly earnings announcements could mitigate this issue to some extent.

We believe that it is likely, at least initially, that companies that elect semi-annual reporting will continue to issue quarterly earnings announcements due to a combination of factors, including contractual requirements, investor and analyst pressure, blackout periods and insider trading related issues. This practice would ameliorate some of the concerns about the transition to optional semi-annual reporting expressed above. Currently, the quarterly earnings announcements and accompanying financial information we see from our

domestic reporting clients are generally carefully prepared and vetted, given that a Form 10-Q based on the same numbers will be issued in conjunction with or shortly following the earnings release.

There is, however, some concern that once the backdrop of a Form 10-Q is removed that the quality (and general uniformity of approach) in quarterly earnings releases may decline and we would urge the Commission to consider ways to ensure these earning announcements remain reliable – perhaps requiring that first and third quarter earnings releases be filed by issuers electing semi-annual reporting rather than merely furnished – a possibility raised with respect to semi-annual filers, in request for comment number 19.

1 See, footnote 69 to the Proposal which provides as examples, the U.S. Nuclear Regulatory Commission, and
the U.S. Department of Commerce.

What group of issuers should be permitted to elect semi-annual reporting?

Request for comment number 3. asks whether semi-annual reporting should be available only to certain filers that meet certain criteria. As proposed, semi-annual reporting would be permitted to be elected by any domestic registrant, regardless of filing status and regardless of how long the issuer had been in the reporting system.

The Proposal rightfully comments that the quarterly reporting requirements of the U.S. reporting system (not replicated in most other jurisdictions) are a negative factor that may discourage issuers (including foreign issuers that do not qualify as foreign private issuers) from registering their securities in the United States.

Our view, however, is that new registrants should, in most cases, be filing quarterly for an initial transition period before being permitted to elect semi-annual reporting (we would propose at least two years). This would help investors familiarize themselves with the issuer, help analysts understand the drivers of the issuer's business and help encourage the new issuer to develop and maintain robust internal controls. The Proposal itself notes that one of the risks of permitting semi-annual reporting is that "[R]educed reporting frequency may also affect corporate accountability and financial reporting quality." In our view, this is a particularly acute risk for new registrants.

Many first-time entrants to the U.S. reporting system already have the benefits of scaled disclosure requirements (e.g., emerging growth companies, smaller reporting companies), which we believe are beneficial to encouraging capital formation in the United States. While allowing new entrants to have the option of semi-annual reporting immediately would also be attractive to new registrants from a time and cost prospective, it is our view that, in most cases, the benefits to investors of having these companies perform quarterly reporting for some period of time outweigh the costs.

One exception to the mandatory transition period we are suggesting would be for new registrants whose financial statements are generally immaterial to investors. For example, certain development stage companies routinely go public in the United States with no or immaterial revenues, including pre-clinical and clinical stage biotech and pharma companies, exploratory mining companies, exploratory oil and gas companies, and energy transition companies. Beyond monitoring these companies' available cash, investors and analysts focus more on the companies' achievement of development stage milestones (e.g., clinical data and trial results, drill and assay results, mineral resource estimates, testing and pre-production milestones) than their quarterly financial results. SPAC financial statements are similarly immaterial to investors. Given the nature of these companies' businesses, we would be supportive of the Commission establishing a subcategory of issuer, akin to the "small non-accelerated filer" category recently proposed by the Commission but premised on immaterial revenues as opposed to assets. We believe the financial statements of these types of issuers do not pose the same type of risks for investors and,

accordingly, these issuers should be permitted to elect semi-annual reporting immediately upon becoming reporting companies.
Should there be a pilot program?
Request for comment no. 3 also asks if the Commission should consider a pilot program to permit optional semi-annual reporting for a subset of reporting companies and, if so, what would be the benefits of such a pilot program? Further, the request for comment asks what types of companies should be included in the pilot program. In our view, there would be merit in having an initial pilot program because of the many uncertainties surrounding issuer and investor reaction to this Proposal that are noted in many places in the release. We would suggest a pilot program of some size that would consist entirely of well-known seasoned issuers ("WKSIs") that had been reporting companies for at least three years. Once again, this would need to be coordinated with the New York Stock Exchange and the Nasdaq Stock Market, as a rule change or an agreed limited period waiver of the listing standards to the pilot participants. The pilot participants could not be issuers that had quarterly reporting obligations existing under another federal or state statute or material financing or other contractual arrangements. Participation would be optional as that ultimately is what the full Proposal provides. Over the period of the pilot, investor sentiment, stock performance and cost savings, among other data could be measured.
****
We thank the Commission and the Commission staff for the opportunity to comment. Questions regarding this letter may be addressed to any of the attorneys listed below.

Re: File No. S7-2026-15
Semiannual Reporting
Dear Office of the Secretary:
We appreciate the opportunity to comment on the SEC's proposal to provide registrants with the option
of filing their interim reports on a semiannual basis. We support the Commission's objectives to reduce
the regulatory burden of being a public company and encourage more companies to go or remain public, while maintaining investor protection. We believe the investor community is best positioned to provide feedback about whether the proposed optional semiannual reporting framework satisfies their
needs for timely and reliable information on which to make informed investing and voting decisions.
Drawing on our experience working with registrants—many of which are smaller reporting companies—
we offer feedback on the overall interim reporting process and disclosure framework. Separately, we support the Commission's efforts to simplify financial statement age requirements and better align those requirements between periodic reports and registration statements, which will reduce complexity
and improve consistency.
Observations on Reporting Cadence
As the Commission considers permitting semiannual reporting on Form 10-S in lieu of quarterly reporting on Form 10-Q, we note that the existing quarterly reporting framework provides certain benefits that are consistent with the longstanding objectives of promoting transparency, comparability,
and high-quality financial reporting. In our experience, the quarterly reporting cadence promotes discipline and rigor in financial reporting processes, supports timely identification and communication of
material developments, and facilitates regular operation and evaluation of internal controls.
If the Commission ultimately adopts an optional semiannual reporting framework, we believe it may be
helpful to consider how certain elements of the current reporting and control environment would operate in practice and whether those continue to meet the needs of investors. For example,

• Consistency and rigor of interim reporting outside of filed reports
Under the proposal, registrants that elect to report semiannually may continue to communicate quarterly financial information through voluntary disclosures via earnings releases or other approaches. While companies may perceive ongoing investor demand for quarterly financial
BDO is the brand name for the BDO network and for each of the BDO Member Firms. BDO USA, P.C, a Virginia professional
corporation, is the U.S. member of BDO International Limited, a UK company limited by guarantee, and forms part of the
international BDO network of independent member firms. For more information, visit: www.bdo.com.
information, we believe that furnishing such information through earnings releases or on Form 8-K, without the same liability exposure, form and content requirements, and management certifications required for Form 10-Q, raises important considerations. In particular, if substantially similar information can be communicated each quarter with reduced liability, less prescriptive requirements, and potentially lower cost, rigor, and independent review, it is unclear what incentives would remain for registrants to continue filing Form 10-Q.
Should registrants choose to communicate quarterly financial information in this manner, we believe investor, company, and audit committee feedback will be important to understanding whether such disclosures would consistently achieve a level of rigor, comparability, and governance similar to that associated with filed periodic reports. This also highlights a broader consideration as to how the costs associated with Form 10-Q reporting compare to the benefits of its safeguards, including management certifications, liability provisions, and independent accountant review procedures, in supporting the quality of financial reporting.
We believe the extent of these considerations may vary across registrants. Larger, more sophisticated companies often have more mature financial reporting processes and robust systems of internal control over financial reporting (ICFR) , which may mitigate some of the potential risks associated with a shift toward voluntary quarterly disclosures without the safeguards highlighted above. In contrast, for smaller companies with more limited resources and less established control environments, there may be inherently greater risk that the absence of these safeguards could affect the consistency, completeness, or reliability of quarterly financial information.
• Ongoing assessment processes
The quarterly reporting cycle currently reinforces timely evaluation of key accounting and disclosure matters. In a semiannual reporting model, it may be useful to consider whether registrants would continue to maintain similarly robust processes for assessing:
o Their ability to continue as a going concern – should registrants choose to voluntarily provide summarized quarterly financial information in an earnings release or only report semiannually, there may be a delay in the disclosure about management's conclusions on the company's ability to continue as a going concern. Such assessments are made in connection with the issuance of U.S. GAAP-compliant financial statements but may not be made absent their preparation, even if the company voluntarily reports certain financial information on a quarterly cadence.
o The effectiveness of disclosure controls and procedures (DCP) and ICFR – the existing quarterly reporting framework supports a recurring discipline around management's evaluation of DCP and ICFR, including the operation of controls aligned with the financial close and reporting process. A reduced reporting frequency may affect the timing of management's evaluations and, in some circumstances, delay the identification, evaluation, and remediation of control deficiencies, including those that could rise to the level of material weaknesses, as well as related public disclosures about material weaknesses and material changes in DCP or ICFR.

Moreover, as the operation and testing of controls are often aligned with reporting cycles, a shift to semiannual reporting could, in certain circumstances, extend the time horizon for remediation of identified deficiencies, particularly in the financial close and reporting process, because there would be fewer interim periods in which management could obtain evidence that

remediated controls are operating effectively on a sustained basis.
Irrespective of the SEC's proposal to permit optional semiannual reporting, we are aware of contractual
and regulatory requirements that may also lead a company to more frequent reporting. For example, certain industries, such as banking and insurance, are subject to separate quarterly reporting regimes
imposed by regulators. Moreover, debt agreements frequently require quarterly financial reporting and
covenant compliance testing, which in practice can influence a company's decision to report quarterly or
semiannually, or to seek amendments to its debt arrangements to permit less frequent reporting and compliance.
Interim Disclosure Framework
We encourage the staff to consider whether the burden of quarterly reporting is largely concentrated in
the volume of required quarterly disclosures rather than the cadence. Accordingly, we believe that a meaningful reform of the interim reporting requirements could extend beyond consideration of reporting frequency to include a broader evaluation of the form and content of interim disclosures required within Form 10-Q, both within and outside of the financial statements.
As we highlighted in our 2019 comment letter on the SEC's Request for Comment on Earnings Releases
and Quarterly Reports, in certain situations, the minimum set of U.S. GAAP interim disclosure requirements may contribute more significantly to compliance costs than reporting frequency itself.
Some of these minimum disclosure requirements may not be consistent with one of the key principles of
quarterly reporting articulated in S-X Rule 10-01(a)(5) that permits the omission of footnote disclosure
which substantially duplicates the annual disclosure appearing in the audited financial statements and
"the details of accounts which have not changed significantly in amount or composition since the end of
the most recently completed fiscal year." Examples that require recurring minimum disclosures regardless of changes since year end include:
• Information about the use of fair value to measure assets and liabilities recognized in the statement of financial position pursuant to ASC 820-10-50
• Information about financial instruments as required by ASC 825-10-50
• Certain information about defined benefit pension plans and other defined benefit postretirement benefit plans, disclosed for all periods presented pursuant to the provisions of ASC 715-20
• The information about certain investments in debt and equity securities as required by ASC 320-10-50, 321-10-50, and 942-320-50

Additionally, the minimum interim disclosure requirements continue to expand. For example, amendments to Regulation S-X added the requirement to disclose the quarterly changes in stockholders'
equity and recent Financial Accounting Standards Board (FASB) standards require (or will require) disclosures such as:
• Information about contract assets, contract liabilities, and disaggregated revenues pursuant to ASC 606-10-50
• A rollforward of the allowance for credit losses as required by ASC 326-10-50
• Significant segment expenses pursuant to ASC 280-10-50
• Disclosures about specific expense categories as required upon the adoption of ASU 2024-03

(often referred to as DISE)
We recommend that the Commission coordinate with the FASB to consider whether:
• The overall package of interim disclosures should be reevaluated, or a more targeted assessment could be undertaken to identify specific disclosures for which the benefits may not justify the costs of preparation and reporting on an interim basis (e.g., by requiring the minimum disclosures only upon a material change from year end), or
• A more principles-based interim reporting framework focused on communicating material developments would satisfy the needs of investors.
We note that the content of earnings releases, some of which are issued well in advance of Form 10-Q
filings, may provide insight into the types of information that investors find most decision-useful, potentially informing a more streamlined interim disclosure framework.
We believe this effort would be a worthwhile exercise irrespective of whether the proposed amendments are adopted and could complement the SEC's objective to rationalize disclosure practices
and focus on material information.
Separately, in our experience, registrants often include information in Form 10-Q that extends beyond
what is explicitly required by the rules. This may include, for example, repeated descriptions of accounting policies, contractual arrangements that have not changed, and risk factor disclosures. While
such information may be intended to provide context or enhance transparency, it can also contribute to
the overall volume and preparation effort associated with interim reporting. We believe it would be helpful to better understand the factors that drive these practices, including whether they reflect investor expectations, internal governance considerations, or other influences, as this insight could inform an evaluation of the costs and benefits of interim reporting requirements.
Flexibility in Reporting Frequency
Under the proposal, registrants must indicate whether they will report semiannually or quarterly using a
checkbox on the cover page of Form 10-K and may not change their election until filing their next annual
4
report on Form 10-K (unless they made an error in completing the checkbox). While this approach is intended to avoid investor confusion, we question whether a registrant should be prohibited from reporting quarterly information on Form 10-Q despite an initial intention to follow the Form 10-S model.
Reporting quarterly financial information on Form 10-Q may have a positive impact on its quality due to
the rigor, processes and controls, management certifications and independent accountant involvement
when compared to reporting quarterly financial information outside of Form 10-Q (as highlighted above). Moreover, capital market needs (e.g., in connection with an otherwise unplanned offering or registration statement in which investors demand more current financial information) may dictate a change to quarterly reporting. Accordingly, we question whether the benefits of providing more frequent information with the rigor applied to information in Form 10-Q, particularly in connection with
capital market requests, outweigh the downside of potential confusion about a registrant electing to switch the Form on which it files quarterly information during the year.
Conversely, we acknowledge that a transition from quarterly to semiannual reporting during a fiscal year
raises different considerations as reduced reporting frequency diminishes the timeliness of

information.
Prohibiting a change from quarterly to semiannual reporting during the fiscal year also safeguards against the choice to report less frequently to avoid reporting quarterly results that do not meet investor or analyst expectations. For these reasons, if the optional semiannual framework is finalized,
we support permitting registrants to change their frequency from semiannual to quarterly during a year,
but not vice versa once the election is made.

Implications for Audit and Accounting Standards

The proposal acknowledges that changes may be necessary to various accounting and auditing standards to facilitate semiannual reporting. We believe the Commission may wish to consider the following areas in its coordination with accounting and auditing standard-setters, and other market participants, as applicable.

Audit Standards

AS 4105

PCAOB Auditing Standard 4105, Reviews of Interim Financial Information (AS 4105), requires the independent accountant to consider whether material modifications are necessary for interim financial
information to conform with U.S. GAAP. As noted in AS 4105.05, such information may be presented as
full financial statements or in summarized form that purports to comply with U.S. GAAP and applicable
regulatory requirements, including Article 10 of Regulation S-X for Form 10-Q.
In our view, an AS 4105 review is premised on the existence of interim financial statements prepared in
accordance with U.S. GAAP, including the footnote disclosures required by Article 10 (for SEC registrants). Accordingly , we do not believe an independent accountant can perform a review over quarterly financial information presented in earnings releases or other filings that purports to comply
5
with AS 4105 unless that information is derived from underlying interim financial statements that include the required disclosures.
In practice, current market demands already drive the preparation of interim financial statements with
footnotes in circumstances where filing is not required, particularly in capital markets transactions such
as initial public offerings. We expect this practice would continue, and potentially increase, if some registrants elect semiannual reporting on Form 10-S while furnishing only summarized quarterly information. As a result, certain anticipated cost or burden reductions of the proposal may not be realized for these registrants.
Additionally, while AS 4105 can be applied to semiannual financial information, the standard is structured around a quarterly reporting model, including references to quarterly periods, procedures, and Forms 10-Q and 10-QSB. For example, AS 4105.06 addresses procedures over selected quarterly
(including fourth quarter) data included in annual reports in accordance with Item 302(a) of Regulation
S-X. Conforming amendments would therefore be necessary to support consistent application in a semiannual reporting framework.

AS 6101

PCAOB AS 6101, Letters for Underwriters and Certain Other Requesting Parties (AS 6101), sets forth
guidance for the independent accountant's issuance of comfort letters to underwriters and other requesting parties (collectively, "underwriters") in connection with registration statements and other

securities offerings. As the proposing release highlights, underwriters ordinarily expect to receive "negative assurance comfort" on subsequent changes in specified financial statement line items from the most recent period that has been audited or reviewed. AS 6101 permits such negative assurance comfort through a date that is less than 135 days from the end of the most recent period that has been audited or reviewed, a timeframe which aligns more closely with a quarterly reporting cadence. However, we observe that AS 6101 is operational even under a semiannual reporting cadence as evidenced by the capital markets activities of foreign private issuers. Auditors of foreign private issuers that only report their financial statements semiannually prepare comfort letters and comply with underwriter requests for incremental procedures or assurance to address the 135-day requirement for negative assurance. Separately, AS 6101 contemplates procedures that may be performed by the independent accountant on subsequent changes in specified financial statement line items as of a date 135 days or more from the end of the most recent period that has been audited or reviewed. In our experience, the acceptance of these procedures in lieu of negative assurance comfort is less common.

However, as a technical matter, AS 6101 does not require changes to accommodate the optional semiannual reporting framework.

Based on our experience, we have observed limitations in the ability to provide negative assurance on certain financial statement line items in circumstances where management is unable to respond to inquiries regarding changes in those line items through a specified date (the "cutoff date") that does not correspond to a natural period end for which financial statement closing procedures have been performed. In these situations, the comfort letter typically indicates that management is unable to respond to such inquiries. As a result, negative assurance on changes through the cutoff date is generally limited to areas such as capital stock and increases in long-term debt, as information related to these items is more readily available on a daily basis than for other financial statement measures, such as revenue, net current assets, or income. Notwithstanding these limitations, we note that offerings frequently proceed with this reduced scope of assurance.

We also believe that inherent risk increases as the period between the cutoff date for which negative assurance is requested and the most recent period audited or reviewed by the independent accountant becomes longer. Accordingly, if the PCAOB were to reevaluate AS 6101 in the context of a semiannual reporting framework, we believe consideration should be given to whether providing negative assurance through a cutoff date extending beyond 134 days would be appropriate without the performance of additional procedures to mitigate the associated risk.

In addition, we believe it is important to consider whether, in such a framework, underwriters may seek to request and perform due diligence on more current financial information than would otherwise be required under a semiannual reporting model. This may occur in response to investor expectations or as a means of managing underwriter risk, particularly in circumstances in which the financial

statements
included in an offering could be more than six months old.

Accounting Standards

We believe the Commission will need to coordinate with the FASB to evaluate changes to U.S. GAAP to
accommodate the semiannual reporting framework. For example, the following standards reference quarterly concepts that may need to be adjusted (or otherwise have reporting frequency implications):

• ASC 250, Accounting Changes and Error Corrections – requires disclosure of the effects of a change
in accounting principle on interim period results when an accounting change is made in the fourth quarter of the fiscal year
• ASC 260, Earnings Per Share (EPS) – generally contemplates annual or quarterly EPS concepts (e.g.,
in certain diluted EPS computations related to the application of the treasury stock or if-converted methods).
• ASC 270, Interim Reporting – generally aligns with quarterly reporting and includes the requirement to disclose certain fourth quarter information.
• ASC 280, Segment Reporting – requires interim segment disclosures for the current quarter and year-to-date periods. Separately, the determination of whether information is regularly
provided to the chief operating decision maker on a regular basis is typically interpreted to be at least quarterly.
• ASC 323, Investments – Equity Method and Joint Ventures – references the inability to obtain quarterly financial information from an investee as an indicator that an investee does not have significant influence. Separately, we note that an equity method investee (or a consolidated subsidiary) can have a different fiscal year end, and the equity method (or consolidation) can be applied using the investee's (subsidiary's) fiscal year-end information if that fiscal year end is not
7
more than three months different. Semiannual filers may encounter more circumstances in which the equity method income/loss is estimated because the company is unable to use the three-month lag.
• ASC 740, Income Taxes - generally presumes a quarterly cadence in the computation of interim tax provisions and effective tax rates

This list is not intended to be exhaustive. We believe the FASB will require additional time to evaluate
whether further changes, including those related to references to quarterly information, are warranted.

Interim Review and Annual Audit Implications

While the nature of procedures performed in an AS 4105 review would generally be similar whether interim financial information is prepared quarterly or semiannually, a change in reporting cadence may
affect when certain matters are evaluated during the audit cycle, rather than eliminate the need to address them. Quarterly reporting promotes a more disciplined interim financial reporting process and
creates a recurring point in time for management and the independent accountant to perform certain procedures earlier in the audit cycle. If a registrant elects semiannual reporting and, as a result, certain
interim financial reporting processes or related control activities occur less frequently, this could reduce
the opportunity for auditors to perform certain procedures on an interim basis, make it more difficult to
identify and respond to significant events on a timely basis, and compress the time available for

audit
procedures during peak reporting periods. For example, some matters currently considered at quarterly
intervals, such as developments reflected in board minutes, significant business combinations or financing transactions, and potential impairment indicators or other interim accounting evaluations, may instead be evaluated less frequently and over a longer period in connection with the semiannual
review or annual audit.
This could have negative implications for both the expected reduction in audit effort and audit-related fees for some registrants as well as audit quality.

Transition Mechanics

We note that the proposal would require a registrant to recast its prior fiscal interim periods in connection with a change in reporting frequency to maintain the comparability of financial statements and related information. While retroactive application could introduce operational complexity and discourage adoption of semiannual reporting, we support the inclusion of comparable financial information in interim reports. These transition requirements may cause registrants to prepare quarterly
financial statements that comply with U.S. GAAP and SEC requirements even if they elect semi-annual
reporting to ease the transition burden if they intend to change their reporting frequency on a semiannual basis to a quarterly basis in the next fiscal year. Depending on the facts and circumstances,
information may need to be publicly disclosed (e.g., via Form 8-K under Regulation FD), reducing the
intended simplification.

Other Matters

We support the simplification of the financial statement age requirements in registration statements to
align with the due dates of the quarterly or semiannual reports, as applicable. We believe these amendments may increase market participants' understanding of financial statement needs in connection with a registration statement.
While the proposed amendments address the age of financial statements of an acquired foreign business in proposed S-X Rule 3-01(e)(2), they do not address the age of financial statements of an acquired business or real estate operation more broadly pursuant to S-X Rules 3-05 and 3-14, respectively. We believe the rules should also address the financial statement age requirements for such
acquisitions (i.e., whether the age requirements follow those applicable to the registrant, or whether the
registrant may elect quarterly or semiannual reporting for the acquired business or real estate operation).

Benjamin L. Schiffrin, Director of Securities Policy, Better Markets, Inc. — Jul 6, 2026
July 6, 2026
Vanessa A. Countryman
Secretary
U.S. Securities and Exchange Commission
100 F Street, NE
Washington, DC 20549-1090
Re: Semiannual Reporting, File No. S7-2026-15, 91 Fed. Reg. 24968 (May 7, 2026)
Dear Ms. Countryman:
Better Markets1 appreciates the opportunity to comment on the above-referenced proposal to allow companies to file semiannual reports instead of quarterly reports.2 The proposal would cut in half the information investors receive about the companies in which they invest. Companies would continue to be able to access the public markets to obtain capital while providing the public with less frequent updates about their financial health. Despite companies providing these quarterly updates for over 50 years, investors would now be left in the dark for six months at a time. This is inconsistent with the Commission's mission to protect investors.
It is also inconsistent with the bedrock of securities regulation in this country. The legislative history of the foundational securities laws "clearly establishes that investor protection through disclosure was the central goal."3 As a result, disclosure and transparency "are at the core of SEC regulations," and "SEC regulations are largely based on a disclosure paradigm."4 The objective of securities regulation is for investors to have timely and accurate information about a company before deciding whether to invest their hard-earned money in that company.5 So the Commission should want companies to provide investors with more, not less, disclosure.
1 Better Markets is a non-profit, non-partisan, and independent organization founded in the wake of the 2008 financial crisis to promote the public interest in the financial markets, support the financial reform of Wall Street, and make our financial system work for all Americans again. Better Markets works with allies—including many in finance—to promote pro-market, pro-business, and pro-growth policies that help build a stronger, safer financial system that protects and promotes Americans' jobs, savings, retirements, and more.
2 91 Fed. Reg. 24,968 (May 7, 2026).
3 Alena Allen, Regulating Health and Wealth, 35 Cardozo L. Rev. 309, 312 n.10 (2013) (citing S. Rep. No. 73-47, at 1 (1933), reprinted in 2 Legislative History of the Securities Act of 1933 and Securities Exchange Act of 1934 (J. S. Ellenberger & Ellen P. The bottom line is that a shift to semiannual reporting would deprive investors of the information that they need and on which they rely to make informed investment decisions. This

shift would also disproportionately impact retail investors, as institutional investors will have the resources and relationships to obtain the information they need but retail investors will not. And the explanations given for the proposal—a desire to increase the number of public companies, lessen short-term thinking, and reduce costs—do not justify eliminating quarterly reporting. For these reasons, discussed further below, the Commission should withdraw the proposal.

I. The only way to protect investors in a disclosure-based regulatory regime is to provide them with material information on a frequent basis.

Quarterly reports protect investors by providing them with essential information.

Quarterly reports also further the goals of a disclosure-based regulatory regime. Semiannual reporting would be inconsistent with investor protection and our system of securities regulation.

A. Quarterly reports protect investors by providing them with essential information.

As discussed above, Congress and the Commission "have relied on disclosure regulations as the primary vehicle for protecting investors."6 Quarterly reports are essential to this effort to protect investors through disclosure. They are "one of the few structured feedback mechanisms available to public investors."7 Quarterly reports provide investors "with material information that they use to make informed investment decisions."8 Quarterly reports "allow for investors to review the health of a company's finances throughout the year, at regular and predictable intervals."9 Perhaps most importantly, quarterly reports "make it possible for investors to more easily compare companies, their financial performance, future profitability, and other objective factors."10 For these reasons, eliminating quarterly reporting would harm the "investors, investment professionals, and other third-party analysts that use and rely upon these filings."11 The Commission itself has recognized that "keeping investors informed is fundamental under the securities laws."12 Yet without quarterly reports, Main Street investors "would be

further in the dark."13 "Ordinary people would know less about hundreds of companies that make up the stock market and hold sway over [their] day-to-day lives."14 The proposal might be a "windfall" for corporations who want the same access to investors' money with less disclosure.15 However, for investors, it "would mean less access to information and more exposure to risk."16 A shift to semiannual reporting would be especially problematic now because it would occur "just as investors are mastering the best tools they've ever had for" utilizing corporate disclosures.17 With artificial intelligence, reports "that once seemed voluminous can be mined instantly . . . for subtle shifts and emerging risks."18 In light of investors' ability to use AI to make "quick work" of analyzing securities filings, a capability that "will only accelerate as AI

systems become more robust and more reliable," it is "an awfully strange time for the government to start thinking of giving investors less information rather than more."19

B. A shift to semiannual reports would frustrate the goals of a disclosure-based regime.

Eliminating quarterly reporting would also conflict with the rationales for a disclosure-based system of securities regulation. These rationales all favor frequent periodic disclosures: First, requiring disclosure can induce corporate officers to behave more ethically and honestly because they know that their actions will regularly be reviewed and exposed. Second, disclosure requirements can reduce agency costs. Mandating disclosure reduces costs that shareholders would otherwise bear in trying to monitor their agent directors and corporate officers. Third, disclosure facilitates informed decision-making about whether to buy or sell a particular security, which makes the price of the security more accurate. Similarly, disclosing information narrows the informational asymmetry between corporations and their officers and investors. Fourth, disclosure serves the twin goals of maintaining (and at times increasing) investor confidence in the market and promoting the public good.20

A shift to semiannual reporting would frustrate all of these goals.

20 Allen, 35 Cardozo L. Rev. at 327-28.

Less regular review and exposure of corporate information incentivizes less ethical behavior. A good example is the potential for insider trading. The SEC's own Investor Advisory Committee says that a shift to semiannual reporting would "increase insider-trading concerns because more frequent disclosure reduces insiders' ability to profit from nonpublic information.21 Corporate insiders "always know more than the market," and quarterly reports are "one of the mechanisms that compresses the window in which insiders can act on non-public information before it comes public."22 By "extending the interval between mandatory reports, semiannual reporting would widen the gap between inside and public information, increasing the risk that insiders could trade while possessing material information not yet available to the market."23

Less frequent reporting will also require investors to spend more time and effort monitoring the companies in which they invest. Empirical evidence "supports the theory that mandatory disclosure improves the monitoring capability of third parties [and] reduces costs for investors."24 Without quarterly reports, investors will incur higher costs to pursue trading gains.25 "Nobody wants to wait an extra three months to find out bad news, such as that a once-profitable company has begun losing money."26 And fewer updates "means that there is more information for investors to catch up on each time a company reports results."27 The existence of quarterly reports means that investors do not need to incur the time and expense of uncovering and digesting relevant information that accumulates over half a year because the SEC already

requires that companies provide that information to investors every three months.28
Eliminating quarterly reporting will also reduce investors' ability to deploy their capital efficiently. Optimal levels of disclosure "help to ensure that capital finds its most productive uses."29 Required disclosures make securities prices more accurate,30 and "accurate securities

prices promote the efficient allocation of capital."31 But "less frequent financial reporting would result in greater volatility in securities prices."32 The market's ability to price securities accurately, and investors' ability to identify the most productive use for their capital, "would be cut in half because of the new six-month reporting schedule."33 So even if "the most productive place to deploy capital could be identified, redistribution would theoretically occur half as often because of the extra ninety-day delay on the availability of substantive information."34
Semiannual reporting would also exacerbate the information asymmetries that already exist between corporations and investors. That is because quarterly reports are one of the "few mechanisms" that allow the public to close the information gap that exists between management and investors.35 "By cutting available information essentially in half, investors would 'be nearly powerless to overcome their informational and bargaining disadvantages.'"36
Finally, semiannual reporting would reduce investor confidence in the market. "With a relatively short period of time between quarterly reports, average investors are able to maintain confidence through continual access to meaningful information."37 As a result, reducing the frequency of reporting "runs the risk of lowering the confidence of average investors."38

II. A Shift to Semiannual Reporting Would Disproportionately Impact Retail Investors.

A shift to semiannual reporting would harm all investors but would harm some investors more than others. Specifically, it would have a disproportionate impact on retail investors. That is because quarterly reports are particularly significant for retail investors.
Unlike institutional investors who have direct access to company management, retail investors often rely on publicly available information to gauge the financial health of a company and assess its investment potential. Quarterly reports provide a treasure trove of financial data that enables retail investors to make informed decisions based on accurate and up-to-date information.39

Semiannual reporting would force retail investors to wait longer to receive this accurate and up-to-date information, which would delay their ability to make informed investment decisions.
The differences in the abilities of institutional investors and retail investors to obtain information from sources other than periodic reports also means that a shift to semiannual reporting would exacerbate the asymmetries that exist among those investors. “Though institutional investors may still, and frequently do, extract from the issuer information that is not provided by the SEC’s mandatory disclosure rules, those rules place individual investors on equal footing with their institutional counterparts as to certain core information.”40 Thus:
Limiting quarterly public disclosure of corporate information risks giving an advantage to some investors while hurting others. The big Wall Street banks, the big mutual fund companies, and other sophisticated financial institutions with substantial research departments will continue to have ready access to corporate officers and corporate information. In an environment with less frequent reporting, these sophisticated and deep-pocketed investors would likely still gain access to information while the less-sophisticated and -resourced investors would be left in the dark, awaiting semi-annual or other disclosures. Due to this informational disadvantage, this latter group would likely suffer by getting “picked off” in the market as those with better information would be better positioned to trade against them.41
Even institutional investors agree. BlackRock has said previously that “a move to less frequent reporting” would “exacerbate” the divide “between average investors” and those able to access “alternative information sources.”42 This would “lower the confidence of average investors that they have access to meaningful and timely information with which to make decisions.”43
The SEC’s Investor Advisory Committee also agrees. It says that the “potential negative impact would be particularly high for retail investors, who rely on quarterly financial disclosures and lack direct access to public company management and other costly proprietary data sources that can provide insight into public company performance or outlook.”44 Even more than institutional investors, quarterly reports “empower retail investors by providing them with comprehensive financial information about a company’s operations, revenue, expenses, profitability, and more”45—information they would not otherwise be able to obtain.

The increase in informational asymmetry between corporations and investors discussed above would therefore impact retail investors to a greater degree as a result of information asymmetry among investors themselves. Timely financial reporting ensures all investors are on an equal footing.46 Because quarterly reports are available to all, they "play a vital role in leveling the playing field among investors with regard to their access to information."47 Less frequent reporting thus "has the ability to create an information divide between sophisticated investors, who are able to access additional data, and average investors, who are not."48 The failure to report information for long stretches "doesn't mean it ceases to exist"; insiders will still have access to the information and the ability to act on it, but retail investors won't.49 So semiannual reporting would give institutional investors with large research budgets and access to management an even greater edge over individual investors than they have now.50 In this respect, a shift to semiannual reporting would make the public markets more like the private markets. In the private markets, the lack of disclosure "affects retail investors significantly more than institutional investors, who generally have the financial sophistication and bargaining power to obtain necessary information."51 They "have the resources to conduct their own due diligence into offerings for which there is very little information available."52 The private markets therefore "give every advantage to insiders and to institutional investors with more bargaining power, sophistication, and access to information."53 Just as "retail investors who lack these resources have less ability to determine for themselves which opportunities in the private markets are worthwhile,"54 a shift to semiannual reporting will make it harder for retail investors specifically to make an informed investment decision about a public company.
Full disclosure "is essential if the small investor is to have confidence in our financial markets."55 Yet a shift to semiannual reporting would reduce the disclosures that retail investors

receive currently. The Commission has always, up to now, prioritized the interests of retail investors, and it should want to instill, not sap, retail investor confidence in securities markets.
III. The Commission's justifications for the proposal are not persuasive.
A. Semiannual reporting will not increase the number of public companies.
The Commission says that the proposal "is one step in a broader Commission effort to encourage more companies to go and remain public by reducing the costs and burdens associated with Exchange Act reporting."56 But there is no reason to think that a shift to semiannual reporting will encourage more companies to go public. The reason for the recent decline in the number of public companies is that companies are now able to raise all the capital they need in the private markets without the disclosure obligations of the public markets. The private markets have virtually no disclosure obligations. A shift to semiannual reporting from quarterly reporting will not incentivize companies to go public because companies have no periodic reporting obligations in the private markets. Cutting public companies' periodic reporting obligations from four times annually to two times annually does not change the math. Zero is still less than two.
There is even reason to believe semiannual reporting could lead to fewer IPOs. Required disclosures "instill investor confidence, which is essential to a growing IPO market."57 Forcing investors that participate in the IPO to wait six months to see how management's representations about the company's business during the offering compare to actual results "is a recipe for skeptical investors demanding a higher risk premium to buy shares in newly public companies, which—if anything—makes the IPO market less attractive, not more."58
A shift to semiannual reporting is also a recipe for the Commission to have less insight into the market. For regulators such as the SEC that monitor systemic risk, "eliminating quarterly earnings would mean a 50% reduction in a data source they rely on heavily."59 Fewer corporate reports "could delay the detection of emerging risks, a concerning dynamic in an era of index funds, algorithmic trading, and rapid capital movement."60 It could also exacerbate the turmoil during a period of market stress. "In a downturn, a surefire way to make investors flee is to slow the information flow and make them wait an extra three months for updates."61

59 Levy, supra note 7.
60 Id.
61 Weil, supra note 17.

B. A shift to semiannual reporting will not curtail short-term thinking.
The Commission also says that a shift to semiannual reporting could allow companies to reduce their short-term thinking and focus on long-term planning.62 The problem is there is no evidence to support this supposition. As an initial matter, there is "limited evidence that short-termism causes significant problems for publicly traded companies.63 And, even "if it did,

changing the frequency of disclosure to a semiannual or annual basis would do little to check the problem."64 That is because numerous studies "have found no discernable improvements in corporate planning or performance in countries where it has been tried."65

For example, the United Kingdom shifted to semiannual reporting in 2014. Yet this "had no material impact on levels of corporate investment," including capital expenditures, spending on research and development, or spending on property, plant, and equipment.66 This makes sense, as "R&D investments, acquisitions, and capital expenditure decisions have multi-year horizons"—they "don't operate on three-month cycles, and they won't operate on six-month cycles either."67 So, in the United Kingdom, a shift to semiannual reporting did not lead to better valuations, better capital raising, or a healthier IPO market; instead, it "tracked a period during which the London Stock Exchange struggled to attract new listings and retain existing ones."68

The notion that the United States should eliminate quarterly reporting because other jurisdictions permit semiannual reporting makes no sense. It is the capital markets in the United States, not in other jurisdictions, that are the envy of the world. Perhaps it is "not coincidental[]" that "semiannual reporting is commonplace" in Europe and Asia but "valuation multiples" in those jurisdictions "tend to trail those of American companies."69 Our system of quarterly reporting has contributed to investors from around the world wanting to invest here. There is no reason to make our reporting regime mirror jurisdictions whose markets pale in comparison to ours.

C. Any cost savings from a shift to semiannual reporting will be outweighed by the loss of transparency and the increase in the costs of capital.

The Commission says further that the proposal would allow companies to "see a reduction in compliance costs of time and money, as they would incur these interim reporting costs only one time in connection with each fiscal year instead of three times in connection with

62 91 Fed. Reg. at 24,991.

69 Weil, supra note 17.

each fiscal year pursuant to quarterly reporting."70 But the "costs of preparing these filings are miniscule compared with the size of the U.S. capital markets."71 So these costs must be weighed against the benefits of transparency with respect to the largest securities markets in the world. These benefits extend not only to investors but to issuers themselves. The costs of quarterly reporting must be measured not only against the benefits to investors but against the benefits to issuers. The SEC ignores the fact that the "point of requiring timely, standardized financial reporting is to lower companies' cost of capital."72 "Capital markets operate most efficiently when investors have equal access to widely disseminated financial information."73 When reliable information is limited, the cost of capital rises because firms must pay a 'signaling premium' in order to encourage investors to supply funds. When information is not accessible to investors on an equal basis, the cost of capital rises because firms must pay an 'unfairness premium' in order to compensate for uncertainty. Thus, when the market is operating efficiently, the firm will communicate information regarding its true or 'intrinsic' value to investors and the cost of capital will approach the fair and equitable ideal.74

In other words, the increased investor confidence that disclosure engenders "results in lower

capital costs for issuers because investors will not demand as large of premium for their investment."75 So the more "transparent and reliable a company's reporting is, all other things being equal, the lower its costs will be to borrow money or raise equity from outside investors."76 The Commission also says that a shift to semiannual reporting will reduce companies' costs because "more frequent disclosure increases the risk of disclosing proprietary information that could benefit competitors to the detriment of the reporting company."77 Yet, in a footnote, the Commission acknowledges that the "impact of the proposed rules on the disclosure of proprietary information would be limited to instances where delaying competitively sensitive

76 Weil, supra note 16.

77 91 Fed. Reg. at 24,987.

information . . . decreases the value of the information to competitors."78 This is hardly a reason to deprive investors of the frequent corporate updates they have relied on for over 50 years.

* * *

As discussed above, the "foundation of securities regulation relies on disclosure to ensure investors have the information necessary to be protected in the markets."79 Disclosure is "widely credited with 'improved selection of new investment projects, improved managerial performance, and reduced investor risk."80 Thus, one of the "essential missions of the SEC is to ensure that investors are provided with material information."81 A desire to increase the number of public companies, curtail short-termism, and reduce costs do not justify providing investors with less disclosure—especially since semiannual reporting will not have those benefits. Indeed, in its economic analysis, the Commission itself seems to recognize the problem with its proposal:

> Conversely, the efficiency of financial markets rests on material information becoming public in a timely fashion. In addition to protecting investors, greater availability of material information allows securities prices to better reflect their issuers' fundamental value and ultimately promotes capital formation as issuers have access to lower cost of capital and investors in those issuers' securities have access to higher liquidity. . . . A reduction in the frequency of interim reporting could result in delayed disclosure of material information, reduced comparability, and some lost information.82

This begs the question of why the Commission is proposing a shift to semiannual reporting in the

first place. The Commission says it is simply a question of a “tradeoff” between “reducing regulatory burdens” on companies and “promoting efficient capital markets through timely disclosure.”83 To the extent there is such a tradeoff—and, as discussed above, the Commission vastly overstates the benefits of a shift to semiannual reporting—the Commission’s mission is not to reduce the so-called regulatory burdens on public companies but rather to protect investors, maintain fair, orderly, and efficient markets, and facilitate capital formation.84

The Commission seems all too willing to make “tradeoffs” that benefit corporations at the expense of investors. For example, the Commission suggests that it is simply trading the quarterly disclosures on Form 10-Q for the disclosures on Form 8-K. The Commission says that it believes that “the requirements of Form 8-K elicit important disclosures about material events

78 Id. at 24,987 n.133.

83 Id. at 24,988.

84 https://www.sec.gov/about/mission.

on a more timely basis than quarterly reports on Form 10-Q.”85 But, as the Commission must know, disclosures on Form 10-Q and disclosures on Form 8-K serve different purposes. Form 8-K, which requires companies to disclose certain events when they occur, is no substitute for quarterly reports. That is because a Form 8-K tells investors something has happened, but it does not tell them the financial ramifications. Investors “are left holding a flag that says ‘something changed’ without any financial map of where they now stand.”86 The “financial translation of a material event is precisely what quarterly reporting provides and what an 8-K cannot.”87

The bottom line is that investors “now rely on quarterly reports for more than just viewing the company’s past quarter’s financial performance.”88 Investors “utilize the information provided in Form 10-Q as a way to assess and predict the company’s health and ensure stable performance.”89 As a result, reducing the “frequency of disclosure requirements would therefore lead to diminished investor confidence and the likelihood of destabilizing our capital markets.”90

Conclusion

We hope these comments are helpful as the Commission considers this matter.

Sincerely,

Benjamin L. Schiffrin

Benjamin Vanwey registered Respiratory Therapist — Jul 6, 2026
Subject: File No. S7-2026-15 From: Benjamin Vanwey This is a bad idea, as a partial owner of every business I invest in I need more transparency not less!

Bertram Parham CEO, Golden Vistas Ltd. — Jul 6, 2026
Subject: File No. S7-2026-15 From: Bertram Parham I am writing as an individual investor and a proud member of The Motley Fool Community to express my strong opposition to the current proposal that would allow public companies to reduce their reporting frequency from four times a year to just two. At its core, investing is ownership. When individuals purchase shares in a public company, we are providing capital in exchange for a stake in that business. In return, we rely on regular, transparent, and timely communication to assess the health of our investments and make informed decisions. Reducing the frequency of these vital updates fundamentally weakens the relationship between companies and their shareholders. I urge the Commission to reject this proposal for the following reasons: Less Information Creates More Volatility: A business does not pause between reports; it operates, adapts, and faces challenges every single day. If updates are restricted to every six months, the resulting data dumps will contain half a year's worth of surprises. This will inevitably lead to sharper market reactions, wider knowledge gaps, and increased volatility, harming retail investors the most. The "Short-Termism" Fallacy: While some argue that quarterly reporting forces companies to manage for the short term, withholding information does not cure this mindset. Investor patience is built on trust and visibility, not opacity. Shielding owners from financial realities does not make the market more patient; it simply makes it less informed. Cost Savings Do Not Justify Opacity: Proponents may argue that fewer reports will save companies money. However, in an era of advanced artificial intelligence and increasingly automated financial disclosure tools, the administrative burden of quarterly reporting is actively decreasing. The minimal cost savings to the company do not justify the massive loss of transparency for the public. In 2000, the SEC took a monumental step forward for individual investors by passing Regulation Fair Disclosure (Reg FD), ensuring a level playing field for all market participants. Allowing companies to cut their reporting frequency in half would be a severe step backward, eroding the transparency that makes U.S. public markets the gold standard of the world. Transparency does not create uncertainty; it cures it. I respectfully urge the SEC to prioritize the rights of informed investors and maintain the requirement for quarterly public-company reports. Thank you for your time and for your continued dedication to protecting investors and maintaining fair, orderly, and efficient markets. Sincerely, B. Parham

Beth M. Fraser — Jul 6, 2026
Subject: File No. S7-2026-15 From: Beth M. Fraser I am opposed to this proposed change which would remove the quarterly reporting requirement on the part of companies. My husband and I are close to retirement and we rely on accurate current information as we plan for our financial future. Changing this rule puts companies above the everyday American citizens that SEC regulations need to protect. These reporting rules arose out of the ashes of the Depression and represent what governments should do to protect their citizenry. Considering the tech advances of the last 30-40 years, if anything the reporting should be more frequent, not increased to only every 6 months. If

enacted, this change would make insider trading easier and also increase the chance that a companies' downturn would hurt the average investor more than the company and its leaders itself.

Beth Rosbach — Jul 6, 2026
Subject: File No. S7-2026-15 From: Beth Rosbach To whom it may concern, I am writing in opposition to the proposed rule change that would allow companies to report on their earnings and financial activities semi-annually. I have the following issues with this proposed change: -Too much time will elapse between required filings. This is especially damaging to shareholders during volatile economic periods. -It will reinforce poor decision making by companies to gain the system when it comes time to report earnings. -It increases risk to normal investors like myself and my family who are depending on our investments for security and retirement funds. Doing business as a publicly traded company in the United States is a privilege, We have the strongest and most secure economy in the world, and part of that security is due to oversight and reporting requirements. Any decision to weaken those requirements will only damage our economy. Leave the reporting rules alone. Do not risk hurting average Americans just to please a small number of wealth interests.

Bill Bruno — Jul 6, 2026
Subject: File No. S7-2026-15 From: Bill Bruno Bill Bruno Jackson Heights, NY I am writing in opposition to the proposed rule change that would change the reporting requirements from quarterly to semi-annually. Economic factors, new data and disclosures, etc, can change rapidly and necessitate quarterly reporting. Removing transparency has never worked well. There is also no reason to believe that the burdens ostensibly lifted by changing the reporting would impact capital spending. Reporting standards have shifted between quarterly and semi-annual both here and in the UK with no difference in capital spending attributable to that. Concerns about burdens could be addressed by streamlining, rather than abolishing, quarterly reports.

BIll Jacobs — Jul 6, 2026
Subject: File No. S7-2026-15 From: BIll Jacobs The current financial reporting framework is unnecessarily burdensome and has become overly complex. Public companies face excessive disclosure requirements, frequent reporting obligations, and continually expanding compliance costs that divert management's time and resources away from growing their businesses. These regulatory burdens are a significant reason many private companies choose not to access the public markets. The SEC should provide reporting companies with the option to file interim reports on a semiannual basis rather than requiring quarterly reports. Companies and their investors should have the flexibility to determine the reporting cadence that best fits their circumstances while continuing to provide timely disclosure of material events through existing Form 8-K requirements. This proposal would reduce unnecessary costs, encourage more companies to go public, and improve the competitiveness of U.S. capital markets without sacrificing meaningful investor protection.

Billy Pirtle — Jul 6, 2026
Subject: File No. S7-2026-15 From: Billy Pirtle S7-2026-15 Please keep quarterly reporting in place!

Bradley Grimm Retail Investor, Motley Fool community — Jul 6, 2026
Subject: File No. S7-2026-15 From: Bradley Grimm Please dismiss current efforts to move to semi-annual, versus quarterly, reporting. Less-frequent reporting means less-informed retail investors, along with less-informed professional market analysts. In these increasingly dynamic market times, lacking awareness can lead to severe impacts due to lacking current understanding of the state of the market. In a time of greater automation and AI-enabled business systems, there seems little reason to address a rapidly diminishing "burden" by halving the information flow to owners of public companies. Instead, please consider measures to increase transparency and allow market forces to reward viable businesses while "correcting" those exhibiting less acumen. Thanks for the opportunity to comment!

Brenda Newton - individual None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Brenda Newton - individual Continue quartery reporting!! It's the right thing to do and you know it!

Brian Galhouse — Jul 6, 2026
Subject: File No. S7-2026-15 From: Brian Galhouse Absolutely against reduced filing frequency. Semiannual reporting creates market opacity while benefiting insiders. while this may reduce reporting costs, it does a significant disservice to investors and the keepers of government statistics by which we measure the health of the economy. Thank you

---

brian simerl retired, but active investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: brian simerl Keep this quarterly. In this age of electronic accounting, the many power that was needed in the past is not longer needed to do audits. This is going to cause great harm to our stock market, of course 401ks, etc. This will leave the door open to corruption. This has been tried before but now, trying to change it back when it fails usually never works.

Vanessa Countryman
Secretary
U.S. Securities and Exchange Commission
100 F Street, NE
Washington, DC 20549
RE: Semiannual Reporting; File Number S7-2026-15
Dear Ms. Countryman,
This letter is submitted on behalf of Business Roundtable, an association of more than 200 chief executive officers (“CEOs”) of America’s leading companies, representing every sector of the U.S. economy. Business Roundtable CEOs lead U.S.-based companies that support one in four

American jobs and almost a quarter of U.S. GDP. Through CEO-led policy committees, Business Roundtable members develop and advocate directly for policies to promote a thriving U.S. economy and expanded opportunity for all Americans.

We appreciate the opportunity to respond to the May 5, 2026, Semiannual Reporting Proposal (the “Proposal”) by the U.S. Securities and Exchange Commission (the “Commission” or “SEC”).

Introduction

Business Roundtable supports the Commission’s efforts to modernize the public company reporting framework and reduce unnecessary regulatory burdens while preserving core investor protections. By moving away from a one-size-fits-all quarterly reporting requirement, the Proposal would allow companies to select the reporting cadence that best aligns with their business models and investor expectations. Quarterly reporting imposes meaningful compliance, quarterly independent auditor review, and managerial burdens, and those costs are not always justified by corresponding benefits. The Proposal strikes an appropriate balance between flexibility, efficiency, and transparency and represents an important step toward enhancing the competitiveness and attractiveness of U.S. public markets.

Overview of the Proposal

The Proposal would permit public companies to elect, on an annual basis, to file periodic reports on a semiannual rather than quarterly basis. Business Roundtable supports this initiative as a meaningful step toward reducing the expense associated with public company status. Reducing the number of required interim filings from three to one could decrease fees

associated with quarterly independent auditor reviews, outside counsel and printing and eliminate the significant management time devoted to preparing quarterly reports. While the magnitude of savings will vary by issuer, in the aggregate they could help achieve a meaningful reduction in the ongoing compliance and reporting expense borne by public companies.

The SEC’S Proposal

Support for a Voluntary Election Framework

Business Roundtable agrees with the Commission that it is important to identify opportunities to reduce the compliance burdens associated with being a public company while preserving core investor protections and the high-quality financial reporting that is critical to confidence in the capital markets. We support the Commission’s proposal to allow public companies to elect annually whether to report on a semiannual basis or to continue reporting quarterly. This approach provides companies with the flexibility to determine which reporting cadence best suits their business and investors while allowing the Commission, investors, and issuers to assess over time the magnitude of those savings and whether semiannual reporting can reduce reporting burdens without adversely affecting market transparency or investor decision-making.

A key feature of the Proposal is that it is voluntary. Companies that believe quarterly reporting remains valuable to their investors would remain free to continue reporting on that basis. This approach would allow issuers to take investor views and other relevant considerations into account as they select the reporting framework that best fits their circumstances.

Preserving Interim Communications with Investors

It is critical that companies electing semiannual reporting retain the ability to communicate regularly with investors outside of quarterly filed reporting without additional regulatory constraints. Companies and investors benefit from consistent, timely updates throughout the year, including earnings releases, forward-looking statements, and announcements regarding material developments. The availability of these communications plays an important role in maintaining market transparency.

Importantly, Business Roundtable expects that many companies will likely continue providing quarterly releases and other periodic investor updates even if they elect semiannual reporting. As a result, investors may continue to receive regular information throughout the year while

issuers benefit from reduced compliance obligations associated with filed periodic reports. If companies perceive that electing semiannual reporting will subject quarterly earnings releases or other investor communications to additional regulatory obligations, many may

conclude that the benefits of the election do not justify the associated costs. Such an outcome would reduce the attractiveness of the framework and could diminish the overall flow of information to investors.

Accordingly, issuers should retain the ability to furnish, rather than file, select quarterly earnings materials on Form 8-K without new content or compliance obligations, regardless of reporting cadence. Companies should retain flexibility regarding the form and substance of interim communications. Rather than imposing prescriptive requirements on interim communications, including earnings releases, the Commission should expressly recognize that Regulation FD and existing Form 8-K requirements already provide an effective framework for maintaining market transparency between semiannual filings.

Structure and Implementation of Form 10-S

We support the Commission's decision to structure the proposed Form 10-S by largely replicating the existing Form 10-Q disclosure framework. Leveraging a familiar and well-understood disclosure structure should reduce complexity for issuers and facilitate implementation, as compared to developing an entirely new reporting regime. Maintaining substantially comparable disclosure content will allow investors and other market participants to evaluate semiannual filers using the same analytical frameworks they apply to quarterly filers, minimizing disruption to established market practices and reinforcing confidence in the quality of both quarterly and semiannual reporting.

Form 10-Q Modernization

Business Roundtable strongly supports a review of Form 10-Q disclosure requirements to identify opportunities for modernization and simplification. Any resulting reforms should apply equally to both Forms 10-Q and 10-S. While disclosure modernization is an important complement to the Proposal, attempting to undertake a comprehensive review of Form 10-Q requirements as part of this rulemaking could unnecessarily complicate and delay an otherwise targeted proposal. Accordingly, a separate and more holistic review process is better suited to achieving meaningful reform, and as part of that effort, the Commission should consider the suggestions in the comment letter Business Roundtable submitted on April 13, 2026, in response to the broader disclosure modernization initiative.

1

1 See Comments on Statement on Reforming Regulation S-K, Business Roundtable, April 13, 2026, available at
https://www.sec.gov/comments/cll-15/cll15-750527-2317354.pdf.

Alignment With Existing Regulatory and Governance Frameworks

We recognize that implementation of the proposed framework will require meaningful adjustments to established company and market practices as well as alignment with adjacent regulatory regimes. These adjustments may include modifications to insider trading policies that are aligned with quarterly reporting cycles, updates to auditor comfort letter and underwriter due diligence practices in connection with securities offerings, modifications to financial reporting covenants in debt instruments and lending agreements, and changes to the timing and structure of investor communications and investor-day events.

2 In addition, many
issuers are subject to quarterly reporting obligations under banking, broker-dealer, and other federal regulatory regimes that operate independently of the Exchange Act periodic reporting framework. We recommend that the Commission acknowledge these transition considerations

in any adopting release and make clear that it expects market practices and professional standards to evolve over time in response to the new framework and coordinate with other regulators and market participants as appropriate.
Conclusion
Business Roundtable appreciates the Commission's efforts to modernize the reporting framework and reduce unnecessary burdens on public companies.
We would be pleased to discuss these comments or any other matters that may be helpful. Please contact Will Anderson, Vice President, Business Roundtable, at wanderson@brt.org or (202) 496-3257.
2 The Commission should also amend the rules deeming financial statements stale either 130 or 135 days after the
end of the most recent fiscal period. Without a corresponding amendment, companies electing semiannual
reporting could be effectively precluded from accessing the capital markets and obtaining customary auditor
comfort letters during extended portions of the year, creating a significant disincentive to voluntary semiannual
reporting and undermining the Commission's objective of providing a meaningful optional reporting framework.

C L CRUGHER Entrepreneur — Jul 6, 2026
Subject: File No. S7-2026-15 From: C L CRUGHER Vanessa A. Countryman Secretary U.S. Securities and Exchange Commission 100 F Street, NE Washington, DC 20549-1090 Re: Semiannual Reporting, Release Nos. 33-11414; 34-105368; 39-2563; IC-36140; File No. S7-2026-15 Dear Secretary Countryman: I am writing to comment on the Commission's proposal to permit domestic public companies to elect semiannual reporting on new Form 10-S in lieu of quarterly reporting on Form 10-Q. I appreciate the opportunity to comment and submit these views as [an individual investor / a member of the public who follows corporate disclosure practices — edit as applicable]. While I recognize the Commission's stated goal of reducing compliance burdens and encouraging long-term corporate decision-making, I have concerns about the proposal as currently drafted, particularly regarding comparability across issuers and the potential for reduced transparency to fall hardest on retail investors. 1. The causal link between quarterly reporting and short-termism is not well established. The proposal draws on academic research — including survey work by Graham, Harvey, and Rajgopal — showing that corporate executives sometimes cut R&D and capital expenditure to meet quarterly earnings targets. However, that research identifies the pressure as coming from analyst consensus estimates, earnings guidance practices, and executive compensation tied to short-term metrics — not from the Form 10-Q filing requirement itself. Removing the quarterly filing requirement does not remove analyst expectations, guidance culture, or compensation structures, which are likely to persist regardless of filing frequency. I encourage the Commission to more directly address, in its economic analysis, whether reduced filing frequency alone is likely to change managerial behavior in the way the proposal anticipates. 2. Foreign experience suggests limited voluntary uptake by the companies investors care most about. The United Kingdom eliminated its mandatory quarterly reporting requirement in 2014 after a period of mandatory quarterly reporting beginning in 2007. Following that change, many larger UK companies with substantial institutional ownership continued to report quarterly on a voluntary basis, suggesting that for widely-held companies, the market — not the regulation — was driving reporting frequency. If a similar pattern holds in the U.S., the primary practical effect of this proposal may be to create a two-tier disclosure environment: smaller, less-covered companies moving to semiannual reporting, while the largest and most liquid companies continue quarterly reporting voluntarily. The Commission should consider whether this bifurcation serves investors, particularly retail investors in

smaller companies who have fewer alternative sources of interim information (e.g., sell-side research coverage) than investors in large-cap companies. 3. Comparability across peer companies and industries may suffer. Because the election is optional and can be changed only annually in connection with a company's Form 10-K, investors and analysts attempting to compare companies within the same industry may face inconsistent reporting cadences from one peer to the next, and potentially from one year to the next for the same company. This creates additional work for investors to normalize data across reporting periods and may increase, rather than decrease, the cost of capital analysis for smaller companies that the proposal is intended to help. 4. The optional, revocable nature of the election could enable strategic timing. Because companies are not locked into a reporting frequency across fiscal years, there is a risk that some issuers could elect semiannual reporting in periods when they wish to delay disclosure of unfavorable interim results, while returning to quarterly reporting when performance improves. I encourage the Commission to consider guardrails — such as a minimum multi-year commitment to a chosen reporting frequency — to reduce this risk. 5. Recommendation. I respectfully urge the Commission to: (a) require a minimum commitment period (e.g., three fiscal years) once a company elects semiannual reporting, to reduce strategic switching; (b) require clear, standardized disclosure to investors at the time of election, explaining the company's reasoning and expected impact on interim disclosure; and (c) monitor and publicly report on comparability effects and investor outcomes if the rule is adopted, with a built-in review period. Thank you for the opportunity to comment on this proposal. I would be glad to provide additional information if helpful to the Commission's consideration. Respectfully submitted, C L CRUGHER Morrice Michigan 6 July 2026

C MB — Jul 6, 2026
Subject: File No. S7-2026-15 From: C MB The quarterly filing rule was implemented originally for a good reason. These filings help maintain accurate, timely, and responsible record-keeping by companies in the US. The quarterly reporting requirement should remain in place.

C. Kio — Jul 6, 2026
Subject: File No. S7-2026-15 From: C. Kio The system as it exists has worked out well for investors and for companies that submit quarterly reports for decades. I see no good reason for that to change, but I do see potential problems. The suggestion that reporting semi-annually is enough is short sighted. The economy has not been stable since COVID began in 2020, and the recent ups and downs associated with tariffs and the war in Iran have made the economy less predictable than ever. This administration has created a volatile situation and the last thing investors need is less information. Don't change any reporting requirements.

Caden — Jul 6, 2026
Subject: File No. S7-2026-15 From: Caden My name is Caden and I’m an engineer at a large, publicly traded transportation company. This is the wrong course of action for many reasons, but one is decreased transparency. The truth is that in a free society, freedom of information and equal access to information is essential to the continuation of that freedom. Forced transparency for large corporations, which already have too much room under the law, is essential and must be maintained for the good of the American people and our economy. And let’s not forget, this economy is a means to an end, and that end is the entire nation, not just those with extraordinary power. I do not support semi annual reporting.

Re: Comment Letter on Proposed Rule: File No. S7-2026-15; Semiannual Reporting, Release Nos. 33-11414; 34-105368; IC-36140

Dear Chair Atkins:

I. Introduction

The California State Teachers' Retirement System (CalSTRS or the Fund) respectfully submits these comments in response to the Securities and Exchange Commission's (Commission or SEC) proposed rule to permit public companies to file semiannual reports on new Form 10-S in lieu of quarterly reports on Form 10-Q to satisfy their interim reporting obligations under the Securities Exchange Act of 1934 (Release Nos. 33-11414; 34-105368; File No. S7-2026-15) (the Proposed Rule).

CalSTRS is the largest educator-only public pension fund in the world, managing approximately $400 billion in assets on behalf of more than 1 million California public school educators and their beneficiaries. As a long-term, diversified institutional investor with equity, fixed income, and alternative holdings across thousands of publicly traded companies, CalSTRS has a direct and material interest in the quality, frequency, and comparability of public company disclosures. The financial well-being of CalSTRS beneficiaries -- active teachers, retired educators, and their surviving families -- depends on the integrity of the information environment supporting U.S. capital markets.

CalSTRS is very concerned with the Proposed Rule as drafted. While we appreciate the Commission's stated goal of reducing regulatory burden, we believe that optional semiannual reporting, as proposed, would materially harm investors by increasing information asymmetry, weakening corporate accountability, reducing market liquidity, and impairing our ability to fulfill our fiduciary obligations as a steward of public retirement assets. We urge the Commission to withdraw or substantially narrow the Proposal and instead pursue targeted reforms that address the legitimate burden-reduction concerns of smaller public companies without compromising the informational foundation of U.S. equity markets.

Core Concerns

The Proposal Undermines Investor Protection by Increasing Information Asymmetry

Quarterly reports are not merely a compliance formality, they are the bedrock of the information environment on which institutional and retail investors, analysts, and markets rely to allocate capital efficiently. The Commission's own economic analysis acknowledges that longer gaps between issuer disclosures increase information asymmetry between investors, because some investors are more able than others to access or process information from alternative, often third-party, channels that provide indirect insight into an issuer's financial

status or performance.[1]
The academic literature cited in the Proposed Rule consistently demonstrates that semiannual reporting is associated with greater information asymmetry than quarterly reporting, particularly during the second half of each semiannual period. The Commission itself acknowledges that a move to semiannual reporting would generally delay the disclosure of information that would have been contained in interim reports for the first and third quarters.[2]
In addition, the Commission further recognizes that widespread information asymmetry can also diminish perceptions of fairness, which can erode trust in markets and reduce capital market participation.[3] For a pension fund managing retirement assets for more than one million California educators, erosion of market fairness and participation is not an abstract concern, it directly diminishes the long-term investment returns on which our beneficiaries depend.

The Proposal Weakens Corporate Accountability

As a long-term shareowner and active fiduciary, CalSTRS depends on timely, standardized financial disclosures to assess management performance, identify governance concerns, conduct engagement, and vote proxies on an informed basis. The Commission's economic analysis acknowledges that less frequent disclosures may reduce the ability of investors and other market participants to monitor the issuer and its management because they would receive less frequent signals about issuer performance and managerial decision-making. The Proposed Rule also increases the risk of informed insider trading. The Commission acknowledges that a move to semiannual reporting would generally increase the length of time for which information asymmetry between corporate insiders and outside investors is

1 Proposed Rule, Release No. 33-11414, at 72: "researchers have found that longer gaps between issuer disclosures increase information asymmetry between investors, because some investors are more able than others to access or process information from alternative, often third-party, channels that provide indirect insight into an issuer's financial status or performance."

2 Proposed Rule, Release No. 33-11414, at 114: "A move to semiannual reporting would generally delay the disclosure of information that would have been contained in interim reports for the first and third quarters and therefore increase the length of time for which information asymmetry between corporate insiders and outside investors is higher."

3 Proposed Rule, Release No. 33-11414, at 72: "Widespread information asymmetry can also diminish perceptions of fairness, which can erode trust in markets and reduce capital market participation."

higher, and that a potential additional cost may arise if insiders engage in trading on information that has not yet been released or if investors perceive that to be more likely.[4]
For CalSTRS, the quarterly reporting cadence provides a regular, structured touchpoint for portfolio monitoring, risk identification, and year-round engagement with portfolio companies. Moving to a semiannual cadence would extend the monitoring blind spot from roughly three months to six months. Deteriorating financial conditions including rising leverage, declining operating margins, unexpected cash flow volatility, or internal control weaknesses may remain hidden from shareholders for materially longer periods under the

Proposed Rule, limiting timely intervention by investors acting in the interest of beneficiaries.

The Proposal Reduces Analyst Coverage and Damages Price Discovery

The Proposed Rule risks a deterioration in the information environment for affected companies. Academic evidence cited in the Proposal demonstrates a positive correlation between reporting frequency and analyst following: studies find that higher frequency of mandatory interim reporting is associated with increased analyst coverage, and that companies that moved to semiannual reporting without supplementing with voluntary quarterly reports experienced a reduction in analyst coverage.5 This leads to reduced price discovery, wider bid-ask spreads, lower liquidity, and a higher cost of equity capital for affected companies. For a pension fund like CalSTRS reduced liquidity has real costs in the form of higher transaction costs, less efficient rebalancing, and diminished ability to build or exit positions without adverse price impact.

The Proposal's Unrestricted Eligibility Creates Systemic Risk to Market Comparability

Most concerning, the Proposed Rule imposes no eligibility criteria whatsoever. Any Exchange Act reporting company – regardless of market capitalization, revenue, float, institutional ownership, or analyst coverage – could elect semiannual reporting. This creates a fragmented reporting landscape in which investors cannot make contemporaneous, period-aligned comparisons across peers in the same sector or industry. A hybrid reporting environment would also impose costs on index investors, passive strategies, and quantitative managers who depend on temporally aligned, structured financial data to maintain their models.

4 Proposed Rule, Release No. 33-11414, at 75: "less frequent disclosures may reduce the ability of investors and
other market participants to monitor the issuer and its management

5 Proposed Rule, Release No. 33-11414, at 110, citing CFA Institute (Mar. 28, 2019): "higher frequency of
mandatory interim reporting is associated with increased analyst coverage" and "companies that moved to
semiannual reporting without supplementing with voluntary quarterly reports experienced a reduction in
analyst coverage."

Auditor Review Frequency and Internal Control Quality

Quarterly financial reporting is not just about investor information, it also underpins public company internal controls, auditor review, and financial reporting. The Commission acknowledges that an auditor's quarterly review procedures increase the likelihood that investors will receive timely information about material changes in internal control over financial reporting, and that there may be fewer opportunities to timely identify or remediate control deficiencies if these controls are performed less frequently. This risk is more prevalent for smaller reporting companies, particularly those with fewer qualified accounting staff or other resources available to them -- precisely the companies most likely to elect semiannual reporting under the Proposal.6

Conclusion

CalSTRS appreciates the Commission's recognition that regulatory burden on public companies is a legitimate concern and that the current quarterly reporting framework may impose disproportionate costs on smaller companies. We share the goal of a healthy, vibrant public market that attracts companies of all sizes and enables long-term value creation. However, we cannot support a Proposal that treats the information needs of investors as a secondary consideration to issuer convenience.

The U.S. capital markets' comparative advantage over many global markets rests in

significant part on the quality, frequency, and reliability of mandatory public company disclosures. Quarterly reporting has been the cornerstone of that advantage since it became standard in the 1970s. CalSTRS urges the Commission to preserve that advantage rather than erode it in the name of deregulation. We respectfully request that the Commission withdraw the Proposed Rule and undertake a more targeted regulatory effort focused on reducing compliance burdens for genuinely small public companies without undermining the transparency and accountability standards that protect all investors.

CalSTRS is committed to constructive engagement with the Commission on disclosure reform. We thank the Commission for the opportunity to comment on this important matter.

Respectfully submitted,

Lynn Paquin
Portfolio Manager
California State Teachers' Retirement System

6 Proposed Rule, Release No. 33-11414, at 76: "To the extent a reduced frequency of interim disclosure is accompanied by fewer interim reviews and less interim testing by independent public accountants, the independent auditors may be slower to identify certain accounting misstatements and deficiencies in internal control, which could negatively impact the timeliness and reliability of the audited annual financial statements."

Cambria Allen-Ratzlaff, CEO, Principles for Responsible Investment — Jul 6, 2026

July 6, 2026

Vanessa A. Countryman, Secretary
Securities and Exchange Commission
100 F Street NE
Washington, DC 20549–1090

Re: Semiannual Reporting, File No. S7-2026-15

Dear Secretary Countryman:

The Principles for Responsible Investment (the “PRI”) respectfully submits these comments in response to the Securities and Exchange Commission’s (the “SEC”) proposal to permit companies to satisfy their interim reporting obligations by filing semiannual reports on new Form 10-S in lieu of quarterly reports on Form 10-Q.1 The PRI is an international network of investors with over 5,000 signatories—including asset managers, asset owners, and service providers—collectively overseeing approximately $130 trillion in assets under management or advisement. Over 800 of those signatories, with approximately $78.5 trillion of assets, are based in the US, and our global signatory base maintains significant exposure to the US markets. Our signatories rely on the periodic disclosures of US public companies to fulfill their fiduciary duties to beneficiaries and to allocate capital efficiently. We write to urge the Commission to preserve mandatory quarterly reporting, and to offer the following observations.

I. The Proposal should be considered in the context of the Commission’s broader disclosure-reform agenda.

The Commission should evaluate this Proposal as one component of the broader suite of disclosure

and
reporting reforms now on its agenda, rather than in isolation. By the Chairman's own description, the Proposal is "the first step of the larger, comprehensive effort to review and reshape the current SEC rules
governing public companies with respect to their ongoing reporting obligations."2 Several of the other
steps in that effort directly impact the quantity and frequency of information available to investors, and
their combined effect cannot be assessed one proposal at a time.
In particular, the Commission has recently proposed to enhance emerging growth company accommodations and to simplify filer status—a proposal that would extend disclosure-scaling accommodations to roughly 81% of public companies, raise the large-accelerated-filer threshold from
$700 million to $2 billion, and provide a minimum five-year "IPO on-ramp," among other things — and, in
a companion release, to broaden registered-offering and shelf-registration flexibility.3 Separately, the Commission has undertaken a comprehensive review of Regulation S-K, the central repository of non-
financial disclosure requirements, and a "rationalization of disclosure practices" appears on its Regulatory Flexibility Act agenda, with a proposal anticipated.4
1 Securities and Exchange Commission (May 5, 2026), Semiannual Reporting, Securities Act Release No. 33-11414, Exchange Act
Release No. 34-105368, File No. S7-2026-15 [hereinafter referred to as the "Proposal"].
2 Chairman Paul S. Atkins (May 5, 2026), Statement on Proposing Release for Semiannual Reporting.
3 Securities and Exchange Commission (May 19, 2026), Enhancement of Emerging Growth Company Accommodations and
Simplification of Filer Status for Reporting Companies, Release No. 33-11419; Securities and Exchange Commission (May 19,
2026), Registered Offering Reform, Release No. 33-11418.
4 Chairman Paul S. Atkins (Jan. 13, 2026), Statement on Reforming Regulation S-K; Securities and Exchange Commission (2025),
2026 Regulatory Flexibility Agenda, Rationalization of Disclosure Practices.
These initiatives address the same disclosure system along different dimensions: the semiannual Proposal concerns the frequency of reporting; the emerging growth company and filer-status proposal
concerns which issuers are subject to full requirements and on what timeline; and the S-K review concerns the content of disclosure. Each reduces the mandatory information reaching the market, and
their effects compound. The Commission must assess these reforms together and weigh their combined
effect before finalizing any one component.
II. Robust mandatory disclosure is a cornerstone of efficient capital markets.
Robust mandatory disclosure has contributed to the position of the US markets as the largest, deepest,
and most liquid in the world. The US federal securities laws have cultivated a high-quality, high-trust information environment since the Securities Act of 1933. The foundational economic literature explains
that information asymmetries between issuers and investors lead to the systematic underproduction of
disclosure absent a mandate—a market failure the US disclosure regime was designed to correct.5
Mandatory periodic disclosure is not an end in itself; it is an input to the mechanisms that make

markets
efficient. Regular, standardized, and comparable disclosures are ingested by a wide range of market actors—analysts, academics, investors, and rating agencies—to inform price discovery, and the resulting informational efficiency supports liquidity and reduces information asymmetries, which tend to widen bid-ask spreads and raise the cost of capital.6 Empirical research links greater disclosure to
lower cost of capital and to more informative prices; reducing the frequency of mandatory disclosure works in the opposite direction, and the Commission must adequately recognize that cost of the Proposal in its economic analysis.
7
III. The cost-benefit analysis must more fully reflect the range of costs.
The Proposal's cost-benefit analysis must faithfully reflect the range of costs that a change in reporting
frequency would impose. The Commission is well positioned to undertake more robust market research
to answer these questions. We note the following specific questions, which we believe the Commission
must seek to quantify and consider before proceeding to a final rule.
(i) What is the cost of reduced information to the full universe of market actors that consume the information on Form 10-Q to support overall market functioning? Equity investors are not the only consumers of the 10-Q and, in fact, depend on a much broader universe of information consumers to
support the price discovery process. Equity analysts depend on quarterly financial statements to update
estimates and perform the peer-relative analysis that underpins price discovery; fixed-income and credit
investors rely on the public disclosures of listed issuers to monitor covenants and creditworthiness between bond-specific communications; and rating agencies, lenders, index providers, and data vendors all consume quarterly data. The Proposal estimates the compliance savings that accrue to issuers but does not comparably quantify the costs that reduced frequency would impose on these consumers of quarterly information.8

Markets; Richard Lambert, Christian Leuz & Robert E. Verrecchia (2007), 45 J. Acct. Rsch. 385, Accounting Information,
Disclosure, and the Cost of Capital.
8 Shivaram Rajgopal (June 1, 2026), Forbes, Who Else Uses the 10-Q? The SEC's Semiannual Reporting Proposal Doesn't Ask.
(ii) What are the costs to market efficiency created by increasing information asymmetries? Greater

information asymmetry undermines the operation of an efficient market. Longer intervals between mandatory disclosures widen the information gap between issuers and outside investors, and between
better- and less-resourced investors. Better-resourced institutions can substitute private channels—such as management access, alternative data, and proprietary research—for public filings; retail and smaller investors cannot.9
(iii) How have and will new technologies, including but not limited to artificial intelligence, affect the cost of producing and consuming corporate disclosures? The Commission's analysis must account for how artificial intelligence and machine-readable, structured (XBRL) data are lowering the cost of both producing and consuming periodic disclosure. To the extent the Proposal rests on issuer compliance burden, that burden is declining as automated drafting, tagging, and review tools mature; to
the extent it rests on investors' capacity to absorb information, that capacity is expanding. The premise
that quarterly reporting imposes an unsustainable cost is weakening over time. The analysis should reflect current and foreseeable technological conditions.10
Recent market research conducted by the CFA Institute indicates a lack of support from investors for this proposed change: a survey of 2,500 investment analysts and portfolio managers found that investors continue to view quarterly reporting as essential to transparency and efficient markets, with 62% opposing replacement of quarterly reporting with semiannual reporting and 63% concluding that
the benefits of quarterly reporting exceed its costs.11 These results raise the concern that the Proposal's
cost benefit analysis did not adequately consider the full costs it imposes on investors.
IV. Conclusion
For the reasons above, the PRI urges the Commission to preserve mandatory quarterly reporting. Before
advancing this or further reforms to the disclosure regime, we encourage the Commission to engage directly with the market actors who rely on these disclosures—asset owners, asset managers, service
providers, and the analysts and other market actors that participate in price discovery—including through a public roundtable and structured empirical investigation into what information investors use,
how they use it, and whether voluntary mechanisms can substitute for mandatory disclosure.
We appreciate the opportunity to share these perspectives and look forward to reviewing any proposal
the Commission releases. Please do not hesitate to reach out to Sam VanderMeulen at sam.vandermeulen@unpri.org if you have any questions or if it would be helpful to meet with Commission staff to discuss the matters raised herein.
Respectfully submitted,
Cambria Allen-Ratzlaff,

Disclosure Requirements.

Carl — Jul 6, 2026
Subject: File No. S7-2026-15 From: Carl Halving the quarterly reports give corporate management more time to hide mismanagement or fraud. I see no reason to do this. Management convenience is no reason to reduce transparency. I suggest that insiders somehow will find out about problems, where other investors will not. I am no insider. This gives them an unfair advantage. I This may damage my 403 B and my other investments. and they will gain from my loss.

Carmela Risola None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Carmela Risola I am vehemently AGAINST proposal S-72026-15. Were this proposal be approved it would adversely affect a private citizens management of their own retirement investments. In this day and age most reporting is generated by Artificial Intelligence, therefore the "Argument" that it would be too expensive does not hold water. Reporting quarterly allows better control on the ability to plan for the long term. Please reconsider this dangerous proposal.

Carol Siebert — Jul 6, 2026
Subject: File No. S7-2026-15 From: Carol Siebert NO to all proposed changes. A lot can change in 6 months. Shareholders and potential investors need current information. The proposed changes are anti-small shareholder, anti investor, and run counter to transparency. Just NO!!!

Carol Sim — Jul 6, 2026
Subject: File No. S7-2026-15 From: Carol Sim Please keep reporting quarterly. As a former CEO, I know how much can change in a quarter. Transparency, timeliness, and integrity are critical, and private individuals investing in companies should be able to have quality information available in a timely manner.

Carol Tansey Octegenarian — Jul 6, 2026
Subject: File No. S7-2026-15 From: Carol Tansey Hold on to quarterly reports: don't change what's not broken. Otherwise, you are risking/inviting a repeated Enron! I am a retired teacher + a grandmother, i.e., an accomplished/savvy generalist -

---

Caroline G Cauchi — Jul 6, 2026
Subject: File No. S7-2026-15 From: Caroline G Cauchi I am writing to formally voice my strong objection to the Commission’s proposal to permit public companies to replace quarterly Form 10-Q filings with semiannual reporting on the proposed Form 10-S. As a retail investor deeply concerned with the long-term health of retirement savings—including 401(k) plans, IRAs, and pension funds—I believe this reduction in financial transparency will significantly elevate market risk, diminish investor protections, and ultimately harm the hard-earned retirement security of millions of everyday Americans. In addition, Mutual fund and institutional managers who handle 401(k) allocations will be forced to reallocate capital based on outdated or speculative data.

Carrie Devorah, DTM SEC Requested Financial Client Non Industry whistleblower — Jul 6, 2026
Subject: File No. S7-2026-15 From: Carrie Devorah, DTM The premise of this Comment soliciting input on "semi annual" reporting is a fraud, I already am in the record with to the SEC Employees, Law Enforcement even Legislators. I exposed the SEC agency and its employees have no oversight of companies, people ie those named daily in the SEC NOCAs. The SEC oversight is of Securities Broker Dealer firms, only and holding companies registered with the SEC regulatory agency. The SEC Regulatory Agency and SEC Employees have absolutely no oversight of companies, company employees, company products, no oversight of any or all financial advisory firms, investment advisory employees, independent contractors and financial clients, a point I have made consistently and repeatedly since August 12, 2010 when the SEC made internal record of my contact to them affirmed in internal documents. I exposed the SEC is Enforcement only not Law Enforcement. Pretending to be a Cop is a Crime. This comment solicitation affirms what I have been saying in to the record- the SEC employees are scamming. Question is where is the money the "SEC" (short name) has been collecting? Ohhhh, I got the answer to that question in my whistleblower record, too. I am in record on the record, still, demanding my whistleblower awards the SEC Employees confirmed to me are to be paid out at 30%. It's all about the moving of money...

Catherine Callan — Jul 6, 2026

Vanessa A. Countryman
Secretary
Securities and Exchange Commission
100 F Street, NE
Washington, DC 20549
Re: File No. S7-2026-15; Semiannual Reporting
Dear Ms. Countryman:
CBIZ CPAs P.C. ("CBIZ") appreciates the opportunity to comment on the Securities and Exchange Commission's (the "Commission" or "SEC") proposal, Semiannual Reporting (the "Proposal" or the "Proposed Amendments"). CBIZ is a national accounting firm that serves a broad range of public and
private companies across industries, including smaller issuers, emerging growth companies, and more
mature reporting companies. We support the Commission's objective of promoting access to the public
markets and reducing unnecessary complexity in the reporting framework.

We are not expressing a point of view on whether the Commission should allow companies to file semiannual reports in lieu of quarterly reports as investors and preparers are in the best position to provide
perspectives on this Proposal. Our comments below reflect some observations we have as auditors on the
potential implications of allowing such flexibility. Additionally, we have addressed certain specific questions that were included in the Proposal based on our experiences as auditors of public companies.
Regardless of whether the Commission allows for this optionality, we believe that there are a number of
benefits of reporting on a routine cadence to both management and investors. These include:
• Instilling discipline and rigor in management's financial reporting processes – including closing the books, preparing disclosures, and ensuring the information can withstand scrutiny every quarter.
• Encouraging registrants to pay continuous attention to accounting judgments, estimates and controls
which may help in preparing the annual financial statements.
• Helping auditors perform iterative, interactive risk assessments and issue identification, improving audit quality over the full year.

The work that we perform in connection with quarterly reviews of financial statements in Form 10-Q assists us in performing the audit of the annual financial statements. Please see Question 24 for further
discussion on the nature and extent of procedures that an independent public accountant may perform
during a review over a fiscal semiannual period or a fiscal quarterly period.
We expect that a number of companies that elect to file Form 10-S will provide quarterly information. Some companies may present this information in a format or level of detail that does not comply with GAAP while other companies may present interim financial statements that do comply with GAAP and
have been reviewed by the auditor as described in S-X Rule 10-01(d). To distinguish quarterly financial
statements that intend to comply with GAAP from quarterly information that does not intend to comply
with GAAP, we recommend that the Commission consider creating a separate section of Form 8-K – Item
2.07 Quarterly Financial Statements, for companies that prepare GAAP compliant interim financial statements. This information would be considered filed versus furnished. Item 2.07 would only be available to companies that elect to be a semiannual filer. See our response to Question 10 in the Appendix
for further discussion.
We believe that investors benefit from the auditors' review of interim financial statements/ information.
Some companies may provide quarterly information that does not comply with GAAP but will want to be
able to indicate that the auditor has reviewed such information. Alternatively, the SEC may want to require
that this information be reviewed by the auditor. We believe that if the auditor is to provide some form of
review over quarterly financial information that does not comply with GAAP that the PCAOB should

develop specific guidance. See our response to Question 10 in the Appendix for further discussion.
In circumstances where companies that elect to file on Form 10-S provide quarterly information in some
form and include it under Item 2.02 of Form 8-K and also include or incorporate that information into a
registration statement, there could be occasions when this information, which may or may not be a full set
of financial statements that comply with GAAP, will reflect a change in accounting principle, discontinued
operations, or a reorganization of entities under common control. If these companies that elect to provide
quarterly information had filed that quarterly information on Form 10-Q, it would be considered a material
change and the company would need to restate its annual financial statements prior to filing its next annual
report on Form 10-K1 It is unclear whether this also would be considered a material change for those
companies that elect to use Form 10-S and provide quarterly information in Item 2.02 of Form 8-K. We
believe the adopting release should address these potential situations and be clear about the need to restate
previously issued financial statements under situations in which the financial information complies with
the interim financial statements under GAAP and those situations in which the financial information does
not purport to comply with GAAP. See our response to Question 18 in the Appendix for further discussion.
Our responses to certain questions raised in the Proposal can be found in the Appendix.
******
1 See Item 11(b) of Form S-3.

We would welcome the opportunity to discuss these comments further or to engage with the Commission
and its staff on these matters. If you have any questions or would like to discuss our views further, please
contact Chief Quality Officer Adam Clark (Adam.Clark@cbiz.com) or National Director of Accounting
Standards Melissa Henry Melissa.Henry@cbiz.com).
Very truly yours,
CBIZ CPAs P.C.
By email: rule-comments@sec.gov
Appendix
Responses to Certain Questions Raised in the Proposal
In addition to the above observations, we offer responses to various aspects of the following questions in
our capacity as the auditor of public companies. While we are not expressing a view on whether the
Commission should allow the option of semiannual reporting in lieu of quarterly reporting, our comments
address some issues that the Commission should consider if they make this change.
5. We are proposing that the filing deadlines for semiannual reports on Form 10-S be the same as for

quarterly reports on Form 10-Q. Should the filing deadline for semiannual reports on Form 10-S be longer or shorter than proposed? If so, what would be an appropriate filing deadline? Do companies need more time to prepare semiannual reports than quarterly reports and if so, why? Should smaller public companies, newly public companies, or emerging growth companies be afforded a longer filing
deadline for Form 10-S to allow for additional time to consult with their accountants and advisers?
As the contents of Form 10-Q and Form 10-S are substantially the same, we believe the filing deadlines
should be the same.
We note that in footnote 242 of the proposal "Enhancements of Emerging Growth Company Accommodations and Simplification of Filer Status for Reporting Companies" - Securities Act Release
No. 11419 - that smaller non-accelerated filers would have an additional five days to file Form 10-S. If
Form 10-S and the concept of a smaller non-accelerated filer is adopted as proposed, we agree that they
should have the five additional days for Form 10-S.
Additionally, it has been our experience that the change from being a private company to a public company, whether due to the completion of a traditional Initial Public Offering, de-SPAC transaction, reverse merger or other structures, can place stress on management to comply with the public company
interim reporting requirements. We believe it would be appropriate to provide newly public companies,
as that term is used in Instruction 1 to Item 308 of Regulation S-K, additional time to file. Such an accommodation would be consistent with the Commission's other initiatives regarding providing accommodations as part of an "on ramp" in connection with being subject to the Exchange Act reporting
requirements.
8. Should the check box that indicates a company has elected semiannual reporting be added to registration statements on Forms 10, S-1, S-3, S-4, and S-11 and annual reports on Form 10-K as proposed? Should we add a similar check box to any other forms, including Forms 1-A or 8-A? If so, why?
While we believe it is acceptable to include the check box on all of the indicated forms, it is not clear when it would be applicable to include on Forms S-3 and 8-A as those forms would not be used as an
initial filing and it would appear that the company would have previously made its election for the year
via another Form.
The Commission should consider whether the check box should be included on Form 8-K. Depending on
how the final rules are structured, we could envision it would be applicable for a transaction involving a
reverse acquisition or reverse recapitalization involving a shell company. In these situations, the legal
target company becomes the registrant for financial reporting purposes. We believe after such a transaction
that the new reporting entity should be able to make the determination whether they want to file on a quarterly basis or semiannual basis. We do not believe they should be constrained by the historical election
of the legal registrant, which will no longer be the registrant for financial reporting purposes.
10. Our proposal would require reporting companies that elect to file semiannual reports to continue with that interim reporting frequency for the rest of the fiscal year in which the election was made.

Therefore, companies would not be allowed to file a semiannual report on Form 10-S for the first six months of a fiscal year and then file a quarterly report for the third quarter for that fiscal year. Likewise,
companies would not be allowed to file a quarterly report on Form 10-Q for the first quarter of a fiscal year, file a semiannual report on Form 10-S for the first six months for that fiscal year, and not file a quarterly report on Form 10-Q for the third fiscal quarter. Would this proposed approach help avoid potential confusion that could be caused by changes in interim reporting frequency during a fiscal year? Is it necessary to add any language to the proposed rules to make more explicit the requirement
to maintain the selected frequency for the full fiscal year? Rather than the proposed approach, should
we allow: (1) semiannual filers and quarterly filers to make a change in interim reporting frequency during the fiscal year, or (2) only semiannual filers to switch to filing quarterly reports during the fiscal year? Should issuers that elect semiannual reporting be required to commit to that disclosure frequency
for a certain period of time? Why or why not?
The Commission could consider allowing a company to make an election once and that election stays in
place until the company invokes a new frequency – which would only be allowed once a year – before the
Form 10-Q for the first quarter would otherwise be due.
If a company elects to report semiannually and file Form 10-S but also wants to provide the market with
information on a quarterly basis, it can file the information on Form 8-K, as noted above. Based on the
Proposal, they would be considered a “hybrid reporter.”
Currently, most companies issue press releases with limited interim information and furnish that information under Item 2.02 of Form 8-K. There may be times when a company that has elected to file on
Form 10-S will want to issue full interim financial statements that comply with Financial Accounting Standards Board (“FASB“) ASC 270 Interim Reporting (“ASC 270”) and S-X Rules 10-01 and 8-03, as
applicable, for a quarterly period (e.g., when filing a registration statement). That is, they would want to
provide the same financial statements that would be included in Form 10-Q.
We expect companies that want to provide quarterly information will furnish that information under Item
2.02 of Form 8-K. We believe it would be beneficial for investors to be able to easily distinguish quarterly
information that is intended to comply with GAAP and S-X 10-01/S-X 8-03 from quarterly information that is not intended to comply with this requirement. To address this situation, we recommend that the
Commission consider expanding Form 8-K to include a new item – Item 2.07 Quarterly Financial Statements.
Information submitted under this item would be filed, not furnished, and would need to comply with (1)
S-X Rules 10-01 or 8-03, as applicable, and ASC 270 and (2) include Management’s Discussion and Analysis of Financial Condition and Results of Operations for the applicable periods that are presented.
Information about Quantitative and Qualitative Disclosures About Market Risk required by Item 305 of
Regulation S-K and Control and Procedures required by Item 307 and 308(c) of Regulation S-K can,

of
course, be provided but would not be required under this item. If the company elects to provide information under this new item, the financial statements will need to be reviewed by an independent public accountant in the same manner as required by S-X Rule 10-01(d) or S-X Rule 8-03, as applicable.
This information would only be provided by companies that elected to be a semiannual filer and for a particular reason want to file complete interim financial statements in accordance with GAAP.
Alternatively, the Commission could expand Item 2.02 of Form 8-K to create a special provision for when
a company elects to provide full GAAP compliant interim financial statements.
This distinction would also be helpful if the company prepares financial information after it has adopted
a new accounting principle, entered into a transaction that will be accounted for as a discontinued operation or entered into a transaction that will be accounted for as a reorganization of entities under common control. See Question 18 below.
11. Do companies that have newly become a public company (e.g., through an initial public offering, de-SPAC transaction, or direct listing) need to have greater flexibility for switching interim reporting frequency within a fiscal year? For example, a private company that elected semiannual reporting in a
Form S-1 for an initial public offering could subsequently decide that quarterly reporting is preferable (e.g., to promote greater trading liquidity by increasing the frequency of its interim reporting) and wish
to switch to quarterly reporting for the rest of the fiscal year. Should we allow such newly public companies to switch the interim reporting frequency within a fiscal year?
It is important to note that in certain situations such as a de-SPAC transaction or reverse acquisition the
financial reporting entity has changed – the financial statements of the entity that was the legal target will
become the financial statements of the registrant. In most instances management has also changed. The
new management, including those charged with governance, may have a different perspective from the
previous management regarding the frequency of interim reporting. In these situations, the election on the
frequency of interim reporting should be allowed to be changed within a reasonable period after such an
event has been consummated.
18. What is the likelihood that companies that elect semiannual reporting will continue to issue quarterly earnings releases (to the extent they did so previously when they reported quarterly)? Why would semiannual filers still issue earnings releases on a quarterly basis? Would this practice create any new or heightened investor protection concerns? For example, would there be any new investor protection concerns if an Exchange Act reporting company with a December 31 year-end elects to file
semiannual reports and issues an earnings release for the first quarter of the fiscal year, with the semiannual report for the first six months of the fiscal year (which includes that first quarter) not due until months later (e.g., in August of that fiscal year)? Would companies that currently issue quarterly earnings releases but elect to become semiannual filers change their earnings release practices either:
(1) to issue earnings releases semiannually, or (2) to cease issuing earnings releases? Please provide
any data or analysis regarding any experience with earnings releases in foreign jurisdictions where issuers report semiannually.

Based on our experiences as auditors of public companies, we offer the following perspectives for those situations in which a hybrid reporting company elects to provide quarterly information. See also our response to Question 10.

A company that elects to file Form 10-S but also wants to provide more current information, either quarterly or year to date, may furnish such information under Item 2.02 of Form 8-K. In this situation, if there is an accounting change made either voluntarily or in response to a standard adopted by the FASB, discontinued operations, a reorganization of entities under common control, or a stock split or reverse stock split, the financial information in Item 2.02 of Form 8-K will not be comparable to the most recent information that has been filed, either on Form 10-K or Form 10-S.

We believe that in this situation the company should be required to provide sufficient information to allow an investor to understand the implications to the historically issued financial statements and the lack of comparability to the financial information in Item 2.02 of Form 10-K and to keep the information that is presented from being misleading. While perhaps this incremental disclosure would be required by Rule 10b-5 of the Exchange Act (this would be a legal matter and we are not expressing a point of view), we recommend that Item 2.02 of Form 8-K be expanded to explicitly address this situation. While this issue can exist today, companies would be filing a Form 10-Q that reflects the change shortly after furnishing Item 2.02 Form 8-K with all the applicable disclosure about the accounting event, so its practical implications are limited.

Additionally, if such financial statements were included on a Form 10-Q and included or incorporated into a registration statement, it would constitute a material change – see Item 11(b) of Form S-3 - and the audited financial statements would need to be restated to present the financial statements on a consistent basis.2

The publication of financial information that is less in scope than required by GAAP does not constitute the issuance of financial statements.3 Assuming this information is less in scope than required to constitute the issuance of financial statements in accordance with GAAP, it would not appear restated audited annual financial statements and possibly interim financial statements for a semiannual filer under Item 11(b) of Form S-3 would need to be provided. However, as this situation did not exist in the past, this point is not clear.

We recommend that the adopting release address this point – especially if the Commission views that the issuance of financial information that is less than full financial statements required by GAAP would constitute a material change that would require the annual, and if applicable the semiannual financial statements, to be restated to be presented on a consistent basis with the information that was

included in
the Item 2.02 Form 8-K.4
We envision that some hybrid reporting companies may, for various reasons, want to issue full interim
financial statements that comply with the applicable requirement in Regulation S-X and GAAP. Assuming
the same fact pattern as described above except for the fact that the financial statements comply with
Regulation S-X and GAAP, it is not clear whether the inclusion of those financial statements under Item
2.02 of Form 8-K that are incorporated into a registration statement would be viewed as a material change
under Item 11(b) of Form S-3 and require previously issued financial statements to be restated so there is
a consistent presentation.
We believe in this fact pattern that the previously issued financial statements would need to be restated to
be presented on a consistent basis with the interim financial statements that are included in or incorporated
into the registration statement. As such, the requirement to restate the audited financial statements should
be the same regardless of whether the Regulation S-X and GAAP compliant financial statements are
included on Form 10-Q or Item 2.02 of Form 8-K. We encourage the Commission to address this point in
the adopting release.
2 As indicated in Section 13500 of the Division of Corporation Finance's Financial Reporting Manual, Stock Splits,
"[O]rdinarily, the sta would not require retrospective revision of previously filed financial statements that are
incorporated by reference into a registration or proxy statement for reasons solely attributable to a stock split. Instead,
the registration or proxy statement may include disclosure of relevant per share information for all periods, with the
stock split prominently disclosed."
3 See ASC 855-10-S99-2.
4 For example, assume the company is a semiannual filer and files a Form 10-S for the six months ended June 30, 2026.
The company presents financial information for the nine months ended September 30, 2026, that is not a complete
financial statement under GAAP that reflects discontinued operations. The company furnishes the nine month
information under Item 2.02 of Form 8-K and incorporates the 8-K into a Form S-3. It is not clear whether the company
would be required to restate the annual and interim financial statements in Form 10-K and Form 10-S, respectively.
See also our response to Question 10 regarding creating a new Item in Form 8-K - Item 2.07 - for situations
in which the Company elects to provide interim financial statements that comply with GAAP.
20. In connection with any adoption of the proposal, should there be a new requirement for semiannual
filers that announce or release earnings for the first or third quarters of their fiscal year (i.e., the periods

that would later be subsumed in Forms 10-S and 10-K but for which there would be no quarterly report
filed with the Commission)—that financial information in any first or third quarter earnings releases be reviewed by an independent public accountant? If so, would any changes to current auditing standards (e.g., governing reviews) be required?
If the SEC were to require some level of auditor review or involvement with the earnings release, we would adapt to the needs of the market. However, assuming the earnings release contains financial information that does not constitute full financial statements prepared in accordance with GAAP, we recommend that the PCAOB develop guidance for the procedures that should be performed in those situations. We do not believe that the current procedures in AS 4105 contemplate a situation where the
auditor would perform a review – or some other procedures - when the financial information presented is
less in scope than financial statements that comply with GAAP.
If this information is required to be reviewed by Commission rule, investors may erroneously believe that
the auditor is concluding on the adequacy of the disclosure for the interim period. If the Commission were
to make such a requirement, we believe the rule should be clear that the auditor is not concluding on the
adequacy of the disclosure that a company elects to present.
24. Would the nature and extent of procedures that an independent public accountant performs during
a review change depending upon whether the independent public accountant is performing a review over a fiscal semiannual period or a fiscal quarterly period? Would independent public accountants conducting reviews do the same amount of work for a fiscal semiannual period as they currently do for
two quarterly fiscal periods on a combined basis? Would an independent public accountant experience
any impact on efficiency or economies of scale when conducting reviews and annual audits under semiannual reporting versus under quarterly reporting for the same company? Would any changes to
independent public accountants' review or audit procedures or any impact on efficiency or economies
of scale result in changes in costs to companies? If so, describe the impact and whether the impact could vary depending upon the size of the registrant subject to the review.
The requirements in AS 4105 would be the same if performing a review for a semiannual period or a quarterly period.
The extent of the potential differences will vary among registrants based on factors such as the size of the
registrant, complexity of the business, nature and scope of unusual transactions, control environment, and
a number of other factors.
At the risk of oversimplifying, we would expect that the work performed for the six-month period would
be less than the combined work performed for the first and second quarters, but more than would be performed for the second quarter for a 10-Q filer. The simple fact that procedures cover a period that is
twice as long means that there will likely be more issues that need to be addressed, and the work will take
longer. Additionally, we believe that if a company does not prepare third-quarter information, it is likely

that there could be greater costs in connection with the annual audit and if a company does not prepare
first quarter information there could be greater costs in connection with a review of the first half of the
year.
Performing work on both interim and annual periods builds on the cumulative information that the auditor
has obtained. By way of example, if the auditor has addressed certain developments, including unusual
transactions, during the first quarter there will be less work that will need to be performed when performing a review of the six-month information.
Likewise, if there is no review performed on the third quarter, there is a greater chance that the auditor
will need to perform additional procedures in connection with the annual audit. There also will be fewer
opportunities to address and resolve issues before the audit of the year end information which would impact efficiency.
25. Would companies that elect semiannual reporting retain their independent public accountant to perform a review of their financial statements at the end of each quarter either to: (1) support financial
information that is used for purposes of a quarterly earnings release (notwithstanding that, as noted above, there is no Commission requirement for a quarterly earnings release to be reviewed by an independent public accountant), or (2) guard against the possible need for a quarterly review to be performed should the company decide to change back to quarterly reporting in a future period (where
that period would require comparative quarterly data for the prior year)?
Companies would be in the best position to determine if they would retain the auditor to perform review
procedures to support quarterly information. However, we believe a company benefits, and therefore investors benefit, when we are engaged and consulted throughout the year and not just in connection with
the issuance of annual financial statements. The sooner we can identify or be advised of potential issues,
either in financial reporting, internal controls, or complex audit issues, the greater the benefit to a company
and in turn its investors.
26. For semiannual filers, what impact would a shift to semiannual reporting have on: (1) companies' disclosure controls and procedures, (2) companies' internal control over financial reporting, and (3) independent public accountants' strategy and approach for the annual audit of companies' internal control over financial reporting or financial statements? With semiannual reporting, is there a potential
for a material increase in the risk that material misstatements (either due to error or fraud) or control deficiencies are not timely detected by or communicated to the independent public accountant thereby
limiting potential remediation of these issues by the issuer? Please provide any data related to these questions.
Taking each item in order, presented below are our views of the impact for semiannual filers on:
Disclosure controls and procedures. The frequency of the operation of these controls may change (semiannual vs. quarterly), but the design of these controls is likely not impacted by a change from quarterly to semiannual reporting.
Internal Control over Financial Reporting (ICFR). Controls operate at varying frequencies depending on the company and the nature of the control. Some controls may operate on a daily basis while

others
may operate on a monthly, quarterly, or annual basis. There may be a risk that a change in frequency
of interim reporting could result in certain controls being performed less often, which may impact a company's ability to demonstrate timely remediation of previously identified deficiencies and/or material weaknesses in internal control and, consequently, result in the reporting of material weaknesses for a moderately longer period of time than under the current quarterly reporting framework. However, even if a company shifts to semiannual reporting, management may still elect to continue performing its period-end financial reporting controls on a more frequent basis.
Independent public accountants' strategy and approach for the annual audit of the company's ICFR. The timing and extent of the public accountant's testing of ICFR is a result of the timing and frequency
of management's controls. If management changes the timing and frequency of their controls, there would be a necessary impact on the audit strategy and approach.
Independent public accountants' strategy and approach for the annual audit of the company's financial
statements. Please see the response to Question 24.
Regarding the potential for a material increase in the risk that material misstatements (either due to error
or fraud) or control deficiencies are not timely detected by or communicated to the auditor, less frequent
reporting would not preclude the auditor from performing work during the year on either ICFR or the financial statements. Obviously, the company would have to be a willing partner in this approach. If work
continues to be performed during the year, interim testing could result in more timely detection of the control deficiencies and material misstatements. However, if interim review procedures are not performed
as frequently, there is risk that it may take longer for the auditor to detect material misstatements and
control deficiencies. In addition, the ability to remediate control deficiencies is based on the timing and
frequency of management's controls. There may be fewer opportunities for the auditor and management
to timely identify or remediate control deficiencies if management's controls are performed less frequently.
27. Would there be reduced securities analyst coverage of Exchange Act reporting companies that elect
the semiannual reporting option as compared to quarterly filers? Would underwriters' requests for independent public accountants to provide "comfort letters" in securities offerings (to support potential
due diligence defenses) lead semiannual filers to continue to retain independent public accountants to
conduct quarterly financial statement reviews? If so, are changes needed to PCAOB Auditing Standards (regarding reviews by independent public accountants)? For example, to comport with semiannual reporting, are changes needed to PCAOB Auditing Standard 6101, Letters for Underwriters and Certain Other Requesting Parties, to permit independent public accountants to provide comfort letters expressing negative assurance on changes subsequent to the date and period of
the latest financial statements included (or incorporated by reference) in the registration statement? If
semiannual filers would continue to prepare quarterly financial information or to retain independent public accountants to conduct quarterly reviews, should the Commission make any rule changes or

take any other steps to address this issue?
We are not in a position to address the first question.
As we have previously mentioned, if a company provides less than complete financial statements that do
not comply with GAAP, it would be helpful if the PCAOB were to develop procedures that should be performed in such circumstances. If a semiannual filer elects to prepare and include either three months
or nine months of information in a registration statement and such financial statements comply with GAAP, we do not believe there should be any unique issues regarding our ability to provide limited assurance. This assumes that 135 days or more have not passed since the end of the most recent period
that financial statements are presented in the registration statement.
If 135 or more days have passed since the end of the most recent financial statements, we are still able to
issue a comfort letter, but, based on the guidance in PCAOB Auditing Standard 6101. Letters for Underwriters and Certain Other Requesting Parties ("AS 6101"), we would be precluded from providing
negative assurance regarding subsequent changes in specified financial statement items. We would be
limited to reporting procedures and findings obtained. This requirement does not prevent an offering from
being completed. However, the underwriters, based on their judgment, could elect to delay an offering
until more current financial information is included in the registration statement, and negative assurance
can be provided.
Provisions similar to the ones in AS 6101 have existed in AICPA standards since at least February 1993.
While we could not determine the reason for the 135 days, we speculate it relates to the age of financial
statement requirements at the time. If the PCAOB were to propose amendments to AS 6101 to change the
135-day period, we would need to evaluate whether it would be appropriate to provide negative assurance
on subsequent changes in specified financial items if this period were extended to 225 days (calculated
based on the likely cadence that would result if a registrant reported on a semiannual basis).
If the Commission adopts the proposed amendments and it is concluded that the period on which negative
assurance can be provided should not be changed to reflect semiannual reporting, we still recommend
some changes to the 135-day requirement in AS 6101. We believe this should be done to reflect the proposed change in the age of financial statement requirements that align the staleness of the financial
statements with the Exchange Act. We recommend that the PCAOB consider modifying this requirement
so negative assurance on a change period can be provided as long as the period does not go past the date
the company would be required to file its quarterly report - if it was a quarterly reporting company or would be current if it was subject to Exchange Act reporting as a quarterly filer (e.g., an Initial Public Offering) – not taking into consideration any extension pursuant to Rule 12b-25.
These changes can be done by aligning AS 6101 with the Exchange Act reporting requirements for

domestic companies or, alternatively, and perhaps simpler, it could be done by changing the number of
days in AS 6101 that negative assurance on a change period could be provided to correspond to the maximum number of days subsequent to the date and period of the latest financial statements that are part
of the registration statement and when a quarterly filer would be required to file Form 10-Q. This should
include the additional five days for a small non-accelerated filer as that term is used in the Commission's
proposal Enhancement of Emerging Growth Company Accommodations and Simplification of Filer Status
for Reporting Companies Securities Act Release No. 11419.
The period between the financial statements for the third quarter and when the annual report is due could
be approximately 182 days. At this time, we are not expressing a point of view on whether the period in
which negative assurance on the change period in AS 6101 can be provided should be extended to create
complete symmetry with the Exchange Act reporting requirements.
28. Would our proposal have any impact on a semiannual filer's application of relevant accounting standards to prepare financial statements in accordance with U.S. GAAP, IFRS, or home-country GAAP? How? Are any changes to accounting standards, including U.S. GAAP or IFRS, necessary or
appropriate to effectuate semiannual reporting (e.g., changes to the guidance on annual impairment testing, lag reporting, earnings per share, or other topics of authoritative guidance)?
Generally, we do not believe there would need to be significant changes to GAAP if the Commission adopted semiannual reporting, ASC 270 can be applied to any period. See the excerpt below:
270-10-05-1
The Interim Reporting Topic clarifies the application of accounting principles and reporting practices to interim financial information, including interim financial statements and summarized interim financial data of publicly traded companies issued for external reporting purposes.
Interim financial information may include current data during a fiscal year on financial position, results of operations, comprehensive income, and cash flows. This information may be issued on a monthly or quarterly basis or at other intervals and may take the form of either complete financial statements or summarized financial data. Interim financial information often is provided for each interim period or on a cumulative year-to-date basis, or both, and for the corresponding periods of the preceding year.
There have been many examples of companies conducting initial registration statements with interim financial statements for a six-month period that comply with GAAP with no quarterly information. However, there are a few items that the FASB could address either through potential rulemaking or interpretive guidance:
• ASC 270-10-50-2 requires disclosure of material fourth quarter matters in the annual financial statements. For those companies that elect semiannual reporting, should this disclosure include the second half of the fiscal year?
• Investee information can be reported on a lag of one quarter. Should this be changed for semiannual
filers to allow for a longer period?
• A number of calculations in the earnings per share guidance are based on quarterly reporting. Is additional guidance required for those companies that elect semiannual reporting?
35. Should the Commission adopt the proposed amendments to Regulation S-X to effectuate semiannual reporting? Are there any other changes beyond those proposed that the Commission should

make to Regulation S-X to effectuate semiannual reporting?
Should the SEC adopt the Proposed Amendments on optional semiannual reporting, we agree with the
proposed changes to Regulation S-X. Additionally, the SEC should evaluate if there should be amendments to Regulation S-X for the following items.
• It is not clear whether the interim financial statements of an acquired or to be acquired business, which
are required under S-X Rule 3-05 and Form S-4, respectively, would be required to follow the frequency of interim reporting that is elected by the registrant or would they be allowed to select a different period? This situation can exist when the target company is private as well as when it is a public company that may have made an election that is different from the registrant. For example, if the registrant is a quarterly filer and acquires a business that is a semiannual filer, will the semiannual
filer be required to prepare interim financial statements as if they were a quarterly filer to conform to the registrant?
• If the registrant and acquired company have different frequency of reporting interim information, e.g.,
the registrant is a quarterly filer, and the target company is a semiannual filer, it is not clear from the Proposed Amendments how pro forma information should be prepared. It could be assumed that consistent with principles of preparing pro forma information, the pro forma information should be prepared on a basis consistent with the registrant. This may require the target company to prepare interim information that would not otherwise be required.5 We recommend that the adopting release make this clear if that was the Commission's intent.
• S-X Rule 11-02(c)(3) states that pro forma information must be presented using the registrant's fiscal
year end. If the most recent fiscal year end of any other entities involved in the transaction differs from
the registrant's most recent fiscal year by more than one fiscal quarter, the other entity's statement of comprehensive income must be brought up to within one fiscal quarter. This concept is not required to be changed if the Commission accepts semiannual reporting.6 However, the Commission should consider if the rules should be modified to prevent companies from needing to prepare interim financial statements solely to comply with this provision that would not otherwise be required.
36. In connection with registration and proxy statements, are the proposed changes to Regulation S-X
necessary to take into account semiannual reporting? If the proposed changes to Regulation S-X were
not made and the relevant rules remained structured around quarterly reporting, would this have a negative impact on semiannual filers seeking to raise capital or solicit proxies?
Should the SEC adopt the Proposed Amendments on optional semiannual reporting, we believe the proposed changes to Regulation S-X should be made.
38. Should we change how the age of financial statements in a registration statement is determined in
order to precisely align with the deadlines of Exchange Act reporting requirements as proposed? Would
our proposed changes to consolidate Rule 3-12 into Rule 3-01 help to streamline Regulation S-X's requirements so that they are easier for registrants to apply?
We support the proposed changes to align the age of financial statements with the deadlines of Exchange
Act reporting. This change would eliminate what we view as an unnecessary complexity. We also support
the changes to consolidate S-X Rules 3-12 into S-X Rule 3-01.
39. Should we have the deadlines that apply at the time of filing and that apply at the time of

effectiveness (for registration statements) or mailing (for proxy statements) centrally located in the same rule as we propose? Why or why not? With respect to this dual role the revised Rule 3-01 would
serve, does new paragraph (a) make clear to registrants that—in considering what age requirements apply with respect to effectiveness or mailing—they should substitute effectiveness or mailing dates for
the filing dates explicitly mentioned in the rule?
We support the central location of the age of financial statements in S-X Rule 3-01 and believe the language is clear.
40. Instead of the amendments we propose, should we retain the current 135-day age requirement for
quarterly filers and adopt a 225-day age requirement for semiannual filers—even if that means semiannual filers may have to update one or two days sooner than quarterly filers? Why or why not?
5 When a domestic company acquires a foreign private issuer, the foreign private issuer may need to provide financial
information for purposes of pro forma information that is more current than is required for its own financial statements.
6 While not common in practice, if a domestic company acquires a foreign private issuer that has a fiscal year end that
di ers from the domestic company the foreign private issuer is still required to be brought up to within one fiscal quarter.
This may require the foreign private issuer to prepare interim financial information that is more current than otherwise
required as acknowledged in Instruction 1 to S-X Rule 11-02(c)(3).
We recommend that the wording as proposed be implemented. As indicated in our response to Question
38, we believe that aligning the age of financial statements in Securities Act filings with the deadlines of
Exchange Act reporting is logical and eliminates unnecessary complexity in financial reporting.
42. Are there any other changes needed to simplify the age of financial statement requirements? Are there any other changes we should make to reduce the compliance burdens associated with Regulation
S-X's requirements in connection with proposed optional semiannual reporting?
While not part of the Proposal, we note the proposed changes to S-X Rule 3-01(c) and S-X Rule 8-08(b)
that are part of the proposal Registered Offering Reform Securities Act Release No. 11418, and we agree
with those proposed changes.
43. Should we adopt changes to Rule 10-01 and Rule 8-03 regarding the contents of interim financial
statements as proposed? Do the proposed amendments appropriately incorporate the reporting of semiannual periods on Form 10-S without changing how the interim financial statement rules apply to
a registrant reporting on Form 10-Q?
We agree with the proposed changes and believe they achieve the objective of consistent reporting.
44. When a registrant acquires a significant business, financial statements of that business are required
to be filed on Form 8-K and must comply with the age requirements of Rule 3- 01 at the date the initial
Form 8-K reporting the acquisition is filed. Depending on the timing of the acquisition, pre-acquisition interim financial information for upwards of six to nine months may never be required to be filed by semiannual filers. Should we require other financial information (e.g., summarized financial

information) to inform investors of pre-acquisition results of operations, financial condition, and cash flows of the acquiree beyond the information that would be required under Rule 3-01 as proposed to be
amended.
If the Commission determines to allow semiannual reporting, we believe that this gap between the last
balance sheet date and the acquisition date is simply a result of a longer reporting period for interim periods. We would not favor creating other reporting requirements that would result in different requirements addressing this gap for semi-annual reporters compared to a gap that exists today for quarterly reporters.

Certain Pharmaceutical Companies — Jul 6, 2026
July 6, 2026
Vanessa A. Countryman
Secretary
Securities and Exchange Commission
100 F Street NE
Washington, DC 20549-1090
RE: Certain Pharmaceutical Companies' Joint Response – Semiannual Reporting (File Number S7-2026-15)
Dear Ms. Countryman:
The pharmaceutical companies listed below (the "Companies") jointly submit this letter in support of the Securities and Exchange Commission's (the "Commission") proposed semiannual reporting rule. As public companies, including several with longstanding reporting practices, the Companies are well-positioned to offer perspective on how this proposal would function in practice.
Companies:
• Bristol Myers Squibb Company
• Eli Lilly and Company
• Gilead Sciences, Inc.
• Johnson & Johnson
• Merck & Co., Inc.
• Pfizer Inc.
• Roivant Sciences Ltd.
• Viatris Inc.
• Zoetis Inc
Summary
Collectively, we support providing issuers with the option to elect semiannual reporting and appreciate the Commission's continued commitment to reduce the regulatory burden of operating as a public company. If the proposal is adopted, some of our Companies currently anticipate electing semiannual reporting on Form 10-S while continuing to furnish voluntary quarterly earnings releases to keep investors informed. Fewer mandated periodic filings would reduce external costs and free up meaningful internal resources each year.
Additional Comments
In addition to the above, we offer the following additional comments:
• Timeline. The Companies welcome the earliest timeline that the Commission could reasonably accomplish, as early as the first quarter of 2027. With participation being voluntary, there is no need for a lengthy transition period.
• Eligibility. The Companies support broad eligibility. The optionality in the proposal

allows each issuer to exercise judgment on the disclosure cadence that best balances investor expectations and preparer reporting efforts.

• Earnings Release Treatment. Because earnings releases are voluntary communications rather than mandated filings, the Companies support retaining their furnished status.

Amendments to Regulation S-X and Comfort Letters

We support the Commission's proposed amendments to Regulation S-X to address the staleness requirement for financial statements in registration statements and ensure alignment with the new optional semiannual reporting approach. Amending the requirements governing the staleness of financial statements in registration statements is necessary to avoid a significant extended blackout period for semiannual filers' ability to access the capital markets.

In addition, we recommend that the SEC encourage the Public Company Accounting Oversight Board ("PCAOB") to similarly revise the 135-day staleness requirement contained in PCAOB Auditing Standard 6101, Letters for Underwriters and Certain Other Requesting Parties. The current standard generally prohibits PCAOB-registered audit firms from providing comfort letters on financial information older than 135-days.

These existing staleness thresholds would be an obstacle for companies who wish to adopt semiannual reporting.

Conclusion

The Companies believe this proposal is a meaningful step toward modernizing the financial reporting environment. Investors will continue to receive timely, material information through Regulation FD reporting practices including Form 8-K filings and, for most Companies, voluntary earnings releases — while issuers are provided the option to gain meaningful relief from the Form 10-Q administrative burden. We encourage the Commission to adopt the rule.

We are happy to discuss any aspect of these comments at the Commission's convenience.

Respectfully submitted,

CFP Board — Jul 6, 2026
BY ELECTRONIC SUBMISSION VIA www.sec.gov
July 6, 2026
Vanessa A. Countryman
Secretary
Securities and Exchange Commission
100 F Street NE
Washington, DC 20549-1090
Re: Semiannual Reporting, File Number S7-2026-15
Dear Ms. Countryman,
On behalf of CFP Board, we appreciate the opportunity to comment on the U.S. Securities and Exchange Commission's (SEC or Commission) proposal to permit companies to file semiannual reports on new Form 10-S instead of quarterly reports on Form 10-Q.1
CFP Board is the professional body that certifies more than 109,000 CERTIFIED FINANCIAL PLANNER® professionals in the United States. CFP Board, which consists of two affiliated non-profit organizations — the Certified Financial Planner Board of Standards, Inc. and the Certified Financial Planner Board of Standards Center for Financial Planning, Inc.
—
operates the CERTIFIED FINANCIAL PLANNER® certification program and is accredited by the National Commission for Certifying Agencies. Approximately one-third of all retail financial professionals are CFP® professionals, providing professional services to millions of American households and small businesses across all 50 states and several U.S. territories on behalf of investment advisers, broker-dealers, insurance companies, and other firms.
CFP Board respectfully urges the Commission to withdraw the rule proposal and retain mandatory quarterly reporting for public companies. CFP® professionals and the investors they serve rely on timely, standardized quarterly reports to make informed financial planning recommendations and decisions. Reducing that cadence would not meaningfully advance the Commission's stated goal of encouraging companies to go and stay public; instead, it would weaken transparency, widen information gaps between insiders and retail investors, and make it harder for retail investors and their financial professionals to assess risks and make timely and informed recommendations and decisions.
1 Semiannual Reporting, 91 Fed. Reg. 24,968 (May 7, 2026).
1425 K St NW #800 • Washington, DC 20005 • P 202-379-2200 • F 202-379-2299 • CFP.net
Quarterly Reporting Is Essential to Retail Investor Protection and Market Transparency
Retail investors participate in the public markets with far fewer resources than issuers,

executives, and sophisticated institutional actors. To participate fairly, they need timely, standardized, and comparable disclosures. Quarterly reports provide that checkpoint, helping investors assess performance, evaluate risk and liquidity concerns, consider operational weaknesses, and decide whether to buy, hold, or sell securities. Without that regularity, investors would face longer periods of uncertainty with less verified information.
Frequent mandatory disclosure is also essential for those providing advice to retail investors, like CFP® professionals. While many retail investors use mutual funds and other products, such as ETFs, that are managed by institutional advisers, others invest directly in securities, often with the help of financial professionals, like CERTIFIED FINANCIAL PLANNER® professionals. While financial professionals provide sophisticated analysis, they generally do not have access to the constant flow of information available to insiders and institutional investors. To the extent data can be purchased from private information providers, it may be less reliable, less standardized, and more difficult to verify than current SEC-mandated disclosures. Reliance on such data would also raise costs. Therefore, with less frequent mandatory disclosures, retail investors and their financial professionals may be disadvantaged.
Significantly, reducing the frequency of required reports would not eliminate investors' need for information; it would make that information less evenly distributed. Those harms would fall especially hard on retail investors, who depend more heavily on public filings than large institutional investors with broader access to management, analysts, and market signals. Without quarterly reporting, retail investors are on an unlevel playing field, with no reasonable way to get timely information about public companies.
Less Frequent Reporting Would Weaken Fraud Detection, Market Integrity, Corporate Accountability, and Regulatory Oversight
Less frequent reporting will also make misconduct harder to detect and easier to conceal. Although the proposal would not eliminate other disclosure obligations, such as current reporting on Form 8-K, it would reduce the number of regular, standardized, and audited filings through which investors and critical gatekeepers like analysts, credit ratings agencies, auditors, regulators, journalists, and market intermediaries can evaluate a company's performance, internal consistency, and risk profile. Longer gaps between reports make it harder to spot declining performance, accounting errors, or inconsistencies between management's statements and reported results and will increase uncertainty in credit assessments and market analysis. These gaps will compound the informational disadvantage retail investors already face and create more opportunities for bad actors to exploit uneven access to information through selective disclosure, delayed recognition of negative developments, or trading advantages before material information becomes public.

Extended periods without mandatory public updates also increase insider-trading risk by raising the value of nonpublic information and lengthening the window in which it can be exploited. Fewer reporting events may mean fewer trading blackout periods for corporate insiders, creating additional opportunities for those with material nonpublic information to trade. Even where unlawful insider trading is not established, a structure that widens the information gap between insiders and the public can erode confidence in market fairness and increase volatility when delayed information finally reaches the market.
Fewer reporting checkpoints would also weaken corporate accountability by reducing market discipline on management and limiting investors' ability to monitor performance and strategy execution in real time. Quarterly reporting provides a regular mechanism for the market to hold corporate leadership accountable. Removing that frequency benefits a narrow group of corporate insiders while diminishing oversight for other market participants.
The proposal also raises practical regulatory concerns. Fewer mandatory filings may

appear to reduce administrative burden, but they would also give regulators fewer opportunities to identify red flags, fewer standardized data points for comparative analysis, and less capacity to detect emerging risks before they escalate into investor harm.

The Proposal Will Create Inconsistencies in Disclosures Across Products and Markets

Allowing companies to choose between quarterly and semiannual reporting would create a two-tier disclosure system. Some issuers would continue providing frequent, standardized updates, while others would report less often. The proposal would also permit companies to change their reporting election each year—and to do so after receiving first-quarter results—raising the prospect that issuers could strategically time their disclosure cadence based on near-term performance. This divergence would fragment the information investors rely on, replacing a uniform baseline with varying levels of visibility across companies.

This inconsistent framework may also create unintended consequences. Companies that elect less frequent reporting could be perceived, rightly or wrongly, as less transparent or less confident in near-term performance. Companies that maintain quarterly reporting may be viewed as more stable or investor focused. These perceptions could influence investor behavior in ways unrelated to fundamentals, adding noise and skepticism to the public market.

Differences in reporting frequency may also reduce comparability across issuers. Investors and analysts often evaluate companies on a consistent timeline to assess trends, benchmark results, and allocate capital efficiently. When companies report with different frequencies, those comparisons become more difficult, particularly across industries or peer groups. That can increase reliance on estimates or non-standardized data, reducing the quality and consistency of market analysis. Over time, a fragmented disclosure structure would move public markets away from a shared transparency baseline and toward a less predictable, less comparable, and less efficient information landscape.

Conclusion

CFP Board recognizes the SEC's interest in encouraging robust public markets and expanding opportunities for companies to access capital. CFP® professionals and the clients they serve benefit from healthy, competitive, and growing public markets. However, market growth should not come at the expense of disclosures that allow those markets to function fairly. The proposed shift away from quarterly reporting presents investor-protection and market-integrity risks that outweigh its uncertain benefits. Although intended to reduce reporting burdens, the proposal would limit the prompt, standardized information investors rely on, widen information gaps between insiders and public investors, and make it harder for retail investors and their financial professionals to make informed recommendations and decisions. For financial professionals, like CFP® professionals, that reduction in transparency could impact their ability to serve clients in their best interest.

For these reasons, CFP Board respectfully urges the Commission to withdraw the proposed rule, preserve strong disclosure standards, and pursue more targeted approaches to public market participation. A stronger public market is best achieved not by reducing transparency, but by maintaining the investor protections that allow retail investors, financial professionals, and institutions to participate with confidence.

We thank the Commission for the opportunity to comment on this important proposal.

Respectfully submitted,

Charles Holmes None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Charles Holmes I would think in this age of wonder doing a monthly reporting would be possible with A.I. there is no reason not to improve productivity. People are saying that if they do change to six month reporting it would be an advantage for inside trader's. Not at all helpful to honest retired people who have a pension. Or anyone who invest money in companies honestly. Most honest people are probably fine with leaving the reporting as is. I TRULY HOPE THE QUATERLY REPORTS WILL BE REQUIRED.

Cheri — Jul 6, 2026
Subject: File No. S7-2026-15 From: Cheri Please do not pass the resolution to allow companies to only file semiannual reports rather than quarterly reports. It would shift power toward insiders because they would not need to provide accurate information as frequently. As an educator, I highly value knowledge. I believe we should have more of it, not less. This resolution would mean having less knowledge to inform our choices. And that makes us less free.

Cheri Fuller-Olson — Jul 6, 2026
Subject: File No. S7-2026-15 From: Cheri Fuller-Olson Keep SEC quarterly filing intact. There should be no six month blackout period.

Cheryl Maye Retired Comupter Science and Business Instructor, Former Investment Rep — Jul 6, 2026
Subject: File No. S7-2026-15 From: Cheryl Maye Cheryl Maye Retired Computer Science and Business Instructor - keep the quarterly reporting. If changes need to be made it should be to report even more frequently. Too many advantages for those in the know and an unfair opportunity for others.

Cheryl Morrell NA — Jul 6, 2026
Subject: File No. S7-2026-15 From: Cheryl Morrell We need transparency, stop trying to protect corporations and individuals trying to hide their actions. Work for the people not corporations, we see what you're trying to do, so enough already!!!! Stop the grift and corruption, we know who is the biggest criminal here! Signed, concerned Texas resident

Chris — Jul 6, 2026
Subject: File No. S7-2026-15 From: Chris To the Securities and Exchange Commission: I am an individual retail investor, and I oppose File No. S7-2026-15, the proposal to allow public companies

to replace quarterly Form 10-Q reporting with semiannual Form 10-S reporting. Reducing mandatory quarterly reporting could increase information asymmetry and make public markets less fair for investors who rely on standardized public filings. The Commission's own economic analysis recognizes this central risk: longer gaps between standardized public disclosures can raise investor transaction costs, reduce liquidity, reduce price informativeness, and disproportionately harm less-resourced investors who lack access to proprietary data, direct management access, analyst infrastructure, or other institutional research tools. The asserted public benefit appears speculative. The proposal suggests that reducing reporting burden may encourage more companies to go public or remain public, but the release does not appear to provide a quantified model showing that this specific change would materially increase IPOs. The Commission also acknowledges research finding that non-regulatory factors, such as abundant private capital, acquisition markets, and economies of scale, likely explain much more of the decline in IPOs than regulatory costs. By contrast, the harm to investors is direct and foreseeable. Quarterly reports are one of the few standardized, broadly available tools that let ordinary investors compare companies, detect deteriorating trends, evaluate management discussion, and respond to changing financial conditions on something closer to equal footing with sophisticated market participants. Reducing mandatory reporting frequency would not remove the need for information; it would shift the advantage toward investors with alternative data, analyst access, expert networks, and greater capacity to infer what public filings no longer reveal. Before adopting the rule, the Commission should provide a specific empirical model estimating: 1. how many additional IPOs this rule is expected to produce; 2. which types of companies are expected to go public because of this change; 3. how much public investor benefit those additional IPOs would create; 4. how the Commission estimates the cost of increased information asymmetry, wider spreads, delayed detection of accounting problems, and reduced comparability; and 5. why narrower alternatives would not achieve the same issuer relief with less harm to investors. At minimum, the Commission should not adopt a broad optional semiannual regime for all reporting companies. If relief is warranted, it should be targeted, evidence-based, and limited to issuers for which quarterly reporting costs are demonstrably disproportionate. The Commission should also require clear investor safeguards, including prominent disclosure of any reporting-frequency change, a reasoned explanation for the election, strong interim disclosure obligations, and review of whether the change increases spreads, volatility, restatements, or delayed detection of financial distress. The public markets depend on public information. Reducing standardized disclosure may benefit issuers that want lower compliance costs, but the SEC's mission is not merely to reduce issuer burden. It is to protect investors, maintain fair and efficient markets, and promote capital formation. This proposal has not yet shown that its capital-formation benefit outweighs its investor-protection cost. Please withdraw the proposal or substantially narrow it unless and until the Commission can demonstrate, with evidence, that the rule produces a net benefit for the investing public.

Chris Bonelli Self employed — Jul 6, 2026
Subject: File No. S7-2026-15 From: Chris Bonelli I believe companies should have to report earnings quarterly. If companies are only reporting twice a year, I feel that it will open the door to more insider trading and corruption with politicians in regards to the stock market.

Chris Crouch Sr. Design Engineer — Jul 6, 2026
Subject: File No. S7-2026-15 From: Chris Crouch I am concerned about the proposed change to semiannual reporting which will reduce available information to the participating public which creates additional market uncertainty where those with unique access to information may create additional losses to the detriment of system stability and growth. (The Greater Fool theory on steroids).

Secondary concerns are that corporations may take higher risks under the assumption that the additional delay in reporting will create an opportunity for greater profit or manipulations of the stock market for short term gain or recovery without market oversight which will expose the system to larger swings and bubbles creating long term losses and growth over short term evaluation spikes.

Chris Naykki — Jul 6, 2026
Subject: File No. S7-2026-15 From: Chris Naykki Please keep reporting quarterly. Otherwise investors have less frequent visibility to company financials.

Christina — Jul 6, 2026
Subject: File No. S7-26-18 From: Christina Companies need to continue reporting quarterly! The general population invests and we must be informed!

Christina Hatch — Jul 6, 2026
Subject: File No. S7-2026-15 From: Christina Hatch I'm a former employee of Worldcom. My coworkers and I suffered because of fraud that was committed by our CEO and top executives. Some of my coworkers lost a significant amount of their 401k. These rules are very necessary and should not be lessened. Quarterly reports keep better transparency to all employees and investors. My name is Christina Hatch and I'm a credit and collection analyst for a major telecom company. Thanks for your time.

Christopher Zeliznak — Jul 6, 2026
Subject: File No. S7-2026-15 From: Christopher Zeliznak I do not approve of the modification.

Chuck Davis Key Account t Director — Jul 6, 2026
Subject: File No. S7-2026-15 From: Chuck Davis Moving to semi-annual reporting is a mistake. There is too much opportunity for problems to be uncovered and less information to investors is going the wrong direction.

Cindy Howgate N/a — Jul 6, 2026
Subject: File No. S7-2026-15 From: Cindy Howgate I don't know when this madness is going to stop. How much money do the wealthy really need? Quarterly reporting keeps things a little closer to honest and by changing it, you are actually making things more dishonest in a world where we need accountability, especially by big corporations and companies who hold the pocketbooks not just the strings. Stop using our people as your profit.

Claudio Trevisan — Jul 6, 2026
Subject: File No. S7-2026-15 From: Claudio Trevisan I oppose the SEC's proposed Semiannual

Reporting rule, File No. S7-2026-15. As an individual investor, I rely on quarterly Form 10-Q reports to understand the businesses I own. Quarterly reporting gives ordinary shareholders timely, standardized, comparable information. Reducing required reporting to twice per year would widen the information gap between corporate insiders, large institutions, and individual investors. Please preserve mandatory quarterly 10-Q reporting for U.S. public companies.

Clifford Stokes — Jul 6, 2026
Subject: File No. S7-2026-15 From: Clifford Stokes Reporting frequency should not be reduced, of it must change, frequency should be increased.

Colleen — Jul 6, 2026
Subject: File No. S7-2026-15 From: Colleen The last time you guys removed some safeguards from the market look what happened: https : / / twitter . com / TedPillows / status / 2062979689145127382 This was just following the June 4th change to make markets riskier by becoming overleveraged. (The one with the day trading change for accounts under $25k). Are you trying to cause a market crash just to try and protect SpaceX and crypto? We can't permit this.

Committee on Capital Markets Regulation — Jul 6, 2026
July 6, 2026
Vanessa A. Countryman, Secretary
Securities and Exchange Commission
100 F Street NE
Washington, DC 20549-1090
Re.: Semiannual Reporting S7-2026-15
VIA ELECTRONIC PORTAL
Dear Ms. Countryman:
The Committee on Capital Markets Regulation (the “Committee”) appreciates the opportunity to comment on the proposed rule of the Securities & Exchange Commission (the “SEC”) Semiannual Reporting (the “Proposed Rule”).
Founded in 2006, the Committee is dedicated to enhancing the competitiveness of U.S. capital markets and ensuring the stability of the U.S. financial system. Our membership includes forty-seven leaders drawn from the finance, investment, business, law, accounting, and academic communities. The Committee is chaired jointly by R. Glenn Hubbard (Emeritus Dean, Columbia Business School) and John L. Thornton (Former Chairman, The Brookings Institution) and is led by Hal S. Scott (Emeritus Nomura Professor of International Financial Systems at Harvard Law School and President of the Program on International Financial Systems). The Committee is an independent and nonpartisan 501(c)(3) research organization, financed by contributions from individuals, foundations, and corporations.
Our letter proceeds in two parts. Part I summarizes how the Proposed Rule would permit public companies to provide interim disclosures through a new semiannual reporting form, proposed Form 10-S, rather than through quarterly reports on Form 10-Q. It also summarizes the Proposed Rule’s economic analysis. Part II evaluates that analysis, focusing on the academic literature and market evidence on the effects of corporate disclosures. Our review indicates that the potential benefits of adopting a semiannual disclosure regime are unclear. In particular, to the extent short-termism exists, it is likely the product of a complex interaction of market forces that reduced mandatory disclosure frequency may not address. Moreover, a semiannual regime would create

costly information asymmetries and would produce minimal compliance cost savings. We therefore recommend that the SEC maintain the current mandatory quarterly disclosure framework together with implementing reforms to streamline and optimize the Regulation S-K framework to focus on materiality and eliminate immaterial or duplicative line items.

Regulation S-K (Apr. 13, 2026), https://capmktsreg.org/wp-content/uploads/2026/04/CCMR-Report-on-Optimizing-
Reg.-S-K-Final-04.13.26.pdf.

1

I. Summary of the Proposed Rule

The SEC currently requires public companies to provide disclosures through interim quarterly reports (Form 10-Q) and annual reports (Form 10-K). Form 10-Q generally focuses on a company's business activities over the prior quarter and Form 10-K generally focuses on a company's business activities over the prior year.2 Form 10-Q includes financial statements, management's discussion and analysis of performance, disclosures about risk and legal proceedings and updates on internal controls and procedures. 3 Form 10-K includes audited financial statements typically covering three years, risk factor disclosures, and more detailed disclosures of business strategy and executive compensation and corporate governance.4 Public companies are also required to disclose on Form 8-K specified material events, such as a major acquisition or sale of assets, leadership changes or bankruptcies, within a few days after the event.5 In addition to these required SEC filings, public companies commonly use Form 8-K to issue voluntary quarterly earnings releases. These earnings releases provide an initial summary of financial results and management commentary before the subsequent Form 10-Q provides more detailed financial statements and additional disclosure and analysis.6

The Proposed Rule would modify this framework by permitting public companies to provide interim disclosures through a new semiannual reporting form, proposed Form 10-S, rather than through quarterly reports on Form 10-Q.7 A company that elects semiannual reporting would file one semiannual report and one annual report for each fiscal year. The Proposed Rule would permit companies to change their elections annually.8

Proposed Form 10-S would require the same narrative disclosures and financial information as Form 10-Q, including management's discussion and analysis, but would cover a six-month period rather than a fiscal quarter.9 Like Form 10-Q, the financial statements would be prepared in accordance with U.S. GAAP and reviewed by an independent public accountant.10 The report would carry the same disclosure controls and officer certification requirements that apply to Form 10-Q.

According to the Proposed Rule, this change would allow a company to select the interim reporting frequency that best suits the company's circumstances, including the company's ability to bear the

costs of preparing quarterly reports, the stage of its business development, and the expectations of its investors.11
The Proposed Rule's economic analysis concludes that the proposed change would produce net economic benefits for three principal reasons. First, it argues that mandatory quarterly reporting contributes to managerial focus on short-term results at the expense of long-term investments, such as capital expenditures and research and development ("short-termism") and that less frequent mandatory reporting would mitigate these effects.
12 Second, it contends that Form 8-K disclosures,
including voluntary earnings releases, would serve as adequate substitutes for quarterly Form 10-Q filings, limiting any reduction in information available to investors.13 Third, it estimates that a semiannual reporting option would reduce compliance costs by requiring only one interim report per fiscal year rather than three, thereby encouraging more firms to enter or remain in the public markets.14
II. Evaluation of the Economic Analysis
Part II evaluates the Proposed Rule's economic analysis in light of the economic literature and market evidence cited in the Proposed Rule, as well as the broader academic research and evidence
on the effects of corporate disclosure. Our review shows that the potential benefits of adopting a semiannual disclosure regime are unclear, and that there are significant potential costs of such a regime. In particular, a substantial body of academic research and market evidence indicates that:
(1) To the extent short-termism exists, it likely arises from a complex interaction of market dynamics beyond mandatory disclosure frequency, and the ability of reduced
mandatory disclosure frequency to mitigate short-termism is thus unclear.
(2) Reducing the frequency of corporate disclosures could lead to information asymmetries
that result in reduced liquidity, increased volatility, and reduced disclosure
comparability.
(3) Mandatory quarterly reports on Form 10-Q can provide valuable supplemental
information to markets that Form 8-K disclosures, including voluntary earnings
releases, do not necessarily provide.
(4) Frequent mandatory reporting facilitates the ability of market participants to monitor
corporate management and can increase the overall availability to public markets of
material information about public companies.
(5) The evidence from jurisdictions that reduced the frequency of mandatory disclosures
indicates that these reforms have had unclear effects.
11 See id. at 25,016.
12 See id. at 24,973, n.44.
13 See id. at 24,999.
14 See id. at 24,999-25,000.

(6) The compliance cost savings of semiannual reporting are minimal, because public
companies will continue to track quarterly financial performance.

Because the available evidence does not support the conclusion that a semiannual reporting mandate would generate net economic benefits, we recommend that the SEC retain the current mandatory quarterly reporting mandate. We now review each of these points in detail.

1. Reducing Disclosure Frequency Has Unclear Effects on Short-Termism to the Extent It Exists.

The Proposed Rule identifies short-termism as a primary justification for reducing mandatory reporting frequency, asserting that quarterly disclosure obligations may pressure corporate managers to prioritize near-term earnings at the expense of long-term investment and strategic planning. However, the academic literature generally indicates that short-termism, to the extent it exists, is not driven primarily by disclosure frequency but is instead likely the product of a complex interaction of market forces that reduced mandatory disclosure frequency may not address. The Proposed Rule acknowledges that the academic literature is mixed on whether quarterly reporting is a primary driver of short-termism. It notes that other factors, such as executive compensation design and earnings guidance, may play a larger role than the periodic disclosure cycle.15 We find that the weight of the empirical literature does not substantiate the existence of short-termism or provide evidence that reducing disclosure frequency would reduce short-termism, to the extent it does exist.

Nallareddy et al. (2021) examined the natural experiment created when the UK's Financial Conduct Authority removed the mandatory quarterly reporting requirement for premium-listed companies in 2014.16 Using a difference-in-differences research design, the authors found no statistically significant increase in capital expenditures, research and development spending, or other measures of long-term investment among firms that voluntarily ceased quarterly reporting. Hillegeist et al. (2026) demonstrate that more frequent reporting enhances the informational role of stock prices, increasing investment-to-price sensitivity so that corporate managers make better-informed investment decisions, with post-adoption profitability increases persisting for up to five years.17

Stein (1989) demonstrated that short-termism, to the extent it exists, does not arise from the frequency of information disclosure.18 Instead, the study finds that to the extent managers engage in short-termism, it is because they are concerned about market perceptions during periods when they may need to access capital markets or when their compensation is tied to stock price performance. Reducing reporting frequency does not eliminate these incentives. If anything, it may

exacerbate them by increasing the information asymmetry between managers and outside investors and amplify the incentive for managers to signal through costly short-term actions.

The state of U.S. corporate investment also provides powerful evidence against the proposition that quarterly reporting constrains long-term strategic decision-making. U.S. public companies are investing at record levels in artificial intelligence infrastructure, committing hundreds of billions of dollars to data centers, semiconductor fabrication facilities, and foundational research, all while subject to the existing quarterly reporting regime.19 If quarterly reporting constrained managerial willingness to make long-horizon investments, one would expect underinvestment in precisely these capital-intensive, long-payoff projects. Instead, the evidence demonstrates that when managers identify potential value-creating long-term opportunities, they pursue them vigorously

regardless of the reporting calendar, and investors reward such investments with higher valuations. The mandatory quarterly reporting framework does not prevent companies from articulating long-term strategies to investors. It provides a regular mechanism through which management can demonstrate and compare progress toward stated long-term objectives, thereby maintaining investor confidence and reducing the cost of capital for long-duration projects.

Furthermore, the literature that the Proposed Rule cites in support of the short-termism concern does not in fact show that reducing mandatory disclosure frequency addresses this concern. The Proposed Rule cites Kraft et al. (2018) for the proposition that mandatory quarterly reporting causes short-termism and reduces long-term investment.20 While the study documents a decline in fixed-asset investment following increases in mandatory reporting frequency among U.S. firms between 1950 and 1970, the study in fact attributes this effect to increased monitoring by markets, which checked managers' ability to pursue private benefits or engage in growth strategies unchecked by market discipline, not a reduced focus on long-term objectives.
21

The Proposed Rule cites Ernstberger et al. (2017) as evidence that quarterly reporting encourages short-termism. The study found that when EU companies were required to provide quarterly financial disclosures, managers increased their tendency to make decisions aimed at meeting or exceeding quarterly earnings targets. 22 However, the study did not find that these decisions compromised long-term value creation. The study therefore does not substantiate the existence of short-termism or establish that quarterly reporting causes short-termism.

The Proposed Rule cites Graham et al. (2005) for its survey finding that a majority of executives would sacrifice long-term value to meet short-term earnings targets. 23 However, the study documents that this tendency is driven by concerns about stock price reactions, analyst

expectations, and career risk, not the requirements of quarterly SEC filings. Reducing reporting frequency from quarterly to semiannual would not eliminate any of these pressures.

The Proposed Rule cites Fu et al. (2020) for its finding of an association between more frequent reporting and reduced corporate innovation, as measured by patent output and quality.24 This finding, however, must be weighed against the same authors' earlier and more directly relevant study, Fu et al. (2012), which demonstrates that higher reporting frequency reduces information asymmetry and the cost of equity capital, benefits that accrue to all investors and that facilitate precisely the kind of external financing that innovation-intensive firms require.25 Moreover, as Foucault and Fresard (2014) demonstrate, firms learn from their peers' stock prices when making investment decisions, and more frequent reporting improves the informativeness of those prices.26 A reduction in reporting frequency would therefore degrade the quality of the price signals upon which innovative firms rely to evaluate investment opportunities, potentially producing worse innovation outcomes than the quarterly regime it would replace.

The Proposed Rule also cites Gigler et al. (2014) for the authors' development of a model in which more frequent reporting can theoretically induce excessive managerial focus on short-term outcomes.27 However, this model is theoretical and is not grounded in empirical results. Moreover, this model does not account for the effects of sell-side analysts, activist investors, and financial media, and in particular the potential capacity of these market participants to monitor for and mitigate managerial focus on short-term outcomes that could compromise long-term value.

2. Reducing Disclosure Frequency Creates Costly Information Asymmetries

Empirical research also shows that reducing the frequency of mandatory disclosures increases information asymmetry between corporate insiders and public investors and decreases market efficiency. For example, Stoumbos (2023) demonstrates that information asymmetry grows by approximately 3.1% between earnings announcements, and that quarterly reporting cuts asymmetry growth time in half relative to semiannual reporting.28

As we review below, information asymmetries have the potential to: (i) reduce liquidity, (ii) increase volatility, and (iii) reduce disclosure comparability, which can increase the cost of trading for investors and the cost of capital for public companies.

Costs and Benefits of Increasing Reporting Frequency, 52 JOURNAL OF ACCOUNTING RESEARCH 357 (2014).

28 Robert Stoumbos, The Growth of Information Asymmetry Between Earnings Announcements and Its Implications
for Reporting Frequency, 69 MGMT. SCI. 1901 (2023).

i. Reduced Liquidity

Stoumbos (2023) finds that switching from semiannual to quarterly reporting reduces bid-ask spreads by 1.6%, representing a meaningful improvement in trading costs that directly benefits all market participants, but particularly retail investors who are most sensitive to transaction costs.29 Fu et al. (2012) corroborate these findings, demonstrating that higher reporting frequency is associated with reduced information asymmetry and a lower cost of equity capital, as more frequent disclosures crowd out costly private information acquisition.30 Knappstein et al. (2020), in examining the reduction in quarterly disclosure for firms listed on the Frankfurt Stock Exchange, find statistically and economically significant harms to smaller firms as a result of increased information asymmetries.31

ii. Increased volatility

Some evidence also suggests that reduced disclosure frequency may also be associated with greater
volatility in the price of a company's stock. For example, Amiram et al. (2019) find that less frequent information flows lead to more sudden, discontinuous price movements and thus increase volatility.32 By contrast, when information flows to the market in a more continuous fashion,
volatility is reduced, trading activity increases, and liquidity improves. Reducing the frequency of mandatory disclosures could thus result in greater volatility to the extent companies choose to report semiannually.

Arif & De George (2020) provide evidence that semiannual reporters' stock returns are almost twice as sensitive to peer-firm earnings announcements as those of quarterly reporters, with subsequent return reversals indicating that this heightened sensitivity reflects overreaction rather than efficient price discovery. 33 This pattern of overreaction and reversal is economically significant, as it imposes costs on long-term investors who bear the consequences of temporary mispricing and favors short-term traders who can exploit the predictable reversal patterns. The theoretical underpinning for this phenomenon is established in Easley and O'Hara (2004), who find that when private information constitutes a greater proportion of total information, uninformed investors demand higher returns to compensate for the adverse selection risk they face.34 This evidence suggests that reducing reporting frequency can shift the balance toward private information, increasing the required rate of return and thus raising the cost of capital for all issuers.

iii. Reducing disclosure comparability

Another primary value of a regular reporting regime lies in consistency and comparability across companies. A standardized framework where all issuers report with the same frequency allows investors to more effectively compare company performance across an industry on a consistent basis, track quarter-over-quarter trends, identify seasonal patterns, and evaluate management's execution against stated objectives at regular intervals. As Foucault and Fresard (2014) and Badertscher et al. (2013) demonstrate, this comparability function is essential not only for the investors in any individual firm but also for the broader capital allocation process.35

This comparability function is diminished when some issuers report quarterly and others report semiannually. Investors would no longer align reporting periods across peer companies to conduct meaningful cross-sectional analysis.36 Moreover, as explained below, voluntary earnings releases do not replicate this comparability function because they lack the standardization, regulatory oversight, auditor review, and structured data requirements that make Form 10-Q filings useful for cross-company and cross-industry analysis.

3. Mandatory Quarterly Reporting Delivers Important Information Beyond Earnings Releases and Form 8-K.

As Part I explained, public companies commonly issue voluntary quarterly earnings releases in addition to Form 10-Q filings. The Proposed Rule reasons that many companies transitioning to semiannual reporting would likely continue this practice, thereby preserving a significant portion of the quarterly information currently available to investors. Public companies are also required to disclose on Form 8-K specified material events, such as a major acquisition or sale of assets, leadership changes or bankruptcies, within a few days after the event. The Proposed Rule thus similarly reasons that Form 8-K filings will continue to act as a safeguard that ensures disclosures of material information to the market if reporting frequency becomes semiannual.37

However, the empirical literature indicates that mandatory quarterly reporting provides valuable

information to investors beyond most voluntary earnings releases and Form 8-K.
McMullin et al. (2019) demonstrate that mandatory periodic quarterly reporting serves a fundamentally different and complementary function to reports of individual material events on Form 8-K. 38 Quarterly reports on Form 10-Q provide comprehensive, standardized financial statements and narrative disclosures that capture the full spectrum of a company's financial condition and operating performance, including developments that may not individually cross the

materiality threshold triggering a Form 8-K but that are collectively essential to informed investor decision-making.
Butler et al. (2007) argue that mandatory quarterly reports do not provide more timely information to the market, as earnings information is often anticipated through alternative channels. 39 However, this does not necessarily support the elimination of mandatory quarterly reporting. The fact that market participants anticipate quarterly earnings reflects the value that investors place on regular periodic information, a demand that would persist under a semiannual regime. The international evidence provided by Arif and De George (2020) addresses the potential consequences of less frequent mandatory disclosures.
40 When firms report only semiannually,
investors tend to rely more on alternative and less standardized indicators of a company's financial situation, including peer-firm results. As a result, investors may overreact from excessive information spillovers, which leads to volatility at the time of each semiannual report.
If there were a significant increase in the number of companies choosing to report semiannually, the elimination of mandatory quarterly reporting could disproportionately disadvantage retail investors who lack access to the alternative data sources and analytical resources available to certain institutional investors. Retail investors, who constitute a significant and growing proportion of U.S. equity market participation, rely primarily on mandatory periodic filings as their source of reliable, standardized financial information about portfolio companies. Sophisticated institutional investors can compensate for reduced public disclosure through proprietary data sources that are not contained in regulatory filings. For example, to estimate a retail business's financial position, certain institutional investors may draw on satellite imagery to measure vehicle and foot traffic to the company's stores and proprietary credit card transaction data to obtain the most recent information about the company's sales volumes.41 Individual investors generally do not have access to these data sources and may thus be more reliant on regulatory filings.
4. Mandatory Quarterly Reporting Provides Important Monitoring Benefits.
The academic literature also identifies important monitoring benefits of mandatory quarterly reporting.
For example, Downar et al. (2018) document the monitoring effect of more frequent disclosure, showing that the discipline imposed by regular reporting deadlines improves corporate governance outcomes.42 Healy and Palepu (2001), La Porta et al. (2006), and Haeberle and Henderson (2018) show that the effectiveness of corporate disclosure in reducing information asymmetry is a

function of the regulatory and legal mechanisms that ensure its reliability, including auditor verification, liability exposure, and standardized reporting requirements.43
Marinovic and Varas (2016) model the strategic timing of voluntary disclosures and demonstrate that mandatory reporting requirements are an important counterpart to voluntary disclosure regimes in facilitating the ability of markets to monitor company management.
44
In the case of the U.S. public company reporting framework, Form 10-Q filings are subject to liability under the Exchange Act, require CEO and CFO certifications under the Sarbanes-Oxley Act, must include financial statements prepared in accordance with U.S. Generally Accepted Accounting Principles ("GAAP") and must be reviewed by an independent public accountant. This means that key company personnel are subject to potential legal liability for misleading Form 10-Q disclosures. Earnings releases, by contrast, are not required to be prepared in accordance with GAAP, are not required to be reviewed by an auditor, and are not subject to the same liability exposure. Mandatory quarterly disclosures therefore are an important complement to voluntary earnings releases. The Proposed Rule cites Bédard and Courteau (2015) to suggest that the incremental value of quarterly auditor reviews may not justify their expense.45 However, this study examines the narrow question of audit assurance quality, not the broader informational benefits of quarterly financial reporting to investors, analysts, and the market as a whole.
5. International Evidence Indicates that Eliminating Mandatory Quarterly Reporting Has Had Unclear Effects.
Empirical evidence from jurisdictions that have reduced the frequency of mandatory corporate disclosures indicates that the effects of such reforms are unclear. In particular, neither the United Kingdom nor the European Union has experienced improved valuations, enhanced capital-raising activity, or more robust initial public offering activity relative to the United States following their elimination of mandatory quarterly reporting.
46 To the contrary, the gap in revenue growth,
profitability, and market capitalization has increased since those jurisdictions eliminated mandatory quarterly reporting.
47 Although there are significant differences between the size and
dynamics of the capital markets and disclosure practices of companies in the United States and in

the United Kingdom and European Union, the evidence from these markets suggests that the effects of reducing mandatory disclosure frequency are unclear.
Several studies examine this evidence in detail. Bornemann et al. (2025) provide evidence from the Vienna Stock Exchange of adverse capital market consequences resulting from the elimination of mandatory quarterly reporting, including a deterioration in liquidity and increased information asymmetry.48 Behrmann et al. (2025) evaluate the EU's Transparency Directive, which eliminated mandatory quarterly financial reporting for firms listed on the Frankfurt Stock Exchange, and find that reduced quarterly disclosure increased information asymmetry (as measured by bid-ask spreads and price impact) and decreased firm value.49 Notably, the study finds that these effects are strongest for first-tier, index-listed stocks with dispersed ownership, precisely the type of firm that constitutes the vast majority of U.S. public equity market capitalization.
In addition, Bar-Hava (2021) examined the market effects of moving from quarterly to semiannual reporting for companies on the Tel Aviv Stock Exchange. The study documented significant negative market reactions for firms that switched to semiannual reporting. These findings indicate that investors interpret such transitions as adverse signals about firm quality or management's willingness to maintain transparency.50
6. The Compliance Cost Savings from Semiannual Reporting Would Be Minimal
The Proposed Rule contends that a semiannual reporting framework would reduce compliance costs for public companies. However, the economic analysis estimates annual savings of only approximately $198,000 per issuer, an amount that is economically insignificant relative to the revenues of a typical public company.51
The operational realities of public companies confirm the view that compliance cost savings from the Proposed Rule would be minimal. More specifically, public companies maintain quarterly financial reporting systems to satisfy the informational demands of their boards of directors, lenders, and internal management processes. Moreover, credit agreements and debt indentures routinely require borrowers to deliver quarterly financial statements, maintain compliance with financial covenants measured on a quarterly basis, and provide lenders with timely notice of material adverse changes in financial condition.52 Although adapting this information for public filing in accordance with the prescriptive line item and narrative disclosure requirements of Form 10-Q results in marginal costs including attention from the company's managers, these costs are modest relative to the total cost of the underlying financial reporting infrastructure. As a result,

companies electing semiannual reporting would continue to incur most of the costs associated with quarterly financial reporting, making any resulting compliance cost savings minimal.
III. Conclusion
Our review of the academic literature and market evidence finds that the potential benefits of adopting a semiannual disclosure regime are unclear. The evidence indicates that, to the extent short-termism exists, it is likely the product of a complex interaction of market forces that reduced mandatory disclosure frequency may not address. It also finds that reduced disclosure frequency could lead to costly information asymmetries. Evidence from other jurisdictions indicates that reducing mandatory disclosure frequency has had unclear effects on capital markets. Moreover, compliance cost savings would be minimal because managers will still require quarterly financial information, and the incremental cost of publicly disclosing that information is relatively small.
We therefore recommend that the SEC retain the current quarterly reporting mandate, which provides a disciplined and standardized system of public accountability that advances the SEC's mission to protect investors, maintain fair, orderly, and efficient markets, and facilitate capital formation.

Dear Chairman Atkins:
As leaders of conservative and free-market organizations interested in reducing red tape that

limits opportunities for middle-class investors and entrepreneurs, we applaud the SEC for this proposed rule to give public companies the option of semi-annual reporting.

We believe that easing the reporting mandate to semiannual from quarterly is long overdue, as most other countries have moved away from or never implemented requirements for public firms to report to investors this frequently. Thus, the current mandate puts American companies and their shareholders at a competitive disadvantage.

The costs of the quarterly reporting mandate are substantial, and giving companies the semiannual option would result in significant savings for many firms. As noted in this rule from the SEC's economic analysis, a company that took advantage of the option to move from quarterly to semiannual reporting would save on average $198,000 per year. This savings could be used to pursue growth opportunities for the company that could benefit its employees and shareholders.

As the rule notes, the reduced costs of semiannual reporting "could also be a positive factor in encouraging additional companies to raise capital through registered securities offerings or to become or remain a public company." It is important to also note that this rule does nothing to change the SEC's numerous anti-fraud rules and requirements that public companies immediately disclose material events that could affect financial performance.

This rule is ultimately about advancing investor choice. If investors really like quarterly financial reports, they could find companies that still issue them. But investors who would rather companies use the cost savings to enhance their bottom line should not be denied the benefits of the semiannual option.

Thank you for your consideration on this important matter.

Connecticut Office of Consumer Counsel — Jul 6, 2026
July 6, 2026
Ms. Vanessa Countryman, Secretary
Securities and Exchange Commission
100 F Street NE
Washington, DC 20549
Re: File No. S7-2026-15 – Proposed Rule on Semiannual Reporting and Form 10S
Dear Ms. Countryman and Members of the Commission:
On behalf of the Connecticut Office of Consumer Counsel ("OCC"), we respectfully submit limited comments to the Securities and Exchange Commission (the "SEC" or "Commission") on the Proposed Rule that would allow public companies to file semiannual reports on a newly created Form 10S in lieu of quarterly reports on Form 10-Q.
The OCC's Interest in the Proposed Rule
The OCC is an independent agency in the State of Connecticut and serves as the advocate for consumer interests in all matters which affect Connecticut consumers with respect to public service companies, electric suppliers and certified telecommunications providers, including, but not limited to, rates and related issues, ratepayer-funded programs and matters concerning the reliability, maintenance, operations, infrastructure and quality of service of such companies, suppliers and providers.
Conn. Gen. Stat. § 16-2a(a).1 The OCC is also "authorized to appear in and participate in any regulatory or judicial proceedings, federal or state, in which such interests of Connecticut consumers may be involved, or in matters affecting utility services rendered or to be rendered in this state may be involved. Id. The OCC has frequently submitted comments to the Federal Communications Commission and participates in proceedings of the Federal Energy Regulatory Commission.
The OCC's specific interest in the Proposed Rule concerns the impact that the Proposed Rule would have on regulatory oversight of our regulated companies that provide essential services over facilities and structures located on public streets and highways. The following comments will therefore be limited to that impact and will not address the impacts on financial markets and investors. OCC is particularly concerned with impediments and burdens the Proposed Rule would have on state utility rate cases and on monitoring of regulated companies' earnings and capital expenditures.
1 The term "public service companies" includes electric distribution, gas, telephone, water, and cable companies,
Conn. Gen. Stat. § 16-1(a)(3), the overwhelming majority of which are substantial public companies.

Changing the long-established quarterly reporting cycle for public companies to a six-month cadence will most likely create an information asymmetry in setting utility rates.2 Utilities will approach rate cases with much more financial information than state regulators and consumer advocates, like the OCC, would otherwise possess. Wider earnings dispersion in the form of return on investment reported on a semi-annual basis would undoubtedly create more surprises in rate case proceedings. Regulators and consumer advocates will have to rely on discovery during rate cases without quarterly Form 10-Qs to evaluate the regulated company's responses to such discovery.3 The Proposed Rule will make it more difficult to establish accurate "test years" in rate cases. The standard quarterly data in Form 10-Q also enables state regulators to track seasonal shifts in energy usage and fuel expenses.

Although as demonstrated in footnote 2, Connecticut already requires the submission to the state's Public Utilities Regulatory Authority ("PURA") of SEC filings, including the 10-Q, the implementation of the Proposed Rule may require PURA or other state utility commissions to mandate state specific quarterly financial filings, which would counter any goal of reducing administrative burdens for public utilities. The quarterly Form 10-Q filings also enable state regulators and consumer advocates to track ongoing capital expenditures, thereby monitoring spending trends which reflect grid modernization efforts and overall investments in network and plant improvements.

The bottom line is that the SEC's Proposed Rule relating to moving to a six-month reporting cycle will result in less transparency by public service companies that will impact more than investors and financial analysts. The Proposed Rule will also create an information gap for utility commissions and consumer advocates, to the detriment of consumers of essential utility services. For these reasons, OCC respectfully requests that that the Commission not approve the Proposed Rule.

2 One financial commenter has suggested that framing the shift to semi-annual Form 10-S as optional ignores the reality of market dynamics that will lead to both major corporations and smaller and mid-cap competitors facing pressure "to avoid bearing the comparative cost of transparency." Comments of Karl T. Muth, J.D., M.B.A., M.Phil., PhD., Lecturer, Northwestern University Pritzker School of Law at p. 2.

3 By a long-standing decision in Docket No. 88-09-06 RE01, Order No. 1 requires the submission of important financial, operational, and regulatory information submitted by public companies to the Securities and Exchange Commission ("SEC") that are critical for keeping the Authority and OCC informed about Connecticut's public service companies. These submissions are Form 10Q, Form 10K, Form 8K, Quarterly Stockholders Report, and Annual Stockholders Report.

Respectfully submitted,

Re: Semiannual Reporting, Release Nos. 33-11414; 34-105368; 39-2563; IC-36140
File No. S7-2026-15
Dear Office of the Secretary:
Crowe LLP appreciates the opportunity to comment on the Commission's proposed rule "Semiannual Reporting" (the proposal), which would permit certain Exchange Act reporting companies to elect semiannual reporting on new Form 10-S in lieu of quarterly reporting on Form 10-Q.
We support the Commission's objective of reducing unnecessary reporting burdens while maintaining investor protection, market transparency, and capital formation through an optional framework. Reporting cadence should be evaluated in light of company-specific facts, investor expectations, and market considerations.
Our comments focus on how the proposal would operate in practice for registrants, auditors, audit committees, and market participants. We consider how a semiannual reporting cadence would affect the preparation and review of interim financial information, the evaluation of significant accounting matters

and related disclosures, and the coordination of interim procedures with the annual audit. We also consider circumstances in which companies continue to provide quarterly information voluntarily or in
connection with earnings releases, investor communications, or securities offerings.
We encourage the Commission to design any final framework so that semiannual reporting fits efficiently
within the existing public company reporting and capital markets system. This includes consideration of
how semiannual reporting would interact with Form 8-K reporting, earnings releases, registration statements, comfort letters, and financial statement age requirements. A framework that works cleanly
with these existing processes would help registrants evaluate whether semiannual reporting is appropriate while maintaining investor confidence and market efficiency.
Pillars
The following principles guide our comments:
Investor decision-usefulness and market transparency.
A semiannual reporting framework should support clear, decision-useful communication to investors. Registrants that elect semiannual reporting should be able to use required filings and other established
channels, including Form 8-K and earnings releases, to provide material information in a timely manner
consistent with existing disclosure obligations.
Flexibility and proportionality.
An optional framework allows registrants to determine, based on their facts and circumstances, whether
quarterly or semiannual reporting best serves the needs of their investors and other stakeholders.
Reliability of interim financial reporting.
Investors and other market participants should be able to understand the nature and reliability of interim
financial information, whether it is included in a required filing, voluntarily provided, or used in connection
with a securities offering. The final framework should support consistent expectations regarding the preparation, review, and use of interim financial information under a semiannual reporting model.
Capital markets functionality.
The final framework should work effectively for companies that access the capital markets between required periodic reports. This includes consideration of securities offerings, underwriter due diligence,
comfort letters, and financial statement age requirements.
Flexible reporting framework
If the Commission permits semiannual reporting, we support the flexibility of an optional semiannual reporting framework. Public companies differ in size, complexity, industry, investor base, capital markets
activity, and contractual or regulatory obligations. Those differences make flexibility preferable to a mandatory semiannual reporting model.
The U.S. capital markets are the strongest in the world in significant part because investors have confidence in the quality, reliability, and timeliness of public company reporting. Any change to reporting
frequency should be implemented with that confidence in mind. For many companies, quarterly reporting
might continue to provide meaningful value to investors and other market participants. It could also support access to capital, investor relations, liquidity, and other business needs. For other companies,

semiannual reporting might better align reporting costs with investor needs and market expectations. A
flexible framework would allow management to evaluate those tradeoffs based on each company's facts
and circumstances, while allowing investor expectations and market forces to influence the appropriate
reporting cadence.
At the same time, optionality should be implemented in a manner that preserves the strengths of the U.S.
capital markets. Different reporting cadences might affect comparability among registrants in the same
industry or peer group, and investors might benefit from transparency and predictability regarding a
company's reporting cadence. For that reason, the decision to elect semiannual reporting should not be
viewed solely as a cost reduction exercise. Management, with appropriate board and audit committee
oversight, should consider investor expectations, market needs, capital markets plans, the nature of the
company's business, and the expected use of interim financial information outside required periodic
reports. Where semiannual filers provide interim information through other channels, investors should be
able to understand the nature of that information and the extent of auditor involvement, if any.
Earnings releases
Although the Commission generally does not require quarterly earnings releases under current rules,
many companies issue them voluntarily, and exchange listing standards and market practice may create
practical expectations. Earnings releases today vary widely in content, format, and level of auditor
involvement. Should the Commission require semiannual filers to provide earnings releases, it should
engage with investors and other market participants as those stakeholders are best positioned to address
what information they need and the appropriate level of auditor involvement. In addition, the Commission
should consider whether there should be a formal mechanism to correct material errors in required
earnings releases.
Auditors stand ready to perform reviews under Public Company Accounting Oversight Board (PCAOB)
Auditing Standard 4105, Reviews of Interim Financial Information (AS 4105) if the Commission
determines that auditor review procedures should be required for first and third quarter information
provided by semiannual filers. However, AS 4105 currently is designed for reviews of interim financial
information presented as financial statements or in summarized form that purports to conform with GAAP
and applicable regulatory requirements. Accordingly, any review requirement should be developed
together with clear expectations for the information subject to review and the basis on which that
information is prepared. This might require the Commission to institute regulatory requirements applicable
to required earnings releases for semiannual filers (for example, through standardization of required
earnings release information within Regulation S-X or S-K). Depending on those changes, the
Commission might also need to coordinate with the PCAOB to ensure AS 4105 is fit for purpose under

any new reporting framework.

Interim disclosure requirements

We believe the Commission should evaluate preparer feedback to determine whether the burdens associated with Form 10-Q arise primarily from the quarterly reporting cadence or from the content of the interim reporting requirements. If the burden is driven in part by repetitive or non-material interim disclosures, the Commission could consider adopting a parallel change-based instruction in Regulation S-K for Form 10-Q non-financial statement disclosures, similar in concept to Rule 10-01(a)(5) of Regulation S-X. If preparers indicate the burden rests with the recognition, measurement, or disclosure requirements of accounting principles generally accepted in the United States (GAAP), the Commission should work with the Financial Accounting Standards Board (FASB) to evaluate any changes to interim reporting.

Interim review procedures

An issuer's selection of semiannual reporting or quarterly reporting would not change the nature of procedures performed in an independent public accountant's interim review. Under AS 4105, interim reviews consist principally of analytical procedures and inquiries of persons responsible for financial and accounting matters. The nature of those procedures should not change solely because the interim period is six months rather than three months; however, because AS 4105 currently includes references to quarterly and year-to-date interim financial information, technical conforming changes or interpretive guidance might be needed to apply those requirements cleanly to Form 10-S.

While the nature of the procedures would remain broadly consistent, the extent and timing of procedures could differ. Under the proposal, a semiannual filer generally would have one required interim review for the Form 10-S covering the first six months of the fiscal year, rather than three Form 10-Q reviews under the current quarterly reporting framework. Certain recurring procedures, including engagement administration, management inquiries, audit committee communications, filing reviews, representation letters, footnote tie-out, and completion procedures, would occur less often and represent the most likely sources of efficiency. The substantive analytical procedures and inquiries that form the core of an interim review, by contrast, generally scale with changes in financial reporting risks, business developments, discrete events, and the volume of transactions during the period under review. As a result, the net effect on aggregate effort, timing, efficiency, and cost is uncertain and would depend on the registrant's facts and circumstances rather than result in a direct proportional reduction.

Disclosure controls, ICFR, and audit strategy

A shift to semiannual reporting would not change the design objectives of a company's disclosure controls and procedures or internal control over financial reporting. Those controls should continue to support timely disclosure decisions and reliable financial reporting. However, the timing and frequency of certain controls, particularly period-end controls related to the financial close, financial statement preparation, disclosure review, and management reporting, might be affected.

The impact on ICFR would depend on how management adapts its control environment. Many controls operate daily, monthly, quarterly, or annually independent of SEC reporting deadlines. However, if management aligns certain period-end controls only with semiannual reporting dates, those controls would operate less frequently. That could affect the timing of management's identification and remediation of control deficiencies, particularly where fewer control operation points are available before year-end.

For auditors, the effect on audit strategy would depend largely on whether management changes the nature, timing, or frequency of relevant controls. Auditors would still be able to perform interim procedures for the audit of ICFR and the financial statements, including procedures within a semiannual reporting period. However, reduced reporting frequency could affect the timing of ICFR testing, the availability of interim evidence, and the nature and extent of year-end procedures. If either management or the auditor identifies control deficiencies later in the reporting cycle, management will have less time to remediate, and auditors will have fewer opportunities to evaluate whether corrective actions are operating effectively before year-end.

For the financial statement audit, auditors might continue to perform audit-level procedures during the year, particularly for significant transactions, new accounting standards, complex estimates, or other matters that arise before year-end. Those procedures typically affect the timing of audit work rather than the overall extent of procedures required for the annual audit. However, the ability to perform meaningful interim audit procedures depends on the company maintaining sufficiently complete and reliable books and records at the relevant interim dates.

Accordingly, semiannual reporting could create efficiencies for some registrants, but the impact would not be uniform. The risk that misstatements or control deficiencies are identified later might increase if management reduces the frequency of financial reporting controls or interim close processes. That risk could be mitigated where management maintains monthly or quarterly controls, and where auditors and management continue periodic touchpoints during the year to support audit planning, evaluate significant developments, and maintain an effective annual audit cadence.

Application of GAAP and current reports

We do not believe a semiannual reporting model requires broad changes to GAAP or International Financial Reporting Standards (IFRS). ASC 270 applies to interim financial statements and notes prepared in accordance with GAAP and is not limited to quarterly reporting periods. Accordingly, the basic recognition, measurement, and disclosure framework should be capable of operating for semiannual financial statements.

The Commission should, however, coordinate with the FASB or the International Accounting Standards Board (IASB) to identify targeted clarifications and conforming amendments where current GAAP or

IFRS
refers to “quarter,” “quarterly,” “three-month period,” “quarter-to-date,” or similar concepts (for example,
ASC 280, Segment Reporting, and ASC 270, Interim Reporting). Those references might be clear in a
quarterly reporting model but less clear when a registrant’s required interim reporting period is six months.
Additional areas where coordination with the FASB might be needed include:
 Earnings per share. ASC 260 includes guidance for year-to-date diluted EPS that uses quarterly diluted EPS computations as building blocks, including the incremental shares included in each quarterly diluted EPS computation. In a semiannual reporting model, the FASB should clarify whether diluted EPS should be computed using the six-month period as the relevant interim period or whether a semiannual filer must perform underlying quarterly computations to arrive at the six-month amount. That distinction could matter because the result could differ depending on whether the calculation is performed using quarterly building blocks or a single six-month interim period.
 Hedge accounting. ASC 815 requires hedge effectiveness assessments at least every three months under ASC 815-20-35, an obligation that operates independently of a registrant’s SEC filing cadence. Because a semiannual filer would remain subject to that requirement whether or not it issues an earnings release, conforming amendments might not be necessary. However, the Commission should work with the FASB to confirm that the every-three-months requirement continues to apply and clarify any references that are keyed to the timing of reported earnings or financial statements.
 Interaction with ASU 2025-11. If an entity electing semiannual reporting continues to publish quarterly earnings releases on a voluntary or required basis, the Commission should work with the FASB to evaluate how that financial information should be presented after the effective date of Accounting Standards Update (ASU) 2025-11, Interim Reporting (Topic 270): Narrow Scope Improvements. ASU 2025-11, effective for public business entities for interim reporting periods within annual reporting periods beginning after December 15, 2027, clarifies that ASC 270 applies when an entity provides interim financial statements and notes in accordance with GAAP, including condensed statements, and does not apply merely because an entity provides less extensive interim financial information such as selected financial statements, account balances, financial statement elements, ratios, or other interim metrics. This raises GAAP application issues, which might depend on the nature and extent of information published in an earnings release, including:
o Adoption dates in interim periods. Many accounting standards require adoption in interim periods or in interim periods within annual periods. If a semiannual filer issues only a first quarter earnings release that does not include GAAP interim financial statements and notes as contemplated in ASU 2025-11, questions might arise about whether selected financial information included in the release should reflect adoption of a material accounting standard that would otherwise be adopted in the next GAAP interim financial statements. The Commission should coordinate with the FASB to clarify how semiannual filers should apply interim-period adoption requirements when they voluntarily provide selected first quarter financial information.
o Other recognition, measurement, and disclosure matters. Other GAAP recognition, measurement, and disclosure requirements might also need clarification in light of ASU 2025-11 when a semiannual reporting company voluntarily provides first or third quarter earnings releases that do not include interim financial statements and notes in accordance with GAAP. The Commission should work with the FASB to evaluate how areas such as income tax valuation allowances, estimated annual effective tax rates, goodwill impairment, and management’s going concern assessment should be applied in a first or third quarter earnings release.

Separately, semiannual reporting might have current reporting implications under Item 2.06 of Form 8-K.
Under the current instruction, a registrant is not required to file an Item 2.06 Form 8-K if the impairment
conclusion is made in connection with the preparation, review, or audit of financial statements required to
be included in the next periodic report, provided that report is filed on time and includes the required disclosure. In a semiannual reporting model, that exception could defer disclosure for a longer period than
under the current quarterly reporting framework, particularly for impairment conclusions reached in the
second half of the fiscal year when the next required periodic report might be the Form 10-K. The Commission could consider whether targeted amendments to Item 2.06 would be appropriate for semiannual filers to preserve timely disclosure of material impairment conclusions, such as by narrowing
the periodic-report exception or limiting its availability when the next periodic report is not expected to be
filed within a period comparable to the current quarterly reporting framework.
Comfort letters
Semiannual reporting raises two distinct comfort letter considerations: whether accountants may issue a
comfort letter and what level of comfort AS 6101 permits accountants to provide. A semiannual reporting
cadence would not, by itself, preclude a comfort letter. AS 6101 provides a framework for letters to underwriters and certain other requesting parties in connection with financial statements and other financial information included or incorporated by reference in securities offering documents.
The more significant issue is the level of comfort accountants may provide over the subsequent change
period after the most recent audit or review. Under AS 6101, accountants may provide negative assurance on subsequent changes in specified financial statement items only when the as-of date is less
than 135 days after the end of the most recent period for which the accountants have performed an audit
or review. If the as-of date is 135 days or more after that period, accountants may not provide negative
assurance and are limited to reporting procedures performed and findings obtained.
Those mechanics would continue to apply under a semiannual reporting model. Depending on the timing
of the capital raising transaction, there might be circumstances in which subsequent change period negative assurance is not available. In those circumstances, the accountant could still issue a comfort
letter, but the relevant comfort would be limited to procedures performed and findings obtained rather
than negative assurance.
A registrant that needs negative assurance to support a capital markets transaction could elect to prepare
and include interim financial information in the offering document and engage its accountant to perform
an AS 4105 review of that information. That approach would provide a more recent audited or reviewed
period from which the 135-day period is measured, subject to the requirements of AS 6101 and AS 4105.

This approach provides a workable mechanism for issuers and underwriters to address transaction-specific needs without requiring all semiannual filers to maintain quarterly reporting solely for comfort letter purposes.
Accordingly, we do not believe changes to AS 6101 or the Commission's rules governing comfort letters
are necessary to accommodate semiannual reporting. The existing framework specifies that negative
assurance is available only within the prescribed period following an audit or review, and procedures-and-
findings comfort remains available when that condition is not met. Issuers, underwriters, and their advisers can determine in individual transactions whether additional interim financial information and review procedures are needed to facilitate the offering.
Merger related observations
Because semiannual reporting would operate through a company-level election, certain merger and transition scenarios could require additional guidance to avoid uncertainty in applying reporting cadence
and financial statement age requirements. For example:
 Entity financial statements in an S-4 registration statement. The proposal amends Regulation S-X so that staleness is measured by reference to the end of the most recently completed interim period reported or due on Form 10-Q or Form 10-S. Where the merging parties are on different cadences, the Commission should consider clarifying which entity's cadence governs the age of financial statements determination included in the S-4 and how a difference should be reconciled to permit registration statement effectiveness.
 Post-merger reporting cadence. Because the proposal would generally make the election company-level, fixed for the fiscal year, and changeable only at the next Form 10-K (or via registration statement for a non-reporting entity), three common merger scenarios might present an opportunity for the Commission to provide clarification in a final rule:
o In a forward merger, does the legal acquiror's existing election govern, or is a new election permitted?
o In a reverse merger of two reporting companies, does the post-combination cadence follow the legal registrant or the accounting acquiror?
o In a reverse merger with a private target that is the accounting acquiror, may the target make a fresh election or is it bound by the legal registrant's prior election?
It would be helpful if the Commission addressed these situations in any final rules, specified the timing and mechanics of any permitted election, and, if applicable in cases where the Commission specifies optionality, whether there is a preferable option.
 Transition reporting. Where a merger triggers a fiscal-year change and the constituent entities had different reporting frequencies, it would be helpful for the Commission to clarify which cadence and corresponding deadline under Rules 13a-10 and 15d-10 governs the stub-period transition report.
Closing
We thank the SEC for the opportunity to comment on the proposal and are available to answer any questions regarding the views expressed in this letter.
Sincerely,
Crowe LLP

Cynthia Nolen Private investor. Master of Science - Nursing — Jul 6, 2026
Subject: File No. S7-2026-15 From: Cynthia Nolen I disagree with the allowing companies the freedom to file financial documents in an semiannual basis as this would limit the amount of information available to private investors and give some companies the ability to shelter signifiant

changes from the public which could unfairly hurt individual investors.

Cynthia Noonan — Jul 6, 2026
Subject: File No. S7-2026-15 From: Cynthia Noonan Dear SEC: Please keep quarterly reporting requirements in place for publicly traded companies. This system has worked mostly well for over 50 years. As regular investors, timeliness and transparency are key in making decisions about investments. Keep mandatory quarterly reporting. Thank you.

D Terzian — Jul 6, 2026
Subject: File No. S7-2026-15 From: D Terzian Keep quarterly reporting. In a time of AI, cryptocurrency, prediction markets, big technology, unstable geopolitics, and unpredictable tariff structures, is it really the right move to pull the shades down?

D. Bishop — Jul 6, 2026
Subject: S7 2026-15, S7 2026-17, S7 2026-18, S7 2026-19, S7 2026-08, S7 2026-05, S7 2026-13, S7 2026-20 From: D. Bishop Affiliation: Jul. 6, 2026 All reporting, amendment, position changes remain the same as they are now. What needs to be add is a list of all subsidiaries owned by parent company when 10k form is filed. What else needs to be included is what pools of securities or notes they have acquired or have ownership of. As well as the first 6 numbers used in their trading Cusip number to make it easier for the public to find.
The corruption happening with in this system is being unmasked and the system is trying so hard to find another way to hide it. Please don't make it harder for the people of america to lower the debt of this country. These companys investors can pick up and leave at any moment but it's the people who can't and have to live with the damage this will further cause. Bring solution please not more burdens. Thank you for your time and consideration and a chance to be acknowledged.
Have a wonderful day and beautiful life.

D. Ford Small Business Owner — Jul 6, 2026
Subject: File No. S7-2026-15 From: D. Ford I firmly believe that publicly traded companies should be required to disclose information quarterly, if not more frequently. In fact, as we rapidly advance into the era of artificial intelligence, real-time disclosures are not only feasible but also the direction we should be heading in. Transparency in the public markets has been instrumental in enabling individual investors to make informed investment decisions with their own money for decades. Removing this transparency would harm those who are striving to build a substantial nest egg for themselves and their families, while simultaneously giving an unfair advantage to insiders, institutional investors, and analysts who have relationships with these public companies. Therefore, I strongly oppose this new rule.

D. Wisniewski — Jul 6, 2026
Subject: File No. S7-2026-15 From: D. Wisniewski Keep quarterly reporting. Quarterly reporting is essential both for the enforcement of securities law and responsibility to shareholders of all sizes. Irresponsible corporate practices were a primary cause of the Great Depression AND in 2008 with

the Great Recession with companies "too big to fail" being bailed out by taxpayers. The speed of business is faster than in 1934 and in 2008; companies must report quarterly - more frequently would be better.

Dan Perkins — Jul 6, 2026
Subject: File No. S7-2026-15 From: Dan Perkins DO NOT STOP REQUIRING QUARTERLY REPORTS!

Dan Rooney — Jul 6, 2026
Subject: File No. S7-2026-15 From: Dan Rooney What this proposal will actually do is provide regular people with half the transparency we get now, and an additional head start for insiders with information we won't have. Please keep things the way the are now.

Dana Hand — Jul 6, 2026
Subject: File No. S7-2026-15 From: Dana Hand This ruling would be unfair to everyday Americans.

Dana Oliphant — Jul 6, 2026
Subject: File No. S7-2026-15 From: Dana Oliphant I support maintaining quarterly reporting requirements for public companies. Regular financial disclosures promote transparency, accountability, and informed decision-making for investors. As an individual investor and retirement saver, I rely on timely public information to understand how companies are performing. Reducing reporting frequency could make it harder to identify risks early and would provide less transparency for everyday investors. Please preserve quarterly reporting requirements.

Daniel Garant, EVP and Global Head, Capital Markets and Credit Investments, British Columbia Investment Management — Jul 6, 2026
July 6, 2026
Vanessa A. Countryman, Secretary
Securities and Exchange Commission
100 F Street, NE
Washington, DC 20549-1090
Submitted electronically via SEC.gov
Re: Proposed Rule on Semi-annual Reporting, File No. S7-2026-15
Dear Secretary Countryman,
We write this comment letter in response to Securities and Exchange Commission's (SEC) invitation for
comments dated May 5, 2026, on the proposed amendments to allow companies to file semi-annual reports on Form 10-S in lieu of quarterly reports on Form 10-Q (the "Proposed Rule").
British Columbia Investment Management Corporation (BCI) manages approximately CAD $314 billion in
assets for pension plans, insurance funds, and trust funds representing approximately 725,000 beneficiaries in British Columbia. As a long-term institutional investor with over 39% of our AUM

invested in U.S. markets, we welcome the opportunity for engagement.
BCI invests in U.S. securities with a multi-year time horizon and has a strong interest in maintaining a
disclosure regime that produces decision-useful information, supports efficient capital allocation, and sustains confidence in U.S. markets over the long term. The Commission's mandate to protect investors
contributes greatly to BCI's long-term confidence in U.S. capital markets. That mandate is exercised in
part through disclosure requirements which ensure that public companies disclose material information
accurately, consistently, and in a form that investors can use. In evaluating the Proposed Rule, BCI's primary consideration is investor protection.
BCI is an associate member of the Council of Institutional Investors (CII) and a member of the International Corporate Governance Network (ICGN). We support the comment letters submitted by each organization in response to the Proposed Rule. This submission sets out BCI's own perspective.
BCI respectfully urges the Commission to retain the existing quarterly reporting framework for all Exchange Act reporting companies.
Direct Reliance on Quarterly Disclosure
Some of the information contained in quarterly reports, including management's forward-looking operational analysis, company-specific risk assessments, and capital resource updates, exists because of
mandatory reporting requirements and cannot be replicated through alternative means. Where such requirements are weakened, that information is simply lost. Investors are willing to bear the costs associated with quarterly reporting because timely, reliable financial information is fundamental to informed capital allocation and efficient markets. Reducing the frequency of disclosure may lower compliance costs for issuers, but it does so by reducing transparency, increasing information asymmetries, and transferring costs and risks to investors.
In managing public equity and fixed income portfolios across global markets, BCI relies on quarterly reporting in ways that semi-annual reporting cannot replace. Three consequences are most significant.
Trend identification: From an operational standpoint, more frequent reporting gives our portfolio managers more opportunities to observe operating trends and identify inflection points before they become material to valuation. Reducing to semi-annual reporting may create blind spots regarding financial, operational and management performance that are harder to detect early, and by the time a
semi-annual report discloses deteriorating fundamentals, the damage to portfolio value may already be
significant.
Information asymmetry: While BCI engages directly with management teams as part of our stewardship
activities, that type of access is not uniformly available for all investors. We continue to rely on the standardized public disclosure record as the foundation for investment decisions between formal engagement events, and retail investors and smaller institutions rely on it entirely. If companies report
semi-annually but continue to engage selectively with certain investors on an interim basis, those with
direct corporate access gain a disproportionate informational advantage. This can result in a two-tier market that benefits large, well-resourced domestic investors at the expense of international investors
and retail participants.
Proxy voting. Most U.S. public companies hold their Annual General Meetings in the spring, after the

first quarter Form 10-Q is filed. Under semi-annual reporting, BCI would routinely make proxy voting decisions on items such as director elections, executive compensation, and shareholder proposals based
on year-end data that may be five or six months old, impairing our ability to assess whether management's recent performance warrants the support we are asked to extend.

The Costs of the Proposed Rule Outweigh the Benefits

The Commission advances two justifications for the proposed rule, these are: reducing regulatory burden to encourage companies to go public and reducing managerial short-termism. The available third-party research on both justifications is inconclusive and does not, in our view, provide clear support for the Proposed Rule.

Cost savings and IPOs: The Commission's economic analysis estimates the net reduction in direct compliance costs at approximately $198,000 per issuer per fiscal year1. This figure may overstate the
practical savings, as companies would still need to maintain accurate financial information for operational purposes, meet contractual quarterly reporting obligations to lenders, and in many cases continue producing voluntary releases. Advances in artificial intelligence further undermine the cost rationale, since AI tools make granular, structured disclosure more consumable to investors than before,
while reducing the processing burden that once made volume a concern. Finally, available research

1 Semi-annual Reporting, Securities Act Release No. 11414, 91 Fed. Reg. 24,968 (May 7, 2026).

suggests that the decline in IPO activity has been driven primarily by the greater availability of private
capital, not disclosure compliance costs.2

On short-termism: The Commission's economic analysis acknowledges the academic literature on this
question is mixed. In BCI's view, the short-termism dynamic is driven by forward earnings guidance, analyst consensus estimates, and compensation tied to near-term targets, not by historical financial reporting. If management is inclined to reduce funding for a research program to meet a quarterly earnings target, it faces the same incentive at a six-month horizon.

Should the Commission wish to address short-termism directly, alternatives that focus on forward guidance practices would be more closely matched to this objective.

Examples from International Markets

The United Kingdom provides the most relevant comparison. From 2007 to 2014, companies on the London Stock Exchange's main market were required to publish quarterly "Interim Management Statements" which consisted of a narrative update on financial position and material developments. In
2014 the UK's Financial Conduct Authority removed this requirement, moving UK companies to semi-
annual reporting. The impacts that followed are instructive.

First, the costs to market quality were real. Companies that stopped quarterly reporting experienced a
reduction in analyst coverage, deterioration in price efficiency, higher bid-ask spreads and higher costs
of equity capital.3 Notably, these market-quality costs arose from the removal of a disclosure obligation
that was narrower in scope than Form 10-Q: the UK's Interim Management Statement was a narrative
update only, carrying none of the financial statements, or XBRL requirements that accompany a quarterly 10-Q filing. These outcomes invite a closer look at whether reduced reporting frequency serves the goal of encouraging more companies to go and stay public.

Second, the anticipated benefit did not materialize. A CFA Institute Research Foundation study of the

UK experience found no statistically significant change in firms' investment decisions and no evidence
that management's decision-making horizon lengthened following the move to less frequent reporting.4
These results cast doubt on the short-termism rationale offered in support of the Proposed Rule, and the result does not support it.
Taken together, the UK experience suggests that reduced reporting frequency carries measurable costs
to market quality without delivering the desired changes in corporate behaviour.
2 Michael Ewens et al., Regulatory Costs of Being Public: Evidence from Bunching Estimation, 153 J. Fin. Econ. 103775 (2024).
Removing all estimated regulatory costs increases the average annual IPO likelihood after 2000 from 0.95% to only 1.4%,
explaining just 7.3% of the observed decline from the pre-2000 period
3 Pozen, Nallareddy & Rajgopal, Consequences of Mandatory Quarterly Reporting: The U.K. Experience, Columbia Business School Research
Paper No. 17-33; CFA Institute Research Foundation (2017), cited in Proposed Rule at n.62 and n.255.
4Sandra Peters & Matthew Winters, Investor Perspectives: Quarterly Reporting, CFA Institute (April 2026), Exhibit 28.

The SEC Investor Advisory Committee Recommendation
On June 4, 2026, the Commission’s Investor Advisory Committee (IAC) voted against the Proposed Rule
and recommended that the Commission retain quarterly reporting requirements for public companies.5
The IAC found that the cost-reduction premise is poorly substantiated by the empirical record; that the
evidence does not support the view that short-termism is a major problem for U.S. public companies today; that semi-annual reporting would widen the gap between inside and public information, increasing insider trading risk; that it would increase the risk of internal control deficiencies and material
misstatements going undetected on a timely basis; and that retail investors are most likely to be negatively impacted, as they primarily rely on quarterly disclosures and lack direct access to company
management.6
BCI respectfully urges the Commission to follow the advisory body’s recommendation.
Conclusion
The available empirical evidence demonstrates that reduced disclosure frequency carries measurable
costs to market quality without delivering the behavioural change. The costs to investor protection, market quality, and capital allocation efficiency are material. As such, BCI respectfully urges the Commission to retain the existing quarterly reporting framework.
We would welcome the opportunity to discuss this matter further. For questions or to arrange a meeting, please contact Jennifer Coulson, Senior Managing Director & Global Head of ESG, at jennifer.coulson@bci.ca, or Susan Golyak, Director of ESG, at susan.golyak@bci.ca.

Daniel Glatter Individual Investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Daniel Glatter I am writing to urge the United States Securities and Exchange Commission (US SEC) to NOT change reporting requirements for publicly-traded companies from quarterly to semiannually. I understand that the job of the US SEC is to protect investors such as me. It appears that changing the requirement for reports from companies from quarterly to semiannually, would reduce protections for individual investors. As an individual investor I rely on quarterly reports to make informed decisions about investments in publicly-traded companies. Please keep the requirement that publicly-traded companies publish reports quarterly. Thank you!

David Englert Retired Trader Joe's employee, flight instructor, design consultant — Jul 6, 2026
Subject: File No. S7-2026-15 From: David Englert I would prefer that the reporting remain on the quarterly basis rather than the proposed semi-annual. I want to be aware of more timely reporting information. Thank you

---

David Losson — Jul 6, 2026
Subject: File No. S7-2026-15 From: David Losson I would not like to see this rule take effect as ongoing improvements in technology make reporting easier and more accessible than ever. The SEC should encourage and require MORE transparency and reporting, not less, for retail investors who do not have the same advantages of time and expertise as institutional investors. Please, protect the transparency of one of the greatest engines of wealth creation for amateur investors and private citizens across the nation.

Debora McFerrin Retired — Jul 6, 2026
Subject: File No. S7-2026-15 From: Debora McFerrin I'm writing to voice my disapproval concerning S7-2026-15. Publicly traded companies need to make their information available quarterly, so the public, can make accurate decisions. A lot of fraud and abuse can happen within the additional 3 months of non-reporting. It will be hard to call out issues the longer they go on. If the SEC doesn't require accountability and transparency, is there a need for the agency? I've heard that the corporations say this will save them money. This cost should be negligible because they still have to keep the books. Reporting is much simpler in the digital age as it's not like they have to mail all of the reports out. Granted they'll need to send mail to some of the stockholders but perhaps they can take this "expense' out of the CEO's salary. As a American tax payer, I would like the government to remember that it's for the people and not just the administration's rich friends.

Deborah Kachel — Jul 6, 2026
Subject: File No. S7-2026-15 From: Deborah Kachel Absolutely believe this rule change will harm small investors and pension fund holders. There is no legitimate reason for this change, and it makes risk management of our retirement portfolios a much dicier proposition. So no. A 1000 times, NO.

Debra Edwards — Jul 6, 2026
Subject: File No. S7-2026-15 From: Debra Edwards I am writing to request that you do not allow reports to be reduced from four times per year to two. Under this proposal, investors would receive only half as many official updates about the businesses they own and be at a great disadvantage when trying to make decisions about their investments. Less transparency increases uncertainty which can be potentially devasting because we did not have the information when it was needed.

Dee — Jul 6, 2026
Subject: File No. S7-2026-15 From: Dee Keep quarterly reporting! It is proper and your job and service to those who trust you. Stay honest and above board at all times. You live in a glass house, keep it clear with what you do.

Dina Weiss VP Operations — Jul 6, 2026
Subject: File No. S7-2026-15 From: Dina Weiss We need quarterly reporting for public companies to be maintained by the SEC as we need visibility into our investments. When we purchase shares, we own a piece of the company and we need to be updated quarterly so that we are not blindsided by lack of transparency and visibility, If we only allow reporting 2x a year the volatility will increase and make it much more challenging to determine whether our investment thesis remains intact. The lack of visibility and transparency diminishes investor confidence and market integrity.

Don A. Essig — Jul 6, 2026
Subject: File No. S7-2026-15 From: Don A. Essig I am a retired American with much of my retirement savings invested in stocks of American corporations. It is of great intertest to me to know what is going on with the financial health of the companies which I own in part. For this reason, I am wholeheartedly opposed to any lessening of financial reporting requirements. Too much can go wrong in six months. Please keep the financial reporting frequency quarterly. Thank you.

Don E Baun — Jul 6, 2026
Subject: File No. S7-2026-15 From: Don E Baun The risk of increased malfeasance far outweighs any other consideration. If short-term goals are problematic, they need to be addressed individually and directly, not by rolling back much needed protections.

Donald A. Zakrowski, Sr. Vice President, Finance and Chief Accounting Officer, Eli Lilly and Company — Jul 6, 2026
Eli Lilly and Company
Lilly Corporate Center
Indianapolis, Indiana 46285
U.S.A.
July 6, 2026
Vanessa A. Countryman
Secretary
Securities and Exchange Commission
100 F Street NE
Washington, DC 20549-1090
RE: Comment Letter on Proposed Rule – Semiannual Reporting (File Number S7-2026-15)
Dear Ms. Countryman:
Eli Lilly and Company ("Lilly") appreciates the opportunity to submit comments in response to the Securities and Exchange Commission's (the "Commission") proposed rule on Semiannual Reporting, released on May 5, 2026. Lilly is engaged in the discovery, development, manufacturing, marketing, and sales of pharmaceutical products worldwide. Founded in 1876 and listed on the New York Stock Exchange for over 70 years, Lilly has a long history of commitment to transparent and timely disclosure to its shareholders and the investing public. We commend the Commission for its thoughtful initiative to modernize the financial reporting landscape for Exchange Act reporting companies.
Lilly's Position on the Proposal
Lilly is supportive of the proposal put forth by the Commission on Semiannual Reporting. If adopted substantially as proposed, we currently anticipate electing to file semiannual reports on the new Form 10-S, supplemented by voluntary quarterly earnings releases to provide our investors with timely and decision-useful financial information. We believe the proposal will result in a reduction of administrative burden associated with Form 10-Q, with very minimal impact on the investor community.
Limited Impact on Investors
Lilly believes that the proposal will not meaningfully diminish the financial information available to our investors. In line with current market practice, Lilly initially and broadly disseminates its quarterly financial results through an earnings release. As a general matter, our earnings release contains all material information related to the applicable quarter. Subsequent to our earnings release, we file our quarterly report on Form 10-Q. Given this practice, we receive few inquiries from investors and other stakeholders about information available exclusively in our Form 10-Q filings.
If adopted, Lilly anticipates continuing to furnish quarterly earnings releases containing financial and operational metrics relied upon by investors to make informed and timely decisions. This is consistent with our longstanding practice and investor expectations. In combination with ongoing Form 8-K disclosure obligations, we believe that our investors and the public at large would continue to be well-informed with decision-useful information.
Reduced Administrative Burden
The option for semiannual reporting on Form 10-S provides a meaningful opportunity to reduce the recurring administrative burden compared to the current reporting cycle. While we would continue our current accounting close processes (including internal controls) each quarter to maintain the accuracy of information in our voluntary earnings releases, there are significant costs we incur specific to Form 10-Q that would be reduced with this proposal. These include both time and financial costs related to Form 10-Q preparation, management review, and external review by outside advisors. These savings would be redirected toward activities in line with our strategic priorities, all while maintaining availability of critical information for our investors and the general public.

Specific Comments
Availability
Lilly supports the Commission's proposal to make the semiannual reporting option available to all Exchange Act reporting companies. Broad eligibility appropriately reflects the diversity of issuer facts and circumstances.
Timing
Lilly is supportive of the earliest practicable adoption timeline. We do not foresee significant time requirements from a systems or process perspective that would require a long transition period. Lilly believes that it would be ready to transition to semiannual reporting beginning with the first quarter of 2027. More broadly, the opt-in nature of the proposal eliminates the need for a lengthy transition period. Issuers that prefer a longer transition have the flexibility to continue their current practices.
Voluntary Earnings Releases
Lilly supports the Commission's proposal for earnings releases to continue to be furnished as opposed to filed. The furnished framework appropriately reflects the voluntary nature of earnings releases and maintains a clear distinction from mandatory periodic reporting obligations.
Rule 10b5-1 Plan Cooling-Off Period
Lilly encourages the Commission to update the Rule 10b5-1 cooling-off period for officers and directors so that it ends the earlier of the existing benchmark or two business days after a company furnishes an earnings release. Without this change, insiders at semiannual reporters would face an unnecessarily long cooling-off period in Q1 and Q3 simply because no Form 10-Q is filed — a result that was never intended by the rule.
Lilly believes this adjustment is appropriate regardless of whether the proposed rule is adopted. Earnings releases are already the primary means by which companies share financial results with the public, so it is more logical to tie the cooling-off period to that date rather than a later filing. This is particularly relevant in Q4, where the gap between an earnings release and the Form 10-K filing can stretch several weeks.
Lilly Corporate Center, Indianapolis, Indiana, 46285, U.S.A.
Conclusion
Lilly supports adoption of the proposed rule. Semiannual reporting will not diminish the quality or timeliness of material information available to investors — earnings releases, current reports on Form 8-K, and the continuing obligations of Regulation FD will ensure that the market remains appropriately informed. At the same time, the reduction in mandated periodic filings will meaningfully reduce compliance costs and management time for issuers, freeing resources for operational and strategic priorities. We urge the Commission to finalize the rule.
We thank the Commission for the initiative and welcome the opportunity to discuss further.
Please feel free to contact me at (317) 651-2310 with any questions.
Sincerely,
ELI LILLY AND COMPANY

Donna Henderson — Jul 6, 2026
Subject: File No. S7-2026-15 From: Donna Henderson As a person whose entire retirement portfolio consists of stock, requiring companies to be fully transparent in their reporting is of the utmost importance to me and my family. I oppose reducing companies filing requirements to semiannual Form 10-S, even if it is revised, in lieu of the current requirement for quarterly Form 10-Q reporting

under the Securities Exchange Act. This information is vital to my decision-making concerning whether I approve of the direction of the companies and provides information that I use to formulate make statements at their annual meetings. It also impacts whether I decide to sell or hold the stocks. I want full quarterly transparency. The reports can be provided on the company's website with notice provided by email or even text. I have no problem with the reduction of unnecessary costs, but the elimination of quarterly transparency is not in the stockholders best interest.

RE: Semiannual Reporting File Number S7-2026-15
Dear SEC:
Donnelley Financial Solutions (DFIN) is a leader in risk and compliance solutions, providing technology solutions and technology-enabled services to clients across the globe. Since 1983, we've been committed to delivering the best possible service and solutions to our clients in support of the Securities and Exchange Commission's (SEC's) ongoing modernization and rulemaking. Public and private companies, as well as investment and other regulated companies, engage DFIN for our SEC domain expertise and solutions to file secure, accurate, timely, and validated disclosures to the SEC, which are needed to ensure effectively functioning capital markets.
We appreciate the opportunity to submit comments concerning the proposed rule for Semiannual Reporting.
Per the Request, DFIN is submitting for the Commission's consideration the following responses to the questions asked in the rule proposal. For ease of review, we have omitted any questions to which, DFIN has no response:
QUESTIONS
1. The proposed amendments would allow Exchange Act reporting companies to elect to file interim reports on a semiannual basis in lieu of quarterly reports on Form 10-Q. Should companies have this option, or should all companies continue to be required to file Form 10-Q? What types of companies are likely to elect the option to file semiannual reports? Are companies in certain industries more likely than those in other industries to elect to file semiannual reports?

DFIN Response:
We applaud the commission for providing optionality and flexibility to the filing community.
We think all companies should have the option to elect semiannual or quarterly reporting.
2. We are proposing amendments that would permit, but not require, all Exchange Act reporting companies that
file Form 10-Q today to file semiannual reports. Should we instead require all companies to file semiannual
reports? What would be the benefits and costs of such a mandatory approach? Would mandatory semiannual
reporting, with the option to file quarterly reports, lead to more companies electing to forgo quarterly reporting?
DFIN Response:
We think providing all companies with the option of electing semiannual or quarterly reporting
is the best path forward.
5. We are proposing that the filing deadlines for semiannual reports on Form 10-S be the same as for quarterly
reports on Form 10-Q. Should the filing deadline for semiannual reports on Form 10-S be longer or shorter than
proposed? If so, what would be an appropriate filing deadline? Do companies need more time to prepare
semiannual reports than quarterly reports and if so, why? Should smaller public companies, newly public
companies, or emerging growth companies be afforded a longer filing deadline for Form
DFINsolutions.com
10-S to allow for additional time to consult with their accountants and advisers?
DFIN Response:
We think the filing deadlines for the new Form 10-S should be consistent with the filing
deadlines as proposed (i) 40 days for large accelerated filers and accelerated filers (as
defined in § 240.12b-2); and (ii) 45 days for all other issuers. Issuers will have the option to
elect their reporting frequency each year, providing sufficient flexibility in the compliance
deadlines.
8. Should the check box that indicates a company has elected semiannual reporting be added to registration
statements on Forms 10, S-1, S-3, S-4, and S-11 and annual reports on Form 10-K as proposed? Should we
add a similar check box to any other forms, including Forms 1-A or 8-A? If so, why?
DFIN Response:
Yes, we think the check box should be added to registration statements listed above and
annual reports on Form 10-K as proposed. We do not see a need to include Forms 1-A or 8-
A.
10. Our proposal would require Exchange Act reporting companies that elect to file semiannual reports to
continue with that interim reporting frequency for the rest of the fiscal year in which the election was made.
Therefore, companies would not be allowed to file a semiannual report on Form 10-S for the first six months of
a fiscal year and then file a quarterly report for the third quarter for that fiscal year. Likewise, companies would
not be allowed to file a quarterly report on Form 10-Q for the first quarter of a fiscal year, file a semiannual
report on Form 10-S for the first six months for that fiscal year, and not file a quarterly report on Form 10-Q for

the third fiscal quarter. Would this proposed approach help avoid potential confusion that could be caused by
changes in interim reporting frequency during a fiscal year? Is it necessary to add any language to the proposed
rules to make more explicit the requirement to maintain the selected frequency for the full fiscal year? Rather
than the proposed approach, should we allow: (1) semiannual filers and quarterly filers to make a change in
interim reporting frequency during the fiscal year, or (2) only semiannual filers to switch to filing quarterly reports
during the fiscal year? Should issuers that elect semiannual reporting be required to commit to that disclosure
frequency for a certain period of time? Why or why not?
DFIN Response:
DFIN agrees with the approach the SEC has taken in the proposed rule. We believe limiting
the frequency of electing 10-S or 10-Q within a fiscal year provides transparency and
predictability to other stakeholders, namely investors, advisors and others involved in the
reporting process.
12. Should correction of errors with respect to the Form 10-K check box related to semiannual reporting be
permitted as we propose? Are the proposed time limits on when an error correction may be made appropriate?
In addition to allowing error correction in an amended Form 10-K—or in lieu thereof—should we allow check
box error correction through a Form 8-K filing?
DFIN Response:
DFIN agrees with how the proposed rule is written and that correction of errors with respect to
the Form 10-K check box should not be allowed through a current Form 8-K filing. If check
box corrections via an 8-K were permitted, we believe the SEC should consider creating a
new form 8-K item number to bring attention to this disclosure.
13. We are proposing a new Form 10-S for companies that elect to file semiannual reports. Is the proposed new
form needed? Should there be one form for all interim reports, regardless of whether they are for a fiscal quarter
or a semiannual period? If so, why?
DFIN Response:
DFIN agrees with the how the proposed rule is written, the new Form 10-S should be
introduced for those opting for semiannual reporting. Without a new Form Type it may be
difficult to write clear form instructions describing appropriate disclosure for both the quarterly

and semiannual period which could lead to investor and issuer confusion. There should not
be a single form type for all interim reporting. We also believe that the current Form 10-Q
should remain so the market can distinguish between those issuers that file semiannually vs.
quarterly. Leaving the Form 10-Q form type permits companies to elect to make no changes
to their current reporting practices.
15. As an alternative to the proposal for optional semiannual reporting, should we instead revise the disclosure
requirements of Form 10-Q to reduce the burden on reporting companies of filing this form, such as amending
the current rules for the required interim financial statement review by an independent public accountant, XBRL
data tagging, MD&A, information about unregistered sales of registrant securities pursuant to 17

CFR 229.701
(Item 701 of Regulation S-K), or year-to-date comparisons involving financial statements and MD&A? How
should these requirements, or any other requirements of Form 10-Q, be revised? What aspects of Form 10-Q's
current reporting framework are most burdensome for reporting companies?
DFIN Response:
DFIN agrees with how the proposed rule is written and does not believe the reporting frameworks are burdensome. In fact, technological advances in disclosure management tools such as DFIN's have streamlined the reporting process, allowing issuers to improve accuracy and reduce potential risks. For example, XBRL tagging is a standard part of the disclosure process and in most companies, is embedded in reporting workflows through disclosure management tools used by issuers to prepare and submit their regulatory filings. XBRL reported SEC data from public companies and investment management companies is a robust and powerful resource for the plethora of data aggregation and analysis tools in active use today. As these tools increasingly utilize AI, they are more efficient (faster, less resource intensive, more consistently accurate) when using data in structured format. While we support the SEC's goal to promote public companies, we do not think the frequency of interim financial statements or the content of such reports are a significant factor in a company's decision to become or remain public.
34. If the proposal is adopted, what should be the compliance date for the proposed amendments? If the
proposal is adopted, is there a need for a transition period and, if so, what should be the length of the period?
DFIN Response:
We think the compliance date should be at least 9-12 months from final rule date. The SEC should provide enough time for companies to analyze their investor base and other factors, in order to determine at their year-end if semiannual reporting or quarterly reporting is appropriate for their business.
45. Should the Commission make any other changes to transition reports under Rules 13a-10 and 15d-10 to
effectuate semiannual reporting?
DFIN Response:
Yes, similar to the transition report Form 10-QT, DFIN believes a new Form 10-ST should be created and serve a similar purpose.
* * *

Thank you for the opportunity to provide feedback for the Commission's consideration.
Sincerely,
_____

Re: Semiannual Reporting, Release Nos. 33-11414; 34-105368; 39-2563; IC-36140;
File No. S7-2026-15 (the "Proposed Rule")
Dear Ms. Countryman,
The Edison Electric Institute ("EEI") appreciates the opportunity to respond to the Securities and Exchange Commission's (the "SEC") Proposed Rule. The Proposed Rule intends to "reduce the regulatory burden of being a reporting company" and has "the goal of providing more flexibility with respect to . . . mandated disclosure." We support these objectives and greatly appreciate the SEC's efforts to streamline the reporting obligations of U.S. public companies. In alignment with the SEC's objectives, we encourage the SEC to pair optional semiannual reporting with targeted reforms to quarterly reporting, which we believe in combination will further advance the SEC's objectives to streamline reporting obligations.
The electric power industry is one of the most capital-intensive industries in the U.S. and our companies often have multiple SEC registrants under a single parent company, which creates significant reporting obligations.
EEI is the association that represents all U.S. investor-owned electric companies. Our members provide safe, reliable electricity for nearly 250 million Americans and operate in all fifty states and the District of Columbia. EEI members are among the most capital-intensive companies in the U.S., and often have multiple SEC registrants within a corporate structure (often a publicly traded holding company and several subsidiary registrants). They also frequently must produce

extensive quarterly disclosures for lenders, rating agencies, regulators, and other counterparties in addition to SEC filings. Additional background information on our quarterly reporting requirements is discussed below.

Many EEI members' Form 10-Qs are often 100-150 pages or more when prepared across multiple registrants, with substantial length attributable to MD&A, core financial statements, and voluminous footnotes. This multi-registrant, multi-financial statements structure substantially increases time and cost to prepare quarterly filings while often providing limited incremental investor value.

We support the introduction of semiannual reporting, but encourage the SEC to allow registrants to elect to continue to file quarterly reports.

IM-#11067380.9

Ms. Vanessa A. Countryman
Secretary
Securities and Exchange Commission
100 F Street NE
Washington, DC
20549-1090

We are broadly supportive of the SEC's efforts to streamline the reporting burden on U.S. public companies. When contemplating both SEC and other quarterly reporting obligations, there is a significant burden on EEI member companies.

Our comments below provide additional considerations the SEC should address if it moves forward with Form 10-S requirements, as well as other disclosure simplification initiatives the SEC could consider.

The SEC should preserve the option of voluntary quarterly reporting if registrants want to provide additional disclosures to the capital markets.

In the Proposed Rule, the SEC requests comment as to whether the SEC should "require" all reporting companies to file semiannual reports (Question 2, p. 32). We recommend preserving optionality for quarterly or semiannual filing. This will allow companies to choose the appropriate reporting frequency based on their facts and circumstances. As an example, if a company believes its investor base would prefer quarterly reporting, we do not believe the SEC should preclude it from providing this.

Mandatory semiannual reporting could create complications for registrants' access to the capital markets absent accompanying reforms from the PCAOB and broader changes in financing practices. EEI offers the following example of how mandatory semi-annual reporting, absent other accompanying reforms, may not actually streamline reporting obligations.

Historically, EEI members have leveraged the financial statements filed using Form 10-Q in securities offerings. EEI members may choose to continue to file a quarterly Form 10-Q for this purpose. As companies in a capital-intensive industry, some EEI members issue securities on a relatively frequent basis and therefore may decide to continue to file SEC quarterly financial statements in support of accessing financial markets.

In the auditor's comfort letter delivered in connection with an underwritten securities offering, the underwriters typically request negative assurance as to changes in specified financial statement items subsequent to the end of the most recent period for which the auditors have performed an audit or review. However, current rules of the Public Company Accounting Oversight Board (the "PCAOB") prohibit auditors from providing such negative assurance if the most recent audited or reviewed financial statements are older than 134 days. In effect, unless the PCAOB adjusts its rules, a registrant that reports semiannually may need to separately prepare quarterly financial statements to ensure that the comfort letter delivered in a securities offering during the latter part of a semiannual period will include negative assurance. To further facilitate semiannual reporting, we recommend that the SEC encourage the PCAOB to consider adjusting its rules.

Receipt of negative assurance from the issuer's auditors is a key piece of an underwriter's due diligence efforts, and many underwriters may be unwilling to participate in securities offerings where negative assurance is not provided. Accordingly, if a registrant were to rely solely on semiannual reporting, they may have difficulty in accessing capital markets during the latter part of a semiannual period, which could harm efficient capital formation, negatively impact registrants' liquidity and otherwise disrupt companies' financing and cash management protocols. Our members could be uniquely affected, as the electric utility industry is one of the most capital-intensive industries in the United States and our members accordingly have significant financing requirements.

To remedy the issue, registrants may still need to prepare quarterly financial statements and have them reviewed by their auditors.

The SEC also should consider initiatives to simplify the 10-Q requirements (assuming registrants file on an optional basis) and allow simplified quarterly disclosure options to be made available to registrants.

The SEC should consider streamlining the disclosure requirements of Form 10-Q.

In the Proposed Rule, the SEC requests comment as to whether the SEC should revise the disclosure requirements of Form 10-Q to alleviate the burden on reporting companies of preparing this form (Question 15, p. 36). We believe that the SEC can further achieve its objective of reducing the regulatory burden on public companies by streamlining the disclosure requirements of Form 10-Q if companies still choose to file.

The scope of the quarterly disclosure requirements applicable to registrants that are subsidiaries of a publicly traded company should be right-sized.

Many investor-owned electric companies have multiple SEC registrants in their corporate structure, typically consisting of a publicly traded holding company and certain of its subsidiaries. It is not uncommon for our members to report for up to eight entities and for their quarterly reports on Form 10-Q to be 100-150 pages. As shown in the table below for EEI's ten largest members by market capitalization, the MD&A and Footnotes to the Financial Statements are the major contributors to the size of the Form 10-Q. Therefore, to meaningfully reduce the regulatory burden on investor-owned electric companies, the SEC should narrow the quarterly financial statement and disclosure requirements applicable to these subsidiary registrants.

Max 8 213 92 48 86 21 78%

We recognize that filing quarterly financial statements for subsidiary registrants may be beneficial for the investing public. However, the scope of the required MD&A and footnote disclosure for such financial statements is overly broad and certain aspects of this disclosure are not necessarily meaningful or beneficial for the investing public on a quarterly basis. For example, financial statement footnote disclosures relating to benefit plans, derivatives and hedging, fair value measurements, income taxes, financing activities and variable interest entities are either not relevant for electric utilities or provide little useful information when presented on a quarterly basis.

Registrants should have the option to provide such footnote disclosure for subsidiary registrants only when material changes have occurred during the reporting period. We appreciate that the footnote disclosure requirements are driven largely by the standards of the Financial Accounting Standards Board ("FASB"), and we encourage the SEC to work with FASB to right-size the scope of these requirements.

Moreover, the SEC should revise Form 10-Q and the applicable items of Regulation S-K so that the requirements thereof apply solely to the publicly traded holding company, and not to the subsidiary registrants, for quarterly periods.

The equity of these subsidiary registrants generally is not publicly traded, and we therefore believe that the above-discussed disclosures do not provide the investing public with meaningful information. The minimal benefit of providing this information is far outweighed by the burden of preparing it. An additional alternative would be to allow companies to just provide the base financial statements for subsidiary registrants (without the footnotes and MD&A sections) in a supplemental schedule to the documents.

An alternative to a 10-Q in a period where a 10-S is not presented could be an extended press release, furnished on Form 8-K.

Ms. Vanessa A. Countryman
Secretary
Securities and Exchange Commission
100 F Street NE
Washington, DC
20549-1090

We believe the Proposed Rule will allow semiannual reporters to provide a level of quarterly information (e.g., earnings, updates to financial guidance and selected footnotes and disclosures) using Form 8-K. This would allow these companies to meet Regulation FD requirements, without having to provide a full set of financial statements, MD&A, footnotes, etc. Under this approach, companies would file materials that are similar to their Earnings Press Release, which companies consider the most relevant information required by investors. This approach would still provide investors with the most relevant information at a significantly reduced burden to SEC registrants.

Certain other quarterly disclosure requirements should be streamlined.

As currently in effect, Item 303(c)(2) of Regulation S-K requires a discussion of material changes in the registrant's results of operations with respect to (i) the most recent fiscal year-to-date period and the corresponding year-to-date period of the preceding fiscal year and (ii) either (a) the most recent quarter for which a statement of comprehensive income is provided and the corresponding quarter for the preceding fiscal year or (b) the most recent quarter for which a statement of comprehensive income is provided and the immediately preceding sequential quarter. The SEC should instead permit registrants to disclose only one of (i) or (ii).

Moreover, the SEC should streamline the disclosure requirements of Item 701 of Regulation S-K. Specifically, we believe that the following pieces of information currently required by this item do not provide meaningful information for investors:

• The names of the principal underwriters.
• The aggregate underwriting discounts and commissions.
• The exemption from registration claimed and the facts relied upon to make the exemption available.

In summary, in addition to its semi-annual reporting proposal, we recommend that the SEC reconsider the existing requirements of Form 10-Q to reorient the form toward its purpose of providing the investing public with timely and useful information about material developments in a registrant's business and financial condition. We encourage the SEC to revise Form 10-Q so that quarterly filings function more like an extended earnings release, emphasizing concise updates, developments and material changes. The scope of the financial statement footnote disclosure, applicable to both the publicly traded company and its registrant subsidiaries, could be limited to updates for material changes during the period. Such a revised quarterly form would allow companies to provide investors with necessary relevant and material information while meaningfully alleviating the regulatory burden on registrants. We would welcome proposed rulemaking on this front.

Elisa M R McClelland — Jul 6, 2026
Subject: File No. S7-2026-15 From: Elisa M R McClelland Rule S7-2026-15 Regarding Rule S7-2026-15, I want the maintenance of the current rule that requires the quarterly and annual affirmations by signature, by the executives of the applicable companies that fall under the current rule which was enacted in 2002. I do not approve of the proposed Rule S7-2026-15. Thank you for your consideration.

Elisa Morsch — Jul 6, 2026
Subject: File No. S7-2026-15 From: Elisa Morsch Subject: Opposing Any Reduction to Quarterly Financial Reporting Requirements Dear Secretary, I am writing to you with a sense of extreme urgency as an American retail investor who relies entirely on my 403 (b) plan for my future survival. I am deeply alarmed by proposals to reduce corporate financial reporting from a quarterly to a semi-annual basis. I strongly urge the Securities and Exchange Commission to reject this roll-back, which directly threatens the retirement security of millions of everyday Americans. Reducing the frequency of financial disclosures is a dangerous step backward that puts retail investors at an immediate, severe disadvantage. A six-month reporting gap creates a dangerous information vacuum. This blackout period leaves hard-working citizens completely in the dark while Wall Street insiders use private resources to gain an unfair edge. Allowing companies to hide their financial health for half a year introduces unacceptable risks to our retirement accounts: - Delayed Red Flags: A six-month gap allows corporate mismanagement, fraud, or financial distress to go completely unnoticed until it is too late, devastating our hard-earned savings. - Extreme Market Volatility: Replacing steady, predictable quarterly updates with semi-annual data drops will trigger massive, volatile price shocks that punish long-term retirement portfolios. - Erosion of Executive Accountability: Dismantling the 90-day reporting cycle removes a vital check on corporate executives, inviting reckless short-term behavior behind a prolonged veil of secrecy. American workers are already shouldering the entire burden of funding their own retirements through 401(k) and 403 (b) plans. We cannot afford to invest blindly. The SEC's core mandate is to protect investors, and right now, protecting investors means defending the transparency of the 10-Q quarterly reporting framework. I urge the Commission to act decisively to preserve quarterly reporting and protect the financial future of Americans. Thank you for your immediate attention to this critical matter. Sincerely, Elisa Morsch

---

Elisabeth Hogan Pres. LKH Digital Strategies, LLC — Jul 6, 2026
Subject: File No. S7-2026-15 From: Elisabeth Hogan Dear Secretary Countryman, As an individual American investor, I strongly oppose moving from quarterly to semiannual financial reporting (File No. S7-2026-15). Withholding financial data for six months creates dangerous information vacuums. This delay severely harms ordinary individual investors, like myself and millions of retirees and savers like me, directly benefiting institutional insiders and hedge funds who already control massive market advantages. American market strength relies on transparent, frequent corporate disclosures. I urge the SEC to kill this proposal and protect the public and its trust in our financial system by

maintaining mandatory quarterly reporting. Thank you for your consideration.

Elizabeth Hart — Jul 6, 2026
Subject: File No. S7-2026-15 From: Elizabeth Hart I strongly disagree with the removal of quarterly transparency. This is an absurd change and once again another proposed change that removes progress and policies established to protect individuals.

Elizabeth McDuffie — Jul 6, 2026
Subject: File No. S7-2026-15 From: Elizabeth McDuffie Individual investors need frequent access to company financials and forward looking statements as we manage our portfolios. It is already risky for the small investors compared to the big management firms; don't reduce the timely information vital to protecting our retirement funds.

Elizabeth Meza — Jul 6, 2026
Subject: File No. S7-2026-15 From: Elizabeth Meza Please keep quarterly reporting

---

Ella R. — Jul 6, 2026
Subject: File No. S7-2026-15 From: Ella R. We should keep quarterly reporting mandatory. It provides additional transparency and accountably to account holders and discourages bad actors.

Elliott Rittenberg Former CEO, Infrared Imaging LLC — Jul 6, 2026
Subject: File No. S7-2026-15 From: Elliott Rittenberg The proposed rule change should not be adopted. This change reduces transparency in financial reporting, and elevates risk for investors. Quarterly reporting provides information needed to support investment decisions. Reducing the frequency of reporting is not in the best interest of the public.

Eric Petersen None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Eric Petersen Keep the quarterly reporting for publicly traded companies intact!

Erin McRae — Jul 6, 2026
Subject: File No. S7-2026-15 From: Erin McRae Please keep quarterly reporting. Business cycles are much shorter than in the past, and shareholders and investors need the information to help make rational decisions. This system has been working well for decades, even through volatile periods. With all of the economic changes that are currently happening and that have been projected, regular up-to-date reporting is essential. Switching to voluntary and/or less frequent reporting will not inspire investor and shareholder confidence and will likely have disastrous consequences.

Erin Sanders Constituent, investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Erin Sanders I am writing to express my strong opposition to the Commission's proposal to allow public companies to switch from quarterly financial reporting to a semiannual schedule via Form 10-S. A six-month gap between financial updates is far too long in today's fast-moving market. A company's operational, financial, and macroeconomic conditions can change drastically in just a few months. Moving to a semiannual schedule will create a dangerous information vacuum, severely damaging investors' ability to make properly informed, timely decisions. Mandatory quarterly reports exist to protect and inform the general public. Reducing this frequency will primarily harm everyday, retail investors who rely heavily on public disclosures to maintain a level playing field with institutional investors. Diluting these transparency requirements compromises market integrity, increases volatility around reporting periods, and undermines the foundational mission of the SEC to protect investors. I urge the Commission to withdraw this proposal and maintain the current mandatory quarterly reporting framework.

Re: Request for Comment on Proposal to Allow Optional Semiannual Reporting
(Release Nos. 33-11414; 34-105368; 39-2563; IC-36140; File No. S7-2026-15)
Dear Ms. Countryman:
Ernst & Young LLP is pleased to provide comments to the Securities and Exchange Commission (SEC
or Commission) on its proposed amendments to allow registrants to file semiannual reports on new Form 10-S in lieu of quarterly reports on Form 10-Q to meet their interim reporting obligations under the Securities Exchange Act of 1934 (Exchange Act).
We recognize that the Commission must balance reducing compliance burdens for registrants with meeting investor needs. However, we believe investors' information needs should have a critical role.
Historically, investor feedback submitted to the Commission has frequently been limited, even on requests for public comment, and often comes from intermediaries or representative groups. Since this proposal affects the extent of information registrants will be required to provide to investors, we encourage the Commission to consider expanding ways to get more direct input from investors. Additionally, advances in artificial intelligence could reduce certain issuer burdens of financial reporting, which could alter the cost-benefit considerations underlying reporting frequency. If the proposal is adopted, the Commission should monitor these developments and their implications.
We offer feedback on several aspects of the proposal, including its interaction with other proposed rulemaking to help strengthen the final rules, the streamlining of the current requirements, certain benefits of the existing quarterly reporting framework and the proposed requirement for registrants to

disclose their interim reporting election. Our insights are intended to assist the Commission in achieving
its objectives, including reducing registrants' compliance burden while maintaining investor protections.

The proposal's interaction with other proposed rulemaking
We note that the proposal was issued shortly before two other significant proposals were released: one on filer status simplification1 and one on registered offering reform.
2, 3 All three initiatives aim to
reduce compliance costs, improve access to capital, and maintain important protections for investors with the broader goal of making public markets, including initial public offerings (IPOs), more attractive to companies.
We recommend that the Commission conduct additional outreach to determine whether a holistic evaluation of these initiatives, including a single, comprehensive economic analysis, would help market participants better understand the net effects of all three proposals if adopted. If market participants indicate that additional analysis would be beneficial, this additional step could help strengthen any final rules, making them less susceptible to legal challenge or reversal. This approach
would also mitigate the risk of overstating or understating the potential costs and benefits.
To help illustrate the overlapping nature of the proposals, consider some of the resulting changes that
would impact a large company upon completing its IPO:
► The company would be allowed to submit a single Form 10-S for the six-month interim period instead of filing three quarterly reports on Form 10-Q.
4
► The independent auditor's attestation report on internal control over financial reporting (ICFR) would be delayed to at least 60 months after the IPO, instead of the second annual report on Form 10-K after the IPO.
5
► Extended filing deadlines for quarterly and annual reports would apply for an additional four years.
5, 6
1 SEC Release No. 33-11419, Enhancement of Emerging Growth Company Accommodations and Simplification of Filer
Status for Reporting Companies.
2 SEC Release No. 33-11418, Registered Offering Reform.
3 In addition, Chairman Atkins has invited the public to submit feedback on Regulation S-K requirements and the SEC's
rules related to IPOs. The SEC's Division of Corporation Finance Director, Jim Moloney, also encouraged the public to
submit targeted, concrete recommendations relating to Regulation S-X.
4 Both existing Form 10-Q and proposed Form 10-S include (1) financial statements reviewed by the independent auditor,
(2) management's conclusion regarding the effectiveness of disclosure controls and procedures, (3) disclosure of
material changes in ICFR, and (4) management certifications.
5 SEC Release No. 33-11419, Enhancement of Emerging Growth Company Accommodations and Simplification of Filer
Status for Reporting Companies.

6 Under current SEC deadlines, a non-accelerated filer has up to 90 days after year end to file its annual report on
Form 10-K (compared to 60 days for a large accelerated filer), and 45 days after quarter end to file a quarterly report
on Form 10-Q (compared to 40 days for a large accelerated filer). Based on the existing rules, a company that conducts
an IPO would not meet the definition of an accelerated filer or large accelerated filer at the end of the fiscal year in which
it went public because it would not have had periodic reporting obligations for at least 12 months. Instead, it would be
considered a non-accelerated filer for purposes of its first annual report on Form 10-K following its IPO, even if its public
float were to exceed the thresholds in the accelerated or large accelerated filer definitions.

► Scaled disclosure requirements currently only available to smaller reporting companies would apply for 60 months.
7, 8
► Private company effective dates for new or revised accounting standards issued by the Financial Accounting Standards Board (FASB) would apply for the five years after the IPO.
7
► Shelf registration would be available immediately rather than 12 months after the IPO.
9

Streamlining quarterly reporting requirements

We agree with Commissioner Hester Peirce's observation10 that, beyond interim reporting frequency,
complying with the reporting requirements (i.e., preparing the Form 10-Q) may influence companies' decisions to access or remain in the public markets. In this context, we believe it is appropriate for the
Commission also to consider whether the scope and content of required disclosures can be adjusted to
balance investor information needs with the costs and complexities imposed on registrants. We believe
targeted adjustments can be made to the reporting requirements within the existing framework to reduce the burden of interim reporting while preserving the benefits of publicly providing timely, high-quality disclosure.

For example, we recommend that the Commission consider whether management's discussion and analysis disclosures in Form 10-Q could be streamlined to include only material changes from the previous quarter, rather than the line-by-line narrative discussion that has become standard.

Certain benefits of the quarterly reporting framework

We encourage the SEC to consider in its analysis certain benefits of the existing reporting framework
as outlined in this section, which reflect our perspective based on our role as independent auditors. We believe registrants may also consider these benefits when deciding whether to report semiannually
or how to implement a hybrid reporting model.

The quarterly reporting framework in place since 1971 has supported the US capital markets by enabling the transparent and timely flow of consistent financial information, which strengthens investor confidence and facilitates the efficient allocation of capital. The existing framework helps address the inherent information gaps between management and investors, while reducing overall

7 SEC Release No. 33-11419, Enhancement of Emerging Growth Company Accommodations and

Simplification of Filer
Status for Reporting Companies.
8 For example, smaller reporting companies benefit from accommodations, such as providing only two years of audited
financial statements instead of three years, reduced executive compensation disclosures and no risk factor disclosure in
periodic reports, among others.
9 SEC Release No. 33-11418, Registered Offering Reform.
10 SEC Commissioner Hester Peirce's Statement on the Proposed Amendments to Allow Semiannual Reporting and
A Quarter for your Thoughts: Remarks at the Meeting of the SEC Investor Advisory Committee.

market uncertainty.11 It also helps mitigate risks in the financial reporting system by reinforcing financial reporting discipline and allowing potential accounting and reporting issues to be identified and resolved on a timely basis.
Registrants currently must provide interim financial statements prepared in accordance with US GAAP
that are reviewed by an independent auditor. Registrants and their certifying officers must maintain disclosure controls and procedures and disclose the conclusions on their effectiveness as of the end of
the period covered by an interim report.
12 Registrants must also disclose any changes that occurred
during the interim period that have materially affected, or are reasonably likely to materially affect, the
registrant's ICFR.
13 These quarterly requirements add valuable rigor to the financial reporting process.
Other benefits of mandatory quarterly reporting include:
► Promoting discipline in financial statement close processes, particularly in areas that typically receive heightened focus in quarterly reporting periods, such as complex accounting estimates and transactions that require significant judgment
► Incentivizing registrants to more often complete certain analyses that help identify significant unusual transactions, contribute to the design and operation of related controls and provide more opportunities to evaluate key assumptions in light of changing macroeconomic and other conditions
► Supporting ongoing engagement between management and the audit committee, which contributes to effective governance and timely reassessment of disclosures and controls
Financial reporting processes
Today's interim reporting provides an appropriately structured cadence for interaction among management, auditors and those charged with governance. This cadence reinforces the discipline associated with the financial statement close process, including preparing and reviewing financial statements and executing key controls on a more frequent basis, supporting effective oversight, appropriate challenge, and timely risk evaluation over the course of the year. Although not addressed
in the proposal, registrants that elect semiannual reporting would have to determine the appropriate cadence for formally closing their books and independent auditors would then determine how to best pace and complete the audit.
11 See also Recommendation of the Investor Advisory Committee Regarding Quarterly vs. Semi-annual Reporting,
approved by the Investor Advisory Committee at the 4 June 2026 meeting.
12 Item 307 of Regulation S-K.
13 Item 308(c) of Regulation S-K.

More frequent interim reporting encourages registrants to perform full or substantially complete financial statement close processes throughout the year. This discipline enhances the design and operation of internal controls and provides more timely opportunities for management and independent auditors to identify and evaluate control deficiencies and potential misstatements, and for management to remediate such matters.14
Collectively, this improves the quality of the registrants' financial reporting processes and controls, as
well as the audit effort for year-end financial reporting.
Interim review standard
The nature of procedures performed in an interim review is established by Public Company Accounting
Oversight Board (PCAOB) Auditing Standard (AS) 4105, Reviews of Interim Financial Information, and
generally remains consistent regardless of the period under review. However, for an independent auditor to perform a review in accordance with PCAOB AS 4105, a registrant must prepare a full set of interim financial statements in accordance with US GAAP that result from its quarterly financial close process.
The SEC should engage with the PCAOB to consider whether updates to PCAOB AS 4105 are needed
to address the implications of a longer interim period under a semiannual reporting model.
Disclosure about interim reporting election
Given the different ways registrants may communicate with stakeholders if they elect semiannual reporting,
15 we recommend that, in addition to the check box requirement,16 the SEC also consider requiring registrants to disclose the reasons for their selected reporting frequency and additional information about their planned interim financial reporting approach. This could include management's expectations related to (1) whether financial information will be provided for the first and third quarters and, if so, a general description of that information and the communication channels where it will be found; (2) changes to ICFR that are reasonably likely to be material; and (3)
changes in the roles and responsibilities of the audit committee.
This disclosure could provide investors with meaningful transparency around a potentially significant change to reporting.
14 We believe the Commission's economic analysis should also consider the combined effects and the potential implications
for financial reporting resulting from both reduced reporting frequency and a smaller population of registrants required
to obtain ICFR attestation from their independent auditors.
15 For example, a registrant that chooses semiannual interim financial reporting could elect to continue publishing earnings
releases for the first and third quarters that must be furnished to the Commission on Form 8-K. The Commission refers
to this in the proposal as a hybrid reporting model.
16 The proposed amendments would add a check box to the cover page of Forms 10-K, Securities Act of 1933 (Securities
Act) registration statements on Forms S-1, S-3, S-4 and S-11, and Exchange Act registration statements on Form 10. A
registrant would indicate annually whether it selects a semiannual or quarterly reporting frequency either by checking or

not checking the semiannual box.

Hybrid reporting model and earnings releases
As recognized by the Commission in its proposal, the contents of earnings releases are not required to
comply with the SEC's interim reporting requirements,17 including the requirement to prepare a full set of interim financial statements in accordance with US GAAP. If a company elects semiannual reporting and continues to provide financial information that falls short of a full set of interim financial statements for the first and third quarters, independent auditors would be unable to provide assurance
under existing standards. However, investors may believe auditors have provided assurance over such
information. The SEC could consider requiring registrants to clarify that independent auditors do not have responsibility for the content of the earnings release and that the interim information could change upon filing of an interim report.
If investors need or registrants prefer assurance over such information, changes to PCAOB standards
would be necessary, and we encourage the SEC and PCAOB to evaluate how the existing standards
need to evolve.
Age of financial statements
We support the changes to the requirements for determining the age of financial statements included in
registration and proxy statements that are included both in this proposal and the proposal on registered
offering reform.18 We believe the changes in the semiannual reporting proposal that would align the requirements more closely with the requirements for periodic reports would make the requirements easier to apply. The more substantive changes in the registered offering reform proposal would eliminate
outdated Rules 3-01(c)(2) and (3) that we believe unfairly penalize registrants with losses in their annual
financial statements by making them update financial statements faster than those without losses.
Comfort letter considerations
The optionality of a semiannual reporting model would have implications on independent auditors' issuance of letters to underwriters and certain other requesting parties, commonly referred to as "comfort letters." Registrants choosing to file semiannual reports may be subject to periods in which independent auditors cannot provide negative assurance on subsequent changes in specified financial
statement items after the date of the most recent audited or reviewed financial statements (i.e., the subsequent change period) in connection with a comfort letter , depending on the timing of the offering.19
17 There are no securities laws or Commission rules or regulations that dictate the content of earnings releases, other than
the general antifraud provisions of the securities laws and related rules and the Commission's non-GAAP rules in
Regulation G and Item 10(e) of Regulation S-K.
18 SEC Release No. 33-11418, Registered Offering Reform.
19 For example, non-accelerated filer Registrant A has a calendar fiscal year and files a Form 10-K with audited financial
statements for fiscal year 2026 on 31 March 2027. It elects to report on a semiannual basis in 2027.

If Registrant A does
not engage its independent auditor to perform the procedures specified by PCAOB AS 4105 for any reporting period before
the six months ended 30 June 2027, the independent auditor would be unable to provide negative assurance on changes in
specified financial statement items as of any date after 14 May 2027, until a review of Registrant A's interim financial
statements, for the six-month period ended 30 June 2027 (due to be filed on Form 10-S on 16 August 2027), is completed.

PCAOB AS 6101, Letters for Underwriters and Certain Other Requesting Parties, provides guidance to
independent auditors for performing and reporting on the results of engagements to issue letters for underwriters and certain other requesting parties. Under a semiannual reporting model, the interval between the financial statements most recently audited (or reviewed in accordance with PCAOB AS 4105) and the offering date may increase significantly. However, PCAOB AS 6101.46 only allows auditors to provide negative assurance over the subsequent change period for a fixed number of days
(i.e., 134 days) after the date of the most recent audited or reviewed financial statements.

We observe that the guidance functions appropriately today for companies that do not report on a quarterly basis. Foreign private issuers often include interim financial statements similar to US domestic
registrants in registration statements in connection with securities offerings. In these cases, the financial statements are subject to PCAOB AS 4105 procedures, enabling independent auditors to provide negative assurance on both the reviewed interim financial statements and the subsequent change period in accordance with PCAOB AS 6101.

Depending on how the offering process adapts to semiannual reporting (i.e., the needs of underwriters and
other requesting parties), registrants may need to prepare interim financial statements and have them
reviewed by an independent auditor earlier than would be required under the proposed amendments.

US GAAP

It is important for the SEC to work with the FASB to review affected accounting standards and related
practice considerations if the proposal moves forward.

Several accounting standards explicitly rely on quarterly measurement or disclosure concepts, including
the treasury stock method computation guidance in Accounting Standard Codification (ASC) 260, Earnings Per Share,
20 the fourth-quarter disclosure requirements in ASC 270, Interim Reporting,
21
and the interim disclosure requirements in ASC 280, Segment Reporting.
22
In addition, established practice often treats the third quarter as the annual impairment testing date for
goodwill and indefinite-lived intangible assets, and equity method investee information is frequently reported on a one-quarter lag under ASC 323, Investments — Equity Method and Joint Ventures.

While these examples are not comprehensive, they illustrate that quarterly reporting conventions are embedded in US GAAP.

Federated Hermes, Inc. — Jul 6, 2026
July 6, 2026
Ms. Vanessa Countryman
Secretary
U.S. Securities and Exchange Commission
100 F Street NE
Washington DC 20549-1090
Re: Semiannual Reporting (File Number S7-2026-15)
Dear Ms. Countryman:
Federated Hermes, Inc.1 ("Federated Hermes") appreciates the opportunity to comment on the U.S. Securities and Exchange Commission's (the "SEC") proposed optional semiannual reporting framework (the "Proposal").2 We submit this letter from the dual perspective of (i) a public reporting company that is a large accelerated filer subject to the SEC's disclosure framework and (ii) a global asset manager whose investment products, fiduciary obligations, and stewardship activities rely extensively on timely and standardized issuer disclosures. From both perspectives, transparency, consistency, and comparability of material financial information are critical to the efficiency of capital markets. As an issuer, we understand the operational and compliance requirements associated with periodic reporting. As an asset manager, we rely on consistent, high-quality disclosures across a broad universe of portfolio companies to support investment decision-making, risk management, and fiduciary oversight. These dual roles are interdependent. The disclosure framework is not solely a compliance mechanism; it is also the foundational infrastructure through which capital is allocated efficiently. As such, changes to reporting frequency should be evaluated not only in terms of issuer burden, but also in terms of investor reliance and system-wide effects.
We applaud the SEC's objective of reducing compliance burdens and encouraging long-term corporate decision-making and believe that the continued availability of reliable, decision-useful material information to investors is essential to efficient capital allocation, risk management, and investor protection. We suggest that these notions can coexist, and that streamlining, rather than eliminating, quarterly filings would appropriately balance investor protection and induce more companies to go public. Specifically, we support the Investment Company Institute's (ICI)
1 Federated Hermes, Inc. (NYSE: FHI) is a global leader in active investment management, with $907.1 billion in
assets under management as of March 31, 2026. We deliver investment solutions that help investors target a broad

range of outcomes and provide equity, fixed-income, alternative/private markets, multi-asset and liquidity
management strategies to more than 11,000 institutions and intermediaries worldwide. Our clients include
corporations, government entities, insurance companies, foundations and endowments, banks and broker-dealers.
2 Semiannual Reporting, 91 Fed. Reg. 24,968 (proposed May 7, 2026) (to be codified at 17 C.F.R. pts. 200, 210,
229, 230, 232, 239, 240, 249, 260), https://www.federalregister.gov/documents/2026/05/07/2026-09095/semiannual-
reporting.

recommendation to maintain mandatory quarterly filings focused on material information, consisting of at least quarterly financial statements and management's discussion and analysis ("MD&A") disclosure.3 We similarly recommend that the SEC maintain mandatory quarterly reporting requirements; streamline Forms 10-K and 10-Q to focus on the most decision-useful, material disclosures, including financial statements and MD&A; and eliminate or reduce prescriptive and immaterial disclosure requirements that do not meaningfully inform investors. These suggestions are complementary to our comments on potential reforms to Regulation S-K.4 In that letter, we advocated for a more principles-based, materiality-focused disclosure framework that prioritizes decision-useful information and eliminates prescriptive, immaterial or duplicative requirements. The same framework provides a path to achieving the Commission's objectives in this Proposal without reducing reporting frequency. Rather than substituting semiannual reporting for quarterly reporting, the Commission can streamline periodic disclosures by aligning Forms 10-K and 10-Q with a modernized Regulation S-K—retaining core financial statements and MD&A while rationalizing prescriptive and immaterial line-item requirements. In this way, the Commission can reduce compliance burdens and discourage prescriptive and immaterial disclosure while preserving the cadence, comparability, and consistency that investors rely on for capital allocation, risk management, and stewardship activities.

I. The Proposal Creates a Structural Misalignment Between Reporting and Investor Needs

We believe that the Proposal introduces a structural misalignment between how companies report and how investors operate. While issuers may elect to reduce formal reporting frequency, investors—including Federated Hermes—will continue to evaluate performance, risk, and valuation based on quarterly disclosures (and, as applicable, material interim disclosures via Current Reports on Form 8-K, press releases and other sources). Empirical evidence demonstrates that more frequent reporting improves investors' ability to forecast earnings and enhances price efficiency.5 Investors, therefore, rely not simply on the existence of disclosures, but on their cadence and consistency.

At the same time, issuers are likely to continue disseminating quarterly information voluntarily through earnings releases and other communications.6 This reflects the reality that market

6 Id.

expectations for quarterly transparency will not diminish, even if formal SEC requirements change. As a result, the Proposal creates a divergence between regulated, consistent disclosure (semiannual) and unregulated, asymmetrical disclosure that may vary widely between issuers (quarterly).
From our perspective as both an issuer and investor, this fragmentation reduces clarity and consistency, increases interpretive risk, and undermines the role of the SEC reporting framework as the central, authoritative source of information. Therefore, instead of reducing the frequency of reporting, we recommend streamlining the current quarterly disclosure requirements to focus on the most material, decision-useful disclosures for investors.
II. Reduced Frequency Will Impair Comparability and Increase Information Asymmetry
As an asset manager, Federated Hermes relies on consistency and comparability across issuers to construct portfolios, evaluate relative performance, and manage risk exposures. The Proposal's optional structure would likely produce a mixed reporting environment in which companies adopt differing disclosure cadences and potentially content.
7 This variation introduces complexity at the
portfolio level. Investors would need to reconcile financial data across companies reporting at different intervals and using different mixes of required and voluntary disclosures. From the perspective of an issuer, this fragmentation may also affect how companies are evaluated relative to peers. Companies electing semiannual reporting may be compared less directly to those continuing quarterly reporting, potentially introducing distortions in valuation and capital allocation.
We are concerned that reducing the frequency of mandated disclosures may therefore increase uncertainty and perceived risk, particularly for issuers in which asset managers rely more heavily on public market data access.8 Reduced standardization may also require additional internal resources to obtain and normalize information across issuers. These costs are ultimately borne by end investors, including retirement savers and other clients. At the very least, the Proposal will likely introduce uncertainty for reporting companies regarding how much information must be

quarterly-reporting
8 CFA Institute, Investor Perspectives on Quarterly Reporting (June 10, 2026)
https://www.cfainstitute.org/about/press-room/2026/quarterly-reporting-survey-2026 (showing that market
participants view quarterly reporting as essential to maintaining comparability and transparency and suggesting that
reducing reporting frequency would impair comparability and increase information asymmetry); Chen et al.,
Disclosure Frequency and Information Asymmetry, Journal of Risk and Financial Management (2025)
https://www.mdpi.com/1911-8074/18/2/64 (suggesting that increased disclosure frequency is

associated with
reduced information asymmetry and improved information environments).

disclosed voluntarily outside of the semiannual disclosure requirements to meet market expectations, potentially leading to increased—not reduced—disclosure burdens and complexity. Reducing reporting frequency may slow the incorporation of information into market prices and increase dispersion in investor expectations. This effect may be exacerbated if issuers adopt inconsistent disclosure practices. Mandatory quarterly reporting, however, provides a regular cadence with consistent disclosure through which markets incorporate new information. Evidence indicates that more frequent reporting may lower costs and improve the alignment between stock prices and future earnings outcomes.9

The Proposal may also affect the behavior of information intermediaries, including analysts, who play a central role in interpreting and disseminating firm-specific information. Empirical work examining changes in reporting frequency has found that analysts are more likely to initiate and maintain coverage of firms that provide more frequent disclosures, as regular reporting reduces information acquisition costs and supports ongoing updates to valuation models.10 Reduced reporting frequency may therefore diminish analyst incentives to sustain coverage, particularly for smaller issuers where coverage decisions are more sensitive to the availability of consistent, timely information. This dynamic could lead to reduced visibility and less efficient information dissemination in the market, with corresponding implications for liquidity and pricing efficiency. Alternatively, research has also indicated that more frequent reporting is associated with improved forecast accuracy, as analysts can incorporate incremental information into earnings estimates on a timelier basis.11 Therefore, we believe maintaining quarterly reporting requirements would better align with the SEC's goal of promoting market efficiency.

III. Semiannual Reporting Would Not Meaningfully Reduce Costs

We acknowledge that the Proposal may offer compliance cost savings for certain issuers, particularly smaller companies. However, we believe these benefits may be more limited in practice than anticipated as the Proposal may reduce formal filings without reducing the overall demand for disclosure, resulting in a system that is less regular and consistent and more asymmetric, but not materially less burdensome. The underlying processes required to generate financial information will also remain largely unchanged, as Form 10-S retains substantially similar disclosure requirements.12 Further, issuers that elect semiannual reporting may face

signaling risks, as investors could interpret such a choice as reflecting reduced transparency.13 This may affect analyst coverage and cost of capital.
Conclusion
Federated Hermes appreciates the SEC's efforts to modernize the disclosure framework and reduce unnecessary compliance burdens. However, we believe the Proposal would introduce fragmentation into the reporting system, reduce comparability, and increase information asymmetry without meaningfully reducing costs for issuers. From both our perspective as a public reporting company and as an asset manager, quarterly reporting remains essential to market efficiency, investor protection, and effective capital allocation. We respectfully urge the Commission to retain mandatory quarterly reporting and instead pursue a targeted approach to streamlining Forms 10-K and 10-Q, focusing on material disclosures (rather than prescriptive and immaterial disclosures) that are most decision-useful to investors.

Fred R LaPoint — Jul 6, 2026
Subject: File No. S7-2026-15 From: Fred R LaPoint Fred R. LaPoint Manistee, MI 49660 July 6, 2026 Vanessa A. Countryman, Secretary U.S. Securities and Exchange Commission 100 F Street, NE Washington, DC 20549 Re: Opposition to Proposed Rule — Semiannual Reporting (File No. S7-2026-15; Release Nos. 33-11414; 34-105368) Dear Secretary Countryman: I write as a member of the investing public to express my firm opposition to the Commission's proposal to permit public companies to file semiannual reports on new Form 10-S in place of quarterly reports on Form 10-Q. I understand the proposal is framed as optional and as a way to reduce compliance burdens and grant companies flexibility in choosing their reporting cadence. I do not find that framing persuasive. Quarterly reporting has been a cornerstone of American market transparency for decades, and it exists for the benefit of investors — not for the convenience of the companies asking them to part with their money. Loosening it, even as an option, moves us in exactly the wrong direction at exactly the wrong time. My objections are these. First, transparency is not a burden to be minimized; it is the price of access to public capital. When a company invites ordinary Americans to invest their savings, retirement funds, and pensions in its stock, the least it owes them is a regular, timely account of how their money is being managed. Cutting the frequency of that account in half means investors would go up to six months without a mandated financial picture. That is a long time to be kept in the dark, and it is the ordinary retail investor — not the sophisticated institution with private access — who is left most exposed by the gap. Second, an "optional" regime does not solve the problem; it creates a two-tier market. Investors and analysts would be forced to compare companies reporting on entirely different schedules, and the companies most likely to opt into less frequent disclosure are often those investors most need to watch closely. Reduced disclosure tends to invite less scrutiny, not more, and less scrutiny is where trouble hides. Voluntary earnings releases on Form 8-K are no

substitute for a reviewed, filed, standardized report carrying the accountability that a Form 10-Q carries. Third, the argument that quarterly reporting fuels "short-termism" asks investors to accept less information as a cure for how some managers choose to behave. The answer to short-term thinking is better long-term stewardship by management, not fewer facts for the people whose money is at stake. Sunlight has served this country's markets well. American capital markets are trusted around the world precisely because of the rigor and regularity of their disclosure. That trust is an asset built over generations, and it should not be traded away for a marginal reduction in paperwork. I have spent over 50 years in emergency and public service, and one principle has held true across every discipline I've worked in: you do not reduce the flow of information at the moment people most need it. Accountability and transparency are what earn public confidence, and once that confidence is eroded it is very hard to rebuild. At a time when public trust in institutions is already strained, the Commission should be strengthening disclosure, not thinning it. I respectfully urge the Commission to withdraw this proposal and to preserve the quarterly reporting requirement that has protected investors so well for so long. Thank you for the opportunity to comment. Respectfully, Fred R. LaPoint Manistee, Michigan

---

Gail Morello — Jul 6, 2026
Subject: File No. S7-2026-15 From: Gail Morello Please keep reporting quarterly. More frequent reporting minimizes the potential for insider trading and fraud. It also promotes accountability by requiring management to regularly assess and disclose the company’s financial position. Reducing this discipline could enable mismanagement or misconduct to go undetected for extended periods, increasing overall risk. I urge the Commission to reject the ‘every 6 months’ reporting proposal and reaffirm its commitment to robust, frequent, and transparent disclosure standards that protect investors and maintain confidence in U.S. markets.

Gary Falacara — Jul 6, 2026
Subject: File No. S7-2026-15 From: Gary Falacara I am deeply discouraged to hear that the SEC is proposing to eliminate the need to file quarterly reports for public corporations, replacing this with a semi-annual reporting requirement. Please, please, PLEASE do not institute this change! Such a change will tilt the balance even more away from individual investors such as myself and into the corner of large institutional investors. Managing your own portfolio is a difficult undertaking for an individual investor. We’re up against funds and other institutional investors that have full time analysts with year round access and visibility into companies that we as individual investors simply do not have. Instead, we have to rely on public disclosures such as 10Qs to gather information about the companies we’re interested in investing in. As it is, it’s not a level playing field. These institutional investors not only already have access to information not readily or affordably available to the public, but they also get lower fees, preferential treatment, and direct access to market makers. Eliminating quarterly reporting will simply amplify the advantages institutional traders have and further put individual investors at a disadvantage. Despite the challenges and the feeling that sometimes the system is “rigged” against the individual investor, I enjoy managing my portfolio, and I spend a great deal of time doing research into the companies I invest in. Please don’t make it even more difficult for people like me by taking away an important tool that I rely on.

George Barr — Jul 6, 2026
Subject: File No. S7-2026-15 From: George Barr I do not agree with the proposal of letting companies decide whether to use semi-annual or quarterly reporting. If the real desire is to reduce

regulatory burden this is the wrong approach. The need for investors to have appropriate information is necessary for the markets to work properly. While there may be circumstances that semi-annual reporting would be sufficient for investors in certain companies, in certain industries, it doesn't make sense in many others (e.g. start ups, reverse mergers, companies in high risk industries). To give all companies a pass doesn't seem to be a prudent plan. The burden of quarterly reporting could be reduced by reviewing all the current regulations to determine what changes might make sense. It also might be helpful to review whether enforcement actions are being used for company's not following the current rules. Thank you for the opportunity to provide feedback.

Gilles Estines — Jul 6, 2026
Subject: File No. S7-2026-15 From: Gilles Estines I feel the filing requirements should remain as they presently are. Thank you.

Glenda Rubin US Citizen — Jul 6, 2026
Subject: File No. S7-2026-15 From: Glenda Rubin Dear Securities and Exchange Commission, Re: Opposition to the Proposed Rule on Semiannual Reporting (File No. S7-2026-15)I strongly oppose the proposal to drop the quarterly Form 10-Q filings and in its place require only twice yearly filings on the new Form 10-S. I hope the Commission will not adopt this proposed rule. While there are many reasons to oppose this proposed rule, I am focusing on how it will harm the small investor. The current system ensures that everyone gets the same information at the same time, so they can make informed decisions about their investments. If you get rid of mandatory quarterly filings, it will create an unfair playing field that hurts everyday investors. Big Wall Street investment firms and institutional insiders have the leverage to demand private quarterly updates, closed-door calls, and direct access to management. The "little guy" does not have that kind of access. So, the proposal creates market inequity by favoring big firms over regular people. SEC rules should, among other things, protect the public's equal access to financial data. Currently, the mandatory 10-Q is the great equalizer. It requires companies to put out the exact same financial facts to everyone at the exact same time. Without it, big firms will still get their quarterly data while regular investors are left guessing in the dark for six months at a time. It will tilt the playing field entirely in favor of well-connected institutional investors. Furthermore, changing this rule won't stop the market's obsession with short-term earnings. Companies are still going to feel intense pressure to boost their stock prices. But without a mandatory 10-Q, they can put out flashy, un-audited press releases that only highlight the good numbers while hiding problems like bad cash flow or rising debt. The SEC’s job is to protect all investors and keep the markets fair. Please keep the mandatory quarterly 10-Q reporting system in place. Sincerely, Glenda Rubin Richmond, CA

Washington, DC 20549-1090
Re: File No. S7-2026-15, Semiannual Reporting

Dear Ms. Countryman:
As corporate law scholars who have investigated the risks, opportunities,1 paradigm shifts,2 and policy solutions3 associated with the resurgence of retail investors, we appreciate the opportunity to comment on File Number S7-2026-15, Semiannual Reporting (the "Semiannual Reporting Release") issued by the Securities and Exchange Commission (the "Commission") on May 5, 2026. After a careful analysis of the proposal, we respectfully advise against permitting reporting companies to file semiannual reports on new Form 10-S in lieu of the three interim reports now required on Form 10-Q. Rather than respond to each question in turn, we organize this letter around the concerns we believe should drive the Commission's decision.
The Securities Act of 1933 and the Securities Exchange Act of 1934 (the "Exchange Act") rest on a single proposition: markets are protected through the provision of information to the investing public. Disclosure is the architecture of the federal securities laws. The Exchange Act in particular embodies a congressional judgment that this protection does not end at the initial offering.4 It requires continuing disclosure so that investors trading in the secondary market do so on the basis of current, reliable information,5 and it prohibits the fraudulent and manipulative practices that erode market confidence.6 Congress created this Commission to carry out that mandate,7 and the disclosure regime the Commission administers today is a direct inheritance of that founding charge. The proposal weakens that architecture across the market, and it weakens it most where it is already thinnest: at the level of the individual investor.
The Commission estimates that issuers electing semiannual reporting would save approximately $198,000 each.8 It offers no corresponding estimate of the costs imposed on the investing public. Moreover, costs and benefits for reporting companies and for investors must be analyzed separately. Otherwise, the policy change would shift the costs from reporting companies to investors. This could drive out of the equity markets many Americans, with consequential ramifications for savings, capitalization, liquidity, and socio-economic growth.
The semiannual reporting proposal falls hardest on the investors who do not have the means to fill the informational gap. Many retail investors do not rely on financial professionals and advanced service providers for investment advice.9 They are self-directed, conducting their own research, and mandated periodic disclosure

(reporting that 69% of investors rely on recommendations from financial professionals who advise them personally, meaning
nearly a third do not).
supplies the raw material for that research. In previous work, we coined the term "wireless investors" to describe
this generation of retail shareholders, who rely on technology to invest and who source most of their investing
information online.10 Wireless investors share their analysis in online communities and participate in corporate
governance through social media.11 At the foundation of all this activity sits a company's publicly available
information, including its 10-Qs.
The harm also reaches investors who never open a filing. Disclosure is a public good. Quarterly reports
inform the prices at which everyone transacts, including the index funds and retirement accounts through which
most American households hold equities. Analysts, journalists, creditors, and competing issuers all draw on the 10-
Q, and the accuracy of market prices reflects that collective analysis. When a segment of issuers reports half as
often or on a voluntary basis with selective information,
12 comparability breaks down industrywide13 and pricing
suffers through wider information asymmetries, thinner liquidity, and possible insider trading. As such, the costs
fall on every market participant, including even those retail investors whose exposure to public companies runs
solely through a retirement plan or an index fund.
Retail investors have made the same point to the Commission directly. In May 2026, r/wallstreetbets, a
Reddit community of approximately 18 million retail investors, submitted a comment letter opposing the
semiannual reporting proposal.14 The letter describes the quarterly report as "the single most

important leveling
mechanism between retail and institutional investors" in United States equity markets.15 Institutional investors can
buy expert networks, alternative data, and direct access to management. Retail investors can only resort to the
filings. The letter also explains that quarterly reports are "the entire mechanism through which a generation of retail
investors taught itself to read financial statements."16
The significance of r/wallstreetbets' participation is underscored when viewed against the evolution of retail
investor participation in the Commission's consideration of reporting frequency. Professor Tzachi Zach of The Ohio
State University Max M. Fisher College of Business has been tracking comment letter frequency in response to the
Commission's 2018 Request for Comment concerning quarterly reporting and the Semiannual Reporting Release.
The numbers are striking. During the SEC's 2018 Request for Comment, eighty-nine public comment letters were
submitted, including fourteen from individual investors.17 By contrast, as of July 4, 2026, the Commission received
8,011 comment letters in response to the Semiannual Reporting Release, approximately 7,615 of which were
submitted by individuals.18 Of the approximately 7,615 individual letters, 99% oppose the semiannual reporting
proposal.19
This surge in individual participation, an over 540-fold increase in the number of individual comment letters, illustrates the increasingly prominent role retail investors have assumed not only in the Commission's notice
and comment process concerning reporting frequency but also in investing in U.S. public companies. In our

19 Id.
scholarship, we have argued that retail investors will increasingly engage in corporate governance.20 Participation in this comment period exemplifies that engagement. Retail investors care about their investments and the companies in which they invest. That they tend to be long term investors does not mean they do not want or need quarterly reports.
Our work also describes the gap between the formal rights of retail investors and the information they need to exercise those rights.21 The semi-annual reporting proposal widens that gap. It permits issuers to step out of the disclosure cadence the rest of the market keeps and leaves retail investors in the dark for six months, a timeframe during which decisions to buy, hold, or sell would be driven by market trends rather than informed strategy.
As corporate governance scholars, we cannot overemphasize how quarterly reporting promotes management accountability and constrains agency costs.
22 The quarterly reporting process imposes discipline and rigor on management while enhancing the quality of financial reporting.23 Regular reporting obligations reinforce internal controls because management must continually evaluate and certify disclosure controls and financial reporting procedures.24
In light of all the issues that semiannual reporting would raise, we respectfully urge the Commission to withdraw the proposal.

Securities and Exchange Commission
100 F Street, NE
Washington, DC 20549-1090
Re: File Number S7-2026-15, Semiannual Reporting
Dear Office of the Secretary:
Grant Thornton LLP appreciates the opportunity to comment on the Securities and Exchange Commission's (SEC's or Commission's) Proposed Rule on Semiannual Reporting. We commend the Commission's efforts to reduce regulatory burdens on companies with a focus on flexibility and simplification, while continuing to protect investors and promote fairness and efficiency in the securities markets. We are providing our firm's perspective on this proposal gained primarily from serving public companies as independent accountants, including interaction with the SEC staff in this capacity.
Executive summary

In preparing our comments, we considered the Commission's objective of incentivizing more companies to go and remain public by reducing the regulatory burdens and offering them flexibility to report either semiannually or quarterly based on their own and their investors' needs. We recommend that the SEC continue to engage further with companies and their audit committees as well as with other stakeholders, possibly through roundtables, to understand the root cause of regulatory burdens related to interim reporting (that is, whether the underlying issue is the cadence of interim reporting; the amount of financial and non-financial information required by U.S. GAAP, Regulation S-X, and/or Form 10-Q; or a combination of these factors). In this regard, we recognize that the Commission is also exploring potential amendments to Regulation S-K and is encouraging the FASB to evaluate potential amendments to its accounting standards, with a focus on materiality.
The interim reporting cadence elected by companies will be determined by management and the board of directors based on investor feedback. As independent accountants, we are prepared and stand ready to adjust our review procedures for either frequency, as needed. Regardless of the interim reporting cadence, we
GT.COM © 2026 Grant Thornton LLP I All rights reserved I U.S. member firm of Grant Thornton International Ltd.
emphasize the critical importance of delivering reliable financial information to the market on a timely basis.
From our perspective, our comments focus on the following themes:
• Lack of an assurance framework for interim financial information included in earnings releases
• Expectation gap from investors' perspective related to quarterly earnings releases for semiannual reporting companies
• Considerations related to potential changes in the timing of audit procedures
• Potential challenges that could arise from the timing of the election to transition from semiannual to quarterly reporting
• Additional guidance required for merger and acquisition transactions
Semiannual reporting considerations
Reporting frequency
The proposed rule would provide all companies, regardless of filer or disclosure status, with the option to file semiannual reports instead of quarterly reports to meet interim reporting requirements.
While certain companies will benefit from semiannual reporting, we are uncertain whether a large number of companies would experience meaningful cost savings, as they may continue with the regular cadence of quarterly reporting or may opt for semiannual reporting but continue to voluntarily present quarterly information for several reasons, including:
• Investors' expectations and demand
• Underwriters or other financial intermediaries' expectations in connection with securities offerings (for example, for companies that report on a semiannual basis, underwriters or other financial intermediaries may still request the disclosure of more recent interim financial information as well as comfort from independent accountants on such information)
• Contractual requirements, such as covenants in debt agreements
• Self-determination regarding (1) what constitutes an appropriate reporting cadence to ensure that investors have all necessary information to make their investment decisions, and (2) what is the impact of the chosen reporting cadence on liquidity and trading volumes.
© 2026 Grant Thornton LLP I All rights reserved I U.S. member firm of Grant Thornton International Ltd.

Accordingly, in an effort to limit the interim reporting requirements only to information that is decision-useful to investors, we encourage the Commission to consider outreach with companies to understand the root cause of regulatory burdens and costs for quarterly reporting and to determine whether additional changes are required to U.S. GAAP, S-X Rules 10-01 or 8-03, and/or Regulation S-K applicable to interim reporting on Form 10-Q.

Auditor assurance

High-quality and reliable financial reporting is critical to the strong foundation for capital markets in the United States. We believe that PCAOB AS 4105, Reviews of Financial Information, provides the required framework for performing a review of interim financial statements for the semiannual periods, as it defines “interim financial information” as statements covering less than a full year or a 12-month period ending outside the fiscal year. As part of any changes to AS 4105 that the PCAOB undertakes, we recommend amending the standard to be period agnostic, similar to AICPA AU-C Section 930, Interim Financial Information.

Independent accountant’s involvement with the Form 8-K earnings release

Currently, independent accountants have no responsibility under professional standards for the information included in the earnings releases furnished on Item 2.02 of Form 8-K. In our experience, most engagement teams ordinarily perform certain limited procedures over earnings releases; however, an interim review under AS 4105 is completed only in connection with the filing of Form 10-Q, which generally occurs a few days after the earnings release is furnished.

There is no available financial reporting framework or auditing standard under which an independent accountant can perform a review of interim financial information, absent interim financial statements prepared in accordance with U.S. GAAP and applicable SEC rules and regulations. Accordingly, we believe that the earnings release process could potentially be delayed if companies were to include interim financial statements that comply with ASC 270 and S-X Article 10 or Rule 8-03 in the Form 8-K earnings release and request that an independent accountant review the financial statements prior to furnishing it with the SEC.

In the event the applicability of AS 4105 is amended and the SEC requires a review of the quarterly information furnished or filed by semiannual reporting companies in their earnings releases, we recommend that the SEC require a clear segregation of the information that will be subject to auditor review. For instance, today companies often include non-GAAP financial measures in Form 10-K or Form 10-Q; however, this information is sufficiently segregated from the financial statements and the related auditor’s report (if applicable), so that it is clear to a reader to which financial information the auditor’s report applies. In an earnings release, such delineation between information may not be as clear, which could lead to investor confusion over what is within and outside the scope of the independent accountant’s audit or interim review. This could further exacerbate the existing expectations gap between what auditors are required to do with “other information” under either PCAOB AS 2710,

© 2026 Grant Thornton LLP | All rights reserved | U.S. member firm of Grant Thornton International Ltd.

Other Information in Documents Containing Audited Financial Statements, or AS 4105, and what investors perceive that auditors do with that information.

Internal control over financial reporting

This proposal requests input on the optionality of semiannual or quarterly reporting and its impact on companies’ disclosure controls and procedures and on internal control over financial reporting (ICFR) when semiannual reporting is elected. Aside from the frequency with which controls operate, we believe it is unlikely the proposed rule would significantly alter other aspects of the design effectiveness of a control. A

company will design the frequency of controls in accordance with the financial reporting risks, and an election to report semiannually could result in certain controls, such as those related to the financial reporting process, operating only twice per year. Further, if a deficiency in ICFR is identified and the company does not have compensating or mitigating controls, there may not be enough instances to remediate such deficiencies before the end of the fiscal year.

Timing of financial statement audit procedures

Irrespective of the frequency of interim reporting elected, we will continue to work with companies to plan and schedule audit procedures on the year-end financial statements such that we perform a high-quality audit. The timing of audit work could potentially require an adjustment for companies that elect reporting on a semiannual basis. Ordinarily, audit procedures are performed on financial information that has been subject to period-end financial reporting processes and controls. To the extent companies do not produce such information on a quarterly basis, certain procedures may need to be performed later in the audit period, which could result in an additional burden on companies while finalizing annual reporting. Further, a delay in performing certain audit procedures could potentially delay the identification of any accounting or reporting matters, thereby creating an additional burden on companies in timely meeting their reporting obligations.

Securities offerings and comfort letters

As noted previously, companies that elect semiannual reporting or hybrid reporting may be required to prepare GAAP interim financial statements with footnotes for a quarterly period in connection with a securities offering. This may be required as part of the company's governance requirements, risk management policies, or requests from underwriters or other financial intermediaries. We have observed that it is common practice for foreign private issuers to prepare quarterly financial information in connection with offerings if these issuers do not otherwise have a quarterly reporting requirement.

The proposal solicits feedback on whether changes are needed to PCAOB AS 6101, Letters for Underwriters and Certain Other Requesting Parties, to accommodate semiannual reporting requirements. AS 6101 provides reporting requirements and related guidance for accountants issuing letters to underwriters and other requesting parties. Currently, independent accountants can provide negative assurance on changes in certain financial statement line items when the cut-off date is less than 135 days from the end of the most recent period that has been audited or reviewed. If the© 2026 Grant Thornton LLP | All rights reserved | U.S. member firm of Grant Thornton International Ltd. subsequent change period is 135 days or more, AS 6101 permits accountants to perform certain inquiries related to changes in specified financial statement line items and to report these results. These requirements are also consistent with AICPA AU-C Section 920, which applies to comfort letters issued in connection with exempt offerings conducted by private companies that do not have any interim reporting requirements. Given that AS 6101 provides a framework for providing comfort on changes in specific financial statement line items irrespective of the duration of the subsequent change period and is consistent with AICPA AU-C Section 920, we believe that a change to AS 6101 is not required.

Election timing and frequency

Under the proposal, the election to report on a semiannual or quarterly basis would be made on an annual basis. We suggest that the Commission consider feedback from investors and analysts as to whether annual changes in reporting cadence would be considered disruptive. Further, if a company reports on a semiannual basis one year and transitions to quarterly reporting for the next year, it would be required to prepare the comparable prior-year quarterly financial statements and disclosures, and

independent accountants would be required to perform review procedures over that information. This could present challenges and may result in delays and incremental costs in the year the company transitions from semiannual to quarterly reporting. This is especially apparent if the election to change one's interim reporting basis is not known until Form 10-K is filed, given that the first quarter Form 10-Q is due shortly thereafter. We ask the SEC to consider whether the first election or a change in reporting cadence should be made by a specified date via Form 8-K that would apply to the next annual period, such as by the end of the company's fiscal year. This would allow sufficient time for investors to digest the revised reporting cadence, for companies to prepare the comparable period information, and for auditors to plan and perform the necessary review procedures.

Mergers and acquisition considerations

While the proposed rule simplifies the interim reporting requirements for existing Exchange Act registrants and companies filing an initial public offering (IPO) registration statement, questions may arise on the application of the proposed rules to certain merger and acquisition transactions. Examples to consider include:

1. De-SPAC transactions: Could the private operating company target elect a reporting cadence that is different from the special purpose acquisition company (SPAC)? Since both the SPAC and the target will be co-issuers on the registration statement, can the target elect semiannual reporting on the cover page of the registration statement even if the SPAC has elected quarterly reporting, or vice-versa? Alternatively, is the target required to take on the SPAC's quarterly reporting election until the target files its first Form 10-K? And, would that answer change based on the legal structure of the transaction (such as a double dummy structure with a newly formed entity as the legal acquiror of the SPAC and target company, or if the private company is the legal acquiror)?

© 2026 Grant Thornton LLP I All rights reserved I U.S. member firm of Grant Thornton International Ltd.

2. 3. Merger of two reporting companies where, prior to the merger, one of the companies reports on a semiannual basis and the other reports on a quarterly basis: In a Form S-4 or merger proxy, would each registrant keep their own interim reporting cadence and decide collectively what the reporting cadence will be going forward, or would the legal acquiror's election remain until the next annual election?

Acquisition of a business or real estate operations when pre-acquisition financial statements are required pursuant to S-X Rule 3-05 or 3-14: Would the acquiree have to follow the same interim reporting cadence as the registrant?

****

We would be pleased to discuss our comments with you. If you have any questions, please contact Rohit Elhance, Partner-in-charge of SEC Regulatory Matters, at 202-861-4110 or Rohit.Elhance@us.gt.com.

Sincerely,

/s/ Grant Thornton LLP

Washington, DC 20549-1090
Re: Request for Public Comment Regarding Semiannual Reporting (File No. S7-2026-15)
Dear Ms. Countryman:
The Vanguard Group, Inc. ("Vanguard") appreciates the opportunity to comment on the Securities and
Exchange Commission's ("SEC" or "Commission") proposal that would provide greater flexibility to public companies when determining their reporting cadence, including moving from a quarterly to a semiannual reporting schedule ("Proposal").
Vanguard is proud to serve over 50 million individual investors globally through a variety of products and
services, and because of that has a deep commitment to the transparency, integrity, and efficient functioning of U.S. capital markets. Unlike other fund managers that are owned by external parties, Vanguard is a unique asset manager structured as a "mutual,
" mutual company, owned by the U.S. funds
it advises which, in turn, are owned by their investors. As a result, when a client invests in these funds,
they also own Vanguard, the asset manager. With this structure, rather than increasing fees to grow earnings and pay dividends to external owners, Vanguard's earnings benefit fund investors via lower fees.
1 Though Vanguard offers a variety of high quality, low cost products and services, as the fund company that popularized index investing 50 years ago, Vanguard is built around low-cost passive investing — which tends to buy and hold securities for as long as they are in an underlying index. 2 This
approach works. For instance, $10,000 invested in Vanguard's 500 index fund in 1976 is worth over $2,000,000 today. In addition to our passive funds' long-term approach, Vanguard investors tend to be
particularly long-term — their average holding period for their mutual fund investments is over five years
which is over 1.5 times as long as investors with other firms.
Given our commitment to the public markets and our long-term, predominantly retail, client base, we share the Commission's interest in fostering vibrant public markets where a diverse array of public companies can compete for investors' capital and investors have a fair chance of benefiting from the long-
1Vanguard has lowered expenses more than 2100 times—cumulatively more than 80%—since our founding, allowing fund investors to keep, and
compound, more of their returns over time.
2 Vanguard funds are routinely in the top decile of performers among peers and the lowest decile in cost. Vanguard's average U.S. asset-weighted
expense ratio is 0.06%, compared to an industry asset-weighted average of 0.44%. A recent Morningstar study compared asset managers' value
creation for investors and found that Vanguard ranked first—delivering $4.6 trillion over a 10-year period ending in 2024—more than double any
other fund family. Amy C. Arnott, Top 15 Value Creators in the Fund Industry, Morningstar (Jan. 28, 2025) available at www.morningstar.
com/funds/top-15-value-creators-fund-industry.
Vanguard Internal Use Only
II. III. term growth of the economy. We appreciate the Commission's interest in modernizing regulatory

requirements that could make it easier for companies to go and stay public. As long-term investors, we
also share an interest in reducing value-destroying short-termism and excessive costs of being public.
While we understand that the proposed filing flexibility could result in marginal benefits for registered companies, we do not believe the Proposal would materially increase the number of IPOs nor reduce
short-termism. Furthermore, we are concerned the proposal could have meaningfully negative effects on
the market and investors.
Our comments on the proposal are summarized as follows:
I. While we share the Commission's interest in promoting vibrant public markets, it is unclear if quarterly reporting affects IPO volume. It appears that IPO trends tend to be cyclical and responsive to market conditions. We encourage the Commission to consider other factors that can influence IPO activity.
The record does not contain sufficient evidence that shows rescinding the quarterly reporting requirement will materially improve investor outcomes. Several other market factors and regulatory issues affect long-termism and the costs of being a public company which ultimately affect long-term shareholder value.
Quarterly reporting has supported market efficiencies like price discovery, higher quality valuations, more informed investment decision-making, and smaller information asymmetries.
The Proposal could roll back these improvements, particularly for retail investors.
Overall, we caution against permitting semiannual reporting without compelling evidence that doing so
would meaningfully increase IPO volume without harming capital markets and investors. We also encourage the Commission to continue working with investors and other market participants to further
evaluate the tradeoffs associated with becoming and staying a public company.
While we share the Commission's interest in promoting vibrant public markets, it is
unclear if quarterly reporting affects IPO volume. It appears that IPO trends tend to be
cyclical and responsive to market conditions. We encourage the Commission to consider
other factors that can influence IPO activity.
We appreciate the Commission's willingness to evaluate the decades-long decline in IPOs, as public markets play a critical role in investors' portfolios.
3 As the Proposal states, a variety of factors drive a
company's decision to go public and the current frequency of reporting requirements does not fully explain the decline in IPOs.
4 The academic literature suggests that there are several structural factors
contributing to decreases in IPOs and the number of public companies including the availability of capital
in the private market, the size of a founder's equity stake,5 a founder's preference to retain control of a

company,6 the availability of a merger or acquisition as an exit opportunity,
7 and market conditions that
can affect valuations.
8
Our analysis of IPO activity in the United States from 2003 to 2024 shows that there has not been a simple year-over-year decline in IPOs. Instead, we found that IPO activity has followed a cyclical pattern
that reflects the general market conditions.9 Vanguard's analysis of global IPO activity over the same
period also suggests that a similar pattern seems to exist in foreign jurisdictions, including those with differing reporting regimes.10 Specifically, we observed that neither the United Kingdom nor the European Union enjoyed a noticeable increase in IPO activity after either jurisdictions shifted to semiannual reporting. While we acknowledge the limitations of a cross-jurisdiction comparative analysis,
the global nature of these patterns seems to suggest that broader macroeconomic and market-cycle factors
are playing important roles in IPO volume.
In academic literature, quarterly reporting is not a frequently studied driver of IPO activity. Certain types
of disclosure and other IPO-related requirements, however, have been studied. For example, one study
sought to understand how the JOBS Act (which Congress intended to help "revitalize the IPO market,
especially for small firms") affected IPO volume. The authors of this study found no evidence the Act's
de-burdening provisions (i.e., provisions designed to decrease costs associated with "certain accounting
and disclosure requirements" and "fixed costs of being public") encouraged IPOs. The authors did, however, find evidence the Act's "de-risking" provisions (i.e., provisions that allow "[certain companies]
to file IPO draft registration statements confidentially and to communicate with qualified institutional investors before publicly filing") did "drive a portion of the… increase in IPO activity."11 We understand
the SEC is evaluating several of these de-risking provisions as well, including expanded use of confidential filing and testing-the-waters provisions.
12
Considering this context, we continue to support the SEC's review of public company requirements more
broadly, along with other factors contributing to IPO and public company volumes, but we do not observe
compelling evidence that a shift from quarterly to optional semiannual filing would meaningfully increase
IPO activity.
the average founder equity stake rose from approximately 50% in the 1990s to nearly 70% by 2015, suggesting that the increase in founder
control over time can help explain the decline in U.S. public listings).

II. The record does not contain sufficient evidence that shows rescinding the quarterly
reporting requirement will materially improve investor outcomes. Several other market
factors and regulatory issues affect long-termism and the costs of being a public company
which can ultimately affect long-term shareholder value.
a. The potential effects of reporting frequency on short-termism are worth further study, but it is unlikely the Proposal will materially affect the issue.
Concerns about short-term managerial behavior are often cited as a rationale for reducing reporting frequency. As a long-term shareholder, we believe that company management teams best serve investors
when they focus on long-term shareholder value instead of short-term performance goals. Vanguard investors, and especially Vanguard funds, are by and large long-term investors. Index funds, for example,
can hold individual names for decades on behalf of our investors. The portfolio management and investment stewardship teams of these funds have therefore long been anchored by the pursuit of long-
term investment returns and look for companies to adopt governance and disclosure practices that demonstrate their own long-term orientations.
Our experience across markets suggests that managerial short-termism is driven less by the existence of
10-Q reporting than by other factors, including the absence of well-structured boards, lack of good corporate governance, and management incentives that motivate firms to make decisions that improve
their assessment of performance relative to longer-term outcomes. Indeed, as noted in the proposal, “executive compensation design or messaging to investors through, for example, earnings guidance…”
may play a larger role in short-termism concerns than the periodic disclosure cycle.
”13 In either regime,
how investors, boards, and executive teams use financial information will vary. Even as long-term

investors, several of Vanguard's active portfolio managers use the information contained in 10-Qs to evaluate long-term trends and to assess emerging risks and opportunities, but also to support long-term
management incentives and outlooks.
We note that the empirical literature examining whether the existence of 10-Qs supports or detracts from
long-term outlooks is somewhat limited and mixed. Literature examining the European experience with
removing mandatory quarterly reporting requirements provides mixed evidence about whether this reform
had a material impact on corporate investment behavior and longer-term outcomes. Analysis of U.K. companies before and after the introduction and subsequent removal of mandatory quarterly reporting
found no material effect on corporate investment behavior or long-term firm performance attributable to
reporting frequency changes.
14 However, other studies found that the removal of mandatory quarterly
reporting had an effect on certain corporate behaviors associated with short-term behavior around reporting times, such as an increase in overproduction and cuts to discretionary expenses to boost reported
income during reporting timeframes — which subsequently harms firm operating performance.
15
These findings suggest that while reporting frequency may be one of many factors influencing corporate
behavior, reducing mandatory quarterly reporting does not appear to support a shift toward longer-term

Vanguard Internal Use Only
decision-making. Instead, disclosure can encourage the alignment of interests between issuers' management teams and shareholders over the long-term. We believe that clear, ongoing disclosure of a
company's strategy, performance, executive compensation, and board oversight of these matters enables
efficient price discovery. In particular, disclosure of compensation policies and their alignment with company performance, and regular disclosure on progress plays a significant role in promoting investor
confidence in the alignment of management incentives with shareholders' interests and enabling markets
to best allocate long-term capital.
b. The compliance costs of quarterly reporting appear limited relative to other costs associated with going and staying public.
We agree with the Commission regarding the importance of reducing unnecessary regulatory costs, not
only to invigorate IPO activity, but also so companies can reallocate resources in ways that might ultimately benefit investors and long-term shareholder returns. However, the costs associated with

quarterly reporting appear small relative to other costs associated with being a public company. Therefore, it is unlikely that reducing the costs associated with quarterly reporting will have a material effect on a company's overall costs and shareholder value. The Commission estimates that electing to report semiannually would have a "net reduction in direct compliance costs equal to $198,000 per fiscal year."16 This number is relatively small when compared to the total cost of becoming a publicly listed company. For example, according to Nasdaq, underwriting fees alone can amount to millions of dollars.17 On average, these fees are $8 million for smaller raises and $72 million for larger ones. The quarterly reporting costs also pale in comparison to other burdens associated with a company going and remaining public.

While we support the Commission's review of the costs of being a public company, it is our understanding that most of the work associated with preparing Form 10-Q is already or will likely become automated, especially as more companies adopt artificial intelligence technology. In any case, we believe public company management teams are already reviewing and tracking material changes to their financial operating performance information at least quarterly, particularly if they are providing earnings releases and forward-looking statements. As application and innovations in technology increase, ease and availability of material financial performance information provided to company insiders will likely only increase, making investor disclosure less expensive. Furthermore, as noted above, other costs of going public appear to have more meaningful implications.

16 Proposing Release at 106.

Vanguard Internal Use Only

a. III. Quarterly reporting has supported market efficiencies like price discovery, higher quality valuations, more informed investment decision-making, and smaller information asymmetries across market participants. The Proposal could roll back these improvements, particularly for retail investors.

U.S. public markets are widely regarded as the most transparent and liquid in the world, this has resulted in broad investor participation and comparatively low costs of capital. Standardized quarterly disclosure has been a principal component of the U.S. market's success, therefore, any regulatory action that would affect these characteristics—including reporting frequency—should be approached with caution.

When the existing quarterly reporting framework was first proposed, the SEC noted that it was designed to promote "a fair and informed market for securities where there is a substantial public investor interest."18 As the Proposal notes, fifty years later, "the efficiency of financial markets rests on material information becoming public in a timely fashion" and "greater availability of material information allows securities prices to better reflect their issuers' fundamental value and ultimately promotes capital

formation as issuers have access to lower cost of capital and investors in those issuers' securities have
access to higher liquidity."19 In many respects, during this period, market outcomes have been directionally positive. As information asymmetries and the cost of capital have decreased, individual investor participation and market transparency have both increased.
b. Insight from several Vanguard investment teams indicate that reliable and timely financial reporting through Form 10-Q plays a meaningful role in supporting price discovery and valuation, in addition to other economically relevant decisions, and cannot be readily replaced by alternative information sources.
As an asset manager and advocate for millions of investors, Vanguard supports transparent, comparable
disclosures that enable more informed investment decisions, promote long-term investing, enhance corporate governance, and direct long-term managerial orientations. We view the Form 10-Q framework
as an important contributor to these objectives.
Most of Vanguard's active investment managers indicate that, while they are long-term investors, they do
utilize 10-Qs. They use these reports to evaluate trends, analyze risk profiles of investments, and to better
understand less verifiable updates from issuers (e.g., earnings releases and forward-looking statements).
Furthermore, millions of index fund investors indirectly rely on the information provided by these disclosures — in addition to the price discovery and healthy, well-functioning markets that come with it.
For instance, many index providers (third-party firms who identify what constitutes a particular index) use 10-Qs for classification purposes (e.g., inclusion in a value or growth index). In addition to fund investors, individual investors who invest in these securities directly have reported in the comment file
and through surveys that they utilize Form 10-Qs to inform their investment decision-making.
20 We are

requirements.

concerned that reducing reporting frequency could impair price discovery and disadvantage retail investors who do not have access to alternative information sources.
While Form 8-K disclosures, earnings releases, and investor materials provide useful information, they
are not substitutes for standardized 10-Q reporting. These disclosures are often non-uniform, include non-
GAAP metrics, and tend to offer statements not backed by relevant financials. This limits their

usefulness
and comparability. Absent a consistent quarterly GAAP baseline to anchor and understand these alternative disclosures, investors may be required to further speculate or rely more heavily on non-GAAP
information. This could reduce transparency and market confidence. The academic literature supports a
view that greater reliance on alternative data sources in the absence of quarterly reporting may also increase speculative volatility. Evidence from semiannual reporting regimes suggests that investors may
overreact to proxy signals (e.g., peer earnings) during non-reporting periods and that there are subsequent
reverse reactions once firm-specific information becomes available.21 These studies suggest that lower
reporting frequency can impair investors' valuation accuracy rather than improve it.
While we appreciate the view that companies should be able to exercise discretion in certain aspects of
corporate disclosures and support materiality-based differences in certain disclosures, financial information reported in the 10-Q offers uniquely valuable, standardized quantitative information that is
instrumental to valuation and comparability. Our experience as an investment manager in multiple markets and asset classes reinforces our belief in the importance of standardized, timely disclosure. For
example, analysts from our credit research and fund accounting teams note that public credit analysis
benefits from the reliability and consistency of the financial information in form 10-Q reporting, whereas
the private credit asset class — where disclosures are less frequent and standardized — often exhibits
greater uncertainty and valuation risk.
c. Reducing the frequency of high-quality disclosures could disproportionately disadvantage individual retail investors relative to public company insiders and institutional investors.
As the Commission notes, longer reporting periods could increase information asymmetries.22 This could
not only "[reduce] liquidity and [increase] transaction costs for investors" but also "[diminish] perceptions of fairness, which can erode trust in markets and reduce capital market participation."23 A
survey of global investment professionals conducted by the CFA Institute found strong opposition to replacing quarterly reporting, with respondents citing concerns about increased information asymmetry,
reduced comparability across firms, and diminished market efficiency.24 These concerns were echoed by
several third-party managers of Vanguard funds. Additionally, some managers observed that this might
require further company engagement with boards and directors, an opportunity that is rarely available to
individual investors or even many smaller investors and stakeholders. Furthermore, we also share the

Vanguard Internal Use Only
Commission's concern that less frequent reporting could widen the gap between inside and public information and increase the temptation for insider trading.25
Separately, we do acknowledge that some academic studies suggest that quarterly reporting may introduce more estimation error than semiannual reporting and can contribute to short-term volatility.26
While we agree that error prone information harms price discovery, we do not believe the solution should
be to permit companies to provide less information, as this may instead exacerbate information gaps.
On balance, we appreciate that the exact impacts on price discovery and volatility are not definitive, but,
based on the criticality of timely, high-quality information to healthy and fair capital markets, and the dearth of evidence that this change would improve market dynamics, urge caution.
Recommendations
In light of a lack of evidence suggesting that quarterly reporting will be a material factor in companies going and staying public, nor on meaningfully freeing up capital or promoting long-termism in companies, Vanguard welcomes the Commission's desire to evaluate other policy levers that may more
directly influence these goals. We encourage the Commission to evaluate and allow the market additional
time to comment on carefully tailored, time-bound measures that reduce friction for smaller issuers seeking to enter the public markets. Vanguard also recognizes that there may still be reasons companies
choose to remain or go private and supports efforts to find responsible ways to broaden participation in
private markets, where appropriate.27
Additionally, with regard to promoting short- vs. long- termism, literature suggests that management behavior is strongly influenced by how executives are evaluated and incentivized. Research suggests that
long-term executive compensation, such as restricted stock, restricted stock options, and long-term incentive plans, can help counteract short-termism and align managers' interests with long-term value
creation.28 While market disclosures and analyst coverage may be related to management behavior, we
believe the proposal may overstate the role of Form 10-Q in driving short-termism and risks addressing a
concern that is more appropriately directly governed by managerial incentives than reporting frequency.
Conclusion
While Vanguard recognizes the rationale for reassessing longstanding disclosure requirements, we do not
believe the evidence supports eliminating the existing quarterly reporting requirements. Quarterly disclosure has long supported transparency, investor confidence, and stakeholder feedback, particularly
from active managers. Experience of stakeholders and academic studies both offer evidence that

quarterly

Gregory J. Oravec Citizen Investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Gregory J. Oravec To the Securities and Exchange Commission: I write as an individual retail investor and a parent to oppose, in the strongest terms, the proposal to let public companies replace quarterly reports on Form 10-Q with semiannual reports on Form 10-S. Start with first principles. Markets do not fail at random — they fail when information is imperfect, stale, or unevenly held. That has been settled economics for half a century: when one

side of a trade knows more than the other, prices stop telling the truth and capital is misallocated. Mandatory, standardized, timely disclosure is the single most important tool we have for closing that gap. This proposal does the opposite. Cutting required interim reporting from four times a year to two does not simplify the market — it doubles the darkness in which it operates. It manufactures precisely the information asymmetry that regulation exists to prevent. Consider what that darkness produces. Business developments do not pause between filings; only their disclosure does. Under a semiannual regime, six months of accumulated news — good and bad — arrives in a single event rather than being metered out as it occurs. Fewer disclosures do not mean calmer markets; they mean larger, more violent repricings when reality finally surfaces, and longer stretches in which rumor, selective leaks, and insider knowledge fill the vacuum. That is a recipe for concentrated risk and sharper swings, not the patient, long-term thinking the proposal imagines. And we need not guess, because the experiment has already been run and has already failed. The European Union abolished mandatory quarterly reporting in 2013; the United Kingdom did the same in 2014; Norway followed. The promised era of long-term corporate thinking never materialized — studies of those markets found no meaningful change in how companies invest. What did change was informational: less analyst coverage, less accurate forecasts, and thinner liquidity for the firms that went dark. The hypothesis behind this proposal has been tested abroad and refuted. We should not now re-run a failed experiment on American investors. Most of all, this proposal hurts the people it should protect. Large institutions will not be left in the dark — they have data terminals, alternative datasets, and direct access to management. It is the retail investor — the teacher, the retiree, the family saving for a child's education — who depends on the mandatory public filing precisely because it is the one place the information is guaranteed, uniform, and free. Stretch the gap between disclosures toward a full year and you hand the advantage to insiders and Wall Street while taxing Main Street with ignorance. Ask any parent: would our children be better served if we abolished report cards and graded them only once a year? Would any account holder be better off receiving bank statements half as often? We know the answer. Accountability and transparency are America at its best — the sunlight that keeps our capital markets the fairest and deepest in the world. This proposal trades that sunlight for the convenience of those who would prefer to be watched less closely. Keep the 10-Q. Preserve quarterly reporting. Do not weaken the disclosure that makes our markets worthy of the public's trust. Respectfully submitted, Gregory J. Oravec Individual investor and parent Port St. Lucie, Florida

Hanna Tetens — Jul 6, 2026
Subject: File No. S7-2026-15 From: Hanna Tetens Dear Commissioners, Please keep quarterly reporting requirements in place. Thanks, Hanna Tetens

---

Helena Murvosh Civil engineer and project manager — Jul 6, 2026
Subject: File No. S7-2026-15 From: Helena Murvosh I oppose changing to a semiannual reporting requirement. As a small investor, I rely on the quarterly information to make decisions. Having less information would negatively affect my ability to make smart decisions about my retirement accounts. The reduced reporting schedule seems advantageous only to insiders, and not working class people like me.

Hovden Law LLC Member — Jul 6, 2026
Subject: File No. S7-2026-15 From: Hovden Law LLC This doubling of the reporting time ensures vastly more cows will get out the barn door before the alarm is sounded. To prevent this is the SEC's

raison d’etre - adoption indicates it’s time for the SEC to disband and quit wasting the taxpayers’ money.

Ilene Weisberg Retired — Jul 6, 2026
Subject: File No. S7-2026-15 From: Ilene Weisberg Transparency is extremely important to the ethical functioning of business and to all Americans. We are all invested in this, our lives and our retirement savings matter, and we rely on SEC to keep things right. Keep reporting quarterly.

Ines Gomez — Jul 6, 2026
Subject: File No. S7-2026-15 From: Ines Gomez I vehemently disagree with the proposal that the SEC should allow semi-annual reporting rather than the currently required quarterly reporting by public corporations. In a world where information moves faster than ever before, corporations should be required to provide information at a pace commensurate with that to the regulatory bodies that oversee them. Current regulations for quarterly reporting have been then standard for long enough that norms are thoroughly established. There is no undue burden on corporations to adhere to them. Allowing the increased window of time proposed between reportings only advantages those that wish to deceive regulators and the public. As public corporations, they enjoy advantages already provided by being within the public market --- which are substantial --- and as such should not be given a tool to obfuscate their practices from the public's scrutiny and possibility to act to the detriment of the public market, particularly in a time of unprecedented information speeds.

Institute of Management Accountants - Financial Reporting Committee — Jul 6, 2026
Business Use
Ms. Vanessa Countryman
Secretary
Securities and Exchange Commission
100 F. Street N.E.
Washington, D.C. 20549-1090
July 6, 2026
Re: File Reference No. S7-2026-15, Semiannual Reporting (Proposal)
Dear Ms. Countryman:
The Financial Reporting Committee (FRC or Committee) of the Institute of Management Accountants
(IMA) is writing to share its views on the Securities and Exchange Commission’s (SEC or Commission)
Proposed Rule on Semiannual Reporting.
The IMA is a global association representing over 140,000 accountants and finance professionals. Our
members work inside organizations of various sizes, industries, and types, including manufacturing and
services, public and private enterprises, not-for-profit organizations, academic institutions, government
entities, and multinational corporations. The FRC is the financial reporting technical committee of the IMA. The Committee includes preparers of financial statements for some of the largest companies in the
world, representatives from the world’s largest accounting firms, valuation experts, accounting

consultants, and analysts. The FRC reviews and responds to research studies, statements, pronouncements, pending legislation, proposals, and other documents issued by domestic and international agencies and organizations. Additional information on the FRC can be found at https://www.imanet.org/en/About-IMA/Advocacy/Financial-Reporting-Committee.

The Committee supports the Commission's efforts to provide issuers with greater flexibility in interim reporting by permitting semiannual reporting. We believe the proposed optional framework, which would allow companies to choose between semiannual and quarterly reporting, would enable issuers to provide investors with timely, reliable, and decision-useful information in a manner that is appropriate for their industry, stage of development, and investor base. At the same time, a semiannual filing cadence should not result in reduced rigor for information that is filed with the Commission.

If finalized, the proposal would create a hybrid interim reporting model, with companies using different reporting cadences and providing different levels of interim financial information to the capital markets during the first and third quarters of each fiscal year. Certain conforming updates to existing standards and market conventions will ultimately drive the extent to which registrants will be able to elect semiannual reporting. Accordingly, we believe the Commission should provide additional clarity and guidance around certain aspects of voluntary interim reporting by semiannual filers, including the filing

requirements for earnings release materials which may contain non-GAAP information. Additionally, there are questions about the external auditor assurance frameworks available and applicable to voluntary interim reporting. We also believe it is important for the Commission to evaluate the proposal's implications for registered offerings, IPO execution, and follow-on capital raising. Finally, we encourage the Commission to continue to prioritize disclosure simplification to further reduce the reporting burden associated with interim financial reporting and encourage the Financial Accounting Standards Board (FASB) to similarly prioritize disclosure simplification in ASC Topic 270.

Please refer to Appendix I for a more detailed discussion of the key themes outlined above and certain other considerations around semiannual reporting.

We would like to highlight that the perspectives contained in this letter are intended to reflect areas of predominant agreement across the Committee. However, certain of our individual Committee members are not supportive of the proposal. Those members believe that current quarterly reporting requirements have served investors well and they have concerns about the potential impacts of the proposal on U.S. financial markets.

* * * * * * * *

We would be pleased to discuss our comments with you or other members of the SEC staff at your convenience and welcome the opportunity to engage in further dialogue on these important topics.
Sincerely,
Brian C. Stevens
Chair, Financial Reporting Committee
Institute of Management Accountants
Brian.Stevens@mdlz.com

Appendix I – Key Themes
Assurance and Reporting Framework for Voluntary Interim Financial Information
The Committee supports the Commission's objective of providing issuers with flexibility through optional semiannual reporting. However, we expect that many issuers electing semiannual reporting will continue to publish quarterly earnings releases, investor presentations, and EPS guidance in response to market expectations, debt agreements, and capital market considerations. The Commission's framework should therefore acknowledge and accommodate the practical reality that a semiannual filing regime will coexist with ongoing quarterly public communications. Our specific recommendations in this area are as follows:
Preserve the Current Framework of Furnishing (Rather than Filing) Earnings Releases
The Committee believes that semiannual filers should be permitted to furnish, rather than file, voluntary quarterly financial disclosures for their first and third quarters under Item 2.02 of Form 8-K, consistent with the current framework for earnings releases. Requiring semiannual reporting companies to file (rather than furnish) those quarterly earnings releases would impose significant compliance burdens to semiannual filers, including:
• The non-GAAP financial measure restrictions applicable to filed documents under Item 10(e) of Regulation S-K could limit or prohibit the presentation of certain adjusted metrics that investors rely on for period-over-period comparisons;
• Heightened statutory liability associated with providing such voluntary financial information; and
• Deemed incorporation into effective registration statements, with the attendant liability implications under Sections 11 and 12 of the Securities Act.
Collectively, these burdens would discourage providing voluntary quarterly financial information, which could make the semiannual reporting election less appealing for many companies.
Reinforce Disclosure Quality Standards
The Committee suggests reinforcing the importance of clear labeling, reconciliation, and anti-fraud compliance for voluntary quarterly financial disclosures so that reduced filing frequency does not result in less reliable or less comparable information for investors. In particular, voluntary quarterly financial disclosures are likely to include non-GAAP measures to which Regulation G will continue to apply. Additional clarity on the level of financial information necessary to support the reconciliations required

by Regulation G would be helpful to both preparers and investors.

Develop an Optional Auditor Review Mechanism for Voluntary Quarterly Financial Information
We expect that the audit committees and management teams of many semiannual reporting companies
will be interested in obtaining independent auditor reviews of voluntary quarterly financial information (for example, earnings releases) in the first and third quarters as good governance practice. For semiannual reporting companies that voluntarily report such financial information, there is currently no
mechanism—absent the company reporting full financial statements and notes—for an independent auditor to perform such a review.
The Committee believes the Commission should work with the Public Company Accounting Oversight
Board (PCAOB) to develop an optional mechanism that could enable semiannual reporting companies to
obtain negative assurance on certain financial information provided voluntarily in the first and third quarters. Such a mechanism should be cost-effective and should not require the preparation of full interim
financial statements and notes thereto.
Additionally, the Committee believes that such reviews of voluntary quarterly financial information should
be optional, rather than required. A mandatory review requirement would undermine the voluntary nature of providing quarterly financial information for semiannual filers and could discourage semiannual
reporting companies from providing such quarterly information.
Capital Formation and the Functioning of Public Offerings
The Committee recommends that the Commission evaluate the Proposal's implications for registered
offerings, IPO execution, and follow-on capital raising. Under current practice, underwriters' due diligence
and liability management rely significantly on the comfort letter framework and the availability of timely
reviewed interim financial information. Market practice, professional standards, and audit firm policies
impose limits on negative assurance for periods that become "stale" relative to an offering date.
While Regulation S-X establishes when financial statements are sufficiently current for inclusion in a registration statement, underwriters' ability to execute equity offerings also depends on the availability
of auditor comfort letters covering interim periods and subsequent changes. PCAOB AS 6101 governs the
issuance of comfort letters to underwriters. A critical limitation arises when more than 135 days separate
the offering date from the most recently audited or reviewed financial statements: beyond that threshold,
auditors are restricted to issuing a procedures-and-findings letter and cannot provide the negative assurance that U.S. underwriters customarily require as a condition to closing.
For semiannual filers, the longer gap between reviewed financial statements could leave extended windows during which auditors cannot deliver the comfort letters underwriters need. The practical

effect
would be to narrow the periods in which these companies can efficiently execute registered offerings,
potentially raising their cost of capital. Accordingly, we encourage the Commission, in coordination with
the PCAOB, to:

• Evaluate whether targeted updates or interpretive guidance under PCAOB AS 6101 are necessary to ensure that semiannual filers can continue to access public markets efficiently throughout the year. The Commission should coordinate with the PCAOB to assess whether the existing comfort letter framework appropriately aligns with a semiannual reporting regime and whether interpretive guidance or targeted standard-setting is warranted to avoid inadvertently impairing registered offering execution or capital formation.
• Extend the availability of negative assurance for semiannual filers to align with the proposed period-end alignment approach to financial statement staleness (i.e., the proposed shift from a days-based staleness assessment to a period-end alignment framework under Regulation S-X). Absent such alignment, semiannual filers seeking to access the capital markets may find themselves compelled to produce interim financial statements on an ad hoc basis outside their elected reporting schedule—effectively negating the efficiency gains the proposal is intended to deliver.
• Clarify how the age-of-financial-statements requirements under Regulation S-X would operate for semiannual filers in the context of registered offerings, so that issuers and underwriters have predictable execution pathways.
• Consider conforming changes to Rule 3-05 regarding acquired businesses, as the proposed amendments address the age of a registrant's own financial statements but are silent on the financial statements of acquired businesses. Without conforming changes, a semiannual filer completing an acquisition could encounter inconsistent staleness standards.
Absent these clarifications, semiannual reporting could unintentionally restrict access to capital markets,
increase the cost of capital, and reduce issuers' willingness to elect semiannual reporting, thereby offsetting the Proposal's intended capital formation benefits.
Interim Reporting Disclosure Simplification
The Committee appreciates the Commission's efforts to reduce the cost and effort associated with interim
reporting by introducing optionality through semiannual reporting. However, for large accelerated filers
and complex financial institutions, much of the quarterly reporting infrastructure—including controls, close processes, regulatory reporting, and management reporting—exists independently of Form 10-Q
preparation. As a result, the incremental efficiencies associated with reduced filing frequency may be limited when viewed in the context of ongoing operational and market-facing requirements. For these
larger entities, additional cost savings and effort reductions could be achieved through further examination of required interim reporting disclosures. Our specific recommendations are as follows:
• Streamline the MD&A disclosure in Form 10-Q/10-S, as part of the Commission's review of Regulation S-K, to focus on the current quarter or semiannual reporting period, reducing repetitive disclosures while continuing to provide investor-relevant information.

• Work closely with the FASB to simplify and modernize interim financial statement reporting more broadly, including for issuers that continue to file Form 10-Q. A more targeted interim reporting framework, anchored in materiality, that emphasizes decision-useful disclosures, reduces duplicative or low-value information, and improves reporting efficiency could advance the Commission's objectives while preserving transparency and comparability for investors.

While we encourage the Commission to continue to look for opportunities to streamline the interim reporting requirements of Form 10-Q (and Form 10-S) in connection with its Regulation S-K modernization efforts, we support continuing those efforts while still moving forward with the current proposal to permit companies to elect semiannual reporting. We believe that these are complementary initiatives that can progress on separate timelines.

Investment Adviser Association — Jul 6, 2026

July 6, 2026

Vanessa A. Countryman
Secretary
Securities and Exchange Commission
100 F Street NE
Washington, DC 20549-1090
Re: Semiannual Reporting; File No. S7-2026-15
Dear Ms. Countryman:

The Investment Adviser Association (IAA)1 appreciates the opportunity to comment on the Securities and Exchange Commission's (SEC's or Commission's) proposed amendments to allow public companies to file semiannual reports on new Form 10-S instead of quarterly reports on Form 10-Q to meet their interim reporting obligations under the Securities Exchange Act of 1934 (Exchange Act).
2

We support the Commission's efforts to reduce unnecessary regulatory costs and burdens on public companies. Robust public markets play a critical role in providing investors with broad access to investment opportunities, liquidity, and efficient price discovery. At a time when the number of public companies has declined significantly, we appreciate the Commission's careful consideration of ways to encourage companies to enter and remain in the public markets while preserving the transparency and investor protections that are essential to the strength and integrity of these markets.

While we support the goals of the Proposal, we do not believe that reducing the frequency of periodic reporting is the most effective way to achieve those objectives. Less frequent reporting requirements would deprive investment advisers that act as fiduciaries to their

1 The IAA is the leading organization dedicated to advancing the interests of fiduciary investment advisers. For nearly 90 years, the IAA has been advocating for advisers before Congress and U.S. and global regulators, promoting best practices and providing education and resources to empower advisers to effectively serve their

clients, the capital markets, and the U.S. economy. Our members range from global asset managers to the medium-
and small-sized firms that make up the majority of our industry. Together, the IAA's member firms manage more
than $57 trillion in assets for a wide variety of individual and institutional clients, including pension plans, trusts,
mutual funds, private funds, endowments, foundations, and corporations. For more information, please
visit www.investmentadviser.org and see the IAA's Investment Adviser Industry Snapshot (Snapshot).
2 Semiannual Reporting, 91 Fed. Reg. 24968 (May 7, 2026) (Proposal).

clients of material, standardized, and comparable information that is important to their ability to make informed investment decisions in those clients' best interest. It also could disproportionately disadvantage smaller and mid-sized advisers, which often lack the resources and alternative information channels available to larger firms, potentially further increasing information asymmetries in the public markets. Moreover, research suggests that compliance costs explain only approximately 7 percent of the decline in initial public offerings (IPOs).3
We thus highlight several potential issues for the Commission to evaluate as it considers the Proposal. We also recommend that the Commission consider alternatives to the Proposal that would not result in the same unintended consequences. For example, the Commission should consider whether its objectives could be achieved through more targeted reforms, such as streamlining the content of periodic reports, without reducing the frequency of disclosures available to investors.

Executive Summary

We make the following comments:

- Quarterly reporting is important to informed investment decision-making.
- Semiannual reporting could exacerbate information asymmetry.
  - Small and mid-sized investment advisers are likely to be disproportionately disadvantaged.
  - Lenders may have access to material information before it becomes available to the markets.
- Semiannual reporting would likely reduce standardization, impair comparability, and increase volatility.
- Timely periodic reporting benefits investors regardless of investment horizon.
- Instead of changing the reporting cadence, the Commission should review the required content of Form 10-Q filings and consider other ways to encourage entry into the public markets.

Quarterly Reporting Is Important to Informed Investment Decision-Making

IAA members rely extensively on public-company disclosures in making investment, portfolio management, asset allocation, and risk management decisions in the best interest of their clients. Timely, standardized, and comparable information is essential to these activities. Form 10-Q filings provide advisers with regular insight into a company's financial condition, operating performance, liquidity, and risks, helping them fulfill their fiduciary obligations.
3 See infra n. 13 and accompanying text.

Quarterly reporting helps advisers identify emerging trends, assess risks, value securities, and detect potential financial, operational, or internal control issues before they become more

significant problems.4 Quarterly reports are particularly valuable because they provide information in a standardized format that is broadly available to all market participants and subject to established disclosure, review, and certification requirements.5

The importance of timely reporting has increased as the pace of technological change has accelerated. Changes in company revenues, earnings, cash flows, capital investment, research and development, and competitive positioning can occur much more rapidly than in the past. A six-month reporting interval would leave advisers having to evaluate investments with older information for longer periods at a time when monitoring changes in the underlying business environment is even more vital.

These considerations are not limited to the equity markets. For example, investment advisers that manage fixed-income portfolios that include public bonds for their clients likewise rely on quarterly reports to assess leverage, liquidity, cash flows, debt-servicing capacity, refinancing risks, and overall credit quality. Quarterly reports facilitate ongoing credit surveillance and enable advisers to monitor changes in an issuer's financial condition, evaluate risk exposures, and make informed asset allocation decisions. Less frequent reporting would require advisers to make these assessments using older financial information for longer periods, increasing uncertainty and potentially reducing the effectiveness of credit analysis. In addition, many lending arrangements and debt instruments incorporate quarterly financial reporting requirements, underscoring the importance of regular financial information to creditors and other market participants. Reducing the frequency of periodic reporting therefore could diminish transparency in the corporate bond market and make it more difficult to assess credit risk and monitor issuer performance.

Semiannual Reporting Could Exacerbate Information Asymmetry

Small and mid-sized investment advisers are likely to be disproportionately disadvantaged

The information asymmetry concerns are not limited to lenders having access to private information channels. Public companies may in general shift more disclosure into private or bilateral channels, such as bank group calls, underwriter due diligence sessions, or meetings with large investors, which may be accessible primarily to larger or more well-resourced market participants. Frequent public reporting is thus critical for smaller and mid-sized investment advisers, which often have less direct access to these channels and fewer resources to support alternative data, research teams, and expert networks. Form 10-Q helps level the playing field.

4 These insights are even more pronounced in industries such as the technology and consumer sectors that are driven
by fast-moving signals. Less frequent reporting risks issues becoming worse before they are publicly disclosed.

5 We note that voluntary disclosures that are furnished but not filed with Sarbanes-Oxley certifications could affect
the credibility and informational value of those disclosures.

Reducing mandatory disclosure to a six-month cycle could thus worsen information asymmetry between corporate insiders and the most well-resourced market participants, on the one hand, and smaller and mid-sized advisers, on the other hand. Smaller advisers in particular depend on public-company disclosures to evaluate investments and monitor portfolio holdings. A shift to semiannual reporting, even if optional, could disproportionately disadvantage these investment advisers and the clients they serve. This effect would be particularly significant because smaller advisers represent the core of the investment adviser industry, serving millions of individual6 and institutional investors.7

Lenders may have access to material information before it becomes available to the markets

Information asymmetry may also arise in the context of information provided to lenders by public companies. Lenders typically require certified quarterly financial statements from their borrowers. To the extent that these lenders would continue to require this information, there is a risk that investors that only see semiannual financial statements would not have access to the same information. This could increase information asymmetries among market participants and create circumstances in which certain creditors possess material information that has not yet been broadly disseminated to the market.8

Semiannual Reporting Would Likely Reduce Standardization, Impair Comparability, and Increase Volatility

While we recommend that the Commission not move forward with the Proposal, if it nevertheless adopts a semiannual reporting framework, we agree that issuers should retain the option of continuing to provide quarterly reports. Preserving issuer choice would be preferable to requiring all reporting companies to move to a semiannual reporting regime and would allow market participants to determine whether investors value more frequent periodic disclosures.

6 In 2025, SEC-registered investment advisers provided asset management services to 61.0 million individual investors. The bulk of these clients (83.9%) were non-high net worth individuals. See Snapshot at 37.

7 We generally agree with the SEC's Investor Advisory Committee's (IAC's) concern that less frequent reporting may widen the gap between investors that have access to alternative information sources and those that rely primarily on public disclosures. We share the IAC's concern that these information disparities "may also create broader negative externalities for U.S. capital markets, including diminished perceptions of fairness, erosion of trust and reduced participation." See Recommendation of the Investor as Owner Subcommittee of the SEC Investor Advisory Committee Regarding Quarterly vs. Semi-annual Reporting (May 28, 2026) (IAC Recommendation) at 9.

8 We recognize that if an issuer selectively discloses material nonpublic information to certain persons, it must make public disclosure of that information under Regulation FD on Form 8-K or through another method "that is reasonably designed to provide broad, non-exclusionary distribution of the information to the public." However, while Regulation FD may reduce some information asymmetry, in our view it is not a substitute for quarterly reporting. It is not as comprehensive as Form 10-Q, the format and method of disclosure vary, and there are several exceptions to the rules. For example, Regulation FD may not apply to a lender that receives material nonpublic information. Moreover, even if an issuer makes public disclosure on Form 8-K or an alternative method, the disclosed information is unlikely to be as fulsome as the nonpublic information provided to the lender.

However, optionality would not eliminate our concerns with the Proposal. Regardless of whether participation is voluntary, allowing issuers to report on different schedules would reduce

the comparability and standardization of public-company disclosures. Although there is currently some variation depending on a company's fiscal year end, every issuer today files financial information that covers the preceding three months, giving investors four snapshots of financial performance per year. This allows them to compare quarter-over-quarter trends using relatively frequent and consistent reporting periods. Under the Proposal, some companies may continue filing quarterly reports, others may file semiannual reports supplemented by quarterly earnings releases, and still others may provide only semiannual reports.9 These differing disclosure practices could make it more difficult for investors and advisers to compare issuers consistently across companies. Importantly, they would also make it more challenging for investors and advisers to evaluate the same issuer over time using a common set of standardized disclosures. To the extent that companies that elect to file semiannual reports continue to provide more frequent voluntary information to the markets, we do not believe that voluntary earnings announcements or other discretionary disclosures are an adequate substitute for filed financial statements that are prepared in accordance with U.S. GAAP and reviewed by an independent auditor. Although voluntary communications may provide useful information, they are not subject to the same standardized content requirements, review processes, and disclosure framework as Form 10-Q filings. Academic research has found that less frequent reporting is associated with more information asymmetry, higher trading costs, less liquidity, and a higher cost of capital.10 These outcomes would work against the very issuers the Proposal is intended to benefit and be contrary to the SEC's mission to protect investors and maintain fair, orderly, and efficient markets.

The IAC Recommendation against the Proposal raises other concerns as well. For instance, a semiannual cadence could lead to reduced securities analyst coverage and could adversely affect valuation, liquidity, and financing costs for some issuers.
11 Semiannual reporting could also increase stock price volatility following interim disclosures because more information would be withheld for longer periods. We encourage the Commission to carefully consider these potential consequences, particularly because they could affect not only issuers, but also investors and investment advisers, market efficiency, and the quality of information available for investment decision-making.

9 Indeed, under the Proposal, a company could change its reporting frequency in its annual report on Form 10-K each fiscal year.

10 See IAC Recommendation at n. 65.

11 See id. at 9-10 and n. 66-68 ("Companies reporting quarterly also attract greater analyst coverage, which in turn is associated with enhanced liquidity and lower cost of capital for those firms. Empirical studies also indicate that reduced frequency of disclosures harms price efficiency and valuation through two related channels. First, when firms report only semiannually, investors rely on information provided by peer-firms, often overreacting to those signals and leading to over or under valuation of public companies." (citing academic research)).

Timely Periodic Reporting Benefits Investors Regardless of Investment Horizon

We disagree with the suggestion in the Proposal that quarterly reporting primarily benefits short-term investors. Long-term investors, and the investment advisers that manage their portfolios as fiduciaries, also rely on timely periodic disclosures to make informed investment decisions, monitor portfolio holdings, assess risks, evaluate creditworthiness, oversee management performance, and engage with issuers. A long-term investment horizon should not

be equated with a “set-it-and-forget-it” approach. Rather, long-term investing requires ongoing monitoring of developments that could affect an issuer’s financial condition or operations, including changes in liquidity, leverage, profitability, internal controls, and other risks. Timely periodic reporting enables investors and advisers to identify and evaluate these developments as they emerge, rather than months later after they may have materially affected the value or risk profile of an investment. Reducing the frequency of periodic reporting, therefore, would not only affect short-term investors. It also would make it more challenging for long-term investors and their advisers to monitor and make well-informed investment decisions.

Moreover, less information does not reduce the market’s demand for short-term signals. Instead, delayed disclosure of material information is likely to increase uncertainty about issuers, potentially leading to greater reliance on informal or alternative information sources. Unofficial data sources would likely develop to fill the void between reporting periods for investors seeking to assess near-term performance.12

Instead of Changing the Reporting Cadence, the Commission Should Review the Required Content of Form 10-Q Filings and Consider Other Ways to Encourage Entry Into the Public Markets

While we recognize that preparing and filing periodic reports impose costs on issuers and that each additional filing creates incremental compliance burdens, other factors appear more likely to influence the decisions whether to enter or remain in the public markets. These include the complexity and expense of the IPO process, extensive disclosure and governance obligations, and litigation and liability risks associated with being a public company.13

Rather than reduce the frequency of public companies’ periodic reports, therefore, we recommend that the Commission undertake a review of the required content of quarterly reports

12 Researchers have generally found that less frequent reporting has an adverse impact, including less efficient capital allocation by investors, more stock volatility, reduced analyst coverage, and wider information gaps. See IAC Recommendation at 5. We encourage the Commission to review the experiences of other jurisdictions that switched from quarterly to semiannual reporting, e.g., the United Kingdom, the European Union, Hong Kong, and Singapore.

13 See IAC Recommendation at n. 52. See also Regulatory costs of being public: Evidence from bunching estimation (March 2024) (finding that regulatory compliance costs explain only about 7.3% of the decline in IPOs. According to the authors, the majority of the decline is explained by the rise of private funding including venture capital, private equity, and other alternative financing options).

on Form 10-Q to identify opportunities for simplification and streamlining.14 Reducing unnecessary or duplicative disclosure requirements would lessen compliance burdens and costs while preserving the timely, standardized, and comparable information that investors and fiduciary investment advisers rely on to make informed decisions. In our view, streamlining the content of periodic reports, rather than reducing their frequency, would better balance the Commission's objectives of reducing regulatory burdens and maintaining the transparency and investor protections that are fundamental to healthy public markets.15

Conclusion

Quarterly reporting under the Exchange Act plays an important role in promoting transparency, comparability, and fairness in U.S. markets. We respectfully urge the Commission

to consider the potential for semiannual reporting to worsen information asymmetry, reduce standardization, increase volatility, and disadvantage smaller and mid-sized investment advisers and their clients. We recommend that the Commission address the substance, rather than the frequency, of reporting to reduce the regulatory burden on public companies while promoting investor protection and maintaining efficient capital markets.
* * *
14 See Proposal, Question 15, and Commissioner Peirce's question in her Statement on the Proposal, "Should we
adjust the reporting burden rather than adjusting whether that burden is quarterly?"
15 We also recommend that the Commission consider and conduct a cost-benefit analysis of the Proposal together
with its recent Registered Offering Reform, 91 Fed. Reg. 31022 (May 26, 2026) and Filer Status Reform, 91 Fed.
Reg. 30086 (May 21, 2026) proposals.

Thank you for your consideration of our comments on this important issue. Please do not hesitate to contact the undersigned at (202) 293-4222 if we can be of further assistance.
Respectfully,
/s/ Gail C. Bernstein

Investment Company Institute (ICI) — Jul 6, 2026
Letter from the Investment Company Institute
July 6, 2026
Ms. Vanessa A. Countryman
Secretary
Securities and Exchange Commission
100 F Street NE
Washington, DC 20549-1090
Re: Semiannual Reporting; File Number S7-2026-15
Dear Ms. Countryman:
The Investment Company Institute1 appreciates the opportunity to comment on the Securities and Exchange Commission's (SEC or Commission) proposal to permit public companies to file interim reports on a semiannual—rather than a quarterly—basis.2 A well-functioning reporting and disclosure regime is vitally important to both public companies and their investors.
This proposal raises competing policy interests. As investors, regulated funds3 and their advisers greatly value both high-quality, comparable, and sufficiently frequent public company disclosure and growing and vibrant public markets.
ICI strongly supports the Commission's goals of reducing unnecessary regulatory burdens on public companies and encouraging more companies to go (or stay) public. If adopted, this

proposal would strike a new regulatory balance between these competing benefits. While our members' views are nuanced and somewhat mixed, we believe that the drawbacks associated with a potential reduction of decision-useful public company disclosure for investors would

1 The Investment Company Institute (ICI) is the leading association representing the asset management industry in service of individual investors. ICI's members include mutual funds, exchange-traded funds (ETFs), closed-end funds, and unit investment trusts (UITs) in the United States, and UCITS and similar funds offered to investors in other jurisdictions. Its members manage $47.7 trillion invested in funds registered under the US Investment Company Act of 1940, serving more than 125 million investors. Members manage an additional $10.8 trillion in regulated fund assets managed outside the United States. ICI also represents its members in their capacity as investment advisers to collective investment trusts (CITs) and retail separately managed accounts (SMAs). ICI Associate Members include service providers to member firms and CIT trust companies. ICI has offices in Washington DC, Brussels, and London.

2 Semiannual Reporting, SEC, 91 Fed. Reg. 24968 (May 7, 2026) (the "proposal").

3 We use the term "regulated fund" to mean any investment company that is registered, or has elected to be regulated as a business development company (BDC), under the Investment Company Act of 1940.

outweigh any inducement that permitted semiannual reporting would provide to companies to go and stay public. Consequently, we recommend maintaining mandatory quarterly filings, consisting of at least quarterly financial statements and management's discussion and analysis (MD&A) disclosure. We are open to removing certain current components of Form 10-Q to reduce the burdens of preparing filings while preserving the core benefits of quarterly reporting.

In this letter, we:

- Support the SEC's efforts to encourage the growth of public markets and explain the importance of these markets to both regulated funds and their investors;
- Detail members' views on the proposal and explain why we continue to support mandatory quarterly filing of at least financial statements and MD&A disclosure; and
- Offer additional views on the SEC's overall efforts to modernize and streamline public company reporting and disclosure.

I. ICI Strongly Supports the SEC's Efforts to Encourage the Growth of Public Markets

We strongly support the Commission's goal of encouraging more companies to go public, and to do so earlier in their lifecycles. Thriving public markets are critically important to companies wishing to raise money to grow and innovate. Broader public markets also support competition, liquidity, and price discovery. Regulated funds are a key source of capital for public companies and also value robust public markets because they provide a large and expanding universe of accessible investment opportunities. At year-end 2025, regulated funds held 33% of outstanding US corporate equity, reflecting the importance of public markets to asset managers and the regulated fund industry, and vice versa.[4]

We agree with Chairman Atkins that it is vitally important to encourage companies not only to go public eventually, but to do so earlier in their lifecycles, so that "all investors—not just a select few with access to the private markets—can participate in and benefit from the growth in

their value."5 And as the Chairman has noted, the decline in the number of public companies in recent decades has been dramatic.6

4 See Investment Company Institute, 2026 Investment Company Fact Book: A Review of Trends and Activities in the Investment Company Industry, at 17, available at www.icifactbook.org ("2026 ICI Fact Book").

5 SEC Chairman Paul S. Atkins, Remarks at the Stanford Rock Center for Corporate Governance (May 26, 2026), available at https://www.sec.gov/newsroom/speeches-statements/atkins-052626-remarks-stanford-rock-center-corporate-governance.

6 Id. "Shortly after I left the SEC as a staff member in the mid-1990s, more than 7,800 companies were listed on the US securities exchanges. When I returned as Chairman a year ago, that number had fallen by roughly 40

Figure 1 below demonstrates some of these trends. Many of today's largest public companies by market capitalization went public much earlier in their lifecycles, at modest initial valuations. Consequently, regulated funds and their predominantly retail investors have participated enormously in their growth, generating returns for every-day investors that help achieve their financial goals and strengthen retirement savings.7 By contrast, SpaceX, for example, waited almost two and a half decades before going public at a massive valuation; consequently, the benefits of its extraordinary pre-IPO growth to regulated funds and retail investors generally have been limited. The same is expected with Anthropic and OpenAI.

Figure 1

Regulated Funds Are Important Investors in Today's Largest Public Companies

	Year founded	Year of IPO	Approximate valuation at IPO pricing1	2026 $1.8 trillion capitalization (June 30, 2026)	Percentage held by regulated funds2
Alphabet (Google)	1998	2004	$23.1 billion	$4.33 trillion	25.0%
Apple	1976	1980	$1.2 billion	$4.25 trillion	25.4%
Amazon	1994	1997	$298.4 million	$2.56 trillion	25.5%
SpaceX	2002	Current market	–	$2.25 trillion	–
Nvidia	1993	1999	$343.2 million	$4.84 trillion	28.8%
Microsoft	1975	1986	$519.0 million	$2.77 trillion	29.8%

1Approximate valuation at IPO pricing is calculated by multiplying the initial offering price by the total company shares outstanding after the public offering, which is based on a company's most recent Form S-1 filing around the time of its IPO.

2Data are based on quarterly public filings between January and March 2026. Data include mutual funds, ETFs,
and closed-end funds, but exclude BDCs.
Source: ICI calculations of Refinitiv, SEC Form S-1, and SEC Form N-PORT data
It is crucial for retail investors and regulated funds that the regulatory regime encourages vibrant public markets where companies go public early in their development and allow retail investors to participate more fully in their growth. In general, we agree that lowering the complexity and burdens of the offering process, as well as reducing the ongoing burdens of being a public company, could help encourage more companies to go public or do so earlier.
percent. Today, companies tend not to go public, if at all, until after their Series D or E round of private fundraising,
whereas thirty years ago, an IPO would be the equivalent of today's Series B or C."
7 For example, retail investors held 87% of mutual fund total net assets at year-end 2025. For more information,
see 2026 ICI Fact Book at 34.

ICI also has supported expanding retail investors' access to private markets.
8 But make no
mistake: for regulated funds and retail investors, private market investments are a complement to, not a substitute for, public market investments.
II. ICI Recommends Maintaining Mandatory Quarterly Reporting
ICI has received a range of feedback on the proposal from members through group calls, one-on-one discussions, and an anonymous member survey.9 ICI member views are mixed. Even within some firms, different portfolio management teams have expressed different views. As detailed below, members who oppose this proposal—the majority—have concerns about the proposal's potential impact on investment decision making, comparability of information across issuers, volatility, price discovery, and information asymmetry in the marketplace, among other factors. Members who are neutral or support this proposal—the minority—tend to focus on potential positive impacts on public markets. These members view the proposal, together with other reforms, as a positive step towards reinvigorating public markets. They also tend to predict that many public companies would voluntarily continue with formal quarterly reporting or provide quarterly earnings releases, limiting the loss of information as a practical matter. Finally, they observe that semiannual reporting is already common in non-US markets.
After weighing the competing considerations, ICI recommends maintaining the current mandatory quarterly reporting framework, with modifications. Although we broadly support the proposal's goals, reducing regulatory burdens on public companies should not come at the expense of market transparency and decision-useful information.
A. ICI's Survey Results
ICI conducted an anonymous member survey to gather views on the proposal. Fourteen ICI member firms responded, representing about $6.1 trillion in US-registered fund assets as of May 2026. We summarize key survey results below.10
First, we asked how firms would describe the importance their portfolio management, research, or other teams place on operating companies' Forms 10-Q for purposes of investment decision making. These groups generally view Form 10-Q filings as moderately to highly important for investment decision making (Figure 2).
8 See, e.g., Reimagining the 1940 Act: Key Recommendations for Innovation and Investor Protection, ICI, (Mar.
2025), available at https://www.ici.org/system/files/2025-03/25-ppr-reimagining-the-40-act.pdf. Regulated funds
can, and do, invest in certain private securities, but they are limited by liquidity and other constraints.
9 Although we summarize the survey results herein, this letter also reflects feedback that we

received through
other engagement with members.
10 Survey results are rounded to the nearest percent.

Not at all important
Then, we asked survey participants generally about their firms' views of the proposal. Most survey participants (64%) oppose the proposal, the bulk of which (43%) were "mildly opposed" (Figure 3). Member firms who selected "other" in Figure 3 indicated that their internal teams had mixed views.
Figure 3

We then asked survey participants to rank on a scale of 1 to 5 (with "1" being not at all important and "5" being highly important) how important each required element of Form 10-Q is to their firm's investment processes. Almost all respondents identified financial statements as "highly important," followed closely by MD&A (Figure 4). By contrast, "mine safety disclosures,
" for example, were ranked as far less important. These results indicate that members make meaningful distinctions among these items and do not value them all equally.
Figure 4

Similarly, we asked survey participants to identify, of the items listed in the previous question, which item is most important to their firms' portfolio management, research, or other teams. Eleven fund groups responded to this question. Some respondents listed more than one item. Still, there was striking uniformity in these responses:

• All identified financial statements as the most important Form 10-Q element.
• Six also identified MD&A (one of which noted that the MD&A is particularly useful "where it provides incremental operational or strategic insight").

11

We also asked survey participants for their views on the SEC scaling public company disclosure frequency based on a company's size or maturity (Figure 5). Members were generally neutral or opposed to this concept.

11 Other responses included the following: (i) One respondent aggregated responses from six of the firm's
analysts and highlighted: Financial statements (cash flow and balance sheet particularly and the notes to the
financial statements); MD&A; Quantitative and Qualitative Disclosures About Market Risk; Legal Proceedings; and
Material Changes in Risk Factors; and (ii) "Exhibits also can be informative and help "complete the narrative" from
the Form 10-Q."

Our survey also asked participants, if the proposal is adopted, whether any categories of public company issuers should be excluded from the ability to elect semiannual reporting. Ten fund groups responded to this question, and responses were mixed but leaned in favor of a uniform standard:

- A majority of respondents (six) preferred that there be a uniform standard applicable to all public companies, regardless of size or maturity;12
- Two respondents said that larger companies (e.g., large-cap issuers or large accelerated filers) should not be able to elect semiannual reporting;13
- One respondent said that the SEC should consider limiting the semiannual option to smaller reporting companies and emerging growth companies; and
- One respondent generally said that they are not supportive of semiannual reporting.

Finally, we asked survey participants to share their views on whether (and to what extent) certain factors would be impacted if public companies were permitted to report semiannually (with "1" being not at all impacted and "5" being highly impacted). A majority of survey participants believe that each of the factors listed below would be impacted at a level of 3 or above if the proposal is adopted (Figure 6).
12 One respondent said that "Five of six [of our internally polled teams] favor uniform application of whatever
reporting standard is adopted, rejecting tiered eligibility. Only one identified a specific risk-based condition (ICFR
weaknesses) that should gate the election."
13 One such respondent noted, however, that different reporting cadences across issuers could reduce
comparability and data availability.

B. A Decrease in Reporting Frequency Could Negatively Impact Investment Decision Making and Other Factors

We believe that the proposal may lead to a decrease in the high quality, comparable data that investors use for their analysis and investment decision making. Comparability of reporting across different companies is critical, and permitting public companies to choose their reporting cadence would make it harder to compare companies. Members who share this view have also raised concerns about a decrease in analyst coverage of certain companies, including smaller or newly public companies. Although many companies may continue to voluntarily release quarterly earnings, members report that earnings releases are not perfect substitutes for Form 10-Q and that Form 10-Q's standardized, quantitative financial statements are better. Furthermore, members have raised concerns about investment decision making across both passive and active strategies, and both fixed income and equity strategies. These concerns are present even for those following long-term strategies, as portfolio managers track information on a regular basis to spot trends over time.

We are also concerned that less frequent reporting could affect fixed income markets and capital formation generally. Investors rely on quarterly public disclosures for credit analysis, debt pricing, and monitoring of issuer fundamentals. Reduced reporting frequency could

increase uncertainty around liquidity, leverage, and refinancing risk, potentially resulting in wider credit spreads and higher borrowing costs. Quarterly disclosures also help stabilize markets during periods of economic or financial stress, when investors place more weight on standardized reporting to assess liquidity, leverage and refinancing risk. Extending the period between standardized reports could increase uncertainty and translate into higher financing costs or reduced access to debt and equity markets. These potential effects may fall most heavily on smaller, lower-rated, or less frequently accessed issuers and may run counter to the Commission's goals of promoting capital formation.

Members have also raised concerns about impacts on broader economic factors, such as volatility and price discovery. While some investment professionals believe that semiannual reporting would decrease volatility around quarterly reporting, many others believe that longer gaps between formal disclosures could increase volatility, as prices may move on less reliable information. Members have also noted that, if some companies in a sector report quarterly but some report semiannually, there may be a tendency to extrapolate results from the quarterly reporters to the semiannual reporters without a factual basis for doing so. There is also a concern that the choice of whether to report semiannually or quarterly will itself—rightly or wrongly—send a message to the marketplace from which investors may draw conclusions. Taken together, these effects would impair price discovery and make it more difficult for advisers to assess company performance and make timely, well-informed investment decisions on behalf of fund shareholders.

Finally, we have concerns about increasing issues arising from possession of material nonpublic information (MNPI) if companies shift to semiannual reporting. Through engagement with companies, asset managers may come into possession of a company's MNPI, and firm policies generally prohibit trading while that information remains nonpublic. In practice, quarterly Form 10-Q filings often serve as important "cleansing" events by making information public and lifting related trading restrictions. Permitting semiannual reporting could disrupt this practice and introduce more lengthy trading limits on those holding MNPI.

As an alternative to the proposal, and consistent with Commissioner Peirce's suggestion,14 the Commission could consider maintaining the existing quarterly reporting cadence but streamlining the content of quarterly reports on Form 10-Q. ICI survey results suggest that members generally view the financial statements and MD&A disclosure as the most important elements of Form 10-Q filings for their investment processes. The Commission could consider reviewing and modernizing those important disclosures to focus on materiality and maximize

utility, as well as streamlining or eliminating certain other elements of Form 10-Q. This could serve the purpose of lessening quarterly burdens while still maintaining high quality, comparable financial information for investors. To the extent the Commission explores this

14 SEC Commissioner Hester M. Peirce, Quarterly Questions: Statement on the Proposed Amendments to Allow
Semiannual Reporting (May 5, 2026), available at https://www.sec.gov/newsroom/speeches-statements/peirce-
statement-proposing-semiannual-reporting-050526 ("[A]n approach that focuses on slimming down the Form 10-
Q—instead of or in addition to making it optional—could be helpful.").

alternative, we encourage the Commission to seek public comment on potential changes in connection with its broader work to review and modernize public company disclosure.[15]

If the Commission decides to move forward with some form of semiannual reporting, we agree with giving companies the choice of reporting quarterly or semiannually. This flexibility would allow issuers to align their reporting frequency with investor preferences, including by continuing to report on a quarterly basis.

C. Semiannual Reporting May Not Meaningfully Induce Companies to Go or Stay Public

We do not believe that reducing required public company reporting from quarterly to semiannual would meaningfully incentivize companies to go or stay public and meaningfully increase the number of public companies. After all, such companies still would be subject to rigorous annual, semiannual, and current (Form 8-K) reporting requirements. We believe that any benefits in this regard from adopting the proposal would be slight. Some ICI members have suggested that SEC efforts to reduce pre-IPO burdens (e.g., by reforming the offering process[16]) and certain other post-IPO burdens (e.g., by reforming the filer status framework and reducing required disclosures[17]) would more meaningfully induce companies to go public. The Commission also discusses the idea that less frequent reporting could reduce management incentives to focus on short-term outcomes. Again, many of our members with long-term investment horizons still value mandatory quarterly reporting as a means of tracking trends and spotting shifts. Moreover, it is unclear whether reducing reporting frequency will mitigate this concern with "short termism,[18]" especially when it is anticipated that many companies will continue to report some information quarterly in the form of voluntary 10-Qs or earnings releases.

15 Id. In her statement, Commissioner Peirce asks, "1. Should we adjust the reporting burden rather than adjusting
whether that burden is quarterly? 2. If so, is that exercise better undertaken in conjunction with this rulemaking or
as part of the Commission's broader project of assessing disclosure requirements?"

16 See, e.g., Registered Offering Reform, SEC, 91 Fed. Reg. 31022 (May 26, 2026) ("Offering Reform proposal").

17 See, e.g., Enhancement of Emerging Growth Company Accommodations and Simplification of Filer Status for
Reporting Companies, SEC, 91 Fed. Reg. 30086 (May 21, 2026) ("Filer Status proposal"); SEC Chairman Paul S.
Atkins, Statement on Reforming Regulation S-K (Jan. 13, 2026), available at
https://www.sec.gov/newsroom/speeches-statements/atkins-statement-reforming-regulation-s-k-
011326.

18 As the Commission notes, studies about the impact of quarterly reporting on short-termism in non-US markets
have produced mixed results, but at least one study regarding UK companies found that “the imposition of
mandatory quarterly reporting had no statistically significant impact on firms’ investment decisions.
” Proposal at
24999 (citing Robert Pozen, Suresh Nallareddy & Shivaram Rajgopal, CFA Institute Research Foundation, The
Impact on Reporting Frequency on UK Public Companies (Mar. 2017)).

It is also unclear whether public companies, in large numbers, would elect to be semiannual filers if the proposal were adopted. We have heard, anecdotally, that many public companies do not at this point expect that they would elect semiannual reporting, but it is unclear whether that would change in the future. The practical impact of this proposal on public company reporting is therefore unknown, and the potential costs and benefits have been challenging to assess.

In light of these concerns, on balance we do not believe that the potential benefits of the proposal outweigh the costs of decreasing transparency and information in the marketplace.

III. ICI Supports Deliberate Modernization and Streamlining of Public Company Reporting and Disclosure

Although we support retaining the current quarterly reporting regime (to include at least financial statements and MD&A), we strongly support the Commission’s goals of revitalizing public markets. We also support the SEC’s deliberate approach to reviewing, proposing, and seeking public input on the current public company reporting regime, including on the frequency and content of disclosures. As the Commission seeks to reform public company disclosure, we encourage it to keep the following principles in mind:

• Materiality should be a guiding principle. Chairman Atkins has said that his goal is to ensure that materiality is the “north star” of the SEC’s disclosure regime.19 We agree with this approach. Materiality is necessarily fact-specific and may differ for different companies, and what is material evolves over time (e.g., AI and cybersecurity risks are relatively new and may be material for some companies). We would encourage the Commission to avoid bright-line definitions of “material” to preserve flexibility.

• Balance and calibration are key. As analyzing this proposal makes clear, public company disclosure raises competing policy interests. It is important to balance the desire to streamline and lessen regulatory burdens with the importance of maintaining transparency and high quality, comparable, baseline information in the marketplace. Such a system promotes investor confidence and effective price discovery. A strong corporate reporting and disclosure regime will feature both principles-based requirements where appropriate (e.g., for risk disclosure), along with requirements that produce more consistent and comparable reporting across companies. The SEC should prioritize reforms that discourage lengthy boilerplate disclosures and encourage clear, concise disclosures.

19 SEC Chairman Paul S. Atkins, Revitalizing America’s Markets at 250 (Dec. 2, 2025), available at https://www.sec.gov/newsroom/speeches-statements/atkins-120225-revitalizing-americas-markets-250.

• The elimination of any disclosure should be done thoughtfully, taking into consideration the full impact on the marketplace. Different ICI member firms may value required disclosures differently, based on their unique strategies and expertise. Even if one firm does not routinely rely upon a given item, other investors or market

participants may filter their analysis of that item into the broader marketplace. Elimination of disclosures should be approached thoughtfully to avoid depriving investors of material information or introducing new risk into the marketplace.
• Layered disclosure could help reduce repeated, voluminous disclosures. In regulated funds' experience with their own extensive reporting and disclosure obligations, principles of layered disclosure, including linking and incorporating information by reference, have alleviated certain regulatory costs and burdens while still emphasizing critical investor information and retaining more detailed information. For example, fund summary prospectuses and tailored shareholder reports have been positive developments for investors and funds. The Commission should consider extending these principles to corporate disclosures as appropriate.
We understand that the Commission is considering potential additional reforms to Regulation S-K. We support this initiative in principle and stand ready to help the Commission as it seeks to modernize these requirements.
Finally, we note that this proposal is only one of several that the Commission is considering that are intended to encourage more companies to go public or to do so earlier in their lifecycles—a goal that we at ICI strongly support. This proposal, the Commission's Offering Reform and Filer Status proposals, and any future proposals related to Regulation S-K or the public company offering or reporting processes are interrelated and should be considered holistically. Accordingly, as the Commission analyzes the potential costs and benefits of these initiatives and considers whether, when, and in what final form to adopt them, it should not only evaluate each proposal individually, but also their cumulative and interactive effects on public companies, investors, and the public markets.

Irina Petrova Member of AICPA — Jul 6, 2026
Subject: File No. S7-2026-15 From: Irina Petrova I disagree with the proposed rule for semi-annual reporting and believe the current reporting rules should stay in place. 6 months is too long of a period to not have information on the company's performance or expectations for the future. As a small investor, this could negatively impact my investments as it is already hard to evaluate with my limited knowledge.

Iza Frechette Trade Program Assistant — Jul 6, 2026
Subject: File No. S7-2026-15 From: Iza Frechette Iza Frechette, program assistant. Regular reporting is KEY in protecting the public from fraud and corruption. The public NEEDS to know what is happening on, at minimum, a quarterly basis to be able to protect themselves from negative shocks.

J Bliss — Jul 6, 2026
Subject: File No. S7-2026-15 From: J Bliss It's important to continue to require quarterly reporting for accountability and also to ensure individual investors can make timely informed decisions. This is especially important to me as I plan for my future retirement needs.

J Burke None — Jul 6, 2026
Subject: File No. S7-2026-15 From: J Burke I'm opposed to Rule S7-2026-15 because it will disadvantage the small investor by reducing transparency in the market. We had a similar rule from the 50's to the 70's and it hurt market performance.

Jack mulcahy SAGAFTRA — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jack mulcahy It's imperative that we keep quarterly reporting. Do it!

Jacqueline Voss SAHM — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jacqueline Voss I am advocating for keeping quarterly reporting for publicly traded companies. Less reporting means less accountability for the companies, and less transparency for the investing public such as myself. I would also suspect less reporting to make stocks more volatile in addition to encouraging insider trading even more-so than is present today. This would not be a fair market for people to trade in. I feel removing the reporting requirement would unduly increase market risk for the everyday investor. A change in the current quarterly reporting policy would cause me to reassess how much funds I have in the stock market versus other investments. Thank you for you time.

I. Executive Summary

The purpose of this report is to provide economic analysis to assist the United States Securities and Exchange Commission (the "SEC" or the "Commission") in its deliberations with respect to a new rule proposed under the Securities Exchange Act of 1934 (the "Exchange Act") entitled "Semiannual Reporting."[1]

The Commission's governing statutes require that the SEC "consider or determine" the consequences that a regulatory action will have on efficiency, competition and capital formation as well as investor protection.[2] In addition, as a matter of policy, the SEC has adopted a protocol to ensure that the best available information about a rule's likely economic consequences is considered when exercising its rulemaking authority.[3]

Based on my review of the proposed rule, and based on my own experience and discussions with market participants, it is my opinion that:

• The Commission's economic analysis does not adequately evaluate the potential consequences of an optional semiannual reporting regime on market quality. The Commission's economic analysis fails to adequately analyze the mechanisms through which optional semiannual reporting may affect market quality measures such as bid-ask spreads, liquidity, trading volume, price efficiency, and the cost of capital. As a result, the Commission's economic analysis understates the potential effects of an optional semiannual reporting regime on the broader market in addition to issuers electing semiannual reporting.

• The Commission's economic analysis fails to consider that semiannual reporting would potentially make cross-company comparisons more difficult thus increasing costs for investors seeking to identify economically similar firms or conduct peer-

1 Semiannual Reporting, 91 Fed. Reg. 24968 (May 7, 2026) ("Proposing Release") available at https://www.govinfo.gov/content/pkg/FR-2026-05-07/pdf/2026-09095.pdf.
2 Section 2(b) of the Securities Act, 15 U.S.C. 77b (b), and Section 3(f) of the Exchange Act, 15 U.S.C. 78c(f)
require the Commission, when engaging in rulemaking, where it is required to consider or determine whether an
action is necessary or appropriate in the public interest, to consider, in addition to the protection of investors,
whether the action will promote efficiency, competition, and capital formation. Further, Section 23(a)(2) of the
Exchange Act, 15 U.S.C. 78w(a)(2) requires the Commission, when making rules under the Exchange Act, to
consider the impact that the rules would have on competition, and prohibits the Commission from adopting any
rule that would impose a burden on competition not necessary or appropriate in furtherance of the Exchange
Act.
3 See "Memorandum Re: Current Guidance on Economic Analysis in SEC Rulemakings," U.S. Securities and
Exchange Commission, March 16, 2012, available at
https://www.sec.gov/divisions/riskfin/rsfi_guidance_econ_analy_secrulemaking.pdf.

group analysis, relative value analysis or performance benchmarking. Allowing reporting firms to opt into different reporting frequencies may impair comparability, which can have spillover effects even on firms that still choose to maintain quarterly reporting by fragmenting peer group information. The process where earnings announcements by one firm convey information about other firms in the same industry or peer group may be impaired when reporting periods are not aligned.

- The Commission's economic analysis overstates the cost savings likely to result from reduced reporting frequency. A substantial portion of public-company reported costs are fixed and must be incurred regardless of how often reports are filed. As a result, reducing the number of required SEC filings does not necessarily eliminate the underlying costs of producing financial information.
- The Commission's economic analysis fails to consider that optional semiannual reporting creates the potential for adverse selection in the choice of reporting frequency. Because the election is optional, economic theory predicts that the election will be disproportionately attractive to firms facing relatively high disclosure costs, including issuers with complex operating conditions, more valuable proprietary-information, heightened uncertainty regarding future performance, or management teams that place a higher value on limiting the frequency of external scrutiny. As a result, the firms with the strongest incentives to elect semiannual reporting may also be those for which more frequent disclosure is most valuable to investors.
- The Commission's economic analysis fails to adequately consider how reducing reporting frequency weakens managerial accountability and diminishes the value of market feedback. Less frequently mandated disclosures increase the period over which earnings management can occur undetected. The Commission's economic analysis acknowledges this possibility, but it merits more rigorous analysis.
- The Commission's economic analysis frames the optional design as a neutral mechanism that allows each issuer to optimize its reporting cadence based on its own circumstances. This framing assumes that the decision whether to elect semiannual reporting is, for any given issuer, a function only of that issuer's individual characteristics and investor expectations. The Commission's economic analysis fails

to adequately consider the legal and contractual constraints that may make the election unavailable or economically infeasible regardless of the issuer's preferences. The Commission's economic analysis does not identify the population of constrained

issuers and does not assess the competitive consequences for firms that cannot access the compliance cost savings available to their unconstrained competitors.

• The Commission’s economic analysis draws on an incomplete review of the relevant economics and accounting literature. The Commission fails to analyze important peer-reviewed literature on how reporting frequency affects market quality metrics such as price efficiency, bid-ask spreads, trading volume, and information asymmetry. In addition, the proposed rule contains no analysis of the literature about adverse selection theory as applied to voluntary disclosure regimes or evidence on how consistent reporting periods impact investor information costs, peer group analysis, or the cost of capital. The analysis of the literature contained in the proposed rule also fails to provide a complete analysis of the short-termism literature and fails to acknowledge contradictory empirical evidence.

• The Commission’s economic analysis fails to demonstrate that the proposed rule is likely to promote efficiency, competition, and capital formation.

II. Overview of the Proposed Rule

On May 5, 2026, the SEC issued a proposed rule that would permit Exchange Act reporting companies currently required to file quarterly reports on Form 10-Q to elect to provide interim reports on a semiannual basis using a newly created Form 10-S.4 Under the proposed framework, an electing issuer would file a single Form 10-S covering the first six months of its fiscal year in lieu of the three Form 10-Q filings otherwise required, while continuing to satisfy its annual reporting obligations under Form 10-K. The proposal does not limit eligibility based on public float, market capitalization, or filer status; the election is available to domestic Exchange Act reporting companies subject to the periodic reporting requirements of Rules 13a-13 and 15d-13 without restriction. Issuers that do not elect semiannual reporting would continue to comply with existing Form 10-Q requirements.

The content of Form 10-S would be modeled in significant respects on Form 10-Q and would require interim financial statements and accompanying disclosures for the first six months of the issuer’s fiscal year, with filing deadlines generally aligned with the timing

4 Proposing Release, at 24970-24971.

structure applicable to existing Form 10-Q filers, except that issuers would no longer file first- and third- quarter reports. The proposal includes conforming amendments to Regulation S-X addressing the presentation of interim financial statements, comparative-period information, and related requirements associated with the transition from quarterly to semiannual disclosure.5

The Commission identifies two principal objectives underlying the proposal. First, the Commission states that reducing the frequency of mandatory interim reporting may decrease compliance costs associated with preparing, reviewing, and filing periodic reports, including accounting, legal, auditing, and internal administrative expenses.

6 Second, the Commission

states that less frequent mandatory reporting may reduce managerial incentives to focus on short-term financial results and thereby facilitate longer-term planning and investment.7

The Commission's economic analysis evaluates these asserted benefits while acknowledging possible effects on investors, analysts, market quality, information availability, and capital formation. The Commission solicits comment on whether the optional design will produce adverse selection in the reporting population, whether reduced disclosure frequency will impair market quality and analyst coverage, and whether form

simplification rather than frequency reduction would be a more appropriate policy to pursue. As discussed in this report, the Commission's treatment of these questions as matters for comment rather than subjects of inquiry reflects a deficiency in the Commission's economic analysis.

III. The Economic Analysis Contained in the Proposing Release Is Incomplete and Does Not Provide a Reasoned Basis for Permitting Optional Semiannual Reporting

A. The Commission's Economic Analysis Fails to Quantify or Reasonably Consider the Costs of Optional Semiannual Reporting

The Commission's economic analysis recognizes that reducing the frequency of mandatory periodic reporting could affect the quantity and timeliness of information available to investors. However, the analysis does not fully evaluate the potential consequences of those changes for market quality. The Commission's economic analysis fails

5 Proposing Release, at 24970-24976.

6 Proposing Release, at 25016.

7 Proposing Release, at 24974.

to adequately analyze the mechanisms through which reduced disclosure frequency may affect market quality measures such as bid-ask spreads, liquidity, trading volume, price efficiency, and the cost of capital. As a result, the Commission's economic analysis understates the potential effects of an optional semiannual reporting regime on the broader market in addition to those issuers electing less frequent disclosure.

The failure of the Commission's economic analysis to fully evaluate the potential consequences of semiannual reporting on market quality is particularly notable because substantial peer-reviewed literature has examined the relationship between corporate disclosure and market quality. That literature generally finds that more frequent and more informative public disclosure reduces information asymmetry between informed and uninformed market participants and improves the efficiency with which securities markets incorporate information into prices.8

The mechanism by which disclosure affects market quality is well understood in the market microstructure literature. For example, mandatory periodic disclosure mitigates against adverse selection which arises when market makers or liquidity providers face the risk that trading counterparties possess private information not reflected in market prices. Because liquidity providers cannot directly observe whether a particular order originates from an informed or uninformed trader, they protect themselves by widening bid-ask spreads to compensate for expected losses to informed order flow. The magnitude of the adverse-selection component of the spread therefore depends, in part, on the amount of private information available to informed traders relative to the public information available to the market.

Mandatory periodic disclosure mitigates this problem by reducing informational disparities among market participants. Regular public disclosure causes information to enter the marketplace on a broadly contemporaneous basis, reducing the informational advantage of insiders and other informed traders. A reduction in mandatory disclosure frequency can therefore be expected to increase the amount of private information available between reporting dates and thereby result in increased adverse-selection costs in trading.

The Commission acknowledges that reduced reporting frequency may affect information asymmetry, but it does not fully analyze how that effect may translate into

observable market-quality outcomes. In particular, the Proposing Release does not evaluate whether issuers electing semiannual reporting may experience wider bid-ask spreads, lower market liquidity, reduced trading activity, or a higher cost of capital as a result of less frequent disclosure.

The empirical disclosure literature provides substantial evidence that disclosure quality and market quality are closely linked. In their comprehensive review of the disclosure literature, Healy and Palepu (2001) conclude that corporate disclosure plays a central role in reducing information asymmetries between managers and outside investors and thereby improves capital-market functioning.9 Likewise, Leuz and Verrecchia (2000) examine German firms that voluntarily adopted international reporting standards, a commitment associated with more extensive disclosure, and find evidence of reduced information asymmetry as reflected in lower bid-ask spreads and higher share turnover.
10 These findings
are consistent with the broader theoretical prediction that enhanced disclosure improves liquidity and lowers the cost of capital.

Although neither study directly evaluates the effects of moving from quarterly to semiannual reporting, both support the proposition that disclosure frequency and disclosure quality can affect market quality through information-asymmetry channels. The Commission's economic analysis does not analyze this literature or explain the consequences of reduced mandatory disclosure as contemplated by the proposed rule.

This omission is significant because any increase in bid-ask spreads or reduction in liquidity represents a real economic cost borne by investors and issuers. Wider spreads increase transaction costs for investors, reduce market liquidity, and may increase the expected return demanded by investors as compensation for higher adverse-selection risk.

A reasoned economic analysis therefore requires more than a qualitative acknowledgment that information asymmetry may increase under a semiannual reporting regime. It requires an assessment of how reduced disclosure frequency may affect the market-quality metrics through which information asymmetry is revealed, including bid-ask spreads, liquidity, trading volume, and the cost of capital. Because the Proposing Release does not undertake that analysis and does not engage with the substantial academic literature linking

9 Healy & Palepu, “Information Asymmetry, Corporate Disclosure, and the Capital Markets: A Review of the
Empirical Disclosure Literature,” 31 J. Acct. & Econ. 405 (2001).

(2000).

disclosure and market quality, it provides an incomplete assessment of the potential economic costs of this aspect of the proposed rule.

The Proposing Release presents a detailed quantitative estimate of the compliance cost savings the proposed rule is expected to generate. The Commission estimates net annual savings of approximately $198,000 per electing issuer, projects aggregate annual savings of $394 million assuming a 20 percent adoption rate and derives a ten-year present value of $2.9 billion to $3.4 billion using standard discounting. These estimates are presented as the basis for the Commission's conclusion that the proposed rule generates net benefits.

What the Proposing Release does not present is any corresponding quantification of the costs the rule is predicted to generate. The most significant of these is an increase in the cost of capital for electing issuers resulting from reduced disclosure frequency and the information asymmetry it produces. The Commission acknowledges in general terms that reduced disclosure may affect information asymmetry and market quality, but it does not undertake any rigorous analysis of how the proposed rule might impact an issuer’s cost of

capital.
The theoretical and empirical literature establishing the link between disclosure frequency and cost of capital is well-developed. Diamond and Verrecchia (1991) demonstrate that reduced public disclosure increases information asymmetry between firms and outside investors, raising the required return on equity by reducing market liquidity and widening bid-ask spreads.11 Leuz and Verrecchia (2000) provide empirical estimates: firms that commit to increased disclosure experience reductions in their cost of capital of one to three percentage points.12 The Commission's economic analysis cites Healy and Palepu (2001), which synthesizes this literature and documents the consistent association between disclosure quality and required returns.13 The Commission provides no explanation for why it relies on this literature to support claims about short-termism and compliance burdens while excluding its implications for a rigorous analysis of the proposed rule's likely impact on the cost of capital.

13 Paul M. Healy & Krishna G. Palepu, Information Asymmetry, Corporate Disclosure, and the Capital Markets:
A Review of the Empirical Disclosure Literature, 31 J. Accounting & Econ. 405 (2001).

The significance of the Commission's failure to quantify cost of capital effects can be seen by considering a break-even analysis whereby the Commission could ask what magnitude of increase in the cost of capital would offset the Commission's claimed net benefit of the proposed rule.
In order to conduct such a break-even analysis, the Commission would need to: (1) establish the average financial profile of a firm in the affected population; (2) quantify the dollar impact of a 1 percent Weighted Average Cost of Capital (WACC) increase on that average firm; and (3) calculate how small a WACC increase is needed to fully offset the Commission's claimed net benefit. Such an analysis would establish a break-even threshold that could then be compared to the likely change in WACC caused by the election of semiannual reporting.
In sum, the Proposing Release acknowledges that semiannual reporting may reduce the amount of information available to investors but does not fully analyze the potential implications for market quality. The Commission has not adequately evaluated the potential consequences of an optional semiannual reporting regime on information asymmetry, liquidity, bid-ask spreads, price efficiency, analyst activity, or the cost of capital. Nor has it sufficiently considered whether the proposal's optional structure could generate adverse-selection effects that concentrate any deterioration in market quality among the issuers for which frequent disclosure is most valuable to investors. The impact of reduced reporting frequency on market quality is only superficially acknowledged in the Commission's economic analysis, despite being central to the Commission's statutory determinations regarding efficiency, competition, capital formation, and the public interest.
B. The Commission's Economic Analysis Fails to Account for Fragmentation of Reporting Regimes, Comparability Loss, and Spillover Effects
Semiannual reporting would make cross-company comparisons more difficult, thus increasing costs for investors seeking to identify economically similar firms or conduct peer-group analysis, relative valuation exercises, or performance benchmarking. Allowing certain firms to opt into different reporting frequencies may impair comparability, which can have spillover effects even on firms that still choose to maintain quarterly reporting by

fragmenting peer group information. The process where financial reports by one firm convey information about other firms in the same industry or peer group may be impaired when reporting periods are not aligned.

The proposed rule would introduce the possibility that otherwise comparable issuers operate under different interim reporting schedules. Under the current regime, virtually all Exchange Act reporting companies subject to Form 10-Q requirements provide standardized interim reports on a common quarterly cadence. Under the proposed rule, some issuers would continue quarterly reporting while others would elect semiannual reporting, and some semiannual filers may supplement required reports with varying forms of voluntary interim disclosure. As a result, investors, analysts, and other market participants would increasingly evaluate firms using information that differs not only in content but also in timeliness and frequency.

Because the election to use semiannual reporting is optional and may be revisited over time, differences in reporting frequency could become a persistent feature of the reporting landscape. The principal economic question is whether the benefits of issuer flexibility outweigh the costs associated with reduced uniformity and comparability in the timing and availability of public information.

The academic literature has long emphasized the importance of comparability in financial reporting. For example, De Franco, Kothari, and Verdi (2011) find that greater accounting comparability is associated with improved analyst performance, greater information transfer across firms, and lower information acquisition costs.14 Although this literature focuses primarily on the comparability of accounting outputs rather than reporting frequency itself, its underlying insight is relevant in that investors derive value when information about economically similar firms can be evaluated using common benchmarks and comparable reporting schedules.

The most immediate comparability effect of the proposal arises from differences in the timeliness of publicly available information among otherwise similar firms. Under the current regime, peer firms generally disclose interim financial information on a common quarterly schedule. Under the proposed rule, a quarterly filer may provide first-quarter and third-quarter financial results while a semiannual-reporting peer may not provide a comparable regulatory filing covering the same period. At various points during the year, investors comparing firms within the same industry may therefore have access to different amounts of verified information regarding recent operating performance.

14 Gus De Franco, S.P. Kothari & Rodrigo S. Verdi, The Benefits of Financial Statement Comparability, 49 J.
Accounting Research 895 (2011).

The resulting challenge is not that peer comparison becomes impossible, but that it becomes more costly and potentially less precise. Analysts may need to rely on older financial statements, management guidance, voluntary earnings releases, industry data, or model-based estimates to evaluate firms that are not reporting on the same schedule. These adjustments can restore some degree of comparability, but they require additional effort and introduce additional estimation errors.

The Commission acknowledges this issue in Question 7, which asks whether differences in reporting frequency could affect comparisons among issuers. Yet the economic analysis does not attempt to evaluate the magnitude of those effects or the extent to which investors and intermediaries would incur additional costs to compensate for reporting-frequency differences.

The potential effects on comparability may be particularly relevant if election decisions are concentrated within particular industries or issuer types. The Proposing Release solicits comment on whether adoption rates may differ across industries and notes that certain

categories of issuers may have stronger incentives to elect semiannual reporting than others. If choosing semiannual reporting is correlated with characteristics such as firm size, growth stage, analyst coverage, or financing needs, peer groups may become segmented in ways that are themselves economically meaningful.

Such clustering would not necessarily eliminate comparability within industries, but it could complicate relative valuation exercises. Analysts may choose to compare firms using a mixture of current-quarter data for some issuers and older semiannual information for others. This could affect earnings forecasts and other analyses that rely on contemporaneous and synchronized financial information.

The proposal may also affect comparability over time for individual issuers. If an issuer elects semiannual reporting for one period and subsequently returns to quarterly reporting, users of financial statements may encounter discontinuities in the availability and granularity of interim information. Historical trend analysis often relies on consistent observation intervals. Changes in reporting frequency do not make such analysis impossible, but they may require analysts to reconstruct or estimate missing interim observations in order to maintain a consistent time series.

The proposed rule may create comparability issues across markets and investment products. For example, across debt and equity markets debt investors may receive quarterly financial reporting as a requirement in bond covenants, while equity investors would rely on

semiannual disclosures from issuers who elect semiannual reporting. Across products, mixed reporting cadences across issuers could impede comparability and complicate portfolio construction for financial market indices and exchange traded funds (ETFs). This potential lack of comparability across markets and products will likely increase information asymmetry and potentially distort relative pricing between debt and equity. This issue is not addressed in the Commission’s economic analysis.

The Commission’s economic analysis recognizes the potential for issues related to comparability in its request for comment regarding issuer elections and transitions between reporting regimes. However, the economic analysis does not evaluate the extent to which semiannual reporting may increase costs for investors and analysts.

Comparability has value not only at the level of individual investment decisions but also for market-wide information systems. Intermediaries such as investment managers, research providers, data vendors, credit analysts, benchmarking services, and academic researchers frequently rely on standardized reporting schedules to aggregate and compare information across firms.

These market intermediaries do not depend on the comparability of any particular pair of companies but on the synchronized, contemporaneous availability of standardized financial data across a defined population of issuers. These intermediaries are not themselves parties to any individual issuer's reporting frequency decision. However, the economic consequences of issuer decisions spill over to these participants, that is, the index providers, passive fund managers, credit analysts, and benchmark users. The Commission's economic analysis does not address the economic impact on this category of market participant.

A voluntary reporting regime would not eliminate the ability of these intermediaries to perform such functions, but it could increase the costs of data collection and analysis. Firms reporting on different schedules would require additional adjustments to produce comparable datasets, and some information users may face greater uncertainty when comparing companies whose most recent regulatory disclosures cover different reporting periods.

These costs would fall largely on investors and information intermediaries rather than on issuers themselves. As a result, these costs may not be reflected in The Commission’s economic analysis that looks to issuer-level compliance-cost estimates. Yet these costs are relevant to any assessment of the proposed rule's overall economic consequences.

The Proposing Release suggests that a reduction in mandatory disclosure may be partially offset by voluntary quarterly disclosures, including earnings releases, investor presentations, and other interim communications. That possibility, however, does not mitigate the proposed rule's costs from an investor perspective. The principal benefit of the current framework is that information is disclosed using a common framework. For investors, analysts, and asset managers, this fragmentation increases information-processing costs and complicates financial modeling, peer-group analysis, performance benchmarking, and relative valuation exercises. Instead of analyzing companies using comparable and contemporaneous information, market participants would be required to reconcile information from differing reporting periods.

The Commission cannot assume that voluntary disclosure will eliminate comparability concerns. Rather, the relevant question is whether voluntary disclosure practices would be sufficiently widespread, consistent, and reliable to preserve the informational benefits currently associated with standardized quarterly reporting.

C. The Commission's Economic Analysis Overstates the Cost Savings from Reduced Reporting Frequency

The Commission's economic analysis overstates the cost savings likely to result from reduced reporting frequency. Several features of the current reporting regime illustrate why reporting costs may not decline proportionately with filing frequency. First, much of the compliance infrastructure necessary to support public-company reporting must be maintained continuously. Accounting personnel, internal-control systems, disclosure controls, legal costs, financial reporting software, and financial close procedures remain necessary whether an issuer files three interim reports annually or one. These resources are not easily scaled in proportion to the number of required filings. Consequently, eliminating a filing may reduce incremental reporting costs without materially reducing the fixed costs of maintaining a reporting organization.

Second, many substantive reporting obligations continue under the proposed regime. Semiannual reporting would still require the preparation of interim financial statements, comparative-period disclosures, auditor review procedures, management review, and compliance with applicable accounting and disclosure requirements. A significant portion of the underlying compliance infrastructure would therefore remain necessary under Form 10-S.

Third, the Commission acknowledges the possibility that many issuers electing semiannual reporting may continue to disseminate quarterly earnings information voluntarily for lenders, debt investors, counterparties, boards, rating agencies, and internal management purposes. In addition, counterparties under financing agreements, credit facilities, bond indentures, and ISDA arrangements often require quarterly or even monthly financial reporting. If firms continue to prepare quarterly financial information, and communicate quarterly performance to investors, much of the operational work associated with quarterly reporting may persist. In that circumstance, the proposal would eliminate only a subset of the activities associated with Form 10-Q compliance, leaving many of the underlying information-production costs unchanged.

This distinction matters because it bears directly on the reliability of the proposal's cost-benefit analysis. If a substantial share of Form 10-Q costs is attributable to complexity rather than frequency, then estimates of cost savings derived from reducing the number of filings may overstate the economic benefits of the proposal. At the same time, the principal costs associated with reduced reporting frequency would remain unchanged.

The proposed rule does not attempt to decompose Form 10-Q compliance costs into frequency-sensitive and frequency-insensitive components. In effect, the Commission's economic analysis treats reporting frequency as a proxy for reporting burden without first establishing that the two are closely linked. Yet the existence of a plausible complexity-based

explanation for reporting costs suggests that reporting frequency and reporting burden are not interchangeable concepts. Before concluding that reduced reporting frequency is an efficient response to reporting costs, the Commission should first determine how much of those costs arise from reporting frequency and how much arise from the substantive requirements accompanying periodic reports. That decomposition is necessary before any reasoned determination that a frequency-based remedy is appropriately matched to the compliance burden the proposal seeks to address.

The Commission's own request for comment suggests that it recognizes the distinction. Question 15 asks whether the Commission should simplify the content requirements of Form 10-Q as an alternative or complement to reducing reporting frequency. The existence of that question implicitly acknowledges that at least some portion of Form 10-Q's compliance burden may derive from the complexity and scope of required disclosures rather than from the fact that reports are filed quarterly. Yet the economic analysis does not estimate the relative importance of these two sources of cost, nor does it evaluate the

potential benefits of an alternative specification of the proposed rule focused on scope, complexity, and format requirements of issuer reporting regardless of frequency. The proposed rule therefore identifies a potentially reasonable alternative without analyzing whether that alternative would address the perceived burden more directly and with fewer consequences for investors.

Potential approaches for simplifying current reporting requirements include simplifying interim disclosure requirements, modifying comparative-period presentation requirements, reducing XBRL obligations for interim filings. Whether such alternatives would be superior to a reduction in reporting frequency is ultimately an empirical question. However, the Commission does not conduct this analysis.

The Proposing Release argues that cost savings accruing to companies electing semiannual reporting could encourage additional companies to become or remain a public company.

15 However, the Commission's economic analysis never concludes that the proposed rule is likely to increase the number of public companies or the amount of capital raised through registered offerings. Nor does it even attempt to estimate the magnitude of any such effect. Importantly, the Commission concedes that "non-regulatory factors may play a more significant role in driving initial public offering activity.

" 16 A central justification for the proposed rule is therefore contradicted by the Commission itself and otherwise left entirely unsubstantiated.

Empirical evidence cited in the Proposing Release supports the argument that rather than regulatory compliance costs, the dominant factor keeping companies private longer and reducing IPO volume has been the significant increase in the availability of private capital in recent years.

17 As private capital has become more widely available, companies that would previously have had limited funding alternatives to a public offering can now raise capital at

15 Proposing Release, at 24988.

16 Proposing Release, at 24988 FN 138: "While savings associated with the proposed amendments may be one factor in a company's decision to go public (or to stay public), we also acknowledge that non-regulatory factors may play a more significant role in driving initial public offering activity."

percent of the decline in the likelihood of initial public offerings after 2000, and stating that non-regulatory
factors, such as abundant private equity financing, changing economies of scale and scope, and changing
acquisition behavior, are likely to have played a more important role).

scale and at favorable valuations while remaining private. Global private capital assets under management rose to $16 trillion in 2024.18

D. The Commission's Economic Analysis Fails to Adequately Address
Adverse Selection in the Choice of Reporting Frequency

A central feature of the proposed rule is that participation in the semiannual reporting regime would be optional. The Commission frames the optional design as a virtue of the proposed rule because it provides issuers with the “flexibility to determine the frequency of interim reporting that best serves the company and its investors.
”19 This framing treats
reporting frequency as a preference variable that issuers are better positioned than regulators to optimize, and it underlies the Commission’s reliance on market forces to discipline the process. There are several problems with this framing, including that it assumes the election is informationally neutral in that market participants will not draw inferences from an issuer’s decision with respect to reporting frequency.

Under the current mandatory quarterly regime, the market draws no adverse inference from quarterly reporting, because all reporting companies report on the same schedule and the reporting decision conveys no issuer-specific information. The proposed rule converts this informationally neutral act into an informationally significant one.

The voluntary disclosure literature provides the relevant analytical framework. Verrecchia (1983) and Dye (1985) demonstrate that disclosure choices may convey information because firms possess private information about their circumstances and incentives that is not fully observable to investors.
20 In this literature, once disclosure
becomes discretionary, the decision whether to disclose (or in this case, whether to remain subject to quarterly reporting) can itself become informative.

Under the current regime, investors generally observe a common quarterly reporting schedule across Exchange Act reporting companies. Because reporting frequency is prescribed by rule, investors ordinarily cannot infer anything about a firm’s characteristics from its reporting choice. Under the proposed rule, investors would have reason to ask

18 PricewaterhouseCoopers, Private Capital at a Crossroads: Industry Convergence (2025), available at

of Nonproprietary Information, 23 J. Acct. Res. 123, 123–25 (1985).

whether firms electing semiannual reporting differ from firms choosing to remain quarterly reporters.

The Proposal’s estimates regarding adoption rates are flawed and incomplete. At the outset, the Commission provides virtually no support for its estimate that 20 percent of companies will adopt Form 10-S. For example, the Commission’s estimate appears to rely heavily on a survey conducted by a single exchange that represented the self-reported views of approximately 6 percent of the exchange's U.S. quarterly-reporting population.

21 The
survey participants were not randomly selected but instead were comprised of a self-selected group of companies who had demonstrated interest in public company regulatory reforms.
The Commission’s adoption rate analysis does not examine which subset of companies may adopt semiannual reporting. The Proposing Release acknowledges the possibility of differential adoption rates but does not model the determinants of election behavior or the implications of self-selection for market outcomes. As a result, the Commission’s economic analysis implicitly evaluates the proposed rule as though issuers electing semiannual reporting and those that do not were broadly comparable groups.
One potential source of adverse selection arises from differences in compliance costs across issuers. However, reporting costs are unlikely to be distributed uniformly across firms. Companies with multiple business lines, extensive geographic operations, complex financing arrangements, significant acquisition activity, or extensive disclosure obligations may incur substantially higher compliance costs than simpler firms in preparing interim reports.
These differences in compliance costs raise the question of whether the population most likely to elect semiannual reporting may differ systematically from the population least likely to elect it. If so, the Commission cannot evaluate the proposal solely by estimating average compliance-cost savings across all issuers. It must also consider whether the issuers generating the largest private benefits from the election of semiannual reporting are the same issuers whose reduced reporting frequency would impose the largest informational costs on investors.
The election of semiannual reporting may also be influenced by an issuer’s financial condition. Quarterly reporting provides investors, creditors, counterparties, and other stakeholders with regular updates regarding a firm's operating performance and financial position. Firms facing elevated uncertainty, liquidity pressures, deteriorating performance, or
21 The survey obtained responses from 187 companies out of the exchange’s approximately 3,100 listed issuers.
183 of the 187 responding companies answered the question about semiannual reporting.

heightened financing needs may have stronger incentives to reduce reporting-related scrutiny than firms facing fewer financing constraints. At the same time, investors may place greater value on timely information about those firms precisely because uncertainty is elevated.
This observation does not imply that financially constrained firms would elect semiannual reporting in disproportionate numbers. Rather, it suggests that adoption rates could be correlated with leverage, credit quality, earnings volatility, financing needs, or other indicators of financial condition. The Proposing Release does not analyze these factors or estimate how the informational value of quarterly reporting may differ across firms.
The critical point is not that issuers electing semiannual reporting would necessarily be lower-quality firms. It is that the election decision itself becomes a signal, and investors cannot unscramble the signal at the individual-firm level. Because the private considerations underlying a reporting election are unobservable, rational market participants cannot distinguish firms that elect semiannual reporting for benign reasons from those that elect it to limit disclosure of adverse information. They will instead form expectations about the electing population as a whole, that is, discounting valuations to reflect the possibility that the group is systematically skewed toward firms with unfavorable private information. This is the adverse selection problem analyzed by Verrecchia (1983) and Dye (1985) in the voluntary disclosure context. The discount falls on all electing issuers regardless of their individual motivations, and it is therefore largest precisely among the firms for whom reduced reporting frequency would be a genuine operational benefit rather than a strategic concealment device. This is the mechanism through which adverse selection imposes a cost on the rule's intended beneficiaries, and the Commission's economic analysis does not address it.
The market-microstructure literature provides a framework for understanding this

possibility. Glosten and Milgrom (1985) demonstrate that greater uncertainty regarding the distribution of information among market participants can increase adverse-selection costs in trading and contribute to wider bid-ask spreads.22 Diamond and Verrecchia (1991) similarly show how disclosure can reduce information asymmetry and improve market liquidity, thereby lowering the cost of capital.23 Huang and Stoll (1997), Easley and O'Hara (1987, 1992) establish empirically that an adverse selection component is a consistently present and

23 Douglas W. Diamond & Robert E. Verrecchia, Disclosure, Liquidity, and the Cost of Capital, 46 J. Fin. 1325
(1991).

economically meaningful portion of the bid-ask spread in trading.

24 These studies identify
mechanisms through which a reduction in mandatory disclosure frequency could affect trading conditions and financing costs.

Evidence from foreign reporting-frequency reforms provides useful, though imperfect, evidence regarding these issues. The European Union's 2013 elimination of mandatory quarterly reporting has generated a growing empirical literature examining how firms and market participants responded when quarterly reporting became less prevalent. Some studies find evidence consistent with a deterioration in firms' information environments, including reduced analyst coverage, lower forecast accuracy, and reduced market liquidity, while others find more limited effects and emphasize substantial heterogeneity across firms, disclosure practices, and market settings.
25

These studies do not provide a direct estimate of the effects of the proposed rule, which differs in important respects from the European reforms. Nonetheless, they demonstrate that adoption decisions, information environments, and market-quality outcomes may be interconnected. The existence of this literature makes the absence of a more developed analysis of self-selection effects in the proposing release particularly notable.

The central issue is not whether every issuer electing semiannual reporting is trying to withhold information. Rather, it is whether the Commission can reasonably assess the proposal's consequences without analyzing who is likely to elect semiannual reporting and how those election decisions may affect investor perceptions, information asymmetry, market liquidity, and the cost of capital. Because the proposal’s economic effects depend critically on the composition of the adopting population, a rigorous analysis of adverse-selection effects needs to be a necessary component of the Commission's overall cost-benefit assessment contained within its economic analysis.

E. The Commission's Economic Analysis Fails to Adequately Consider How Reducing Reporting Frequency Weakens Managerial Accountability and Diminishes the Value of Market Feedback

The Commission's economic analysis fails to adequately consider how reducing reporting frequency may increase principal-agent costs by inhibiting the ability of investors to monitor managerial performance and to intervene to hold management accountable. The Commission's economic analysis acknowledges that reducing the frequency of mandatory periodic reporting could exacerbate principal-agent problems between managers and shareholders. The Commission's treatment of this issue is, however, brief, largely qualitative, and unaccompanied by any meaningful attempt to assess the likely magnitude of these effects. Although the Commission's economic analysis recognizes the concern in general terms, it does not engage with the substantial body of academic literature examining how disclosure frequency affects managerial accountability, information asymmetry, earnings management, and the effectiveness of corporate governance mechanisms.

The result is an economic analysis that identifies agency costs as a potential consequence of the proposed rule but does not meaningfully assess either their likely magnitude or the mechanisms through which they could arise.

Standard agency theory, originating with Jensen and Meckling (1976), holds that managers have private incentives that may diverge from shareholder interests, and that mechanisms for monitoring managerial behavior reduce the welfare losses associated with that divergence.26 Periodic public disclosure is one such mechanism because it requires managers to produce structured, auditor-reviewed accounts of financial performance at regular intervals, reducing the informational advantage that management holds over outside investors and limiting the duration over which deviations from shareholder-maximizing behavior can operate undetected.27 Shleifer and Vishny (1997) identify disclosure as a key element of corporate governance infrastructure because it constrains opportunistic managerial behavior through external scrutiny. Healy and Palepu (2001) conclude that mandatory

26Michael C. Jensen & William H. Meckling, Theory of the Firm: Managerial Behavior, Agency Costs and
Ownership Structure, 3 J. Fin. Econ. 305 (1976).

27Andrei Shleifer & Robert W. Vishny, A Survey of Corporate Governance, 52 J. Fin. 737 (1997).

disclosure requirements reduce information asymmetry and improve the effectiveness of external monitoring of managerial performance.
28

The implications for the proposed rule are straightforward. Reducing the frequency of reports from four per year to two lengthens the period during which management may possess information not subject to mandatory public disclosure. To the extent that periodic reporting promotes managerial accountability and facilitates investor monitoring, a reduction in reporting frequency may weaken those governance mechanisms. The Commission acknowledges this possibility but does not evaluate the relevant empirical literature or attempt to assess the likely magnitude of these effects with respect to the proposed rule.

A substantial body of empirical research finds that managers have incentives to manage reported earnings, particularly around benchmarks such as avoiding losses, meeting analyst expectations, or avoiding earnings declines.29 More frequent disclosure can constrain such behavior by increasing the frequency of external monitoring and reducing the period over which accrual-based distortions may remain undisclosed.30

The literature indicates that reducing mandatory reporting frequency could weaken

these monitoring mechanisms. Less frequent reporting lengthens the interval between mandatory disclosures, potentially increasing management's discretion over the timing and presentation of financial information and reducing the frequency with which investors, analysts, auditors, and boards of directors can evaluate reported performance against underlying operating results.

Coffee (1984) identifies the reduction of managerial discretion over the timing and content of disclosures as one of the central governance functions of mandatory disclosure requirements. Quarterly reporting limits management's ability to delay the disclosure of adverse developments or to strategically time the release of unfavorable information.[31]

Reducing reporting frequency necessarily weakens that constraint. The proposed rule's

Rev. 717 (1984) (arguing that mandatory disclosure reduces managerial opportunism by removing the issuer's
discretion over timing and content of disclosures).

optional structure reintroduces the governance problem that mandatory quarterly reporting was designed to address.

Quarterly reporting creates recurring occasions on which managerial performance is evaluated by investors, analysts, creditors, and other market participants. Earnings releases, Form 10-Q filings, management discussion and analysis, and related communications collectively facilitate external scrutiny of managerial decisions and firm performance. They also improve the information content of stock prices, allowing managers to receive more timely and accurate feedback from investors regarding the market's assessment of corporate performance and strategic decisions.

Reducing mandatory reporting frequency lengthens the interval between these structured monitoring events. To the extent that external scrutiny influences managerial behavior, a reduction in reporting frequency may delay the identification of operational underperformance, reduce pressure for corrective action, and weaken the connection between observed performance and market discipline. These potential effects are particularly relevant for firms with weaker internal governance structures, where external monitoring may play a more significant role. The Commission's economic analysis does not evaluate whether these governance effects are likely to occur, whether they may vary across firms, or whether they could offset some of the benefits the Commission attributes to reduced reporting frequency.

Semiannual reporting lengthens the window during which underperforming managers are insulated from this form of public accountability. A manager whose operating decisions are producing deteriorating results will not be required to disclose that deterioration to public investors for up to six months; the quarterly earnings release that would otherwise force acknowledgment and investor response is simply absent. The governance consequences fall on the shareholders of electing issuers.

The Commission's principal justification for the proposed rule rests in part on the premise that quarterly reporting encourages managerial short-termism by increasing pressure

to meet near-term earnings targets. In support of this proposition, the proposed rule cites Graham, Harvey, and Rajgopal (2005), which reports survey evidence indicating that many chief financial officers perceive pressure to meet earnings benchmarks.32 That survey, however, does not establish that mandatory quarterly reporting is the principal cause of such

32 John R. Graham, Campbell R. Harvey & Shiva Rajgopal, The Economic Implications of Corporate Financial
Reporting, 40 J. Acct. & Econ. 3 (2005).

behavior, nor does it demonstrate that reducing reporting frequency would mitigate the underlying incentives.

The Commission offers no justification of why a six-month reporting cycle, which is still a short-term cycle, would fall below a threshold at which short-termism would cease to operate. If short-termism is caused by managing to the next reporting date, then moving the reporting date from 90 to 180 days does not cure the problem, it merely lengthens the interval between episodes. The Commission offers no theoretical or empirical evidence that semiannual reporters behave differently from quarterly reporters with respect to long-term investment.

Other literature suggests that to the extent short-termism exists, it is the result of factors other than reporting frequency. Dechow and Sloan (1991), for example, attribute reductions in research and development expenditures primarily to managerial horizon problems associated with incentives created by the departure date of a CEO.33 Similarly, Edmans, Fang, and Lewellen (2017) find that investment distortions are closely associated with equity-vesting incentives and compensation structures.34 These studies suggest that short-termism may arise from compensation arrangements, managerial career concerns, and other incentive structures. Accordingly, the Commission's conclusion that reducing reporting frequency will meaningfully alleviate short-termism rests on a causal relationship that the cited literature does not clearly establish.

Hillegeist et al. (2026) offers a different narrative on reporting frequency and managerial short-termism not considered in the Commission’s economic analysis.35 The paper's central question is whether mandatory financial reporting frequency affects the quality of corporate investment decisions. Specifically, the authors address the question of whether more frequent reporting improves or worsens long-term investment behavior. The paper’s findings run in precisely the opposite direction from what the Commission assumes. The authors find that more frequent reporting enhances the informational role of stock prices and enables managers to make better-informed long-term investment decisions, and

2229 (2017) (documenting the relationship between short-duration equity compensation and reductions in long-
term investment).

35 Hillegeist, Stephen A., Asad Kausar, Arthur Kraft, and You-il (Chris) Park. "More Frequent Financial
Reporting and Market Feedback Effect: Evidence from U.S. and EU Regulatory Changes." Journal of
Accounting and Public Policy 56 (March 2026): 107421. https://doi.org/10.1016/j.jaccpubpol.2026.107421.

improves profitability as a result of improved efficiency in capital allocation. These findings

point in the opposite direction from the Commission's conclusion. Rather than promoting better long-term decision-making, reducing reporting frequency would degrade the informational content of stock prices and diminish managers' ability to learn from market signals when making long-term investment decisions. This implies that the proposed rule would cause short-termism rather than curing it.

At the same time, a reduction in reporting frequency may weaken monitoring mechanisms that address distinct agency problems, including earnings management and managerial entrenchment. Although the proposed rule notes that firms could continue to provide voluntary quarterly updates, voluntary disclosure cannot be assumed to provide an equivalent substitute for mandatory disclosure. The disclosure literature has long recognized that managers possess incentives to disclose favorable information while delaying or withholding unfavorable information. As a result, voluntary disclosure regimes generally do not eliminate information asymmetries to the same extent as mandatory reporting requirements.

Regulation FD prohibits the selective disclosure of material nonpublic information to certain market participants without simultaneous public disclosure.36 It does not, however, prohibit insiders from holding material nonpublic information; it restricts only its selective communication. Reducing mandatory reporting frequency would lengthen the intervals during which corporate insiders possess information that has not yet been disclosed through required public filings. To the extent that mandatory reporting compresses the duration of insider informational advantages, semiannual reporting operates in the opposite direction by extending those periods.

The Proposing Release acknowledges that some issuers may prefer quarterly reporting because it provides more frequent opportunities for directors and officers to trade during open trading windows. More broadly, however, the Commission does not evaluate whether longer periods of informational asymmetry could affect compliance costs, insider-trading controls, investor confidence in market fairness, or the risk of inadvertent selective disclosure during analyst meetings, investor conferences, and other investor-relations activities.

3617 C.F.R. § 243.100 (Regulation FD, prohibiting selective disclosure of material nonpublic information to
certain market participants without simultaneous public disclosure).

The Commission's economic analysis also does not engage with the limited but relevant natural-experiment literature examining the consequences of reductions in mandatory disclosure frequency. Nallareddy, Pozen, and Rajgopal (2017) study the repeal of the United Kingdom's interim management statement requirement, which reduced mandatory disclosure obligations for U.K. public companies.

Their findings suggest that reductions in mandatory disclosure frequency were associated with declines in investment efficiency and weaker monitoring effects, particularly among firms exhibiting weaker governance characteristics. While institutional differences between U.K. and U.S. markets warrant caution in extrapolation, the study provides rare causal evidence regarding the effects of reduced disclosure frequency in a developed capital market.

The Commission's economic analysis acknowledges that reduced reporting frequency may diminish shareholder monitoring and exacerbate principal-agent problems, but it treats these concerns largely as qualitative observations rather than as economic effects warranting empirical evaluation. The Commission identifies agency costs as a potential consequence of the proposed rule yet does not attempt to evaluate their likely magnitude, incidence, or importance despite the existence of a substantial body of relevant academic research.

The literature discussed above provides a framework through which the Commission could have more rigorously assessed these issues. The Commission's failure to engage meaningfully with that literature leaves an important component of the cost-benefit analysis

incomplete and raises substantial questions as to whether the Commission's economic analysis has adequately evaluated the governance consequences of the proposed rule.

F. The Commission's Economic Analysis Fails to Address Competitive Inequality Arising from Differential Regulatory Constraints on Reporting Frequency Choice

The Commission's economic analysis of the proposed rule frames the optional design as a neutral mechanism that allows each issuer to optimize its reporting cadence based on its own circumstances. This framing assumes that the decision whether to elect semiannual reporting is, for any given issuer, a function only of that issuer's individual characteristics and investor expectations. The Commission's economic analysis fails to adequately consider the legal and contractual constraints that may make the election unavailable or economically infeasible regardless of the issuer's preferences.

Many Exchange Act reporting companies face legal, regulatory, and contractual obligations that require quarterly financial disclosure to counterparties, regulators, or creditors independent of the SEC's periodic reporting rules. For these issuers, the semiannual election is either unavailable as a legal matter or available only at a cost such as the cost of renegotiating debt instruments, gaining regulatory approval, or amending contracts. These costs erode or eliminate the compliance cost savings the Commission attributes to electing issuers. Where two firms in the same product market face different regulatory costs of choosing semiannual reporting, the proposed rule creates a competitive asymmetry. The Commission's economic analysis does not identify the population of constrained issuers, does not estimate the cost asymmetry they would face, and does not assess the competitive consequences for firms that cannot access the compliance cost savings available to their unconstrained competitors.

One constraint facing issuers who elect semiannual reporting consists of quarterly financial reporting requirements embedded in corporate debt instruments. Standard commercial lending and corporate bond documentation routinely includes covenants requiring borrowers to deliver periodic financial statements to lenders as a condition of maintaining the credit facility in good standing. Debt covenants are legally binding conditions written into loan agreements that define how a borrower must behave during the term of the loan, with financial reporting covenants among the most common. These covenants typically require companies to submit quarterly financial statements to lenders.

For an issuer subject to a debt covenant requiring quarterly financial statements, the election of semiannual SEC reporting does not eliminate the obligation to produce quarterly financial data. Instead, it removes the SEC filing requirement while leaving the private contractual obligation intact. Such an issuer would be required to continue producing quarterly financial statements for lender delivery, eliminating the compliance cost savings the Commission attributes to issuers choosing semiannual reporting, while still bearing the reporting-period heterogeneity and adverse selection costs discussed elsewhere in this report.

Alternatively, the issuer could seek to renegotiate its debt instruments to eliminate the quarterly reporting covenant. However, this is a process that entails negotiation costs, potential amendments fees, and the risk that lenders demand compensating covenant tightening or interest rate adjustments as a condition of any modification. Loan agreements typically contain covenant reporting provisions requiring compliance to be reported to the lender on a quarterly, semiannual, or annual basis.

The Commission's Proposing Release acknowledges that contractual obligations may be among the factors that cause some issuers to continue quarterly reporting after the election becomes available.37 It does not, however, analyze what fraction of potentially eligible issuers face binding quarterly reporting covenants in their debt instruments, does not estimate the cost of renegotiating those covenants, and does not assess whether the compliance cost

savings of the semiannual election would be offset for covenant-constrained issuers by debt renegotiation costs. The Commission's own estimate of approximately $198,000 in annual compliance cost net savings per electing issuer represents the benefit the rule claims to deliver. However, if debt covenant renegotiation costs are of comparable or greater magnitude for a large fraction of potentially eligible issuers, the rule's claimed benefit is substantially reduced for that population.

Bank holding companies that file Form 10-Q are simultaneously subject to the Federal Reserve's quarterly FR Y-9C reporting requirement. The FR Y-9C is filed quarterly as of the last calendar day of March, June, September, and December by bank holding companies with total consolidated assets of $3 billion or more, and is a primary analytical tool used to monitor financial institutions between on-site examinations. The subsidiary commercial banks of these holding companies are independently required to file quarterly Call Reports with the Federal Financial Institutions Examination Council, pursuant to requirements administered jointly by the Federal Reserve, the OCC, and the FDIC. These banking regulatory reports require quarterly financial information in a format that substantially overlaps with, but is not identical to, the GAAP financial statements required by Form 10-Q.

A bank holding company that elected semiannual SEC reporting would remain obligated to produce quarterly financial data for its FR Y-9C and Call Report filings regardless of its SEC reporting election. The incremental compliance cost savings from eliminating two Form 10-Q filings would be substantially reduced because the quarterly financial data production process required for bank regulatory reporting would continue uninterrupted. At the same time, the bank holding company electing semiannual reporting would incur the adverse selection, comparability, and market quality costs documented elsewhere in this report. These are costs that its non-electing banking peers avoid. The Commission's economic analysis does not identify bank holding companies as a category of issuer for whom the compliance cost savings of the semiannual election are substantially

37 Proposing Release, at 25003.

offset by independent regulatory reporting obligations, and does not analyze the competitive consequences for bank holding companies competing with non-bank financial issuers or non-bank holding company peers that are not subject to the FR Y-9C constraint.

Electric utilities, natural gas pipeline companies, and other entities subject to the jurisdiction of the Federal Energy Regulatory Commission are required to file quarterly financial reports on FERC Form 3-Q, the Quarterly Financial Report of Electric Utilities, Licensees, and Natural Gas Companies, pursuant to 18 C.F.R. § 141.400. FERC Form No. 3-Q is a quarterly regulatory requirement which supplements the annual financial reporting requirement, and is required of each major electric utility, licensee, or other entity as classified by the Commission. Regulated entities under FERC submit quarterly reports to adhere to the Uniform System of Accounts, with quarterly reports offering ongoing insight into the entity's financials and allowing for timely oversight.

FERC-regulated issuers that are also Exchange Act reporting companies therefore face the same structural constraint as bank holding companies: independent federal regulatory requirements mandate quarterly financial reporting on a schedule and in a format that is not affected by the SEC's periodic reporting rules. The election of semiannual SEC reporting eliminates the Form 10-Q obligation while leaving the FERC Form 3-Q obligation intact. For these issuers, compliance cost savings from the semiannual election are minimal because the underlying quarterly financial data production process continues unchanged. The Commission’s economic analysis does not address this constraint anywhere in the proposing release.

Insurance companies subject to state insurance regulatory requirements file quarterly statutory financial statements with state insurance regulators on schedules that are independent of and not synchronized with SEC periodic reporting requirements. State

insurance regulators require quarterly financial statements from licensed carriers as a condition of maintaining insurance licenses and satisfying solvency monitoring requirements. An insurance holding company that elects semiannual SEC reporting remains obligated to produce quarterly statutory financial statements for state regulatory delivery, again substantially limiting the compliance cost savings achievable through the semiannual election.

Broker-dealer subsidiaries of Exchange Act reporting companies are subject to FINRA financial reporting requirements, including quarterly FOCUS Report filings (Financial and Operational Combined Uniform Single Reports), that operate independently of

SEC periodic reporting obligations. A reporting company with significant broker-dealer operations that elects semiannual SEC reporting must continue to maintain quarterly financial data production infrastructure to satisfy FINRA reporting requirements for its regulated subsidiaries, limiting the practical compliance cost savings available from the semiannual election.

A consequence of the constrained categories described above is that two firms operating in the same product market and otherwise identical in size, business complexity, and financial profile may face different costs of exercising the semiannual election because of the regulatory and contractual environments in which they operate. The firm unconstrained by independent quarterly reporting obligations can elect semiannual reporting and realize the Commission's estimated $198,000 in annual compliance cost savings. Its constrained competitor, subject to a quarterly debt covenant, a banking regulatory reporting requirement, or a FERC filing obligation, either cannot make the same election or can do so only at a renegotiation cost that substantially erodes or eliminates the compliance cost savings. The unconstrained firm thereby acquires a permanent regulatory cost advantage over its constrained competitor that has nothing to do with operational efficiency or business merit. This form of competitive impact is precisely what the Commission's 2012 Guidance identifies as a category of indirect cost requiring analysis. The 2012 Guidance specifies that the costs and benefits analysis must address “distributional and competitive effects” of a proposed rule, including effects on competition among firms subject to different regulatory treatments under the rule.38 The Commission’s proposing release does not contain any analysis of intra-industry competitive distortions arising from differential access to the elective semiannual reporting regime. It does not identify the population of issuers subject to binding independent quarterly reporting obligations, does not estimate the cost asymmetry between constrained and unconstrained firms in the same product market, and does not assess whether the rule would confer durable competitive advantages on unconstrained adopters at the expense of constrained competitors.

The Commission's proposing release contains no survey of legal or contractual constraints that would limit the practical availability of the semiannual election for a substantial fraction of potentially eligible issuers. It does not identify debt covenants, banking

38 See “Memorandum Re: Current Guidance on Economic Analysis in SEC Rulemakings,” U.S. Securities and Exchange Commission, March 16, 2012, available at https://www.sec.gov/divisions/riskfin/rsfi_guidance_econ_analy_secrulemaking.pdf.

regulatory reporting requirements, FERC obligations, state insurance reporting requirements, or FINRA financial reporting requirements as relevant features of the economic baseline. It does not model or estimate the competitive consequences for constrained firms competing with unconstrained adopters in the same product markets. And it does not analyze whether the aggregate compliance cost savings it attributes to the rule would be reduced once the constrained population is properly identified and its actual net savings are estimated. Addressing these deficiencies before any final rule is adopted would require

additional analytical steps. First, the Commission would need to survey the landscape of binding legal and contractual constraints, that is, standard debt covenant provisions, banking and insurance regulatory reporting requirements, FERC filing obligations, and FINRA requirements, that limit the practical availability of the semiannual election for identified categories of potentially eligible issuers. Second, having identified the constrained population, the Commission would need to model the competitive consequences for constrained issuers competing with unconstrained adopters, including the magnitude of the compliance cost asymmetry and its persistence over time.

G. The Commission's Economic Analysis Fails to Address Interactive and Cumulative Effects of the SEC's Full Set of Initiatives Aimed at Reducing the Regulatory Burdens of Being a Public Company

The foundation of any rigorous economic analysis of a proposed rule is to establish a baseline against which the proposed rule's effects are measured. The Commission's own 2012 Guidance mandates that every SEC economic analysis include: 1) a stated need for rulemaking; 2) the definition of a baseline against which to measure the likely economic consequences of the proposed regulation; 3) the identification of reasonable regulatory alternatives; 4) and an evaluation of the benefits and costs of the proposed regulatory action and reasonable alternatives as compared to the baseline.39

The economic baseline represents a well-defined description of the economic conditions that would prevail absent the proposed rule. It is against this baseline that all costs and benefits of the proposed rule are to be measured. Failure to establish a proper baseline can lead to errors in the Commission's estimate of the likely economic consequences of a proposed rule.

39 See "Memorandum Re: Current Guidance on Economic Analysis in SEC Rulemakings," U.S. Securities and
Exchange Commission, March 16, 2012, available at
https://www.sec.gov/divisions/riskfin/rsfi_guidance_econ_analy_secrulemaking.pdf.

The Proposing Release constructs its baseline as though the regulatory environment facing public companies is static. However, the Commission is simultaneously pursuing a coordinated set of initiatives that are specifically designed to reduce the regulatory burdens of being a public company. Those initiatives address many of the same concerns the Commission addresses in justifying the proposed rule. A baseline that does not account for those other initiatives does not describe the economic conditions that would prevail without the proposed rule. It describes the economic conditions that prevailed before the Commission's current initiatives were announced.

The set of regulatory initiatives currently being pursued by the SEC include, among others: 1) Rescission of Climate-Related Disclosure Rules; 2) Enhancement of Emerging Growth Company Accommodations and Simplification of Filer Status for Reporting Companies; 3) Registered Offering Reform; 4) Amendments to SEC Gun-Jumping Rules; 5) Regulation S-K Reforms; and 6) Executive Compensation Disclosure Reform.

Each of these initiatives responds to the same concern the Commission identifies in the Proposing Release about how the cumulative burden of public company compliance obligations has inhibited access to public capital markets. Failing to construct the baseline in the proposed rule to include the regulatory environment that will prevail if these concurrent initiatives are finalized will lead to an overstatement of the proposed rule's likely benefits.

The Commission's failure to account for concurrent initiatives produces a second-order analytical failure in that it prevents any assessment of how these initiatives interact with each other and with the proposed rule in ways that may affect their individual and combined effects.

The Commission's economic analysis fails to estimate the extent to which the SEC's other concurrent initiatives may achieve the objectives it seeks to achieve in the proposed rule

without allowing optional semiannual reporting. The result of this failure is to overstate likely benefits as the baseline against which the proposed rule's likely consequences are compared does not account for the relief being provided through concurrent initiatives. This omission renders the Commission's net benefit conclusion unreliable.

IV. Summary Assessment and Recommendations for Supplemental Economic Analysis

A. Summary Assessment

The economic analysis contained in the proposed rule does not satisfy the standards the Commission has committed to apply. The SEC's 2012 Guidance on economic analysis in rulemaking requires the Commission to identify the market failure or compelling need justifying regulatory intervention, define an appropriate economic baseline, identify and analyze reasonable alternatives, and provide a rigorous, symmetric quantitative and qualitative assessment of costs and benefits.40 The proposed rule falls short of each of these requirements. As a result, the Commission has failed to demonstrate that the proposed rule is likely to promote efficiency, competition, and capital formation.

The Commission has quantified a single category of benefit — estimated annual compliance cost savings of approximately $198,000 per eligible issuer attributable to the elimination of two quarterly filings — while leaving unquantified, and in several cases unaddressed, cost categories of potentially far greater magnitude. These cost categories include adverse selection costs arising from the optional design, information fragmentation across peer-firm pairs and financial indices, spillover costs imposed on non-electing issuers, capital cost elevation for electing issuers, and the systemic consequences for passive investment infrastructure. The Commission's failure to engage with the directly relevant empirical literature, including natural experiment evidence from the European quarterly reporting deregulation, compounds this deficiency.

The most fundamental analytical failure of the Commission's economic analysis is its treatment of the optional design as a neutral feature rather than as the primary driver of the rule's adverse consequences. Voluntary disclosure theory predicts that an annual, issuer-elected reduction in reporting frequency will produce adverse sorting in the electing population, a group-level capital cost discount falling on all electing issuers including those with benign cost-reduction motivations, and a fragmented reporting landscape whose consequences for intra-industry comparability and financial index construction the Commission does not model. These consequences are predicted by a well-developed

40 SEC, Current Guidance on Economic Analysis in SEC Rulemakings (Mar. 16, 2012).

theoretical framework supported by natural experiment evidence that the Commission neither cites nor addresses.

The Commission also conflates two analytically distinct cost categories: frequency-driven compliance costs, which the proposed rule would reduce for electing issuers, and complexity-driven compliance costs, which the proposed rule does not address. This conflation overstates the savings attributable to a reduction in reporting frequency, forecloses consideration of complexity reduction as a standalone or complementary policy alternative, and prevents the Commission from presenting investors and other market participants with a complete picture of the available policy options.

B. Recommendations for Supplemental Economic Analysis

The deficiencies identified in this report can, in significant part, be addressed through supplemental analysis. The Commission has sought comment on its economic analysis, and the analytical gaps identified here are addressable through well-established empirical and survey methodologies available in the accounting and finance literature. The Commission should conduct the following supplemental analyses prior to determining whether the SEC has a reasoned basis for exercising its rulemaking authority.

1. Adverse Selection Sensitivity Analysis. The Commission should conduct a sensitivity analysis showing how aggregate benefit-cost estimates change under scenarios in which high-complexity, high-information-asymmetry firms disproportionately adopt semiannual reporting. The Commission's current analysis treats the electing population as representative of the eligible population. Voluntary disclosure theory, and the European deregulation evidence, predict systematic non-randomness in adoption. Sensitivity analysis modeling the cost-benefit outcome under adverse adoption scenarios is a minimum requirement for a defensible benefit-cost framework. The Commission should present these estimates alongside its baseline estimates and disclose the assumptions on which the baseline adoption distribution rests.

2. Quantification of Comparability Loss. The Commission should quantify comparability loss using established methodologies from the accounting literature and estimate the expected increase in analyst forecast errors and cost of capital for affected firm-pairs. The comparability measure developed by De Franco, Kothari, and Verdi (2011) is directly applicable to the heterogeneous-reporting-period context the proposed rule would

create, and the empirical relationship between comparability loss and analyst forecast dispersion and cost of capital is well-documented.41 The Commission's current analysis does not attempt this quantification.

3. Analysis of Spillover Costs on Non-Electing Issuers. The Commission should analyze the magnitude of spillover costs on quarterly reporters as an indirect cost of the proposed rule. Quarterly reporters will face higher analyst forecast errors and reduced liquidity to the extent that the fragmented reporting population impairs the quality of peer-based benchmarking, earnings model calibration, and index-level data aggregation. These are costs of the rule borne by issuers and investors who derive no benefit from it. The Commission's economic analysis does not identify this category of costs.

4. Survey of Issuers Facing Legal and Contractual Constraints. The Commission should survey issuers facing legal and contractual constraints to electing semiannual reporting. A material segment of the eligible population will be unable, as a practical matter, to elect semiannual reporting without triggering renegotiation, consent fees, or covenant defaults. This includes issuers subject to quarterly financial reporting covenants in credit agreements, indentures, and material commercial contracts. The Commission's economic analysis does not estimate the size of this population, does not analyze the contractual costs they would face, and does not discount the estimated adopter population to account for constrained issuers. An issuer survey would provide direct, verifiable evidence on which the Commission could rely in constructing a credible estimate of the number of issuers that can elect semiannual reporting.

5. Survey of Index Providers, ETF Sponsors, and Credit Rating Agencies. The Commission should survey index providers, ETF sponsors, and credit rating agencies regarding the operational and economic consequences of introducing reporting period heterogeneity into existing index compositions. Passive investment funds tracking indices that include both quarterly and semiannual reporters will face data gaps at predictable points in the reporting calendar; credit rating agencies will face informational asymmetries between issuers within the same rating category; and index construction methodologies premised on the availability of periodic financial data will require structural revision. The magnitude of these costs is unknown because the Commission has not inquired. Survey-based evidence would transform a category of acknowledged uncertainty into a quantifiable cost estimate.

41 See De Franco, Kothari & Verdi, The Benefits of Financial Statement Comparability, 49 J. Acct. Res. 895
(2011).

6. Quantification of Costs to Passive Investment Infrastructure. The Commission

should quantify, to the extent practicable, the costs to passive investment infrastructure of accommodating mixed reporting cadences among index constituents. ETF sponsors, index administrators, and data vendors will incur one-time systems and methodology revision costs, as well as ongoing costs from the management of reporting-period heterogeneity in index rebalancing, proxy voting, and financial modeling. These costs are borne by passive market participants who derive no compliance-cost benefit from the proposed rule and who represent a substantial and growing share of equity market ownership.

7. Modeling of Compliance Cost Savings from Alternative Disclosure Reforms.

The Commission should model the compliance cost savings achievable through better tailoring disclosure requirements independent of any change in reporting frequency, and present these estimates alongside the frequency-reduction savings estimate of $198,000 per issuer per year. The Form 10-Q is a product of decades of layered rulemaking and contains numerous disclosure items whose informational value relative to their preparation cost has not been recently assessed. An analysis presenting the costs and savings achievable through simplification, for all quarterly reporters, alongside the costs and savings of the proposed rule's frequency-reduction mechanism is necessary to ensure the Commission has considered the full range of alternatives available to it.

8. Disaggregation of Frequency and Complexity Costs in PRA Burden Estimates.

The Commission should conduct an analysis distinguishing frequency-driven costs from complexity-driven costs within its Paperwork Reduction Act (“PRA”) compliance burden methodology, and present the breakdown by filer category. The Commission's current PRA burden estimate for Form 10-Q conflates costs associated with the cadence of filing with costs associated with the scope and complexity of disclosure. Only the former are reduced by the proposed rule. Without this disaggregation, the Commission's cost savings estimate cannot be validated, and the economic case for the proposed rule's principal benefit rests on an undifferentiated and potentially overstated number. This analysis is essential to the Commission's ability to defend the benefit side of its cost-benefit framework.

9. Determine the Break-even Point at Which Increased Financing Costs

Eliminate the Proposal’s Estimated Benefits. The Commission should determine the increase in issuers' cost of capital that would offset its estimated compliance-cost savings and evaluate whether that threshold is likely to be exceeded under the proposed rule.

10. The Commission should supplement its economic analysis with a revised baseline that accounts for the expected effects of concurrent deregulatory initiatives.

The Commission should evaluate how these concurrent initiatives interact with the proposed rule with respect to public company compliance costs, IPO activity, and short-termism. The Commission should explain why the proposed rule is necessary to achieve the Commission's stated objectives in light of the relief already being sought. Absent that analysis, the Commission's conclusion that the proposed rule generates net benefits is based on a baseline that describes a regulatory world that may not exist when the proposed rule takes effect.

V. Conclusion.

The Commission has proposed a significant change to the reporting framework that has governed U.S. public company disclosure for decades. However, the Commission’s economic analysis accompanying the proposed rule does not provide a sufficient basis for determining the rule's likely economic consequences. The Commission's economic analysis of the proposed rule: 1) fails to adequately analyze the mechanisms through which optional semiannual reporting may affect market quality measures such as bid-ask spreads, liquidity, trading volume, price efficiency, and the cost of capital; 2) fails to consider that semiannual reporting would potentially make cross-company comparisons more difficult thus increasing costs for investors seeking to identify economically similar firms or conduct peer-group analysis, relative value analysis or performance benchmarking; 3) overstates the cost savings likely to result from reduced reporting frequency; 4) fails to consider that optional

semiannual reporting creates the potential for adverse selection in the choice of reporting frequency; 5) fails to adequately consider how reducing reporting frequency may increase principal-agent costs by inhibiting the ability of investors to monitor managerial performance and to intervene to hold management accountable; 6) fails to provide a complete review of the relevant economics and accounting literature with respect to reporting frequency; 7) fails to adequately consider the legal and contractual constraints that may make the election unavailable or economically infeasible regardless of the issuer's preferences; and 8) fails to address interactive and cumulative effects of the SEC's full set of initiatives aimed at reducing the regulatory burdens of being a public company.
Page 35
This report describes a set of supplemental analyses the SEC could conduct to bolster the proposed rule’s economic analysis prior to determining whether the Commission has a reasoned basis for exercising its rulemaking authority.
In summary, the Commission’s economic analysis fails to demonstrate that the proposed rule is likely to promote efficiency, competition, and capital formation.
Page 36

James Fischer Attorney — Jul 6, 2026
Subject: File No. S7-2026-15 From: James Fischer The proposed rule change allows for sloppy book keeping, lack of compliance, reduces transparency, and further erodes market confidence. I recommend this proposed change be withdrawn.

James J. Moran Jr. — Jul 6, 2026
Subject: File No. S7-2026-15 From: James J. Moran Jr. As a small investor managing my own portfolio, I strongly oppose reducing SEC filings to semi-annually. This rule cuts financial updates in half. This puts small investors at a huge disadvantage. Big institutions have private ways to talk to company leaders. Regular investors like me only get the news from public reports. Without quarterly reports, we cannot spot risks or make good choices. Less transparency just helps insiders and hurts small portfolios. Please keep mandatory quarterly reporting. Thank you for your consideration.

James Keeler — Jul 6, 2026
Subject: File No. S7-2026-15 From: James Keeler Aside from my own personal investments, my children, and theirs, will be affected by this. It is bad enough when a government does not enforce the laws that really protect us. This simply sheds part of the protections that are at least current law. Keeping this current law as is at least makes it available to any responsible government in the future, should such exist.

James Kong None — Jul 6, 2026
Subject: File No. S7-2026-15 From: James Kong Comments attached.

James Lally Retired federal employee — Jul 6, 2026
Subject: File No. S7-2026-15 From: James Lally My name is James Lally. I live in Shirley,

Massachusetts. I am a retired federal public affairs professional, a military veteran, and a working American who has spent decades saving and investing for retirement. I strongly oppose the SEC's proposed rule "Semiannual Reporting," File No. S7-2026-15, which would reduce public company financial reporting requirements from quarterly reporting to twice per year. For more than 20 years, I served the public — both in uniform and as a federal employee — where accountability and transparency were not optional. They were fundamental responsibilities. I believe publicly traded companies that benefit from access to American investors' money should be held to that same standard. This issue matters personally to me because my family's financial future depends on fair and transparent markets. Like millions of Americans, much of my retirement security is tied to investments, including retirement savings built over decades of work. Individual investors do not have the same access, resources, or influence as corporate insiders and major institutions. Regular financial reporting helps level the playing field. Moving from quarterly to twice-a-year reporting gives ordinary investors less information while potentially allowing problems inside companies to remain hidden longer. A lot can change in six months — leadership problems, declining revenue, excessive risk-taking, debt concerns, or other issues that shareholders deserve to know about. Reducing transparency should not be considered "efficiency." Strong markets are built on trust, and trust comes from timely and accurate information. If a company wants access to public investment dollars, regular disclosure is part of the responsibility that comes with that privilege. The SEC's mission is to protect investors, maintain fair markets, and promote confidence — not reduce the information available to the very people it exists to protect. I urge the SEC to reject the Semiannual Reporting proposal, File No. S7-2026-15, and preserve quarterly reporting requirements.

James P. None — Jul 6, 2026
Subject: File No. S7-2026-15 From: James P. Shrinking corporate reporting from quarterly is a mistake. It will just cause more volatility in the market since we won't have chance to see things coming and take action in a timely mannor. Your argument about voluntarily early reporting is crazy! No way that will happed. Management has every reason to: Delay bad news a long as legally possible, Bury it in the next 10-S alongside better news, diluting the Impact. Its just human nature. Corporations will love it but it will hurt us little guys who don't have 15 analysts watching every company like a hawk!

Re: Proposed Rule on Semiannual Reporting, File Number S7-2026-15
Submitted by: James R. Copland
Dear Ms. Countryman:
I am submitting the following comments in response to the above-referenced proposed rule that would allow publicly traded companies the option to file semiannual as opposed to quarterly reports. These comments are adapted from and expand upon the thoughts I expressed in the SEC Investor Advisory Committee meeting on June 4. My comments are of course my own and do not reflect the consensus position of the IAC (nor the Manhattan Institute, my employer).
It is my belief that the IAC-approved recommendation of the Investor as Owner

Subcommittee, which I serve as vice chairman, is a very thoughtful piece of work. The committee spent a lot of time on it. I think the process was very open and fair. That said, I ultimately was not supportive of advancing this recommendation out of subcommittee, and I decided to abstain from endorsing the final recommendation, largely because I think the recommendation was too pointed and too narrow. Specifically, the recommendation took too firm a position on the question of whether permitting companies to opt to reduce the frequency of SEC-mandated reports was unwise; and the recommendation was insufficiently open to the potential benefits of reducing non-financial disclosure requirements, particularly beyond annual 10-K reports.

James R. Copland is a senior fellow at and director of legal policy for the Manhattan Institute for Policy
Research. The opinions expressed here are the author's alone and do not represent the official position of the
Manhattan Institute.

The IAC Recommendation Is Too Pointed

With regard to the first concern, that the IAC recommendation was too pointed: I think that the proposed rule, endorsing a semiannual reporting cycle as an option for public companies, is one with a mixed bag of evidence pro and con. I am not convinced that the totality of the evidence weighs against the proposed rule.

That said, I do think we should take very seriously the evidence we heard from Fidelity and Citadel, as well as other concerns I have heard from those in the market. I do think that market actors are interested in getting regular financial reports from publicly traded companies; that absent such regular reporting we might see larger volatility in share pricing around reporting periods; and that a fortiori less frequent reporting of financial information might lead to less efficient markets on the margin.

But it is also important to keep in mind that a market actor may be sensitive to one piece of the puzzle that directly affects his business model but be unaware of other economic effects—including the costs on the companies in which he invests, to which he is sensitive but which also equally affect his market competitors. The parable of the blind men and the elephant, see Tittha Sutta, Udāna 6.4, Khuddaka Nikaya, is always instructive.

Specifically, I think that in assessing the risks of allowing companies to shift from quarterly to semiannual reporting, the IAC recommendation obscures the distinction between internalized risks and market risks.

Take the IAC recommendation's argument that moving from quarterly to semiannual reporting might, in at least some instances, increase the cost of capital for companies. Even if this is true on average—can we be certain that it is true universally? And why is the SEC best positioned to assess this risk, and weigh it against the benefits of less-frequent disclosures? If a company would face an increased cost of capital due to reducing its disclosure frequency, why would this cost not be one best weighed by corporate fiduciaries themselves?

Similarly, the IAC recommendation argues that moving from quarterly to semiannual reporting might decrease analyst coverage, thus increasing the cost of capital. Again, a company's board of directors would seem much better positioned to weigh this risk than a regulatory body.

Perhaps some internalized risks may become market risks. For example, if there is evidence that companies reporting less frequently would reduce the overall demand for analyst coverage, and that such reduction would affect the cost of capital for all companies including those continuing to report quarterly, that is a reasonable argument for questioning optionality here. But the IAC recommendation on its face does not adequately parse the difference between internalized and market risks.

Put simply: if the cost of opting for semiannual versus quarterly reporting is fully internalized to the company, there is no good reason for the SEC not to allow optionality and

variety in this area. The only risks the regulator should worry about in this context are market risks in which one company's judgment affects other companies' cost of capital or valuations. And it is always worth remembering that companies will not necessarily face identical cost-benefit tradeoffs.

The IAC Recommendation Is Too Narrow

In thinking that the IAC's recommendation is too narrow, I question the laser focus on the frequency of reporting versus the content of reporting requirements. Here's the rub: every for-profit business keeps close track of its financial numbers. I have been a director of multiple private companies, non-profit organizations, and government entities. Each monitors financial data monthly, let alone quarterly.

The issue with 10-Q reporting is thus not one of an undue burden in tabulating numbers. Rather, the issue is twofold. First, companies face a litany of risks – including litigation and enforcement risks – in making public disclosures. That's true whether talking about any earnings report, not just 10-Q reports; but more formal reporting obviously increases the requisite compliance burden.

Second, 10-Q reporting, as currently constructed, is not limited to material disclosures of financial information. Because the SEC requires companies to produce quarterly reports under both Regulations S-X and S-K, companies have to include not only financial numbers material for investors trying accurately to price securities, see 17 C.F.R. Part 210, but also a litany of descriptive and qualitative assessments, see 17 C.F.R. Part 229.

Unlike the IAC recommendation, the testimony we heard in our March IAC meeting did not focus narrowly on the timing versus the substance of reporting requirements. Rather, even as our investor and legal witnesses expressed a preference for quarterly reporting of material financial data, they also argued for significant streamlining of reporting requirements.

- Citadel's Stephen Berger expressly advocated reforming S-K requirements and eliminating much non-financial disclosure reporting, at least beyond annual reporting; and better defining materiality, so that issuers had more confidence in what to include and exclude.
- Fidelity's Neil Constable argued that mandating a superset of required disclosures for all companies creates a giant volume of immaterial reporting; that removing regulatory burdens would lead to an increase in public listings; and that the frequency or depth of non-financial reporting should be reduced.
- Robert Downes of Sullivan and Cromwell argued for an overarching materiality standard, with a number of suggested line items the SEC should tackle; and suggested a safe harbor to protect against meritless litigation.
- Consistent with Downes's suggested safe harbor, Rick Werner of Haynes and Boone emphasized that the cost of strike suits, and protective director and officer liability insurance, is the real cost driver – not the production costs of disclosure themselves.

Although many members of the IAC were very attuned to these arguments, these issues and concerns were not reflected in the IAC's recommendation, which instead narrowly considered the frequency of reporting requirements without examining their scope.

Conclusion

More broadly, I want to applaud the SEC for its laudable goal here: to try to increase the number of public listed companies, and have more companies want to IPO and fewer go private. This is an issue that is very important to me; one I testified on in Congress 20 years ago for the first time.1

Unfortunately, I think the frequency of quarterly reporting of financial numbers is not closely related to companies' decisions not to go public. Instead, I think the substance of reporting requirements and their collateral risks and costs are paramount to companies' aversion to public listing.

In this case, we have evidence from other jurisdictions that is helpful—but probably not dispositive for either critics or supporters of the proposed rule. The evidence we had from the

U.K.,2 for instance, shows that fewer than 10 percent of the companies actually adopted semiannual reporting when given the option. To me, that suggests two things.

First, we should not overly catastrophize what is likely to happen if the SEC goes forward with this experiment. Market forces will likely push most companies to retain quarterly disclosure. Those that opt for semiannual reporting would potentially pay a market price. That does not mean that market price would exceed the company's internalized benefits. Such cost-benefit calculations would not be uniform from company to company; size, industry, and company life cycle all matter.

Second, we should not expect semiannual disclosure to be a panacea for our public-listing problem. I continue to believe that the substance of disclosure requirements, ambiguities about

1 Statement of James R. Copland, Testimony before the House Financial Services Committee, Apr. 26, 2006,

representatives-committee-on-financial-services.

2 Proposed Rule, 21 & n.62.

materiality, and collateral litigation risks and costs matter much more to companies' going-public decisions than the frequency of reporting financial data.

While financial disclosure is essential to the functioning of our financial markets and the linchpin of the federal role for securities regulation, there is no obvious optimum frequency on financial disclosure. I'm reminded of the scene in There's Something About Mary, in which the (murderous) hitchhiker suggests a business idea to Ben Stiller's character Ted: he proposes a new workout tape, "Seven Minute Abs," which would obviously be superior to the incumbent, "Eight Minute Abs." But Ted has the obvious rejoinder: why not six-minute abs? Similarly, should SEC-mandated disclosure be quarterly or semiannual—or monthly, or even weekly? There is no self-evident answer to this question, and our current regime owes as much to inertia as to anything. There is much to be said for inertia, as embedded expectations make investment possible. But there is also merit in experimentation, particularly in a deregulatory direction in which the costs of error are mostly internalized rather than falling upon third parties.

Unlike the recommendation supported by a majority of the IAC, I do not see a fully obvious answer to the question here, as regards reporting frequency, with the limited but important caveat that investors are worried about scaling back the frequency of material, financial data. On the flip side, I see an obvious need to reduce the burdens and collateral risks of immaterial, non-financial disclosures, which should be broadly scaled back—in particular for non-annual reporting cycles. In failing to address this point, the IAC recommendation missed an opportunity and gave an incomplete picture of the testimony we heard.

Respectfully submitted,
James R. Copland
Senior Fellow and Director, Legal Policy
Manhattan Institute for Policy Research

James Salmon — Jul 6, 2026

Subject: File No. S7-2026-15 From: James Salmon I request that financial reports be issued every quarter as is currently the case. Reporting every 6 months hampers retail investors by not allowing them access to timely information while benefiting insiders.

Re: File Number S7-2026-15: Proposal to Allow Semiannual Reporting
Dear Ms. Countryman:
The NYSE Institute1 (the "Institute") appreciates the opportunity to comment on the Securities and Exchange Commission (the "Commission") proposal to allow companies to file semiannual reports on
new Form 10-S in lieu of quarterly reports on Form 10-Q to satisfy their interim reporting obligations (the "Proposal"). We applaud the current Commission's efforts to maintain the strength of the U.S. capital markets and ensure that the regulatory environment fosters companies going and remaining public.
2 Meaningfully reforming the corporate disclosure regime is an important element of achieving that objective.
The quarterly cadence of corporate reporting on Form 10-Q has been the norm for more than 50 years.
Institutional investors, analysts and retail shareholders alike have come to expect the release of financial
results every three months and corporate issuers have developed robust infrastructure to meet their required disclosure obligations. However, the quarterly reporting regime also comes with substantial costs in terms of money, time, and other corporate resources that can distract from executing important
strategic and operational initiatives. Many issuers also believe that quarterly reporting leads to "short termism" insofar as investors focus on near term financial results at the expense of long term gains and
enterprise success. The Institute is pleased that the Commission is exploring ways to improve the disclosure regime and is supportive of the Proposal. Based on feedback from the community of NYSE-
1 Launched in 2022, the Institute's mission is to advocate for the more than 2,400 public companies listed on NYSE
exchanges and promote the long-term strength of U.S. capital markets. Of that community, more than [2,100]
currently file quarterly reports on Form 10-Q.
2 See, for example, "Statement on Reforming Regulation S-K," Atkins, Paul S., January 13, 2026, File No CLL-15,
available at https://www.sec.gov/newsroom/speeches-statements/atkins-statement-reforming-regulation-s-k-
011326; "SEC Announces Roundtable on Executive Compensation Disclosure Requirements," Release No. 2025-73,
May 16, 2025, available at https://www.sec.gov/newsroom/press-releases/2025-73; the Commission's Proposed
Rule on Registered Offering Reform (Securities Act Release No. 33-11418; File No. S7-2026-17); and the Proposed

Rule on the Public Company Reporting Framework (Securities Act Release No. 33-11419; File No. S7-2026-18).
listed companies, the Institute offers the following comments on the Proposal for the Commission's consideration.

1. Optionality Is Key

Issuers overwhelmingly support having the choice to report quarterly or semiannually. Retaining this optionality will be a critical element of any final rule. Providing issuers with alternative reporting cycles enables them to assess the specific circumstances applicable to their company and make the choice that best responds to the needs and expectations of their shareholders and other interested constituents.

In providing views on the Proposal to the Institute, issuers were consistent that any decision to change their reporting cadence would be informed by investor and analyst expectations as well as the practice of their peers and market competitors. While enthusiastic about the prospect of semiannual reporting, many issuers expressed that they would be unlikely to transition from quarterly to semiannual reporting unless there was widespread market acceptance and they were convinced that it would not be detrimental to investor or analyst perceptions. At the outset, given that there is unlikely to be a single standardized approach, providing regulatory flexibility is especially important. Allowing issuers the option to transition between quarterly and semiannual reporting based on a yearly election on the cover of their Form 10-K is a thoughtful approach that lets issuers test semiannual reporting while preserving the option to reverse course if they conclude that quarterly reporting is in their best interest.

Based on feedback from NYSE-listed companies, the Institute believes that some companies may opt to voluntarily issue quarterly earnings releases and hold quarterly earnings calls with investors, even if they elect a semiannual reporting cadence. Others may choose to issue some form of quarterly disclosure with material information that is less robust than a standard Form 10-Q.3 Still others might elect to rely on event-driven Form 8-K filings to report material developments as they occur. Over time, the Institute believes issuers may increasingly find these hybrid approaches to be an attractive option to responsibly disclose material information and meet investor needs. Notably, electing to report semiannually does not mean that quarterly disclosure disappears. Rather, it may simply take a different — more streamlined — form.

Further reinforcing the need for flexibility, issuers stated that quarterly reporting is often required pursuant to contractual arrangements outside the Commission's purview. The terms of credit facility agreements, for example, often require borrowers to provide quarterly financial statement disclosures. Unless and until those agreements can be amended or renegotiated, issuers will continue to report quarterly. By offering semiannual reporting as an option, rather than a mandate, the Proposal enables issuers to meet their contractual obligations in the near term.

2. Regulatory Coordination Is Critical to the Proposal's Success

For the Proposal's option of semiannual reporting to get maximum uptake, the Commission must

coordinate with other regulatory agencies. Issuers are unlikely to adopt semiannual reporting under the terms of the Proposal if they believe it might impair their ability to raise capital or remain compliant with other applicable rules and regulations.

3 The Institute notes that Foreign Private Issuers are not required to file quarterly reports on Form 10-Q, but frequently elect to make some sort of quarterly report in response to investor expectations.

The Commission seeks to address one potential hurdle for issuers that are interested in transitioning to semiannual reporting by proposing amendments to Regulation S-X under the Securities Exchange Act of 1934 that would amend deadlines for financial statement staleness. Under the Proposal, an issuer electing to report on a semiannual basis would not be required to include interim financial reports in a mid-year registration statement until its Form 10-S filing had been made or come due. Notwithstanding this proposed accommodation, without corresponding changes from the Public Company Accounting Oversight Board ("PCAOB") issuers may struggle to obtain customary comfort letters from audit firms.

Under PCAOB Auditing Standard 6101 an auditor is not permitted to provide negative assurance on interim financial information unless it has conducted an interim review in accordance with the applicable PCAOB standard for a period ended not more than 134 days prior to the cut-off date of the comfort letter.4 For an issuer that reports semiannually, there are likely to be windows throughout the year where it has been more than 134 days since its auditor conducted an interim review, thus impairing its ability to obtain a comfort letter. For issuers that rely on frequent capital raising transactions reporting on a semiannual basis may not be a viable option unless PCAOB Auditing Standard 6101 is amended. We encourage the Commission to work with the PCAOB to implement sensible rule amendments that ensure any interested issuer can elect to report semiannually without jeopardizing its ability to access the capital markets.

Issuers operating in certain regulated industries, including banks, insurers and public utilities, may face similar challenges in transitioning to a cadence of semiannual reporting. Many of these issuers fall under the jurisdiction of other industry regulators that may continue to require quarterly reporting. The Institute encourages the Commission, to the extent possible, to engage with related regulatory bodies to work towards a consistent reporting schedule.

If the Proposal is adopted as currently contemplated, the NYSE will need to amend certain of its own listing rules related to timely filing of periodic reports. The Exchange recognizes and appreciates the Commission's outreach on this topic to date and welcomes the opportunity to further collaborate on issues of timing and rule amendments.

3. Semiannual Reporting Is Only One of the Disclosure Modernization Opportunities

The Commission's focus on disclosure reform over the last eighteen months has been an extremely welcome development for NYSE-listed issuers; the current framework for corporate disclosure is burdensome, costly and does not always benefit shareholders. The Commission's proactive

engagement with issuers and the investing public has set a strong baseline for its disclosure modernization agenda.

5 The Institute has appreciated the opportunity to provide feedback on Commission proposals and emphasize the importance of returning to a disclosure regime focused on principles of materiality.6

4 See PCAOB Auditing Standard 6101, Letters for Underwriters and Certain Other Requesting Parties. See, also, PCAOB Auditing Standard 4105, Reviews of Interim Financial Information.

6 See Letter, dated June 25, 2025, from Klima, Jaime L., Re: File Number 4-855; Executive Compensation Roundtable - June 26, 2025, available at https://www.sec.gov/comments/4-855/4855-617127-1810194.pdf; Letter, dated April 13, 2026, from Klima, Jaime L.., Re: Request for Comment on Modernizing Regulation S-K (File No. CLL-15), available at https://www.sec.gov/comments/CLL-15/cll15-749769-2316574.pdf.

3

The Proposal is yet another worthy effort to evaluate current disclosure requirements and how they may be improved by allowing for semiannual reporting. While reducing the frequency of interim reports may be helpful to some issuers, the Institute notes that the proposed Form 10-S is substantively identical to current Form 10-Q. In commenting on the Proposal, Commissioner Peirce aptly noted that "an approach that focuses on slimming down the Form 10-Q — instead of or in addition to making it optional — could be helpful."7 The Institute agrees with this sentiment and believes that the semiannual reporting construct could provide further opportunities to slim down the content of quarterly reports so that they focus on material information and are not unduly costly or burdensome to prepare. In response to the Commission's request for comment on modernizing Regulation S-K, the Institute provided several suggestions for such possible reforms.8 NYSE-listed issuers report that numerous items required to be disclosed in Form 10-Q are repetitive and burdensome to prepare. For example, "Management's Discussion and Analysis of Financial Condition and Result of Operations" (Item 305) and "Quantitative and Qualitative Disclosures About Market Risk" (Item 305) were both cited as areas where streamlined disclosure could have a meaningful impact that is consistent with the SEC's mission. The Institute encourages the Commission to remain focused on holistic disclosure reform.

Conclusion

The Institute commends the Commission on seeking to provide issuer choice with respect to interim reporting. Allowing for a cadence of semiannual reporting provides a responsible option that simultaneously recognizes the importance of corporate disclosure and the notion that one size does not always fit all. The Institute supports the Proposal and is prepared to engage with Commission staff in any manner that may be helpful.

Respectfully submitted,

Jaime L. Klima

Jamie May Hart — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jamie May Hart I am writing as an individual retail investor to express my strong opposition to the proposed rule that would eliminate mandatory quarterly reporting for public companies. As a self-directed investor managing my own personal portfolio, I rely heavily on the regular, predictable flow of audited or reviewed financial data to make informed investment decisions. Quarterly reports (Form 10-Q) are vital tools that allow retail investors to track corporate health, evaluate management performance, and adjust risk exposure in a timely manner. Eliminating these updates in favor of a semi-annual schedule would severely harm individual investors in the following ways: Increased Information Asymmetry: Institutional investors and Wall Street insiders possess resources to gather alternative, real-time data or maintain direct access to corporate management. Retail investors do not. Moving to a six-month reporting cycle will widen the gap between insiders and the public, leaving retail investors trading in the dark. Compromised Risk Management: Six months is an exceptionally long time in modern markets. A company's financial health can deteriorate rapidly due to supply chain disruptions, macroeconomic shifts, or poor management. Waiting half a year to discover these issues prevents retail investors from mitigating losses, effectively shifting immense risk onto our savings. Erosion of Market Confidence: The transparency mandated by the SEC is the primary reason I trust the U.S. public markets over more opaque investment vehicles. Reducing disclosure requirements will inevitably damage public trust and discourage retail participation in the equities market. While I understand the desire to reduce the regulatory and compliance costs faced by public companies, saving corporate overhead should not come at the expense of investor protection. If compliance costs are a verifiable burden, I urge the Commission to consider a compromise—such as streamlined or simplified quarterly disclosures—rather than eliminating quarterly visibility altogether. Thank you for your time and for considering the perspective of individual retail investors who depend on SEC disclosures to protect their hard-earned capital.

Jamie Menasco retired SEC Reporting Accountant — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jamie Menasco I worked in the SEC Reporting Department for a Fortune 1000 company for many years. Multiple times we discussed moving away from monthly accounting for "efficiency". But whenever we attempted this in small pilot programs, we always went back to the fact that when you don't look at things timely, there is a greater chance for errors to slip through without notice. We always reverted to monthly accounting. The same thing applies to SEC Quarterly Reporting. Sure preparing quarterly reporting and 10-Qs are a laborious process, but it keeps management on top of the financial results on a consistent basis, ensuing errors or misunderstanding (or fraud!) do not fester and work into even larger problems. Every company is going to take advantage of this rule if it passes, but that will leave public, ordinary investors blind to any changes, while of course, insiders and those in the know have more time to react. I vehemently disagree with changing the public reporting requirement from every 3 months to every 6 months.

Jane Joiner — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jane Joiner As a citizen of the USA and an individual that

maintains a significant percentage of my networth invested in a balanced portfolio of domestic and foreign financial investments; I depend upon the timely and truthful quarterly financial reports to make investment decisions. When the SEC provides publicly traded entities the opportunity to provide fewer financial reports, this does not benefit individual investors.

Jane Wills attorney — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jane Wills A great deal can go wrong with a company in a matter of 3 months, let alone 6 months. Investors (including owners of 401Ks and pensions) have the right to receive quarterly results, and companies have the fiduciary obligation to provide more, not less, transparency. History shows that when financial regulations are relaxed, regular investors pay the price. The 10-Q is the only regular check investors have on public companies. Rule S7-2026 is designed to let public companies hide bad numbers and allow insiders to dump shares while the nation's tax payers, workers, retirees, and everyday Americans suffer great losses. And what happens then has been told by history. "To the extent that companies determined to voluntarily report quarterly financial and other information, the sufficiency and accuracy of those disclosures would be subject only to the prohibitions of the antifraud rules under the U.S. federal securities laws. This could result in increased shareholder litigation and to inconsistent or confusing disclosures across industries or competitors." Debevoise memorandum by Matthew Kaplan, Paul Rodel, Steven Slutzky, Eric Juergens, Benjamin Pedersen, and Jonathan Tuttle.

Subject: File No. S7-2026-15 From: Jared S. Trullinger Dear Regulators: As a financial professional, I would like to see full reports continue to be quarterly. We do not need less transparency from publicly traded corporations. More transparency leads to a more efficient market. Strong form efficient markets are better for investors. Jared S. Trullinger, PhD, MS -Lecturer in Finance -FINRA Series 7 & 66 -Indiana & Iowa Life & Health Licenses

---

Jason Lenox — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jason Lenox To whom it may concern- I wanted to comment on the proposed change from quarterly to semi annual financial reporting for publicly traded companies. I am against this change for the following reasons. 1. Delayed time in reporting & disclosures creates more earning surprises and slower detection of potential fraud. 2. Higher market volatility when issues come to light causing more extreme stock swings which would hurt retail investors more than corporate insiders. 3. Having some companies continue to report quarterly and some voluntarily as semi-annually make it harder for retail investors to accurately compare companies. I want more information as an investor, not less. Making this change would reduce transparency and lower accountabilitiy between the shareholder and senior management. Thank you Jason Lenox

Jason Simpson, Systematic-trading operator; Accredited Financial Counselor — Jul 6, 2026
Comment on Proposed Rule ... Semiannual Reporting
Submitted to: U.S. Securities and Exchange Commission
File No.: S7-2026-15
Release No.: 33-11414 (Semiannual Reporting)
Comment period closes: July 6, 2026
Re: Support for optional semiannual reporting, with five implementation safeguards
Dear Chair Atkins and Commissioners,
I write in support of the Commission's effort to give issuers flexibility in interim reporting, and to recommend five safeguards that would let the Commission grant that flexibility without weakening price discovery, comparability, or investor protection.
I submit this comment as the operator of a quantitative, systematic trading engine and as an accredited financial counselor and financial planner. That vantage point is the reason I am writing. Systematic strategies consume interim financial disclosures as structured inputs and depend on cross-sectional comparability across the issuers they evaluate; the financial-planning side of my work keeps me close to how non-professional investors actually use, or lose, interim information. The questions the proposing release raises about comparability and capital formation are, for a market participant in my position, not abstract.
I support the core design choice in the release: permitting, rather than requiring, semiannual reporting, and preserving Form 10-Q for issuers that do not elect. My recommendations are confined to how the option is bounded, locked, costed, reviewed, and disclosed.
1. Confine the election by filer status to preserve comparability
The proposing release acknowledges that a market in which quarterly and semiannual filers coexist may create comparability challenges for investors and analysts. That cost is not distributed evenly. It concentrates in the large, heavily held, heavily modeled issuers that dominate index exposure and carry the bulk of daily price discovery ... precisely the issuers for whom a missing first- and third-quarter financial picture is most consequential to the broad investing public.
A second comparability loss compounds the first and is easily understated. Form 10-S would present only year-to-date, six-month financial information; it drops the quarter-to-date presentation that Form 10-Q provides alongside the year-to-date view. For an electing issuer, the discrete first- and second-quarter results are therefore not merely delayed ... the three-month lens disappears for the entire first half, even for a reader who obtains every Form 10-S and Form 10-K the issuer files, because those two documents disclose only the six-month and full-year periods and cannot be

decomposed into quarters. The disclosure withdrawn is thus larger than the cadence framing implies: not one fewer filing per half-year, but the loss of the discrete-period view that makes quarter-over-quarter trend and seasonality legible. That deepens the comparability cost rather than restating it, and it reinforces confining the election to the issuers for whom that cost is least consequential to price discovery.
The relief the proposal offers ... a lighter interim-reporting burden ... is most valuable to smaller issuers, for whom the fixed costs of a quarterly close are proportionally largest and analyst coverage is thinnest. It is least valuable, and most costly to the market, at the top of the capitalization distribution, where coverage is dense, the incremental cost of a close is proportionally trivial, and the disclosure feeds broad index ownership. I therefore recommend the Commission confine the semiannual election to non-accelerated filers and smaller reporting companies, and retain mandatory quarterly reporting for accelerated and large accelerated filers. This aligns the relief with the issuers who need it and preserves the higher-frequency signal precisely where the market relies on it most.
2. Lock the election against opportunistic switching
The proposal already forecloses one form of gaming: an issuer cannot change cadence mid-fiscal-year, and a semiannual filer reverts to quarterly only by leaving the cover-page box unchecked on

its next Form 10-K. That within-year lock is sound, and I do not ask the Commission to disturb it. The residual exposure sits at the annual boundary. Because the election is renewed each year on the
Form 10-K, an issuer can in principle move to semiannual reporting in a year it anticipates soft interim results and back to quarterly when results improve ... timing the market's information window around its own performance.
To close that remaining gap, I recommend the Commission require a minimum election term of at least three consecutive fiscal years once semiannual reporting is elected. A multi-year commitment preserves genuine flexibility for an issuer making a considered, durable choice about its reporting model, while removing the ability to toggle cadence opportunistically around the results themselves. The safeguard is additive to the within-year lock already in the proposal; it addresses the year-over-year re-election cycle the current design leaves open.
3. Recalibrate the cost-benefit to an automation-adjusted baseline
The proposal's economic case rests substantially on the compliance-cost savings a semiannual cadence would deliver, and that estimate is calibrated to the cost of an interim close as it has historically been performed. That baseline is moving. The marginal cost of preparing quarterly financial statements is being compressed by automation on both sides of the workflow ... the AI-assisted close inside issuers and the increasingly automated interim-review procedures at their audit

and accounting firms. A cost-benefit analysis anchored to a pre-automation close will systematically overstate the savings the rule delivers over its operative life, and therefore overstate the benefit side of the ledger against the comparability and information-timing costs on the other side.
I recommend the Commission re-estimate the compliance-cost relief against the production environment that will actually exist across the rule's life ... an automation-adjusted baseline ... rather than the historical cost of a manual close. A relief estimate that shrinks as automation advances materially changes the proportionality between the savings the rule confers and the disclosure it withdraws.
4. Condition any move toward a default on evidence
The premise that less-frequent reporting curbs short-termism is contested, not established. The available record ... including study of the United Kingdom's natural experiment after the Financial Conduct Authority removed its quarterly-reporting mandate ... does not cleanly show that reduced frequency lengthens managerial horizons or improves investment; the net effect appears conditional on firm size and investor base, and the sign is unresolved. That uncertainty counsels against treating
optionality as a way station toward a semiannual default.
I recommend two procedural commitments. First, that the Commission preserve a genuine parallel-run environment in which electing issuers' semiannual disclosures can be evaluated against the quarterly baseline the rest of the market continues to observe. Second, that before the Commission ever proposes moving from an optional regime to a semiannual default, it commit on the record to publishing a retrospective study built on U.S. data from electing firms. I frame these as procedural durability rather than as a binding lock, because no present Commission can bind a future one. The value is in establishing an evidentiary predicate ... a study obligation and a preserved comparison set ... that any future move toward a default would have to confront on the record before it could proceed.
5. Make the cadence election salient to retail investors
Under the proposal, an issuer's choice to report semiannually is discoverable only by a reader who notices, and understands the significance of, a check box on the cover page of the Form 10-K. Professional investors and systematic engines will parse that flag. Retail investors, as a rule, will not. The result is a class of investors who may rely on an interim-information environment they do not know has changed ... expecting a third-quarter financial picture that will never be filed.
The Commission may note that electing issuers can continue to furnish first- and third-quarter information through earnings releases on Form 8-K. For the investors this safeguard concerns, that

mitigant is weaker than it appears. Information furnished on Form 8-K is not filed: it falls outside Securities Exchange Act Section 18 liability, is not automatically incorporated into the issuer's

registration statements, and is not subject to auditor review. A retail investor who relies on a furnished earnings release is therefore relying on a disclosure that rests on a materially weaker liability footing than the reviewed, filed Form 10-Q it displaces ... and, as a rule, will not know that distinction exists. The salience problem is thus twofold: retail investors may not know the reporting cadence has changed, and may not appreciate that the substitute they are offered carries less legal assurance than the report it replaces.
I recommend the Commission require a plain-language, standardized salience mechanism so that an
issuer's semiannual status is visible to a non-professional investor at the point of decision: a standardized legend on the issuer's periodic filings and interim communications, paired with a machine-readable flag in EDGAR that data providers and retail platforms can surface. Where an electing issuer supplies first- or third-quarter figures by earnings release, that same mechanism should indicate, in standardized form, that those figures are furnished rather than filed and are not auditor-reviewed. The election can remain the issuer's to make; the fact of it should not be effectively hidden from the investors least equipped to infer it.
Conclusion
Optional interim reporting can be a reasonable modernization if it is bounded to the firms that benefit, locked against opportunistic switching, costed against the production environment that will actually exist, conditioned on evidence gathered from U.S. markets, and disclosed in a way retail investors can see. The five safeguards above are offered in that constructive spirit. I would be glad to provide the cross-sectional comparability analysis underlying my first recommendation if it would assist the staff.
Thank you for your consideration and for your work maintaining fair, orderly, and efficient markets.
Respectfully submitted,
JASON HARRELL SIMPSON

Jease — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jease This proposal would be terrible for retail investors, reducing corporate transparency.

Jeff T Garber — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jeff T Garber I agree with the following from The Motley Fool: At its heart, investing is ownership. When you own a piece of a business, you deserve regular, transparent communication from that business. Reducing reporting requirements weakens the connection between companies and their owners. Some argue that fewer reports would reduce costs. Maybe. Although in an age of AI and increasingly efficient disclosure tools, even that point is debatable. Others argue it would ease the pressure to manage quarter to quarter. But short-termism comes from how people react to information, not from the information itself. Taking the reports away doesn't make anyone more patient. It just makes everyone less informed. What isn’t debatable is that less information rarely creates better-informed owners. Imagine owning a business and getting updates from your managers only twice a year. It would still run every day. You'd just know far less

about how it was doing. That's effectively what's being proposed here. Companies will continue operating every day. Products will be launched. Customers will be won and lost. Strategies will succeed and fail. Yet under this proposal, owners would receive only half as many official updates about the businesses they own. Less transparency doesn't eliminate uncertainty. It increases it. And when information finally does arrive, the surprises are likely to be bigger, the reactions sharper, and the volatility greater. Right?

Jeffrey Kostecki — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jeffrey Kostecki The proposal now on the table to allow companies to elect to reduce the number of public-company reports from four times a year to just two is bad. As a former business owner, I can testify that regular and accurate reporting was the lifeblood of our business. This quarterly reporting makes the company accountable to its shareholders and it's what we expect. The voluntary reduction of this report frequency is a mistake! I am opposed to this.

Jeffrey R Strege — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jeffrey R Strege As a business professional for forty years, I have worked for publicly traded organizations pre-SOX and post-SOX. As a Houstonian, I remember vividly the fall of Enron and Arthur Andersen due to executive greed, dishonesty, and lack of transparency. I knew Houstonians whose retirement savings disappeared literally overnight at Enron's demise. From my perspective, SOX has been a godsend to the business and investment communities. It significantly increased transparency and, I believe, is a major reason our market has been healthy since SOX's implementation. I understand that this proposed rule is not a suspension of SOX. However, I believe implementation of semi-annual reporting would be a significant step backwards and will, over time, undermine investor confidence and returns on investment. Please do not pass this rule. Governance is important. Transparency is important. Quarterly reporting is a significant reason we have such a healthy marketplace today. Leave it alone; it is working.

Jeffrey Rosenberg None re finance. Former CFO. — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jeffrey Rosenberg The quarterly reporting keeps people in positions of authority honest and protects us. As a former CFO of a non-public company, we produced quarterly numbers, and the requirement to submit them (not law, but business group) kept me actively involved and informed. Public company officers should have these same requirements. Do not change, and weaken, the responsibility for the C-levels to be informed and validate numbers.

Jeffrey Yochum — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jeffrey Yochum I am writing to oppose the proposed rule allowing public companies to abandon quarterly financial reporting in favor of semiannual disclosures. I'm 41 years old and have owned stocks in at least 10 companies since I was in college in 2007, which means I own pieces of real companies. Quarterly reports are how those companies tell me where my money is going and how well my investments are actually performing. Cut that to twice a year, and you've doubled the information gap between company insiders and everyday investors like me. That's not progress – it's a step backward. The SEC justified this proposal by suggesting that quarterly reporting pressures executives into short-term thinking. But research tells a

different story. When the U.K. dropped mandatory quarterly reporting a few years ago, executives didn't suddenly start investing more in their companies' futures. The only thing that changed was that investors had less information. The real drivers of short-termism are compensation structures and governance issues – not how often companies file financial statements. Here's what worries me most: The companies most likely to opt out are smaller ones that already get less analyst coverage. These are precisely the businesses where investor oversight matters most. Making them harder to monitor doesn't help anyone except the companies trying to hide problems. Institutional investors have advantages I'll never have – direct access to management, sophisticated data sources, networks of experts. What I have is the 10-Q: four detailed financial snapshots a year that let me understand the health and direction of my investments. That quarterly cadence is the playing field leveler this market needs. This proposal moves us away from transparency and toward opacity. I urge you to reject it.

Jen Sisson, CEO, International Corporate Governance Network (ICGN) — Jul 6, 2026
The Honourable Paul Atkins, Chairman
Vanessa Countryman, Secretary
US Securities and Exchange Commission
100 F Street, NE
Washington, D.C. 20549
6 July 2026
Dear Chairman Atkins and Secretary Countryman,
Subject: Securities and Exchange Commission's Proposed Rule on Optional Semiannual Reporting, S-7-2026-15
The International Corporate Governance Network (ICGN) appreciates the opportunity to comment on the Securities and Exchange Commission's (SEC) proposed amendments to allow companies to file optional semiannual reports on new Form 10-S in lieu of quarterly reports on Form 10-Q and changes to the financial statement requirements of Regulation S-X to facilitate semiannual reporting and to simplify rules regarding the age of financial statements.
Led by investors responsible for assets under management of >US$100 trillion, ICGN is an authority on global standards of corporate governance and investor stewardship. Headquartered in London, our membership is based in more than 40 countries. ICGN's Global Governance Principles and Global Stewardship Principles, written from an investor perspective, are widely used by our members in their company assessments and voting decisions, and by regulators when developing corporate governance rules.
ICGN strongly supports the mission of the SEC to protect investors, maintain fair, orderly, and efficient markets, and facilitate capital formation. As global investors, heavily invested in US companies, we consider the SEC's role as critical to fundamental investor protections and market credibility. As we noted in our recent letter on the SEC's proposed strategic plan, we believe the SEC can support capital formation and market growth, but only if it maintains strong investor protections, robust disclosure standards, clear regulatory oversight, meaningful shareholder rights, and has sufficient resources to enforce them effectively.
Over recent months, ICGN has responded to consultations and engaged with the SEC on the series of proposals affecting issues that matter most to investors. Taken together, this proposal, the ideas for changes to Regulation S-K, and the pending proposal to streamline filer status and disclosure requirements, raise concerns that the SEC's commitment to investor protection may be diminishing. We strongly urge the SEC to keep its core mission of investor protection at the heart of its rulemaking.
We are not supportive of the proposal to allow companies to voluntarily report on a semiannual basis and recommend that the current quarterly reporting requirements

be maintained.
Quarterly reporting underpins market discipline and transparency
• As long-term providers of capital, investors have a direct interest in the financial discipline, transparency, and accountability that quarterly reporting promotes.

• While the SEC states that the purpose of this proposal is to provide regulatory flexibility, reduce the burden of being a reporting company, and encourage more companies to become or remain public, we do not believe the evidence supports the conclusion that reducing the frequency of mandatory reporting would achieve those objectives.
Reducing reporting requirements shifts costs and risks to investors
• All costs to public companies are ultimately borne by their investors. We are not in favour of unnecessary costs and burdens of regulation, however, investors understand and appreciate that there are necessary regulatory and reporting related costs that are associated with being a public company. The trust and transparency on which the effective functioning of the market depend require a certain level of investment from companies and therefore their investors.
• Investors are willing to bear the costs associated with periodic reporting because timely, reliable financial information is fundamental to informed capital allocation and efficient markets.
• Any reduction in reporting frequency may lower compliance costs for issuers, but it does so by reducing transparency, increasing information asymmetries, and transferring costs and risks to investors.
• We therefore oppose any proposal that would dilute the reliability of quarterly reporting, regardless of company size.
• Overall, investors recognise the significant value of maintaining regular mandatory quarterly reporting, particularly its contribution to market discipline and transparency.
The evidence does not support the SEC's stated rationale
• The policy rationale for the proposal is primarily based on attracting companies to list on public markets by reducing compliance costs and addressing concerns about short-termism.
• However, the available evidence does not demonstrate that quarterly reporting is a significant factor in companies' decisions to access or remain in the public markets, to list in any particular jurisdiction, nor that moving to optional semiannual reporting would deliver meaningful cost savings. The SEC Investor Advisory Committee (IAC) considered the evidence and determined:
Although shifting from a quarterly disclosure mandate to a semiannual mandate would reduce the direct public disclosure filing costs for public companies, the [Proposed Rule] . . . itself estimates that the approximate net reduction in direct compliance costs would be only $198,000 per fiscal year for each issuer that switches to semiannual reporting. Public companies would still need to maintain accurate financial information as part of their ordinary operations, including for purposes of day-to-day business management. As a result, the costs associated with maintaining complete, accurate and reliable financial information would remain even without a quarterly disclosure mandate.i
• The IAC also cited research that contradicts the premise that the “compliance cost burden of being a public company deters firms from going public”, which has been

undermined by empirical work, found that the observed declines in IPO activity have been driven by demand-side and market-structure factors rather than by the cost of disclosure compliance.ii, iii

• We therefore do not believe the proposal is likely to achieve the Commission's stated objectives.

There are significant risks associated with a move to semiannual reporting

• Empirical research findings show that:

o Less frequent reporting creates volatility and can cause excessive swings in stock prices harming the efficiency of the financial markets.
iv v

o Having timely, accurate, and comparable information allows long-term investors to make more informed investment and voting decisions.
vi

o Less frequent reporting creates excessive swings in stock prices harming the efficiency of the financial markets.
vii

o Neither the United Kingdom (UK) nor the European Union has enjoyed better valuations, better capital raising, or a healthier IPO market as the result of their voluntary quarterly reporting framework.viii

• We also note that there are several other federal agencies with rules that contain references to quarterly reports filed with the Commission. The proposal acknowledges this fact, however, does not address a timeline how other agencies will be consulted, or provide investors time to comment to these federal agencies about our concerns with the proposal before the SEC considers action.

The SEC Investor Advisory Committee viewpoint aligns with this position

• Following consideration of the issue by its Investor as Owner Subcommittee, the SEC's Investor Advisory Committee (IAC) concluded that panellists "overwhelmingly noted the structural importance of the existing quarterly reporting cadence to the U.S. capital markets and were skeptical that a semi-annual alternative would be feasible or attractive to most public companies." ix

• The IAC subsequently recommended that the Commission retain mandatory quarterly reporting, concluding that the evidence did not support concerns regarding short-termism or demonstrate meaningful cost savings.

• Instead, it found that moving to semiannual reporting would reduce investors' ability to make informed decisions, increase trading costs, and increase the cost of capital for public companies.

• The IAC also noted that retail investors would be disproportionately affected because they rely primarily on public disclosures rather than direct access to company management.

• ICGN agrees with the IAC's assessment and also supports the views expressed by the Council of Institutional Investors in its letter of 25 June 2026 that "the requirement to file on a quarterly basis data-tagged financial statements and related footnotes on Form 10-Q and have those statements subject to an independent auditor review and management certification is a key element of the timely and accurate information flow that underpins the quality and efficiency of the U.S. capital markets." x

We also note that our view is supported by the Council of Institutional Investorsxi and the results of the 2026 CFA Institute member survey (2026 CFA Survey) which finds only 35% of

respondents supported moving from quarterly to semiannual reporting.

Mandatory quarterly reporting should be retained
• Taken together, the evidence strongly supports retaining mandatory quarterly reporting.

Policy impact • Networking • Education
• Quarterly reporting remains a cornerstone of transparent, efficient, and well-functioning U.S. capital markets. It provides investors with the timely and reliable information needed to allocate capital effectively, supports market discipline, and accountability, and helps maintain confidence in U.S. public markets.
• The impact of the SEC's Form 10-Q reporting framework is not limited to the US. A number of UK and European companies are also subject to SEC reporting requirements, meaning the framework plays an important role in ensuring regular and consistent information is made available to the market internationally. Maintaining quarterly reporting therefore supports transparency, comparability, and investor confidence across global capital markets.
• ICGN therefore recommends that the Commission retain the existing quarterly reporting requirements.
Detailed comments related to specific questions in this consultation
We have sought to answer the questions most important from an investor viewpoint. We have retained the original numbers of the questions in the proposal to help with the assimilation of the responses by SEC staff members and the Commission's review.
1. 3. The proposed amendments would allow Exchange Act reporting companies to elect to file interim reports on a semiannual basis in lieu of quarterly reports on Form 10–Q. Should companies have this option, or should all companies continue to be required to file Form 10–Q? What types of companies are likely to elect the option to file semiannual reports? Are companies in certain industries more likely than those in other industries to elect to file semiannual reports?
• No, we do not believe that companies should have the option to report on a semiannual basis.
• We strongly support continued mandatory quarterly reporting.
• All companies should continue to be required to file Form 10-Q.
Our proposal would permit semiannual reports for all Exchange Act reporting companies that file Form 10–Q today, regardless of filer status, revenues, market capitalization, or other criteria. Should the option for semiannual reporting be available only for Exchange Act reporting companies that satisfy certain criteria? If so, what criteria should be imposed and why? For example, should only emerging growth companies or smaller reporting companies be allowed to report semiannually?
• No, we do not believe that companies should have the option to report on a semiannual basis.
• We would not support any carve out for emerging growth companies, smaller reporting companies, or companies in specific sectors. We believe that in many cases smaller companies may need to provide investors with more financial information rather than less, especially if they are seeking additional capital.
6. If adopted, would semiannual reporting have an impact on investors' ability

to compare same-company performance over time? Why or why not?
Salisbury House, 29 Finsbury Circus, London, EC2M 5QQ
VAT No: 927 1665 09 I Registered in England No: 6467372
e: membership@icgn.org I w: www.icgn.org
in: International Corporate Governance Network

• Yes. Any movement by companies to report on a semiannual basis will impact investors' ability to compare same-company performance over time.
• Generally, for investors, the most current information is the most accurate and useful information available about a company.
• The timeliness of information is important and even more so in times of market volatility.
• Reducing the frequency of reporting creates longer information gaps for investors and therefore impedes their ability to use information to fulfil their fiduciary duties.
7. What effect would our proposal have on investors' ability to compare the relative peer company financial performance of a quarterly filer to a semiannual filer? For example, can an investor reasonably compare a quarterly filer to a semiannual filer where the companies have the same fiscal year and the comparison is sought to be made in the second quarter (when first quarter information that would be subsumed in the semiannual filer's semiannual report on Form 10–S is not yet available) or made in the fourth quarter (when third quarter information that would be subsumed in the semiannual filer's annual report on Form 10–K is not yet available)?
• Investors need reliable, comparable, and timely information. The SEC proposal diminishes two of these requirements. It impacts comparability between companies as some will provide semiannual financial information and others will continue with quarterly information. The proposal will therefore increase market volatility.
• If one peer reports quarterly while another reports semi-annually, investors and stakeholders may review the information from the quarterly reporter and make inferences on the semi-annual reporter, which may or may not be accurate, leading to greater volatility in the semi-annual reporter's share price.
• Allowing companies to elect to report semiannually while others continue to report quarterly could increase information asymmetries across the market, with investors having access to materially different levels of information at any given point in time. This could disadvantage investors in companies providing less frequent disclosure and reduce overall market transparency and comparability.
• As such, the proposal would negatively impact the ability of investors to compare relative peer company financial performance if part of the peer group is no longer reporting on a quarterly basis.
• This view is supported by a recent survey conducted by the CFA Institute in June in which 84% of members that responded to the survey said that semiannual vs. quarterly reporting would pose challenges to comparing financial performance, especially after a lack of first and third quarter reporting.xiii
15. As an alternative to the proposal for optional semiannual reporting, should we instead revise the disclosure requirements of Form 10–Q to reduce the burden on reporting companies of filing this form, such as amending the current rules for the required interim financial statement review by an independent public accountant, XBRL data tagging, MD&A, information about

unregistered sales of registrant securities pursuant to 17 CFR 229.701 (Item 701 of Regulation S–K), or year-to-date comparisons involving financial
Salisbury House, 29 Finsbury Circus, London, EC2M 5QQ
VAT No: 927 1665 09 | Registered in England No: 6467372
e: membership@icgn.org | w: www.icgn.org
in: International Corporate Governance Network

statements and MD&A? How should these requirements, or any other requirements of Form 10–Q, be revised? What aspects of Form 10–Q's current reporting framework are most burdensome for reporting companies?
• We would not be opposed to certain measured changes being made to the scope of Form 10-Q. Should the SEC decide to issue a proposed rule and seek comments on it, we would be happy to provide detailed investor-led input into the most material matters to retain.
• We strongly believe that core safeguards in Form 10-Q would need to be retained however. Notably, investors would need the retention of an independent auditor review, a management certification, a filing requirement, and XBRL data tagging.
• We reiterate our concern that the possible revision of Form 10-Q is qualified in the question to reduce the "burden" of reporting companies that must file the form. We believe that the cost and burden of a lack of disclosure falls on the investors who will no longer be able to rely on investor protections coming from the disclosure requirements under Form 10-Q or through quarterly reporting.
22. Would the option for semiannual reporting result in an overall reduction in material information for investors? Or would other regulatory requirements, such as Form 8–K filing requirements and Regulation FD, elicit sufficient information to offset the less frequent interim reports and address any investor protection concerns? Would market forces or demands on a company's business—such as contractual obligations, investor expectations, and potential for shareholder activism— encourage semiannual filers to: (1) voluntarily disclose more information than required, (2) disclose information more frequently than is required, or (3) opt not to become semiannual filers at all?
• Yes, optional semiannual reporting will result in a reduction of material information for investors.
• The burden should not be placed on investors to drive additional reporting from issuers. There should be a standard basis of quarterly reporting for all companies.
• The Form 8-K or Regulation FD filing requirement is not a comparable "substitute for the more holistic picture provided by quarterly reports," as mentioned in the proposal.
• We do not agree that relying on Form 8-K and Regulation FD is an appropriate way to temper this lack of disclosure. The potential harm to investors is clear from the SEC proposal, on page 16, in which the following discussion was included:
Conversely, the efficiency of financial markets rests on material information becoming public in a timely fashion. In addition to protecting investors, greater availability of material public information allows securities prices to better reflect their issuers' fundamental value and ultimately promotes capital formation as issuers have access to lower cost of capital and investors in those securities have

access to higher liquidity. A reduction in the frequency of interim reporting could result in delayed disclosure of material information, reduce comparability, and some lost information.

Salisbury House, 29 Finsbury Circus, London, EC2M 5QQ

Policy impact • Networking • Education

• Form 8-K is not a substitute for quarterly reporting. It is triggered only when a company determines that a material event has occurred, rather than providing regular, comprehensive financial updates.
• Investors should not have to rely on management's judgement alone. Under a semiannual reporting regime, companies would decide both what is material and whether to provide interim earnings updates, potentially leaving investors without important information between reporting periods.
• Regulation FD serves a different purpose. It requires public disclosure when material non-public information has been selectively shared, but it does not require companies to provide regular financial reporting.
• Neither Form 8-K nor Regulation FD replaces the value of mandatory quarterly reporting. They are event-driven disclosure mechanisms, not investor-driven reporting frameworks that provide timely, consistent, and comparable financial information.

23. With semiannual reporting, would there be an impact on investors or other market participants as a result of less frequent certifications by management relating to internal control over financial reporting and disclosure controls and procedures, as well as less frequent disclosures of changes in such controls?

• Yes, there will be an impact due to less frequent certifications by management relating to internal controls over financial reporting and related disclosure controls.
• Less frequent certifications and disclosures regarding changes in internal controls could:
o Delay the identification and communication of material weaknesses or significant control deficiencies to investors.
o Reduce transparency regarding changes to a company's control environment and financial reporting processes.
o Increase uncertainty about the reliability of reported financial information between reporting periods.
o Weaken an important governance discipline by reducing the frequency with which management and audit committees formally assess and certify the effectiveness of disclosure controls and internal controls over financial reporting.

26. For semiannual filers, what impact would a shift to semiannual reporting have on: (1) companies' disclosure controls and procedures, (2) companies' internal control over financial reporting, and (3) independent public accountants' strategy and approach for the annual audit of companies' internal control over financial reporting or financial statements? With semiannual reporting, is there a potential for a material increase in the risk that material misstatements (either due to error or fraud) or control deficiencies are not timely detected by or communicated to the independent public accountant thereby limiting potential remediation of these issues by the issuer? Please provide any data related to these questions.

• The process of preparing and reviewing quarterly financial statements

requires management to regularly assess accounting judgments, test disclosure controls and procedures, evaluate internal control over financial reporting, and engage with auditors on significant matters. This regular

reporting cadence promotes timely identification and remediation of errors, control deficiencies, and emerging risks.
• Any move to semiannual reporting therefore inevitably lengthens the period between these formal reporting and review processes.
• While companies would remain subject to their existing obligations regarding internal controls and disclosure, investors are concerned that less frequent reporting could reduce the opportunity for management, audit committees, and independent auditors to identify and address deficiencies before they become more significant.
• In particular, there is a greater risk that material misstatements, whether arising from error or fraud, or weaknesses in internal controls may remain undetected for longer periods before coming to light.
• ICGN agrees with the CII and CFA, on the importance to investors of the independent auditor review of the companies' quarterly financial information. Our view is also consistent with the 2026 CFA Survey results finding that 68% of respondents agreed that Form 10-Q filings are important because they are reviewed by the companies' auditors.
xiv
32. Would there be an increased risk of insider trading at companies that elect to report on a semiannual basis? If so, please provide the basis for this view, as well as data. Could companies enhance their insider trading policies or improve their self-enforcement of these policies to help address this concern? What other actions could companies or the Commission take to mitigate any increase in the risk of insider trading?
• Yes, there is a strong perception that there may be an increased risk of insider trading at companies that elect to report on a semiannual basis due to the longer periods of time between reporting.
• We note that the SEC IAC commented:
A shift to semiannual reporting would also increase insider-trading concerns because more frequent disclosure reduces insiders' ability to profit from nonpublic information. By extending the interval between mandatory reports, semiannual reporting would widen the gap between inside and public information, increasing the risk that insiders could trade while possessing material information not yet available to the market. The Proposal acknowledges this heightened risk and suggests that it may warrant longer blackout periods, as the value of material nonpublic information and the potential for misuse would be higher. A shift to semiannual reporting would also weaken corporate accountability. For example, poor quarterly results present corporate management with market discipline that can help them make necessary business changes to improve future returns. Shifting to semiannual disclosures would therefore reduce market discipline xv
33. How would the proposed flexible approach to semiannual reporting affect the competitiveness of U.S. reporting companies vis-a-vis foreign

competitors? For Exchange Act reporting foreign companies that would not be foreign private issuers (which report semiannually as discussed above) and that would report quarterly under the current system, would the proposed option to report semiannually make these foreign companies more likely to list on a U.S. exchange? What would be the competitive implications of the

proposed optional semiannual reporting approach between U.S. reporting companies (which report quarterly under the current system) and foreign private issuers (which report semiannually under the current system as a practical matter)? Should there be different periodic reporting for foreign private issuers compared to domestic issuers? Why or why not?

• We generally believe that domestic and foreign issuers should be subject to the same rules on any given exchange.

• As we believe that all companies should continue to report on a quarterly basis, it would be consistent to have the same reporting requirements for foreign private issuers (FPIs) as domestic ones.

48. What would be the benefits to investors from reporting companies' flexibility to file semiannual reports on Form 10–S, instead of quarterly reports on Form 10–Q? Are there certain types of companies or industries for which such benefits would be greater than for others? Would the benefits to investors be limited to the pass-through of cost savings, or would there be other kinds of benefits, such as improved managerial incentives or reallocation of company resources to potentially more productive corporate activities?

• We do not believe there would be benefits to investors from this proposal. Rather than the benefits to investors, we see greater risks.

49. What would be the costs to investors from providing reporting companies with flexibility to file semiannual reports on Form 10–S, instead of quarterly reports on Form 10– Q? Would the option for semiannual reporting increase information asymmetries in ways that impair investors' abilities to make investment and voting decisions? To the extent there are such costs or information is reduced, would other regulatory requirements (beyond those requiring interim reports) or market forces mitigate such factors?

Providing companies with the option to report on a semiannual rather than quarterly basis would impose significant costs on investors and impair their ability to make informed investment, stewardship, and voting decisions. In particular, investors would face:

• Less timely and less comparable information. Investors would have fewer standardised financial updates on company performance and outlook, reducing the ability to compare companies and assess relative performance and industry trends.

• Reduced market efficiency. Less frequent reporting would delay the incorporation of material information into market prices, potentially leading to less efficient price discovery, greater reliance on rumours or alternative information sources, and increased market volatility.

• Weaker ability to adjust capital allocation. Investors would have fewer opportunities to identify deteriorating performance, reallocate capital to stronger companies, or respond to changing risks and opportunities in a timely manner. This will increase opportunity cost for investors.

• Greater information asymmetry. Longer periods between mandatory disclosures would increase the time during which company insiders possess material non-public information, exacerbating information asymmetries between issuers and investors. There is always a risk of information

asymmetry between insiders and investors. This will exist due to the information originated internally until released. Quarterly reporting helps to reduce this situation. Investors continually insist that all material non-public information should be disclosed.

• Weaker stewardship and corporate accountability. Quarterly reporting provides an important basis for investor engagement, monitoring corporate performance, assessing executive remuneration against agreed performance metrics, and informing proxy voting decisions. Less frequent reporting would reduce investors' ability to hold boards and management accountable and could allow governance concerns to persist for longer before being identified and addressed.

Taken together, these costs would accumulate over time, reducing market transparency, weakening investor confidence, and impairing the efficient allocation of capital.

55. For semiannual filers who would not voluntarily release earnings quarterly, would stock price movements around the release of semiannual financial information be more volatile compared to movements around quarterly releases? If so, what are the reasons this would occur? If so, how would this affect investors, companies, and markets?

We agree with the response from the Council of Institutional Investors in its comment letter and incorporate it by reference. As CII stated,

[S]tock price movements around the release of semiannual financial information would be more volatile compared to movements around quarterly releases as investors expend more effort guessing how the company is doing. Our view is supported by empirical research.80 That research is briefly referenced in a single footnote to the Proposed Rule.81 The co-author of that research, Salman Arif, Associate Professor, Curtis L Carlson Professorship Accounting at the University of Minnesota, discussed the study's findings and their implications for investors in a CII Voice of Corporate Governance podcast: "There are many firms outside the US that report semi-annually, and so it's possible to actually study the effects of semi-annual reporting on those firms. A recent study by myself and Emmanuel DeGeorge, who's an Assistant Professor of Accounting at London Business School, uses actual data on semi-annual firms around the world to look at how investors in those firms behave under semi-annual reporting. What our findings indicate is that because semi-annual reporting causes investors to operate in an information vacuum for longer periods of time, they end up overreacting to other types of news that they believe is value relevant." xvi

Academic research suggests that with semiannual reporting, investors will require compensation to invest in stocks that report semiannually because of the increased risk and volatility of these stocks. Less frequent financial reporting increases information asymmetry between companies and investors by extending the period during which investors have limited access to standardised, comparable information

about a company's financial performance and prospects. As a result, investors are likely to demand a higher risk premium to compensate for the increased uncertainty associated with holding those securities. This can increase a company's cost of capital and reduce the liquidity of its shares, as investors are less willing to trade or invest where timely information is unavailable. Over time, these effects may

contribute to lower valuations, higher financing costs, and a diminished ability for affected companies to raise capital efficiently and support long-term growth.xvii Quarterly reporting, in comparison, compresses price discovery into shorter windows, significantly accelerating information assimilation and reducing the persistence of post-announcement mispricing. This expedited information flow facilitates faster capital reallocation, enhancing market allocative efficiency.

56. If the proposal were to reduce securities analyst coverage of Exchange Act reporting companies that elect the semiannual reporting option, what effect would this have on investors and companies? How would such a reduction in analyst coverage affect stock market price efficiency? How would such a reduction affect liquidity of semiannual filers' securities?

Any reduced coverage could result in negative consequences for investors. Coverage by skilled and knowledgeable securities analysts is another data point and potential signal of a company's performance to investors. Any dilution of third party information could be detrimental and unnecessary.

We refer to CII's letter which provided the:

[C]onclusion of Professor Rajgopal, who studied the impact on securities analysts' coverage of these companies when the UK mandated quarterly reporting in 2007, then eliminated the requirement in 2014: "The UK experiment gave us the evidence we needed. A shift from semiannual to quarterly reporting does have a significant impact on the relationships between UK public companies and security analysts. That relationship — analysts doing the work of translating company performance into market prices — is part of what makes the U.S. equity market the most liquid, efficient, and investor-friendly in the world. The SEC's proposal risks degrading it, for speculative benefits that a decade of real-world evidence from the UK has failed to materialize".xviii

We have observed that this has occurred in the United Kingdom (UK) and the European Union (EU) member states when both these markets moved from quarterly reporting. Indeed in the UK, initially only 10% of companies ceased to provide quarterly reports. The UK and EU examples show that analysts focused their reviews on companies continuing to report quarterly, and evidence shows that the analysis was more accurate in forecasting into the future.

58. Would a company's valuation or cost of capital differ based on whether the company is a quarterly filer or a semiannual filer? Please explain the reasons why there would be a difference and provide any specific data. Would less frequent interim reporting negatively affect the ability of investors or other market participants to value the company's securities? If cost of capital would increase for semiannual filers, would this result from an increase in the cost of equity or cost of debt (or both)? How?

• Investors have raised concerns that the cost of capital could increase for companies that move to semiannual reporting.

• From the CII letter, we also refer to the following quote from an IAC member:

Policy impact • Networking • Education
Regulations and Program on International Financial Systems at the June
2026 IAC meeting: "[I]nvestors in companies that elect semiannual reporting
will have less information to act on. And less information leads to wors[e]
decisions that can reduce investor returns. Longer gaps between mandated
disclosures leave investors with fewer opportunities to spot deteriorating
performance or emerging opportunities at public companies and therefore [a]
weaker basis for valu[ing] . . . securities." 44 xix
• According to research conducted by Salman Arif, Associate Professor, Curtis
L Carlson Professorship Accounting at the University of Minnesota, the cost of
capital can be impacted. He said, "Basically it's more risky for investors to
hold stocks for which they can't assess the actual performance for long
periods of time. So what this means is that the cost of capital for semi-annual
firms is higher and the liquidity of these stocks is lower. And so this creates
higher interest rates and lower stock prices for these firms and damages their
ability to raise financing and grow." 82 xx
• On page 69 of the proposal, the SEC notes that:
[R]educing the frequency of periodic disclosures may delay the public
disclosure of material information about a company. Such decreased
transparency may make it more difficult for investors to make well-informed
decisions and may increase the expected return (i.e., the cost of capital) that
they demand for holding a company's securities. In particular, less frequent
disclosures may result in a higher cost of capital if investors receive less
precise information about a company's cash flows and how they covary with
other companies' cash flows and/or if there is an increased risk of information
symmetry across investors as a result of the increased time gaps between
public disclosures. A higher cost of capital, in turn, may discourage
companies from raising funds for new investments.
ICGN agrees with the above statement as another reason to oppose the proposal.
If the SEC moves forward, we seek minimum guardrails for investors
We do not recommend that this proposal be adopted, however, if the Commission is
planning on approving optional semiannual reporting in some form we offer these
suggestions as potential investor protection focused guardrails for investors:
1. 2. 3. Establish a pilot project with a small group of filers for the period of one fiscal
year for the purposes of evaluating semiannual reporting on a smaller scale.
This would provide investors and issuers with greater detail how the reporting
is working, areas of concern, and whether quarterly reporting should remain
the standard for the SEC and federal agencies that refer to the SEC's
quarterly reporting requirements.
Delay the implementation of the proposed rule until other federal agencies
that refer to the SEC's quarterly reporting regime have the opportunity to
request comments from investors and their constituencies to ensure that all
potential risks and impacts on investors are considered.
Require that an issuer who is not able to ensure a clean audit due to material
misstatements, restatements, and/or a current financial situation that impacts

the audit opinion, must revert back to quarterly reporting within the next three months, and remain under this reporting period until a clean audit is issued or

4. 5. 6. the period of one full year. This would include financial misstatements that could mask earnings trends, increase the payout of executive compensation, potential concealment of criminal activity and fraud, and/or ones that impact a review of regulatory compliance.

Require that issuers provide investors with the ability to vote at the company's annual general meeting on a resolution seeking support for a change from quarterly to semiannual reporting within a certain cadence, for example, every three years, unless there is an audit issue with the financial statements. Then, the company would need to revert to quarterly reporting.

Reporting requirements should be applied consistently, rather than leaving the decision to individual companies to use to their advantage. Companies switching between reporting frequencies over time creates additional complexity, signals reporting concerns, and noise for investors seeking to assess performance trends and compare companies effectively.

Require that issuers who are under investigation by the SEC, PCAOB, or state Securities regulatory bodies, or who are subject to litigation due to material misstatements, restatements, or legal proceedings on financial statements, are required to revert back to quarterly reporting within the next three months and continue until the investigations are resolved or a court determines that semiannual reporting may restart.

Thank you for the opportunity to provide comments on this proposal. If you would like to follow up with questions or comments, please contact me or our Senior Advisor- Americas, Carol Nolan Drake, (carol.nolandrake@icgn.org).

Yours faithfully,
Jen Sisson
Chief Executive Officer, ICGN

Jennifer Kallista — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jennifer Kallista As a general investor, I find it deeply troubling that the SEC is proposing less frequent accounting for companies. It needs to remain quarterly for

investors to keep track of how their investments are doing.

Jennifer W. Han, Chief Legal Officer & Head of Global Regulatory Affairs, MFA — Jul 6, 2026
July 6, 2026
Via Electronic Mail: rule-comments@sec.gov
Vanessa A. Countryman
Secretary
U.S. Securities and Exchange Commission
110 F Street, N.E.
Washington, D.C. 20549-1090
Re: Semiannual Reporting
Dear Secretary Countryman:
MFA1 submits this letter to urge the U.S. Securities and Exchange Commission ("Commission" or "SEC") to
withdraw its proposal to replace the quarterly reporting framework that has existed since 1970 (the "Proposed
Amendment") with an optional semiannual reporting regime that would reduce the frequency of public financial
disclosure.
2 These comments reflect the perspectives of MFA's members, who are significant investors in public
companies and invest on behalf of their underlying investors, including public and private pension funds, endowments,
and charitable organizations, among other sophisticated investors.
As MFA explained in its April 2026 SEC comment letter regarding Regulation S-K reform, MFA broadly supports
the Commission's efforts to refine and modernize the regulatory framework governing public company disclosures.3 In
particular, MFA encouraged the Commission to focus disclosure requirements on material information, eliminate
duplicative or unnecessary requirements, and streamline disclosure obligations to better support capital formation while
preserving the quality and timeliness of information available to investors. Such targeted reforms can reduce issuer
costs without diminishing the transparency and integrity of U.S. public markets.
1 Managed Funds Association ("MFA"), based in Washington, D.C., New York City, Brussels, and London, represents the
global alternative asset management industry. MFA's mission is to advance the ability of alternative asset managers to raise
capital, invest it, and generate returns for their beneficiaries. MFA advocates on behalf of its membership and convenes
stakeholders to address global regulatory, operational, and business issues. MFA has more than 180 fund manager
members, including traditional hedge funds, private credit funds, and hybrid funds, that employ a diverse set of investment
strategies. Member firms help pension plans, university endowments, charitable foundations, and other institutional
investors diversify their investments, manage risk, and generate attractive returns throughout the economic cycle.

www.MFAalts.org
The Proposed Amendment, however, takes a fundamentally different approach. Rather than refining disclosure requirements, it would reduce the frequency of mandatory financial reporting by public companies. MFA urges the Commission to withdraw the Proposed Amendment. Quarterly financial reporting is a core feature of the U.S. disclosure framework that provides investors with critical, timely, decision-useful information about a company's financial performance and evolving business conditions, thus enabling more informed capital allocation and risk assessment.
Meanwhile, a shift to semiannual reporting risks significant unintended consequences for investors and capital markets, all for a claimed benefit that the evidence does not support.
At a minimum, the Commission must not proceed with the Proposed Amendment while it considers other, considerably less harmful, content-based reforms to public company disclosure requirements. In fact, within days of publishing the Proposed Amendment, the Commission proposed amendments that would greatly alter filer status and Form S-3 eligibility.4 The Commission must consider the costs and benefits of the Proposed Amendment in tandem with the other two proposals. These reforms would directly affect both issuer compliance costs and the informational value of disclosures, and thus fundamentally shape the context in which any changes to reporting frequency must be evaluated. Absent clarity regarding the ultimate scope and impact of these reforms, if adopted, the Commission cannot satisfy its statutory obligation to assess the costs and benefits of the Proposed Amendment.
Executive Summary
The Proposed Amendment represents a significant departure from the longstanding quarterly reporting framework that has served as a cornerstone of the U.S. disclosure regime. MFA respectfully

requests that the
Commission consider the following before implementing a change of that magnitude:
(I) A switch to semiannual reporting would harm investors and market integrity by increasing information
asymmetries, delaying price discovery, weakening corporate accountability, and impairing the efficient
functioning of public markets;
(II) The Commission's contention that changing to semiannual reporting will redress the decline in public
offerings lacks evidentiary support; and
(III) The Commission must finalize its consideration of less harmful alternatives to reduce public company
reporting burdens before it can accurately assess the costs and benefits of the Proposed Amendment.

Emerging Growth Company Accommodations and Simplification of Filer Status for Reporting Companies, 91 Fed. Reg.
30,086 (May 21, 2026), available at https://www.federalregister.gov/documents/2026/05/21/2026-10222/enhancement-
of-emerging-growth-company-accommodations-and-simplification-of-filer-status-for.

I. The Proposed Amendment Risks Serious Foreseeable and Adverse Consequences
Investor access to timely, reliable, and material information about public companies is a core tenet of U.S.
capital markets and the regulatory framework governing those markets. The current quarterly financial reporting
requirement promotes transparency, market discipline, and investor confidence, and should remain a cornerstone of
the U.S. public company disclosure regime. Indeed, investors have relied on the quarterly reporting cadence for decades
now, building investment models, risk management frameworks, and capital allocation processes around the predictable
flow of reviewed financial information that quarterly Form 10-Q filings provide. MFA's members, in particular, depend
on quarterly filings to evaluate companies in which they have invested or are considering investing, and to assess the
progress companies have made toward achieving their stated objectives.
Adopting the Proposed Amendment's switch to semiannual reporting would upend that established flow of
financial information, risking significant and wide-ranging consequences for the Commission's core statutory objectives
of market integrity, investor protection, and capital formation. Those consequences fall into three related categories:
impairments to the quality and timeliness of information, market-integrity risks, and weakened governance and capital-
market outcomes.
• Information Asymmetry and Increased Costs
As discussed in MFA's April 2026 letter, empirical studies and recent experience both confirm that reducing
the frequency of required financial reporting would increase disparities in access to information and

would
disproportionately disadvantage retail investors and smaller market participants that rely heavily on periodic
disclosures. Quarterly reporting provides timely, reliable, and material information that is central to informed capital allocation and investor confidence; without it, investors' ability to evaluate performance,
monitor risk, and compare issuers would be significantly diminished. Thus, reducing reporting frequency
would increase uncertainty and information asymmetry by delaying the release of standardized financial
information, allowing material information to accumulate privately, and shifting the market from uniform
public disclosure to uneven, resource-dependent information access. In response, investors would, at a
minimum, demand a higher risk premium, increasing issuers' cost of capital and, in more pronounced cases,
may deter the deployment of long-term institutional capital. Either outcome would run counter to the Commission's stated objective of promoting capital formation.

• Delayed Market Price Discovery

Reducing the number of mandated reporting intervals would also increase the chance that markets will
incorporate outdated financial information, potentially causing delayed or less efficient price adjustments
and impairments to overall market efficiency. Those impairments would, in turn, threaten the advantages
that have helped make U.S. public markets a global leader in issuance and proceeds, including deeper
liquidity, stronger price discovery, and sustained investor confidence. The risk is not farfetched, as research
on European markets, cited in MFA's April 2026 letter, shows that markets with less frequent mandatory

disclosure experience weaker valuations and thinner trading liquidity, even amid improving global conditions.5 The Commission should not risk replicating these outcomes in U.S. markets.

• Loss of Financial Granularity

A reduction in reporting frequency would also reduce the availability of granular financial data. Companies'
quarterly reports provide frequent and detailed insight into issuer performance, including interim trends
and developments that are critical to informed capital allocation. Transitioning to semiannual reports would
reduce the timeliness and comparability of such financial information, in turn, potentially weakening valuation accuracy and increasing the risk of market mispricing. The result would be less efficient allocation
of capital across companies and industry sectors. Additionally, MFA members, as institutional investors, rely
on consistent and reliable financial information to compare similar companies and make informed investment decisions; without structured quarterly reporting required by all companies, that ability would
be significantly diminished.

• Increased Susceptibility to Rumors, Misinformation, and Elevated Insider Trading Risk

Longer reporting gaps would also create an environment in which unofficial sources, speculation,

and
incomplete information have a greater influence on market behavior, thereby increasing volatility and the
potential for misinformation-driven trading activity. Eliminating mandatory quarterly reporting would also
lengthen blackout periods during which material nonpublic information ("MNPI") accumulates. Currently,
quarterly Form 10-Q filings provide a regular and predictable mechanism for disclosing MNPI. But if the
Proposed Amendment is adopted, MNPI could remain undisclosed for periods of up to six months. While, as
the Commission noted in the Proposed Amendment, companies have other means of disclosing MNPI to the
markets, many of these are optional, and companies are generally reluctant to disclose financial information
without the benefit of having closed their books and completed auditor processes.
An issuer's reporting cadence could itself become a source of speculation. Investors might view less
frequent reporting as a sign of weakness or continued quarterly reporting as a sign of strength. Either
perception risks fueling rumor-driven trading and adding market noise unrelated to fundamentals. The
absence of a regular quarterly reporting cadence would prolong information asymmetry, increase reliance
on stale disclosure and social media inferences and rumors, and weaken market liquidity and attractiveness.
It would increase the value of non-public information and the potential for its misuse, raising the risk of
insider trading.
5 See Tobia Bornemann et al., The Consequences of Abandoning the Quarterly Reporting Mandate in the Prime Market
Segment, 34 EUR. ACCT. REV. 89 (2025); see also Vanessa Behrmann et al., The Deregulation of Quarterly Reporting and Its
Effects on Information Asymmetry and Firm Value, 64 REV. QUANT. FIN. & ACCT. 1221 (2024).

• Shift from Public Disclosure to Private Corporate Access
Reducing reporting frequency would make information about public companies less available through
standardized public disclosures. Rather than reducing the market's demand for timely financial information,
the Proposed Amendment would increase the value of obtaining such information through private channels
and corporate access. Companies would also continue to provide financial information to lenders and other
contractual counterparties through private reporting arrangements. The result would be a market in which
investment outcomes increasingly depend on privileged access to information rather than analysis of
publicly disseminated financial information, undermining the transparency and fairness that distinguish U.S.
public markets.
• Weakened Corporate Accountability and Constrained Legitimate Corporate Activity
Fewer reporting checkpoints would likewise reduce the scrutiny to which management is subject, limiting

investors' (and other market participants') ability to monitor a company's performance and strategy execution on a timely basis. The shift to semiannual reporting would cause longer blackout periods, reducing
flexibility for management and boards to transact in company stock during open trading windows. The
Proposed Amendment would not only remove regular public accountability; it could also constrain legitimate insider activity, which serves important price-discovery and incentive-alignment functions.

• Reduced Attractiveness and Competitiveness of U.S. Capital Markets

Moving to semiannual reporting could weaken the competitive advantage that U.S. markets enjoy relative
to other global markets and private capital alternatives. As MFA explained previously, in Europe, which has
moved away from mandatory quarterly reporting requirements, public markets have continued to lag behind the U.S., with lower deal volumes, weaker valuations, and thinner trading liquidity, even amid improving global conditions.6 Replicating that approach could similarly shift issuance activity away from U.S.
public markets, either to jurisdictions offering comparable liquidity with lower regulatory burdens or into
private markets where disclosure is limited to sophisticated investors.

II. Optional Quarterly Reporting Would Create Additional Concerns

The Commission's main response to the above concerns seems to be optionality, allowing issuers to choose
between quarterly and semiannual reporting. Optionality does not mitigate our concerns but instead adds new ones.

The optionality of reporting under the Proposed Amendment would lead to inconsistent disclosure practices, with some
companies continuing to report quarterly, others (informally) reporting only particular quarters, and others electing to
report semiannually. Such variability would disrupt comparability and the availability of timely, standardized
information, undermining the very objectives the disclosure regime is meant to serve. For example, mixed reporting

6 Id.

across index and ETFs constituents would disrupt comparability and complicate portfolio construction. Index providers
and fund managers would have to deal with inconsistent data, which would add confusion, reduce valuation accuracy
and impact how the index is composed and weighted. These inconsistencies would also exacerbate disparities within an
issuer's capital structure. As an example, debt investors often receive quarterly financials via covenant reporting
regardless of SEC filing requirements, while equity investors would be limited to semiannual disclosures. Such
imbalance would heighten information asymmetries between holders of different securities of the same issuer and
could distort relative pricing between debt and equity, creating an uneven playing field.

Additionally, optionality also raises important corporate governance questions. First, who within a company
decides whether to make the semiannual election (or earnings disclosures), and what process governs that decision?

Given that reporting frequency directly affects investor access to information, this is not a matter that

should rest solely
with management. As proposed, the election mechanism risks being captured by management interests that may not
align with the information needs of the investing public. Second, optionality leaves unanswered the consequences of a
company's failure to make an election. Because issuers would affirmatively elect, generally on an annual basis, a failure
to clearly make such an election could leave investors uncertain whether the issuer will report quarterly or semiannually
and create opportunities for issuers to manipulate the timing and signaling of that decision, leaving investors in limbo
and with limited visibility into what disclosure information they will receive.
By introducing variability in reporting practices across issuers, the Proposed Amendment would fragment the
information landscape, impair comparability, and create new governance risks, all while failing to address the underlying
concerns that prompted the proposal. The Commission should not adopt a framework that replaces investor protection
with increased investor confusion. For these reasons, MFA urges the Commission to retain the existing uniform quarterly
reporting requirement.
III. The Proposed Amendment Will Not Meaningfully Advance the Commission's Key Objectives
The lack of support for the Proposed Amendment's central premise, that a change in reporting frequency will
address the decline in public offerings, provides an independent reason for the Commission to reconsider the Proposed
Amendment. Notably, the Commission's economic analysis does not identify increased IPO activity as a potential benefit
of the Proposed Amendment, nor does it analyze how reducing reporting frequency would encourage companies to go
or remain public. Under federal securities laws, the Commission is required to consider the effects of its rulemaking on
efficiency, competition, and capital formation. Courts have made it clear that this obligation requires the Commission to
engage in a reasoned analysis of the rule's economic consequences, including its effects on capital formation.7 Absent
such analysis, the Commission cannot satisfy its statutory duty to evaluate whether the Proposed Amendment would
meaningfully advance capital formation.
7 See Business Roundtable v. SEC, 647 F.3d 1144, 1148–49 (D.C. Cir. 2011) (vacating SEC rule for failure adequately to assess
economic effects, including effects on efficiency, competition, and capital formation); Chamber of Commerce v. SEC, 412
F.3d 133, 144–45 (D.C. Cir. 2005) (holding the SEC must adequately consider costs and alternatives in rulemaking).

The absence of such analysis is particularly significant because the available evidence does not support the
assumption that reporting frequency is a meaningful driver of IPO activity or company participation. The Commission
has framed the Proposed Amendment as a means to encourage companies to go public (or to stay public) by alleviating

the burdens associated with public company status. That rational, however, rests on a causal assumption that lacks
empirical support. The decline in U.S. IPO activity is driven primarily by structural and market-driven factors, not
reporting frequency. Research highlights the increasing appeal of selling to larger firms rather than remaining
independent, along with the rapid growth of private capital markets, which allows startups to stay private longer at a
larger scale.8 From 2001 to 2016, roughly 90% of successful venture capital-backed exits occurred through trade sales
rather than IPOs, compared to just 20% in 1990 to 1991.9 More recent data indicates that this trend has persisted. Only
about 4% of U.S. venture capital-backed exits in 2025 were IPOs, with the remaining 96% occurred through acquisitions
or other private transactions.10 This trend reflects a rational shift by founders leveraging expanded access to private
capital, rather than a failure in public markets.11 In this context, regulatory costs appear to account for only a small share
of the overall decline in the number of public companies.12
The timing also undercuts the Commission's premise. The decline in IPOs began well before the enactment of
Sarbanes-Oxley, and subsequent legislative efforts to reduce public company burdens (including the JOBS Act of 2012)
have not reversed the trend.13 Given that those broader reforms failed to meaningfully increase IPO volumes, there is
little reason to conclude that replacing quarterly filings with a single semiannual report will succeed where previous
legislative efforts did not. The Commission therefore lacks a sufficient basis to conclude that the Proposed Amendment

decline predated the Sarbanes-Oxley Act).

will generate the capital formation benefits it suggests, while the costs identified above are likely to be realized
regardless.
The Commission’s related justification, that less frequent reporting will reduce short-termism and encourage
companies to focus on long-term value creation, is equally unsupported. The Commission does not commit to this
theory; it acknowledges that the academic evidence is mixed on whether quarterly reporting actually drives short-term
managerial behavior, that reducing reporting frequency is unlikely to affect genuinely long-horizon decisions, and that
other factors, such as executive compensation design and earnings guidance, likely matter far more than the reporting
cycle. Such concessions fatally undermine short-termism as a justification for the Proposed Amendment, and the
Commission cannot demonstrate that it would meaningfully curb short-termism.
Moreover, even setting the Commission’s own concessions aside, there is no reason to believe that changing the
reporting cadence from three months to six will alter decision-making over the five-, seven-, or ten-year horizons that
drive long-term value. Less frequent disclosure does not make management more long-term oriented; it simply makes
investors less informed. The Commission identifies no evidence that withholding material financial information for an
additional quarter improves capital allocation or creates shareholder value, and the weight of the research runs in the
other direction, more frequent reporting helps managers learn from market signals, improves investment efficiency, and
is associated with profitability gains that persist for years.14 The short-termism rationale therefore provides no basis for
the Proposed Amendment.
Finally, even if some issuers were to elect semiannual reporting, the Proposed Amendment would not
meaningfully reduce the compliance burdens that the Commission claims deter companies from going or staying public.
Public companies must maintain robust internal controls, financial reporting infrastructure, and governance processes to
ensure the accuracy and reliability of their disclosures (obligations that exist independent of reporting frequency).
Reducing the number of required filings from four to two does not eliminate the need to maintain quarter-close
processes, internal audit functions, disclosure committees, or the personnel and systems required to produce timely and
accurate financial statements. Companies would still need to track and assess material developments on an ongoing
basis to comply with their disclosure obligations under federal securities laws. Because the costs associated with public

company reporting are largely fixed, the infrastructure required to support those obligations would remain substantially
unchanged. As a result, the Proposed Amendment would do little to alter the cost-benefit analysis facing companies
considering whether to go public or remain public.

IV. The Commission Does Not Have Enough Information to Accurately Assess the Proposed Amendment's
Costs and Benefits

Even if the Commission were to disagree with MFA's substantive concerns, the current record provides an
independent reason to pause: the Commission cannot yet conduct the requisite economic analysis.

14 See Stephen A. Hillegeist, Asad Kausar, Arthur Kraft & You-il (Chris) Park, More Frequent Financial Reporting and Market
Feedback Effect: Evidence from U.S. and EU Regulatory Changes, J. ACCT. & PUB. POL'Y (forthcoming) (Feb. 11, 2026).

Courts of appeals have been clear: the Commission has a "statutory obligation to determine as best it can the
economic implications" of rules like the Proposed Amendment.15 Specifically, the Commission must consider the effect
of any new rule upon "efficiency, competition, and capital formation."16 The Commission's "failure to apprise itself -- and
hence the public and the Congress -- of the economic consequences of a proposed regulation makes promulgation of
the rule arbitrary and capricious and not in accordance with law."17

The Commission's current analysis of the Proposed Amendment is already flawed. The Commission estimates
that the Proposed Amendment will result in net compliance savings of approximately $200,000 in annual savings per
issuer. But it makes no attempt to quantify the Proposed Amendment's (far greater) costs. That failure is critical. The
costs associated with even a small change to risk premia, spreads, costs of capital, or liquidity are all but guaranteed to
wipe out the mere $200,000 in savings the Commission predicts. Plus, the Commission's estimate is far from certain. The
predicted adoption rate is nothing but guesswork; the Commission has no idea how many companies will switch to its
new Form 10-S. Nor does it consider whether certain types or sizes of companies are more likely to switch than others,
much less what that would mean for market quality or investors. Finally, the Commission's calculation likely overstates
issuers' savings given that the principal drivers of compliance costs -- internal controls -- will stay the same regardless of
reporting cadence.

In any event, the Commission cannot fully conduct the required economic analysis at this juncture. As the
Commission itself has explained, "the required economic analysis … considers the incremental benefits and costs for the
specific rule -- that is, the benefits and costs stemming from that rule compared to the baseline."18 The Commission
therefore must have an accurate and stable baseline against which a rule's effects can be measured. Without one, the

Commission cannot determine whether any identified costs or benefits are attributable to the rule in question, or to
something else entirely.
Here, the Commission cannot have a defined economic baseline because it is currently engaged in multiple,
concurrent reform initiatives affecting public company disclosure, including substantial revisions to Regulation S-K,
changes to filer status classifications, and adjustments to Form S-3 eligibility. These reforms will directly affect issuer
compliance costs, the production of information, and the value of disclosures to investors, the precise variables that
must be understood to assess the effects of altering reporting frequency. Yet the scope and substance of these reforms
remain unsettled.
The Commission cannot proceed in the face of that uncertainty. To do so, it would have to choose between
speculating as to the contours of the anticipated reforms and the corresponding economic effects, or ignoring the
anticipated reforms altogether. The first path is foreclosed by Business Roundtable v. SEC, where the D.C. Circuit held
15 Business Roundtable v. SEC, 647 F.3d 1144, 1148 (D.C. Cir. 2011).
16 15 U.S.C. §§ 78c(f), 78w(a)(2), 80a–2(c).
17 Business Roundtable, 647 F.3d at 1148 (internal quotation marks omitted).
18 National Ass'n of Priv. Fund Managers v. SEC, 151 F.4th 252, 269 (5th Cir. 2025) (internal quotation marks omitted).

that the Commission "failed … adequately to assess the economic effects of a new rule," in part, because the
Commission "neglected to support its predictive judgments."19 "[M]ere speculation," the Court explained, could not
suffice.20 And the second path -- ignoring the anticipated reforms and proceeding as though the existing disclosure
regime were fixed -- fares no better. In National Association of Private Fund Managers v. SEC, the Fifth Circuit rejected
precisely that approach, holding that the Commission cannot rely on an economic baseline that "ignore[d]" "highly
interrelated" and contemporaneously adopted rules; the Commission must account for such rules' "collective economic
effects."21 The same is true here.
MFA appreciates that developing a complete economic analysis in the face of multiple concurrent reforms might
be challenging. But courts have repeatedly held that any "difficulty" in estimating a rule's economic effects "does not
excuse the Commission" from its obligation to do so as best it can.22 If anything, the complexity of the task is reason for
the Commission to proceed with greater care, not with incomplete information.
To be clear, none of this is to say the Commission should rethink (or delay) reform more broadly. In fact, MFA
supports the Commission's ongoing efforts to modernize and streamline disclosure requirements, particularly through
content-focused reforms that refocus disclosures on material information, reduce duplicative obligations, and improve

data usability. But as MFA noted in its April 2026 letter regarding Regulation S-K, changes to narrative and qualitative
disclosure requirements should be considered holistically with any proposal to alter reporting frequency, and the
Commission should evaluate the aggregated costs and benefits of these interrelated reforms together.23
In short, if the Commission decides to proceed with changes to reporting frequency, such changes should be
adopted, if at all, only after these related reforms are finalized. A sound assessment of the Proposed Amendment's costs
and benefits is possible only when measured against a settled regulatory baseline -- one that reflects final decisions
regarding the content of required disclosures, filer status classifications, and the scope of available relief. The
Commission's statutory obligations, its own economic framework, and governing precedent all point to the same
conclusion: reforms of this magnitude must be sequenced deliberately, not adopted piecemeal.
* * * * *
MFA appreciates your consideration of our recommendations. We look forward to working with the Commission
on content-focused reforms that refocus disclosures on material information, reduce duplicative obligations, and
improve data usability. We would welcome the opportunity to discuss our recommendations in greater detail. Please do

Re: Semiannual Reporting, File No. S7-2026-15
Dear Secretary Countryman:
MFA1 writes in response to the Securities and Exchange Commission's ("Commission" or "SEC") proposal to
permit reporting companies currently required to file quarterly reports on Form 10-Q to elect instead to file semiannual
reports on new Form 10-S (the "Proposed Amendment").2 We submit this separate letter with the attached report by
Ron Alquist and Craig Lewis, Economic Analysis of the SEC's Proposed Rule on Semiannual Reporting (the "Report").3
MFA supports the Administration's efforts, including at the SEC, to improve public equity markets and make
going and staying public more attractive. MFA supports improvements to public company disclosures, with targeted
reforms that focus disclosure on preserving material information, eliminating duplicative requirements, and reducing
unnecessary costs -- all while preserving the material information investors need.
1 Managed Funds Association ("MFA"), based in Washington, D.C., New York City, Brussels, and London, represents the global
alternative asset management industry. MFA's mission is to advance the ability of alternative asset managers to raise
capital, invest it, and generate returns for their beneficiaries. MFA advocates on behalf of its membership
and convenes stakeholders to address global regulatory, operational, and business issues. MFA has more than 180 fund
manager members, including traditional hedge funds, private credit funds, and hybrid funds, that employ a diverse set of
investment strategies. Member firms help pension plans, university endowments, charitable foundations, and other
institutional investors diversify their investments, manage risk, and generate attractive returns throughout the economic
cycle.

https://www.federalregister.gov/documents/2026/05/07/2026-09095/semiannual-reporting.
3 Ron Alquist & Craig Lewis, Economic Analysis of the SEC's Proposed Rule on Semiannual Reporting (July 6, 2026)
(accompanying) (analyzing the Commission's economic analysis of the Proposed Amendment and concluding that the
proposal's quantified compliance-cost benefits do not account for potentially significant capital-market costs associated
with reduced transparency).

The Report supplements the separate comment letter that MFA is filing today on the Proposed Amendment (the
"MFA Comment Letter").4 For the reasons set out in the MFA Comment Letter, MFA urges the

Commission to withdraw
the Proposed Amendment. The Report also demonstrates that the Proposed Amendment fails to provide an economic
analysis justifying a fundamental reduction in the frequency of mandatory public financial reporting.
The Report offers a thorough economic assessment of the Commission's analysis and concludes that the
proposal's quantified benefits substantially understate its costs. Specifically, the Report finds that:

- The Proposed Amendment monetizes paperwork and compliance-cost savings while leaving significant capital-market costs largely unquantified.
- The Proposed Amendment's estimated net benefits depend heavily on a single, assumed 20% adoption rate that receives limited support in the Proposed Amendment and is materially higher than available real-world evidence.
- The Commission acknowledges but does not quantify several important cost channels that may arise from reduced reporting frequency, including increased information asymmetry, reduced liquidity, higher costs of capital, reduced price informativeness, diminished comparability, weaker investor monitoring, and switching-related costs.
- Even modest increases in issuers' cost of equity could generate shareholder losses that dwarf the Commission's estimated compliance cost savings.
- The Proposed Amendment creates a recurring reporting-cadence election that may allow issuers to act on private information, raising agency-cost and adverse-selection concerns.
- Reasonable alternatives could preserve issuer flexibility while reducing transparency-related costs and opportunistic switching incentives.

Before adopting any final rule, the Commission should quantify reasonably estimable capital-market costs,
present sensitivity analysis around issuer adoption, analyze the option value created by annual reporting-frequency
elections, and compare the Proposed Amendment against alternatives that better align issuer flexibility with investor
and market protections. Absent that additional work, the Commission's estimated net benefits do not provide a sound
basis for changing the reporting framework that has anchored U.S. public company disclosure for more than a half-
century.

Jerome Cooney Retired — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jerome Cooney The SEC must maintain the quarterly reporting requirements for publicly traded companies. As an investor in the markets, I digest these reports to best understand the underlying financial health of a company. Quarterly reporting provides the proper balance that ensures corporate transparency and management accountability that is vital for retail investors. It would be a significant error in judgement to change this accounting rule that has been in effect since 1970.

Jessica Allison Private investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jessica Allison I am opposed to the proposed changes to SEC reporting. I believe that keeping the reporting on a quarterly basis provides transparency. Transparency provides accountability and safety. Whenever large amounts of money is involved more transparency is always better. It keeps people honest.

Jessica Smith U.S. Citizen — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jessica Smith I am a U.S. citizen who has heard about this proposal and though I don’t work in finance, I can see the pattern here and strongly urge the Commission to withdraw this proposal and continue mandatory quarterly reporting on Form 10-Q. History shows that quarterly reporting creates a healthier economy. Interdependence and transparency are key to a healthy economy. Government regulations should be used for the good of all - to be fair, but also to stabilize wealth for all. When consumers are weak, companies cannot be as strong. A few on top will come out ahead with this proposal, but at the expense of the majority. This proposal does not reflect what the SEC was meant for. When the SEC is weakened by listening to the interests of only the most wealthy, we are headed in a direction that we’ve already experienced in this country… recessions, crashes, or even depression. We already know the outcome of semi-annual reporting comes at a price of a weak economy overall. Please drop this proposal. Thank you Jessica Smith

---

Jill Rothwello Motley Fool Asset Management — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jill Rothwello I am against moving to semi annual reporting from quarterly for public companies because having fewer updates means less transparency for individual investors. They deserve a steady stream of public information. Twice a year is not enough. The theory that executives chase quarterly targets because they're required to report quarterly does not hold up per study done by CFA Institute Research & Policy center. It studied the UK's experiment when they dropped mandatory quarterly reporting in 2014 and found that reporting frequency had no material impact on corporate investment behavior and companies that did stop quarterly reporting

didn't invest more in the long term. Meanwhile it greatly impacts individual investors. Please continue to require quarterly reporting. Thank you.

I. Executive Summary

The purpose of this report is to provide economic analysis to assist the United States Securities and Exchange Commission (the "SEC" or the "Commission") in its deliberations with respect to a new rule proposed under the Securities Exchange Act of 1934 (the "Exchange Act") entitled "Semiannual Reporting."[1]

The Commission's governing statutes require that the SEC "consider or determine" the consequences that a regulatory action will have on efficiency, competition and capital formation as well as investor protection.[2] In addition, as a matter of policy, the SEC has adopted a protocol to ensure that the best available information about a rule's likely economic

consequences is considered when exercising its rulemaking authority.3
Based on my review of the proposed rule, and based on my own experience and discussions with market participants, it is my opinion that:

• The Commission's economic analysis does not adequately evaluate the potential consequences of an optional semiannual reporting regime on market quality. The Commission's economic analysis fails to adequately analyze the mechanisms through which optional semiannual reporting may affect market quality measures such as bid-ask spreads, liquidity, trading volume, price efficiency, and the cost of capital. As a result, the Commission's economic analysis understates the potential effects of an optional semiannual reporting regime on the broader market in addition to issuers electing semiannual reporting.
• The Commission's economic analysis fails to consider that semiannual reporting would potentially make cross-company comparisons more difficult thus increasing costs for investors seeking to identify economically similar firms or conduct peer-

1 Semiannual Reporting, 91 Fed. Reg. 24968 (May 7, 2026) ("Proposing Release") available at https://www.govinfo.gov/content/pkg/FR-2026-05-07/pdf/2026-09095.pdf.
2 Section 2(b) of the Securities Act, 15 U.S.C. 77b (b), and Section 3(f) of the Exchange Act, 15 U.S.C. 78c(f) require the Commission, when engaging in rulemaking, where it is required to consider or determine whether an action is necessary or appropriate in the public interest, to consider, in addition to the protection of investors, whether the action will promote efficiency, competition, and capital formation. Further, Section 23(a)(2) of the Exchange Act, 15 U.S.C. 78w(a)(2) requires the Commission, when making rules under the Exchange Act, to consider the impact that the rules would have on competition, and prohibits the Commission from adopting any rule that would impose a burden on competition not necessary or appropriate in furtherance of the Exchange Act.
3 See "Memorandum Re: Current Guidance on Economic Analysis in SEC Rulemakings," U.S. Securities and Exchange Commission, March 16, 2012, available at https://www.sec.gov/divisions/riskfin/rsfi_guidance_econ_analy_secrulemaking.pdf.

group analysis, relative value analysis or performance benchmarking. Allowing reporting firms to opt into different reporting frequencies may impair comparability, which can have spillover effects even on firms that still choose to maintain quarterly reporting by fragmenting peer group information. The process where earnings announcements by one firm convey information about other firms in the same industry or peer group may be impaired when reporting periods are not aligned.
• The Commission's economic analysis overstates the cost savings likely to result from reduced reporting frequency. A substantial portion of public-company reported costs are fixed and must be incurred regardless of how often reports are filed. As a result, reducing the number of required SEC filings does not necessarily eliminate the underlying costs of producing financial information.
• The Commission's economic analysis fails to consider that optional semiannual reporting creates the potential for adverse selection in the choice of reporting frequency. Because the election is optional, economic theory predicts that the election will be disproportionately attractive to firms facing relatively high disclosure costs, including issuers with complex operating conditions, more valuable proprietary-

information, heightened uncertainty regarding future performance, or management teams that place a higher value on limiting the frequency of external scrutiny. As a result, the firms with the strongest incentives to elect semiannual reporting may also be those for which more frequent disclosure is most valuable to investors.

• The Commission's economic analysis fails to adequately consider how reducing reporting frequency weakens managerial accountability and diminishes the value of market feedback. Less frequently mandated disclosures increase the period over which earnings management can occur undetected. The Commission's economic analysis acknowledges this possibility, but it merits more rigorous analysis.

• The Commission's economic analysis frames the optional design as a neutral mechanism that allows each issuer to optimize its reporting cadence based on its own circumstances. This framing assumes that the decision whether to elect semiannual reporting is, for any given issuer, a function only of that issuer's individual characteristics and investor expectations. The Commission's economic analysis fails to adequately consider the legal and contractual constraints that may make the election unavailable or economically infeasible regardless of the issuer's preferences. The Commission's economic analysis does not identify the population of constrained

issuers and does not assess the competitive consequences for firms that cannot access the compliance cost savings available to their unconstrained competitors.

• The Commission's economic analysis draws on an incomplete review of the relevant economics and accounting literature. The Commission fails to analyze important peer-reviewed literature on how reporting frequency affects market quality metrics such as price efficiency, bid-ask spreads, trading volume, and information asymmetry. In addition, the proposed rule contains no analysis of the literature about adverse selection theory as applied to voluntary disclosure regimes or evidence on how consistent reporting periods impact investor information costs, peer group analysis, or the cost of capital. The analysis of the literature contained in the proposed rule also fails to provide a complete analysis of the short-termism literature and fails to acknowledge contradictory empirical evidence.

• The Commission's economic analysis fails to demonstrate that the proposed rule is likely to promote efficiency, competition, and capital formation.

II. Overview of the Proposed Rule

On May 5, 2026, the SEC issued a proposed rule that would permit Exchange Act reporting companies currently required to file quarterly reports on Form 10-Q to elect to provide interim reports on a semiannual basis using a newly created Form 10-S.[4] Under the proposed framework, an electing issuer would file a single Form 10-S covering the first six months of its fiscal year in lieu of the three Form 10-Q filings otherwise required, while continuing to satisfy its annual reporting obligations under Form 10-K. The proposal does not limit eligibility based on public float, market capitalization, or filer status; the election is available to domestic Exchange Act reporting companies subject to the periodic reporting requirements of Rules 13a-13 and 15d-13 without restriction. Issuers that do not elect semiannual reporting would continue to comply with existing Form 10-Q requirements.

The content of Form 10-S would be modeled in significant respects on Form 10-Q and would require interim financial statements and accompanying disclosures for the first six months of the issuer's fiscal year, with filing deadlines generally aligned with the timing

4 Proposing Release, at 24970-24971.

structure applicable to existing Form 10-Q filers, except that issuers would no longer file first- and third- quarter reports. The proposal includes conforming amendments to Regulation S-X addressing the presentation of interim financial statements, comparative-period

information, and related requirements associated with the transition from quarterly to semiannual disclosure.5

The Commission identifies two principal objectives underlying the proposal. First, the Commission states that reducing the frequency of mandatory interim reporting may decrease compliance costs associated with preparing, reviewing, and filing periodic reports, including accounting, legal, auditing, and internal administrative expenses.6 Second, the Commission states that less frequent mandatory reporting may reduce managerial incentives to focus on short-term financial results and thereby facilitate longer-term planning and investment.7

The Commission's economic analysis evaluates these asserted benefits while acknowledging possible effects on investors, analysts, market quality, information availability, and capital formation. The Commission solicits comment on whether the optional design will produce adverse selection in the reporting population, whether reduced disclosure frequency will impair market quality and analyst coverage, and whether form simplification rather than frequency reduction would be a more appropriate policy to pursue. As discussed in this report, the Commission's treatment of these questions as matters for comment rather than subjects of inquiry reflects a deficiency in the Commission's economic analysis.

III. The Economic Analysis Contained in the Proposing Release Is Incomplete and Does Not Provide a Reasoned Basis for Permitting Optional Semiannual Reporting

A. The Commission's Economic Analysis Fails to Quantify or Reasonably Consider the Costs of Optional Semiannual Reporting

The Commission's economic analysis recognizes that reducing the frequency of mandatory periodic reporting could affect the quantity and timeliness of information available to investors. However, the analysis does not fully evaluate the potential consequences of those changes for market quality. The Commission's economic analysis fails

5 Proposing Release, at 24970-24976.

6 Proposing Release, at 25016.

7 Proposing Release, at 24974.

to adequately analyze the mechanisms through which reduced disclosure frequency may affect market quality measures such as bid-ask spreads, liquidity, trading volume, price efficiency, and the cost of capital. As a result, the Commission's economic analysis understates the potential effects of an optional semiannual reporting regime on the broader market in addition to those issuers electing less frequent disclosure.

The failure of the Commission's economic analysis to fully evaluate the potential consequences of semiannual reporting on market quality is particularly notable because substantial peer-reviewed literature has examined the relationship between corporate disclosure and market quality. That literature generally finds that more frequent and more informative public disclosure reduces information asymmetry between informed and uninformed market participants and improves the efficiency with which securities markets incorporate information into prices.8

The mechanism by which disclosure affects market quality is well understood in the market microstructure literature. For example, mandatory periodic disclosure mitigates against adverse selection which arises when market makers or liquidity providers face the risk that trading counterparties possess private information not reflected in market prices. Because liquidity providers cannot directly observe whether a particular order originates from an informed or uninformed trader, they protect themselves by widening bid-ask spreads to compensate for expected losses to informed order flow. The magnitude of the adverse-selection component of the spread therefore depends, in part, on the amount of private information available to informed traders relative to the public information available to the

market.
Mandatory periodic disclosure mitigates this problem by reducing informational disparities among market participants. Regular public disclosure causes information to enter the marketplace on a broadly contemporaneous basis, reducing the informational advantage of insiders and other informed traders. A reduction in mandatory disclosure frequency can therefore be expected to increase the amount of private information available between reporting dates and thereby result in increased adverse-selection costs in trading.
The Commission acknowledges that reduced reporting frequency may affect information asymmetry, but it does not fully analyze how that effect may translate into

observable market-quality outcomes. In particular, the Proposing Release does not evaluate whether issuers electing semiannual reporting may experience wider bid-ask spreads, lower market liquidity, reduced trading activity, or a higher cost of capital as a result of less frequent disclosure.
The empirical disclosure literature provides substantial evidence that disclosure quality and market quality are closely linked. In their comprehensive review of the disclosure literature, Healy and Palepu (2001) conclude that corporate disclosure plays a central role in reducing information asymmetries between managers and outside investors and thereby improves capital-market functioning.9 Likewise, Leuz and Verrecchia (2000) examine German firms that voluntarily adopted international reporting standards, a commitment associated with more extensive disclosure, and find evidence of reduced information asymmetry as reflected in lower bid-ask spreads and higher share turnover.
10 These findings
are consistent with the broader theoretical prediction that enhanced disclosure improves liquidity and lowers the cost of capital.
Although neither study directly evaluates the effects of moving from quarterly to semiannual reporting, both support the proposition that disclosure frequency and disclosure quality can affect market quality through information-asymmetry channels. The Commission's economic analysis does not analyze this literature or explain the consequences of reduced mandatory disclosure as contemplated by the proposed rule.
This omission is significant because any increase in bid-ask spreads or reduction in liquidity represents a real economic cost borne by investors and issuers. Wider spreads increase transaction costs for investors, reduce market liquidity, and may increase the expected return demanded by investors as compensation for higher adverse-selection risk.
A reasoned economic analysis therefore requires more than a qualitative acknowledgment that information asymmetry may increase under a semiannual reporting regime. It requires an assessment of how reduced disclosure frequency may affect the market-quality metrics through which information asymmetry is revealed, including bid-ask spreads, liquidity, trading volume, and the cost of capital. Because the Proposing Release does not undertake that analysis and does not engage with the substantial academic literature linking
9 Healy & Palepu, “Information Asymmetry, Corporate Disclosure, and the Capital Markets: A Review of the
Empirical Disclosure Literature,” 31 J. Acct. & Econ. 405 (2001).
10 Leuz & Verrecchia, “The Economic Consequences of Increased Disclosure,” 38 J. Acct. Res. (Supp.) 91
(2000).

disclosure and market quality, it provides an incomplete assessment of the potential economic costs of this aspect of the proposed rule.

The Proposing Release presents a detailed quantitative estimate of the compliance cost savings the proposed rule is expected to generate. The Commission estimates net annual savings of approximately $198,000 per electing issuer, projects aggregate annual savings of $394 million assuming a 20 percent adoption rate and derives a ten-year present value of $2.9 billion to $3.4 billion using standard discounting. These estimates are presented as the basis for the Commission's conclusion that the proposed rule generates net benefits.

What the Proposing Release does not present is any corresponding quantification of the costs the rule is predicted to generate. The most significant of these is an increase in the cost of capital for electing issuers resulting from reduced disclosure frequency and the information asymmetry it produces. The Commission acknowledges in general terms that reduced disclosure may affect information asymmetry and market quality, but it does not undertake any rigorous analysis of how the proposed rule might impact an issuer's cost of capital.

The theoretical and empirical literature establishing the link between disclosure frequency and cost of capital is well-developed. Diamond and Verrecchia (1991) demonstrate that reduced public disclosure increases information asymmetry between firms and outside investors, raising the required return on equity by reducing market liquidity and widening bid-ask spreads.11 Leuz and Verrecchia (2000) provide empirical estimates: firms that commit to increased disclosure experience reductions in their cost of capital of one to three percentage points.12 The Commission's economic analysis cites Healy and Palepu (2001), which synthesizes this literature and documents the consistent association between disclosure quality and required returns.13 The Commission provides no explanation for why it relies on this literature to support claims about short-termism and compliance burdens while excluding its implications for a rigorous analysis of the proposed rule's likely impact on the cost of capital.

13 Paul M. Healy & Krishna G. Palepu, Information Asymmetry, Corporate Disclosure, and the Capital Markets:
A Review of the Empirical Disclosure Literature, 31 J. Accounting & Econ. 405 (2001).

The significance of the Commission's failure to quantify cost of capital effects can be seen by considering a break-even analysis whereby the Commission could ask what magnitude of increase in the cost of capital would offset the Commission's claimed net benefit of the proposed rule.

In order to conduct such a break-even analysis, the Commission would need to: (1) establish the average financial profile of a firm in the affected population; (2) quantify the dollar impact of a 1 percent Weighted Average Cost of Capital (WACC) increase on that average firm; and (3) calculate how small a WACC increase is needed to fully offset the Commission's claimed net benefit. Such an analysis would establish a break-even threshold that could then be compared to the likely change in WACC caused by the election of semiannual reporting.

In sum, the Proposing Release acknowledges that semiannual reporting may reduce the amount of information available to investors but does not fully analyze the potential implications for market quality. The Commission has not adequately evaluated the potential consequences of an optional semiannual reporting regime on information asymmetry,

liquidity, bid-ask spreads, price efficiency, analyst activity, or the cost of capital. Nor has it sufficiently considered whether the proposal's optional structure could generate adverse-selection effects that concentrate any deterioration in market quality among the issuers for which frequent disclosure is most valuable to investors. The impact of reduced reporting frequency on market quality is only superficially acknowledged in the Commission's economic analysis, despite being central to the Commission's statutory determinations regarding efficiency, competition, capital formation, and the public interest.

B. The Commission's Economic Analysis Fails to Account for Fragmentation of Reporting Regimes, Comparability Loss, and Spillover Effects

Semiannual reporting would make cross-company comparisons more difficult, thus increasing costs for investors seeking to identify economically similar firms or conduct peer-group analysis, relative valuation exercises, or performance benchmarking. Allowing certain firms to opt into different reporting frequencies may impair comparability, which can have spillover effects even on firms that still choose to maintain quarterly reporting by fragmenting peer group information. The process where financial reports by one firm convey information about other firms in the same industry or peer group may be impaired when reporting periods are not aligned.

The proposed rule would introduce the possibility that otherwise comparable issuers operate under different interim reporting schedules. Under the current regime, virtually all Exchange Act reporting companies subject to Form 10-Q requirements provide standardized interim reports on a common quarterly cadence. Under the proposed rule, some issuers would continue quarterly reporting while others would elect semiannual reporting, and some semiannual filers may supplement required reports with varying forms of voluntary interim disclosure. As a result, investors, analysts, and other market participants would increasingly evaluate firms using information that differs not only in content but also in timeliness and frequency.

Because the election to use semiannual reporting is optional and may be revisited over time, differences in reporting frequency could become a persistent feature of the reporting landscape. The principal economic question is whether the benefits of issuer flexibility outweigh the costs associated with reduced uniformity and comparability in the timing and availability of public information.

The academic literature has long emphasized the importance of comparability in financial reporting. For example, De Franco, Kothari, and Verdi (2011) find that greater accounting comparability is associated with improved analyst performance, greater information transfer across firms, and lower information acquisition costs.14 Although this literature focuses primarily on the comparability of accounting outputs rather than reporting frequency itself, its underlying insight is relevant in that investors derive value when information about economically similar firms can be evaluated using common benchmarks and comparable reporting schedules.

The most immediate comparability effect of the proposal arises from differences in the timeliness of publicly available information among otherwise similar firms. Under the current regime, peer firms generally disclose interim financial information on a common quarterly schedule. Under the proposed rule, a quarterly filer may provide first-quarter and third-quarter financial results while a semiannual-reporting peer may not provide a comparable regulatory filing covering the same period. At various points during the year, investors comparing firms within the same industry may therefore have access to different amounts of verified information regarding recent operating performance.

14 Gus De Franco, S.P. Kothari & Rodrigo S. Verdi, The Benefits of Financial Statement Comparability, 49 J.
Accounting Research 895 (2011).

The resulting challenge is not that peer comparison becomes impossible, but that it becomes more costly and potentially less precise. Analysts may need to rely on older financial statements, management guidance, voluntary earnings releases, industry data, or model-based estimates to evaluate firms that are not reporting on the same schedule. These adjustments can restore some degree of comparability, but they require additional effort and introduce additional estimation errors.

The Commission acknowledges this issue in Question 7, which asks whether differences in reporting frequency could affect comparisons among issuers. Yet the economic analysis does not attempt to evaluate the magnitude of those effects or the extent to which investors and intermediaries would incur additional costs to compensate for reporting-frequency differences.

The potential effects on comparability may be particularly relevant if election decisions are concentrated within particular industries or issuer types. The Proposing Release solicits comment on whether adoption rates may differ across industries and notes that certain categories of issuers may have stronger incentives to elect semiannual reporting than others. If choosing semiannual reporting is correlated with characteristics such as firm size, growth stage, analyst coverage, or financing needs, peer groups may become segmented in ways that are themselves economically meaningful.

Such clustering would not necessarily eliminate comparability within industries, but it could complicate relative valuation exercises. Analysts may choose to compare firms using a mixture of current-quarter data for some issuers and older semiannual information for others. This could affect earnings forecasts and other analyses that rely on contemporaneous and synchronized financial information.

The proposal may also affect comparability over time for individual issuers. If an issuer elects semiannual reporting for one period and subsequently returns to quarterly reporting, users of financial statements may encounter discontinuities in the availability and granularity of interim information. Historical trend analysis often relies on consistent observation intervals. Changes in reporting frequency do not make such analysis impossible, but they may require analysts to reconstruct or estimate missing interim observations in order to maintain a consistent time series.

The proposed rule may create comparability issues across markets and investment products. For example, across debt and equity markets debt investors may receive quarterly financial reporting as a requirement in bond covenants, while equity investors would rely on

semiannual disclosures from issuers who elect semiannual reporting. Across products, mixed reporting cadences across issuers could impede comparability and complicate portfolio construction for financial market indices and exchange traded funds (ETFs). This potential lack of comparability across markets and products will likely increase information asymmetry and potentially distort relative pricing between debt and equity. This issue is not addressed in the Commission's economic analysis.

The Commission's economic analysis recognizes the potential for issues related to comparability in its request for comment regarding issuer elections and transitions between reporting regimes. However, the economic analysis does not evaluate the extent to which semiannual reporting may increase costs for investors and analysts.

Comparability has value not only at the level of individual investment decisions but also for market-wide information systems. Intermediaries such as investment managers, research providers, data vendors, credit analysts, benchmarking services, and academic researchers frequently rely on standardized reporting schedules to aggregate and compare information across firms.

These market intermediaries do not depend on the comparability of any particular pair of companies but on the synchronized, contemporaneous availability of standardized financial data across a defined population of issuers. These intermediaries are not themselves

parties to any individual issuer's reporting frequency decision. However, the economic consequences of issuer decisions spill over to these participants, that is, the index providers, passive fund managers, credit analysts, and benchmark users. The Commission's economic analysis does not address the economic impact on this category of market participant.

A voluntary reporting regime would not eliminate the ability of these intermediaries to perform such functions, but it could increase the costs of data collection and analysis. Firms reporting on different schedules would require additional adjustments to produce comparable datasets, and some information users may face greater uncertainty when comparing companies whose most recent regulatory disclosures cover different reporting periods.

These costs would fall largely on investors and information intermediaries rather than on issuers themselves. As a result, these costs may not be reflected in The Commission's economic analysis that looks to issuer-level compliance-cost estimates. Yet these costs are relevant to any assessment of the proposed rule's overall economic consequences.

The Proposing Release suggests that a reduction in mandatory disclosure may be partially offset by voluntary quarterly disclosures, including earnings releases, investor presentations, and other interim communications. That possibility, however, does not mitigate the proposed rule's costs from an investor perspective. The principal benefit of the current framework is that information is disclosed using a common framework. For investors, analysts, and asset managers, this fragmentation increases information-processing costs and complicates financial modeling, peer-group analysis, performance benchmarking, and relative valuation exercises. Instead of analyzing companies using comparable and contemporaneous information, market participants would be required to reconcile information from differing reporting periods.

The Commission cannot assume that voluntary disclosure will eliminate comparability concerns. Rather, the relevant question is whether voluntary disclosure practices would be sufficiently widespread, consistent, and reliable to preserve the informational benefits currently associated with standardized quarterly reporting.

C. The Commission's Economic Analysis Overstates the Cost Savings from Reduced Reporting Frequency

The Commission's economic analysis overstates the cost savings likely to result from reduced reporting frequency. Several features of the current reporting regime illustrate why reporting costs may not decline proportionately with filing frequency. First, much of the compliance infrastructure necessary to support public-company reporting must be maintained continuously. Accounting personnel, internal-control systems, disclosure controls, legal costs, financial reporting software, and financial close procedures remain necessary whether an issuer files three interim reports annually or one. These resources are not easily scaled in proportion to the number of required filings. Consequently, eliminating a filing may reduce incremental reporting costs without materially reducing the fixed costs of maintaining a reporting organization.

Second, many substantive reporting obligations continue under the proposed regime. Semiannual reporting would still require the preparation of interim financial statements, comparative-period disclosures, auditor review procedures, management review, and compliance with applicable accounting and disclosure requirements. A significant portion of the underlying compliance infrastructure would therefore remain necessary under Form 10-S.

Third, the Commission acknowledges the possibility that many issuers electing semiannual reporting may continue to disseminate quarterly earnings information voluntarily for lenders, debt investors, counterparties, boards, rating agencies, and internal management purposes. In addition, counterparties under financing agreements, credit facilities, bond indentures, and ISDA arrangements often require quarterly or even monthly financial

reporting. If firms continue to prepare quarterly financial information, and communicate quarterly performance to investors, much of the operational work associated with quarterly reporting may persist. In that circumstance, the proposal would eliminate only a subset of the activities associated with Form 10-Q compliance, leaving many of the underlying information-production costs unchanged.

This distinction matters because it bears directly on the reliability of the proposal's cost-benefit analysis. If a substantial share of Form 10-Q costs is attributable to complexity rather than frequency, then estimates of cost savings derived from reducing the number of filings may overstate the economic benefits of the proposal. At the same time, the principal costs associated with reduced reporting frequency would remain unchanged.

The proposed rule does not attempt to decompose Form 10-Q compliance costs into frequency-sensitive and frequency-insensitive components. In effect, the Commission's economic analysis treats reporting frequency as a proxy for reporting burden without first establishing that the two are closely linked. Yet the existence of a plausible complexity-based explanation for reporting costs suggests that reporting frequency and reporting burden are not interchangeable concepts. Before concluding that reduced reporting frequency is an efficient response to reporting costs, the Commission should first determine how much of those costs arise from reporting frequency and how much arise from the substantive requirements accompanying periodic reports. That decomposition is necessary before any reasoned determination that a frequency-based remedy is appropriately matched to the compliance burden the proposal seeks to address.

The Commission's own request for comment suggests that it recognizes the distinction. Question 15 asks whether the Commission should simplify the content requirements of Form 10-Q as an alternative or complement to reducing reporting frequency. The existence of that question implicitly acknowledges that at least some portion of Form 10-Q's compliance burden may derive from the complexity and scope of required disclosures rather than from the fact that reports are filed quarterly. Yet the economic analysis does not estimate the relative importance of these two sources of cost, nor does it evaluate the

potential benefits of an alternative specification of the proposed rule focused on scope, complexity, and format requirements of issuer reporting regardless of frequency. The proposed rule therefore identifies a potentially reasonable alternative without analyzing whether that alternative would address the perceived burden more directly and with fewer consequences for investors.

Potential approaches for simplifying current reporting requirements include simplifying interim disclosure requirements, modifying comparative-period presentation requirements, reducing XBRL obligations for interim filings. Whether such alternatives would be superior to a reduction in reporting frequency is ultimately an empirical question. However, the Commission does not conduct this analysis.

The Proposing Release argues that cost savings accruing to companies electing semiannual reporting could encourage additional companies to become or remain a public company.

15 However, the Commission's economic analysis never concludes that the proposed rule is likely to increase the number of public companies or the amount of capital raised through registered offerings. Nor does it even attempt to estimate the magnitude of any such effect. Importantly, the Commission concedes that "non-regulatory factors may play a more significant role in driving initial public offering activity.

" 16 A central justification for the proposed rule is therefore contradicted by the Commission itself and otherwise left entirely unsubstantiated.

Empirical evidence cited in the Proposing Release supports the argument that rather than regulatory compliance costs, the dominant factor keeping companies private longer and

reducing IPO volume has been the significant increase in the availability of private capital in recent years.
17 As private capital has become more widely available, companies that would previously have had limited funding alternatives to a public offering can now raise capital at

16 Proposing Release, at 24988 FN 138: “While savings associated with the proposed amendments may be one factor in a company’s decision to go public (or to stay public), we also acknowledge that non-regulatory factors may play a more significant role in driving initial public offering activity.”
17 Michael Ewens, Kairong Xiao & Ting Xu, “Regulatory Costs of Being Public: Evidence from Bunching Estimation,” 153 J. Fin. Econ. 103775 (2024) (estimating that regulatory costs may explain only about 7.3 percent of the decline in the likelihood of initial public offerings after 2000, and stating that non-regulatory factors, such as abundant private equity financing, changing economies of scale and scope, and changing acquisition behavior, are likely to have played a more important role).

scale and at favorable valuations while remaining private. Global private capital assets under management rose to $16 trillion in 2024.18

D. The Commission's Economic Analysis Fails to Adequately Address Adverse Selection in the Choice of Reporting Frequency

A central feature of the proposed rule is that participation in the semiannual reporting regime would be optional. The Commission frames the optional design as a virtue of the proposed rule because it provides issuers with the “flexibility to determine the frequency of interim reporting that best serves the company and its investors.”19 This framing treats reporting frequency as a preference variable that issuers are better positioned than regulators to optimize, and it underlies the Commission’s reliance on market forces to discipline the process. There are several problems with this framing, including that it assumes the election is informationally neutral in that market participants will not draw inferences from an issuer’s decision with respect to reporting frequency.

Under the current mandatory quarterly regime, the market draws no adverse inference from quarterly reporting, because all reporting companies report on the same schedule and the reporting decision conveys no issuer-specific information. The proposed rule converts this informationally neutral act into an informationally significant one.

The voluntary disclosure literature provides the relevant analytical framework. Verrecchia (1983) and Dye (1985) demonstrate that disclosure choices may convey information because firms possess private information about their circumstances and incentives that is not fully observable to investors.20 In this literature, once disclosure becomes discretionary, the decision whether to disclose (or in this case, whether to remain subject to quarterly reporting) can itself become informative.

Under the current regime, investors generally observe a common quarterly reporting schedule across Exchange Act reporting companies. Because reporting frequency is prescribed by rule, investors ordinarily cannot infer anything about a firm’s characteristics from its reporting choice. Under the proposed rule, investors would have reason to ask
18 PricewaterhouseCoopers, Private Capital at a Crossroads: Industry Convergence (2025), available at https://www.pwc.com/gx/en/issues/business-model-reinvention/how-we-fund-and-insure/private-

equity-

of Nonproprietary Information, 23 J. Acct. Res. 123, 123–25 (1985).

whether firms electing semiannual reporting differ from firms choosing to remain quarterly reporters.
The Proposal's estimates regarding adoption rates are flawed and incomplete. At the outset, the Commission provides virtually no support for its estimate that 20 percent of companies will adopt Form 10-S. For example, the Commission's estimate appears to rely heavily on a survey conducted by a single exchange that represented the self-reported views of approximately 6 percent of the exchange's U.S. quarterly-reporting population.
21 The
survey participants were not randomly selected but instead were comprised of a self-selected group of companies who had demonstrated interest in public company regulatory reforms.
The Commission's adoption rate analysis does not examine which subset of companies may adopt semiannual reporting. The Proposing Release acknowledges the possibility of differential adoption rates but does not model the determinants of election behavior or the implications of self-selection for market outcomes. As a result, the Commission's economic analysis implicitly evaluates the proposed rule as though issuers electing semiannual reporting and those that do not were broadly comparable groups.
One potential source of adverse selection arises from differences in compliance costs across issuers. However, reporting costs are unlikely to be distributed uniformly across firms. Companies with multiple business lines, extensive geographic operations, complex financing arrangements, significant acquisition activity, or extensive disclosure obligations may incur substantially higher compliance costs than simpler firms in preparing interim reports.
These differences in compliance costs raise the question of whether the population most likely to elect semiannual reporting may differ systematically from the population least likely to elect it. If so, the Commission cannot evaluate the proposal solely by estimating average compliance-cost savings across all issuers. It must also consider whether the issuers generating the largest private benefits from the election of semiannual reporting are the same issuers whose reduced reporting frequency would impose the largest informational costs on investors.
The election of semiannual reporting may also be influenced by an issuer's financial condition. Quarterly reporting provides investors, creditors, counterparties, and other stakeholders with regular updates regarding a firm's operating performance and financial position. Firms facing elevated uncertainty, liquidity pressures, deteriorating performance, or
21 The survey obtained responses from 187 companies out of the exchange's approximately 3,100 listed issuers.
183 of the 187 responding companies answered the question about semiannual reporting.

heightened financing needs may have stronger incentives to reduce reporting-related scrutiny than firms facing fewer financing constraints. At the same time, investors may place greater value on timely information about those firms precisely because uncertainty is elevated.
This observation does not imply that financially constrained firms would elect semiannual reporting in disproportionate numbers. Rather, it suggests that adoption rates could be correlated with leverage, credit quality, earnings volatility, financing needs, or other indicators of financial condition. The Proposing Release does not analyze these factors or estimate how the informational value of quarterly reporting may differ across firms.
The critical point is not that issuers electing semiannual reporting would necessarily

be lower-quality firms. It is that the election decision itself becomes a signal, and investors cannot unscramble the signal at the individual-firm level. Because the private considerations underlying a reporting election are unobservable, rational market participants cannot distinguish firms that elect semiannual reporting for benign reasons from those that elect it to limit disclosure of adverse information. They will instead form expectations about the electing population as a whole, that is, discounting valuations to reflect the possibility that the group is systematically skewed toward firms with unfavorable private information. This is the adverse selection problem analyzed by Verrecchia (1983) and Dye (1985) in the voluntary disclosure context. The discount falls on all electing issuers regardless of their individual motivations, and it is therefore largest precisely among the firms for whom reduced reporting frequency would be a genuine operational benefit rather than a strategic concealment device. This is the mechanism through which adverse selection imposes a cost on the rule's intended beneficiaries, and the Commission's economic analysis does not address it.

The market-microstructure literature provides a framework for understanding this possibility. Glosten and Milgrom (1985) demonstrate that greater uncertainty regarding the distribution of information among market participants can increase adverse-selection costs in trading and contribute to wider bid-ask spreads.22 Diamond and Verrecchia (1991) similarly show how disclosure can reduce information asymmetry and improve market liquidity, thereby lowering the cost of capital.23 Huang and Stoll (1997), Easley and O'Hara (1987, 1992) establish empirically that an adverse selection component is a consistently present and

23 Douglas W. Diamond & Robert E. Verrecchia, Disclosure, Liquidity, and the Cost of Capital, 46 J. Fin. 1325
(1991).

economically meaningful portion of the bid-ask spread in trading.

24 These studies identify
mechanisms through which a reduction in mandatory disclosure frequency could affect trading conditions and financing costs.

Evidence from foreign reporting-frequency reforms provides useful, though imperfect, evidence regarding these issues. The European Union's 2013 elimination of mandatory quarterly reporting has generated a growing empirical literature examining how firms and market participants responded when quarterly reporting became less prevalent. Some studies find evidence consistent with a deterioration in firms' information environments, including reduced analyst coverage, lower forecast accuracy, and reduced market liquidity, while others find more limited effects and emphasize substantial heterogeneity across firms, disclosure practices, and market settings.
25

These studies do not provide a direct estimate of the effects of the proposed rule, which differs in important respects from the European reforms. Nonetheless, they demonstrate that adoption decisions, information environments, and market-quality outcomes may be interconnected. The existence of this literature makes the absence of a more developed analysis of self-selection effects in the proposing release particularly notable.

The central issue is not whether every issuer electing semiannual reporting is trying to withhold information. Rather, it is whether the Commission can reasonably assess the proposal's consequences without analyzing who is likely to elect semiannual reporting and how those election decisions may affect investor perceptions, information asymmetry, market liquidity, and the cost of capital. Because the proposal’s economic effects depend critically on the composition of the adopting population, a rigorous analysis of adverse-selection effects needs to be a necessary component of the Commission's overall cost-benefit

assessment contained within its economic analysis.

E. The Commission’s Economic Analysis Fails to Adequately Consider How
Reducing Reporting Frequency Weakens Managerial Accountability and
Diminishes the Value of Market Feedback
The Commission’s economic analysis fails to adequately consider how reducing
reporting frequency may increase principal-agent costs by inhibiting the ability of investors to
monitor managerial performance and to intervene to hold management accountable. The
Commission’s economic analysis acknowledges that reducing the frequency of mandatory
periodic reporting could exacerbate principal-agent problems between managers and
shareholders. The Commission's treatment of this issue is, however, brief, largely qualitative,
and unaccompanied by any meaningful attempt to assess the likely magnitude of these
effects. Although the Commission’s economic analysis recognizes the concern in general
terms, it does not engage with the substantial body of academic literature examining how
disclosure frequency affects managerial accountability, information asymmetry, earnings
management, and the effectiveness of corporate governance mechanisms.
The result is an economic analysis that identifies agency costs as a potential
consequence of the proposed rule but does not meaningfully assess either their likely
magnitude or the mechanisms through which they could arise.
Standard agency theory, originating with Jensen and Meckling (1976), holds that
managers have private incentives that may diverge from shareholder interests, and that
mechanisms for monitoring managerial behavior reduce the welfare losses associated with
that divergence.26 Periodic public disclosure is one such mechanism because it requires
managers to produce structured, auditor-reviewed accounts of financial performance at
regular intervals, reducing the informational advantage that management holds over outside
investors and limiting the duration over which deviations from shareholder-maximizing
behavior can operate undetected.27 Shleifer and Vishny (1997) identify disclosure as a key
element of corporate governance infrastructure because it constrains opportunistic managerial
behavior through external scrutiny. Healy and Palepu (2001) conclude that mandatory
26Michael C. Jensen & William H. Meckling, Theory of the Firm: Managerial Behavior, Agency Costs and
Ownership Structure, 3 J. Fin. Econ. 305 (1976).
27Andrei Shleifer & Robert W. Vishny, A Survey of Corporate Governance, 52 J. Fin. 737 (1997).

disclosure requirements reduce information asymmetry and improve the effectiveness of
external monitoring of managerial performance.

28
The implications for the proposed rule are straightforward. Reducing the frequency of reports from four per year to two lengthens the period during which management may possess information not subject to mandatory public disclosure. To the extent that periodic reporting promotes managerial accountability and facilitates investor monitoring, a reduction in reporting frequency may weaken those governance mechanisms. The Commission acknowledges this possibility but does not evaluate the relevant empirical literature or attempt to assess the likely magnitude of these effects with respect to the proposed rule.
A substantial body of empirical research finds that managers have incentives to manage reported earnings, particularly around benchmarks such as avoiding losses, meeting analyst expectations, or avoiding earnings declines.29 More frequent disclosure can constrain such behavior by increasing the frequency of external monitoring and reducing the period over which accrual-based distortions may remain undisclosed.30
The literature indicates that reducing mandatory reporting frequency could weaken these monitoring mechanisms. Less frequent reporting lengthens the interval between mandatory disclosures, potentially increasing management's discretion over the timing and presentation of financial information and reducing the frequency with which investors, analysts, auditors, and boards of directors can evaluate reported performance against underlying operating results.
Coffee (1984) identifies the reduction of managerial discretion over the timing and content of disclosures as one of the central governance functions of mandatory disclosure requirements. Quarterly reporting limits management’s ability to delay the disclosure of adverse developments or to strategically time the release of unfavorable information.
31
Reducing reporting frequency necessarily weakens that constraint. The proposed rule’s

Rev. 717 (1984) (arguing that mandatory disclosure reduces managerial opportunism by removing the issuer’s
discretion over timing and content of disclosures).

optional structure reintroduces the governance problem that mandatory quarterly reporting was designed to address.
Quarterly reporting creates recurring occasions on which managerial performance is evaluated by investors, analysts, creditors, and other market participants. Earnings releases, Form 10-Q filings, management discussion and analysis, and related communications collectively facilitate external scrutiny of managerial decisions and firm performance. They also improve the information content of stock prices, allowing managers to receive more timely and accurate feedback from investors regarding the market’s assessment of corporate performance and strategic decisions.
Reducing mandatory reporting frequency lengthens the interval between these structured monitoring events. To the extent that external scrutiny influences managerial behavior, a reduction in reporting frequency may delay the identification of operational

underperformance, reduce pressure for corrective action, and weaken the connection between observed performance and market discipline. These potential effects are particularly relevant for firms with weaker internal governance structures, where external monitoring may play a more significant role. The Commission's economic analysis does not evaluate whether these governance effects are likely to occur, whether they may vary across firms, or whether they could offset some of the benefits the Commission attributes to reduced reporting frequency.
Semiannual reporting lengthens the window during which underperforming managers are insulated from this form of public accountability. A manager whose operating decisions are producing deteriorating results will not be required to disclose that deterioration to public investors for up to six months; the quarterly earnings release that would otherwise force acknowledgment and investor response is simply absent. The governance consequences fall on the shareholders of electing issuers.
The Commission's principal justification for the proposed rule rests in part on the premise that quarterly reporting encourages managerial short-termism by increasing pressure to meet near-term earnings targets. In support of this proposition, the proposed rule cites Graham, Harvey, and Rajgopal (2005), which reports survey evidence indicating that many chief financial officers perceive pressure to meet earnings benchmarks.32 That survey, however, does not establish that mandatory quarterly reporting is the principal cause of such
32 John R. Graham, Campbell R. Harvey & Shiva Rajgopal, The Economic Implications of Corporate Financial
Reporting, 40 J. Acct. & Econ. 3 (2005).

behavior, nor does it demonstrate that reducing reporting frequency would mitigate the underlying incentives.
The Commission offers no justification of why a six-month reporting cycle, which is still a short-term cycle, would fall below a threshold at which short-termism would cease to operate. If short-termism is caused by managing to the next reporting date, then moving the reporting date from 90 to 180 days does not cure the problem, it merely lengthens the interval between episodes. The Commission offers no theoretical or empirical evidence that semiannual reporters behave differently from quarterly reporters with respect to long-term investment.
Other literature suggests that to the extent short-termism exists, it is the result of factors other than reporting frequency. Dechow and Sloan (1991), for example, attribute reductions in research and development expenditures primarily to managerial horizon problems associated with incentives created by the departure date of a CEO.
33 Similarly,
Edmans, Fang, and Lewellen (2017) find that investment distortions are closely associated with equity-vesting incentives and compensation structures.34 These studies suggest that short-termism may arise from compensation arrangements, managerial career concerns, and other incentive structures. Accordingly, the Commission's conclusion that reducing reporting frequency will meaningfully alleviate short-termism rests on a causal relationship that the cited literature does not clearly establish.
Hillegeist et al. (2026) offers a different narrative on reporting frequency and managerial short-termism not considered in the Commission's economic analysis.35 The paper's central question is whether mandatory financial reporting frequency affects the quality of corporate investment decisions. Specifically, the authors address the question of whether more frequent reporting improves or worsens long-term investment behavior. The paper's findings run in precisely the opposite direction from what the Commission assumes. The authors find that more frequent reporting enhances the informational role of stock prices and enables managers to make better-informed long-term investment decisions, and
33 Patricia M. Dechow & Richard G. Sloan, Executive Incentives and the Horizon Problem: An Empirical

Investigation, 14 J. Acct. & Econ. 51 (1991).
34 Alex Edmans, Vivian W. Fang & Katharina A. Lewellen, Equity Vesting and Investment, 30 Rev. Fin. Stud.
2229 (2017) (documenting the relationship between short-duration equity compensation and reductions in long-
term investment).
35 Hillegeist, Stephen A., Asad Kausar, Arthur Kraft, and You-il (Chris) Park. "More Frequent Financial
Reporting and Market Feedback Effect: Evidence from U.S. and EU Regulatory Changes." Journal of
Accounting and Public Policy 56 (March 2026): 107421. https://doi.org/10.1016/j.jaccpubpol.2026.107421.

improves profitability as a result of improved efficiency in capital allocation. These findings point in the opposite direction from the Commission's conclusion. Rather than promoting better long-term decision-making, reducing reporting frequency would degrade the informational content of stock prices and diminish managers' ability to learn from market signals when making long-term investment decisions. This implies that the proposed rule would cause short-termism rather than curing it.
At the same time, a reduction in reporting frequency may weaken monitoring mechanisms that address distinct agency problems, including earnings management and managerial entrenchment. Although the proposed rule notes that firms could continue to provide voluntary quarterly updates, voluntary disclosure cannot be assumed to provide an equivalent substitute for mandatory disclosure. The disclosure literature has long recognized that managers possess incentives to disclose favorable information while delaying or withholding unfavorable information. As a result, voluntary disclosure regimes generally do not eliminate information asymmetries to the same extent as mandatory reporting requirements.
Regulation FD prohibits the selective disclosure of material nonpublic information to certain market participants without simultaneous public disclosure.36 It does not, however, prohibit insiders from holding material nonpublic information; it restricts only its selective communication. Reducing mandatory reporting frequency would lengthen the intervals during which corporate insiders possess information that has not yet been disclosed through required public filings. To the extent that mandatory reporting compresses the duration of insider informational advantages, semiannual reporting operates in the opposite direction by extending those periods.
The Proposing Release acknowledges that some issuers may prefer quarterly reporting because it provides more frequent opportunities for directors and officers to trade during open trading windows. More broadly, however, the Commission does not evaluate whether longer periods of informational asymmetry could affect compliance costs, insider-trading controls, investor confidence in market fairness, or the risk of inadvertent selective disclosure during analyst meetings, investor conferences, and other investor-relations activities.
3617 C.F.R. § 243.100 (Regulation FD, prohibiting selective disclosure of material nonpublic information to
certain market participants without simultaneous public disclosure).

The Commission's economic analysis also does not engage with the limited but relevant natural-experiment literature examining the consequences of reductions in mandatory disclosure frequency. Nallareddy, Pozen, and Rajgopal (2017) study the repeal of the United Kingdom's interim management statement requirement, which reduced mandatory disclosure obligations for U.K. public companies.
Their findings suggest that reductions in mandatory disclosure frequency were

associated with declines in investment efficiency and weaker monitoring effects, particularly among firms exhibiting weaker governance characteristics. While institutional differences between U.K. and U.S. markets warrant caution in extrapolation, the study provides rare causal evidence regarding the effects of reduced disclosure frequency in a developed capital market.

The Commission's economic analysis acknowledges that reduced reporting frequency may diminish shareholder monitoring and exacerbate principal-agent problems, but it treats these concerns largely as qualitative observations rather than as economic effects warranting empirical evaluation. The Commission identifies agency costs as a potential consequence of the proposed rule yet does not attempt to evaluate their likely magnitude, incidence, or importance despite the existence of a substantial body of relevant academic research.

The literature discussed above provides a framework through which the Commission could have more rigorously assessed these issues. The Commission's failure to engage meaningfully with that literature leaves an important component of the cost-benefit analysis incomplete and raises substantial questions as to whether the Commission's economic analysis has adequately evaluated the governance consequences of the proposed rule.

F. The Commission's Economic Analysis Fails to Address Competitive Inequality Arising from Differential Regulatory Constraints on Reporting Frequency Choice

The Commission's economic analysis of the proposed rule frames the optional design as a neutral mechanism that allows each issuer to optimize its reporting cadence based on its own circumstances. This framing assumes that the decision whether to elect semiannual reporting is, for any given issuer, a function only of that issuer's individual characteristics and investor expectations. The Commission's economic analysis fails to adequately consider the legal and contractual constraints that may make the election unavailable or economically infeasible regardless of the issuer's preferences.

Many Exchange Act reporting companies face legal, regulatory, and contractual obligations that require quarterly financial disclosure to counterparties, regulators, or creditors independent of the SEC's periodic reporting rules. For these issuers, the semiannual election is either unavailable as a legal matter or available only at a cost such as the cost of renegotiating debt instruments, gaining regulatory approval, or amending contracts. These costs erode or eliminate the compliance cost savings the Commission attributes to electing issuers. Where two firms in the same product market face different regulatory costs of choosing semiannual reporting, the proposed rule creates a competitive asymmetry. The Commission's economic analysis does not identify the population of constrained issuers, does not estimate the cost asymmetry they would face, and does not assess the competitive consequences for firms that cannot access the compliance cost savings available to their unconstrained competitors.

One constraint facing issuers who elect semiannual reporting consists of quarterly financial reporting requirements embedded in corporate debt instruments. Standard commercial lending and corporate bond documentation routinely includes covenants requiring borrowers to deliver periodic financial statements to lenders as a condition of maintaining the credit facility in good standing. Debt covenants are legally binding conditions written into loan agreements that define how a borrower must behave during the term of the loan, with financial reporting covenants among the most common. These covenants typically require companies to submit quarterly financial statements to lenders.

For an issuer subject to a debt covenant requiring quarterly financial statements, the election of semiannual SEC reporting does not eliminate the obligation to produce quarterly financial data. Instead, it removes the SEC filing requirement while leaving the private contractual obligation intact. Such an issuer would be required to continue producing quarterly financial statements for lender delivery, eliminating the compliance cost savings the

Commission attributes to issuers choosing semiannual reporting, while still bearing the reporting-period heterogeneity and adverse selection costs discussed elsewhere in this report. Alternatively, the issuer could seek to renegotiate its debt instruments to eliminate the quarterly reporting covenant. However, this is a process that entails negotiation costs, potential amendments fees, and the risk that lenders demand compensating covenant tightening or interest rate adjustments as a condition of any modification. Loan agreements typically contain covenant reporting provisions requiring compliance to be reported to the lender on a quarterly, semiannual, or annual basis.

The Commission’s Proposing Release acknowledges that contractual obligations may be among the factors that cause some issuers to continue quarterly reporting after the election becomes available.37 It does not, however, analyze what fraction of potentially eligible issuers face binding quarterly reporting covenants in their debt instruments, does not estimate the cost of renegotiating those covenants, and does not assess whether the compliance cost savings of the semiannual election would be offset for covenant-constrained issuers by debt renegotiation costs. The Commission's own estimate of approximately $198,000 in annual compliance cost net savings per electing issuer represents the benefit the rule claims to deliver. However, if debt covenant renegotiation costs are of comparable or greater magnitude for a large fraction of potentially eligible issuers, the rule's claimed benefit is substantially reduced for that population.

Bank holding companies that file Form 10-Q are simultaneously subject to the Federal Reserve's quarterly FR Y-9C reporting requirement. The FR Y-9C is filed quarterly as of the last calendar day of March, June, September, and December by bank holding companies with total consolidated assets of $3 billion or more, and is a primary analytical tool used to monitor financial institutions between on-site examinations. The subsidiary commercial banks of these holding companies are independently required to file quarterly Call Reports with the Federal Financial Institutions Examination Council, pursuant to requirements administered jointly by the Federal Reserve, the OCC, and the FDIC. These banking regulatory reports require quarterly financial information in a format that substantially overlaps with, but is not identical to, the GAAP financial statements required by Form 10-Q. A bank holding company that elected semiannual SEC reporting would remain obligated to produce quarterly financial data for its FR Y-9C and Call Report filings regardless of its SEC reporting election. The incremental compliance cost savings from eliminating two Form 10-Q filings would be substantially reduced because the quarterly financial data production process required for bank regulatory reporting would continue uninterrupted. At the same time, the bank holding company electing semiannual reporting would incur the adverse selection, comparability, and market quality costs documented elsewhere in this report. These are costs that its non-electing banking peers avoid. The Commission's economic analysis does not identify bank holding companies as a category of issuer for whom the compliance cost savings of the semiannual election are substantially

37 Proposing Release, at 25003.

offset by independent regulatory reporting obligations, and does not analyze the competitive consequences for bank holding companies competing with non-bank financial issuers or non-bank holding company peers that are not subject to the FR Y-9C constraint.

Electric utilities, natural gas pipeline companies, and other entities subject to the jurisdiction of the Federal Energy Regulatory Commission are required to file quarterly financial reports on FERC Form 3-Q, the Quarterly Financial Report of Electric Utilities, Licensees, and Natural Gas Companies, pursuant to 18 C.F.R. § 141.400. FERC Form No. 3-Q is a quarterly regulatory requirement which supplements the annual financial reporting requirement, and is required of each major electric utility, licensee, or other entity as classified by the Commission. Regulated entities under FERC submit quarterly reports to

adhere to the Uniform System of Accounts, with quarterly reports offering ongoing insight into the entity's financials and allowing for timely oversight.

FERC-regulated issuers that are also Exchange Act reporting companies therefore face the same structural constraint as bank holding companies: independent federal regulatory requirements mandate quarterly financial reporting on a schedule and in a format that is not affected by the SEC's periodic reporting rules. The election of semiannual SEC reporting eliminates the Form 10-Q obligation while leaving the FERC Form 3-Q obligation intact. For these issuers, compliance cost savings from the semiannual election are minimal because the underlying quarterly financial data production process continues unchanged. The Commission’s economic analysis does not address this constraint anywhere in the proposing release.

Insurance companies subject to state insurance regulatory requirements file quarterly statutory financial statements with state insurance regulators on schedules that are independent of and not synchronized with SEC periodic reporting requirements. State insurance regulators require quarterly financial statements from licensed carriers as a condition of maintaining insurance licenses and satisfying solvency monitoring requirements. An insurance holding company that elects semiannual SEC reporting remains obligated to produce quarterly statutory financial statements for state regulatory delivery, again substantially limiting the compliance cost savings achievable through the semiannual election.

Broker-dealer subsidiaries of Exchange Act reporting companies are subject to FINRA financial reporting requirements, including quarterly FOCUS Report filings (Financial and Operational Combined Uniform Single Reports), that operate independently of

SEC periodic reporting obligations. A reporting company with significant broker-dealer operations that elects semiannual SEC reporting must continue to maintain quarterly financial data production infrastructure to satisfy FINRA reporting requirements for its regulated subsidiaries, limiting the practical compliance cost savings available from the semiannual election.

A consequence of the constrained categories described above is that two firms operating in the same product market and otherwise identical in size, business complexity, and financial profile may face different costs of exercising the semiannual election because of the regulatory and contractual environments in which they operate. The firm unconstrained by independent quarterly reporting obligations can elect semiannual reporting and realize the Commission's estimated $198,000 in annual compliance cost savings. Its constrained competitor, subject to a quarterly debt covenant, a banking regulatory reporting requirement, or a FERC filing obligation, either cannot make the same election or can do so only at a renegotiation cost that substantially erodes or eliminates the compliance cost savings. The unconstrained firm thereby acquires a permanent regulatory cost advantage over its constrained competitor that has nothing to do with operational efficiency or business merit. This form of competitive impact is precisely what the Commission's 2012 Guidance identifies as a category of indirect cost requiring analysis. The 2012 Guidance specifies that the costs and benefits analysis must address “distributional and competitive effects” of a proposed rule, including effects on competition among firms subject to different regulatory treatments under the rule.38 The Commission’s proposing release does not contain any analysis of intra-industry competitive distortions arising from differential access to the elective semiannual reporting regime. It does not identify the population of issuers subject to binding independent quarterly reporting obligations, does not estimate the cost asymmetry between constrained and unconstrained firms in the same product market, and does not assess whether the rule would confer durable competitive advantages on unconstrained adopters at the expense of constrained competitors.

The Commission's proposing release contains no survey of legal or contractual

constraints that would limit the practical availability of the semiannual election for a substantial fraction of potentially eligible issuers. It does not identify debt covenants, banking

38 See “Memorandum Re: Current Guidance on Economic Analysis in SEC Rulemakings,” U.S. Securities and
Exchange Commission, March 16, 2012, available at
https://www.sec.gov/divisions/riskfin/rsfi_guidance_econ_analy_secrulemaking.pdf.

regulatory reporting requirements, FERC obligations, state insurance reporting requirements, or FINRA financial reporting requirements as relevant features of the economic baseline. It does not model or estimate the competitive consequences for constrained firms competing with unconstrained adopters in the same product markets. And it does not analyze whether the aggregate compliance cost savings it attributes to the rule would be reduced once the constrained population is properly identified and its actual net savings are estimated.

Addressing these deficiencies before any final rule is adopted would require additional analytical steps. First, the Commission would need to survey the landscape of binding legal and contractual constraints, that is, standard debt covenant provisions, banking and insurance regulatory reporting requirements, FERC filing obligations, and FINRA requirements, that limit the practical availability of the semiannual election for identified categories of potentially eligible issuers. Second, having identified the constrained population, the Commission would need to model the competitive consequences for constrained issuers competing with unconstrained adopters, including the magnitude of the compliance cost asymmetry and its persistence over time.

G. The Commission’s Economic Analysis Fails to Address Interactive and Cumulative Effects of the SEC’s Full Set of Initiatives Aimed at Reducing the Regulatory Burdens of Being a Public Company

The foundation of any rigorous economic analysis of a proposed rule is to establish a baseline against which the proposed rule's effects are measured. The Commission’s own 2012 Guidance mandates that every SEC economic analysis include: 1) a stated need for rulemaking; 2) the definition of a baseline against which to measure the likely economic consequences of the proposed regulation; 3) the identification of reasonable regulatory alternatives; 4) and an evaluation of the benefits and costs of the proposed regulatory action and reasonable alternatives as compared to the baseline.39

The economic baseline represents a well-defined description of the economic conditions that would prevail absent the proposed rule. It is against this baseline that all costs and benefits of the proposed rule are to be measured. Failure to establish a proper baseline can lead to errors in the Commission’s estimate of the likely economic consequences of a proposed rule.

39 See “Memorandum Re: Current Guidance on Economic Analysis in SEC Rulemakings,” U.S. Securities and
Exchange Commission, March 16, 2012, available at
https://www.sec.gov/divisions/riskfin/rsfi_guidance_econ_analy_secrulemaking.pdf.

The Proposing Release constructs its baseline as though the regulatory environment facing public companies is static. However, the Commission is simultaneously pursuing a coordinated set of initiatives that are specifically designed to reduce the regulatory burdens of being a public company. Those initiatives address many of the same concerns the Commission addresses in justifying the proposed rule. A baseline that does not account for those other initiatives does not describe the economic conditions that would prevail without the proposed rule. It describes the economic conditions that prevailed before the Commission's current initiatives were announced.

The set of regulatory initiatives currently being pursued by the SEC include, among others: 1) Rescission of Climate-Related Disclosure Rules; 2) Enhancement of Emerging

Growth Company Accommodations and Simplification of Filer Status for Reporting Companies; 3) Registered Offering Reform; 4) Amendments to SEC Gun-Jumping Rules; 5) Regulation S-K Reforms; and 6) Executive Compensation Disclosure Reform.

Each of these initiatives responds to the same concern the Commission identifies in the Proposing Release about how the cumulative burden of public company compliance obligations has inhibited access to public capital markets. Failing to construct the baseline in the proposed rule to include the regulatory environment that will prevail if these concurrent initiatives are finalized will lead to an overstatement of the proposed rule's likely benefits.

The Commission's failure to account for concurrent initiatives produces a second-order analytical failure in that it prevents any assessment of how these initiatives interact with each other and with the proposed rule in ways that may affect their individual and combined effects.

The Commission's economic analysis fails to estimate the extent to which the SEC's other concurrent initiatives may achieve the objectives it seeks to achieve in the proposed rule without allowing optional semiannual reporting. The result of this failure is to overstate likely benefits as the baseline against which the proposed rule's likely consequences are compared does not account for the relief being provided through concurrent initiatives. This omission renders the Commission's net benefit conclusion unreliable.

IV. Summary Assessment and Recommendations for Supplemental Economic Analysis

A. Summary Assessment

The economic analysis contained in the proposed rule does not satisfy the standards the Commission has committed to apply. The SEC's 2012 Guidance on economic analysis in rulemaking requires the Commission to identify the market failure or compelling need justifying regulatory intervention, define an appropriate economic baseline, identify and analyze reasonable alternatives, and provide a rigorous, symmetric quantitative and qualitative assessment of costs and benefits.40 The proposed rule falls short of each of these requirements. As a result, the Commission has failed to demonstrate that the proposed rule is likely to promote efficiency, competition, and capital formation.

The Commission has quantified a single category of benefit — estimated annual compliance cost savings of approximately $198,000 per eligible issuer attributable to the elimination of two quarterly filings — while leaving unquantified, and in several cases unaddressed, cost categories of potentially far greater magnitude. These cost categories include adverse selection costs arising from the optional design, information fragmentation across peer-firm pairs and financial indices, spillover costs imposed on non-electing issuers, capital cost elevation for electing issuers, and the systemic consequences for passive investment infrastructure. The Commission's failure to engage with the directly relevant empirical literature, including natural experiment evidence from the European quarterly reporting deregulation, compounds this deficiency.

The most fundamental analytical failure of the Commission's economic analysis is its treatment of the optional design as a neutral feature rather than as the primary driver of the rule's adverse consequences. Voluntary disclosure theory predicts that an annual, issuer-elected reduction in reporting frequency will produce adverse sorting in the electing population, a group-level capital cost discount falling on all electing issuers including those with benign cost-reduction motivations, and a fragmented reporting landscape whose consequences for intra-industry comparability and financial index construction the Commission does not model. These consequences are predicted by a well-developed

40 SEC, Current Guidance on Economic Analysis in SEC Rulemakings (Mar. 16, 2012).

theoretical framework supported by natural experiment evidence that the Commission neither cites nor addresses.

The Commission also conflates two analytically distinct cost categories: frequency-driven compliance costs, which the proposed rule would reduce for electing issuers, and complexity-driven compliance costs, which the proposed rule does not address. This conflation overstates the savings attributable to a reduction in reporting frequency, forecloses consideration of complexity reduction as a standalone or complementary policy alternative, and prevents the Commission from presenting investors and other market participants with a complete picture of the available policy options.

B. Recommendations for Supplemental Economic Analysis

The deficiencies identified in this report can, in significant part, be addressed through supplemental analysis. The Commission has sought comment on its economic analysis, and the analytical gaps identified here are addressable through well-established empirical and survey methodologies available in the accounting and finance literature. The Commission should conduct the following supplemental analyses prior to determining whether the SEC has a reasoned basis for exercising its rulemaking authority.

1. Adverse Selection Sensitivity Analysis. The Commission should conduct a sensitivity analysis showing how aggregate benefit-cost estimates change under scenarios in which high-complexity, high-information-asymmetry firms disproportionately adopt semiannual reporting. The Commission's current analysis treats the electing population as representative of the eligible population. Voluntary disclosure theory, and the European deregulation evidence, predict systematic non-randomness in adoption. Sensitivity analysis modeling the cost-benefit outcome under adverse adoption scenarios is a minimum requirement for a defensible benefit-cost framework. The Commission should present these estimates alongside its baseline estimates and disclose the assumptions on which the baseline adoption distribution rests.

2. Quantification of Comparability Loss. The Commission should quantify comparability loss using established methodologies from the accounting literature and estimate the expected increase in analyst forecast errors and cost of capital for affected firm-pairs. The comparability measure developed by De Franco, Kothari, and Verdi (2011) is directly applicable to the heterogeneous-reporting-period context the proposed rule would

create, and the empirical relationship between comparability loss and analyst forecast dispersion and cost of capital is well-documented.41 The Commission’s current analysis does not attempt this quantification.

3. Analysis of Spillover Costs on Non-Electing Issuers. The Commission should analyze the magnitude of spillover costs on quarterly reporters as an indirect cost of the proposed rule. Quarterly reporters will face higher analyst forecast errors and reduced liquidity to the extent that the fragmented reporting population impairs the quality of peer-based benchmarking, earnings model calibration, and index-level data aggregation. These are costs of the rule borne by issuers and investors who derive no benefit from it. The Commission's economic analysis does not identify this category of costs.

4. Survey of Issuers Facing Legal and Contractual Constraints. The Commission should survey issuers facing legal and contractual constraints to electing semiannual reporting. A material segment of the eligible population will be unable, as a practical matter, to elect semiannual reporting without triggering renegotiation, consent fees, or covenant defaults. This includes issuers subject to quarterly financial reporting covenants in credit agreements, indentures, and material commercial contracts. The Commission’s economic analysis does not estimate the size of this population, does not analyze the contractual costs they would face, and does not discount the estimated adopter population to account for constrained issuers. An issuer survey would provide direct, verifiable evidence on which the Commission could rely in constructing a credible estimate of the number of issuers that can elect semiannual reporting.

5. Survey of Index Providers, ETF Sponsors, and Credit Rating Agencies. The

Commission should survey index providers, ETF sponsors, and credit rating agencies regarding the operational and economic consequences of introducing reporting period heterogeneity into existing index compositions. Passive investment funds tracking indices that include both quarterly and semiannual reporters will face data gaps at predictable points in the reporting calendar; credit rating agencies will face informational asymmetries between issuers within the same rating category; and index construction methodologies premised on the availability of periodic financial data will require structural revision. The magnitude of these costs is unknown because the Commission has not inquired. Survey-based evidence would transform a category of acknowledged uncertainty into a quantifiable cost estimate.
41 See De Franco, Kothari & Verdi, The Benefits of Financial Statement Comparability, 49 J. Acct. Res. 895
(2011).

6. Quantification of Costs to Passive Investment Infrastructure. The Commission should quantify, to the extent practicable, the costs to passive investment infrastructure of accommodating mixed reporting cadences among index constituents. ETF sponsors, index administrators, and data vendors will incur one-time systems and methodology revision costs, as well as ongoing costs from the management of reporting-period heterogeneity in index rebalancing, proxy voting, and financial modeling. These costs are borne by passive market participants who derive no compliance-cost benefit from the proposed rule and who represent a substantial and growing share of equity market ownership.
7. Modeling of Compliance Cost Savings from Alternative Disclosure Reforms.
The Commission should model the compliance cost savings achievable through better tailoring disclosure requirements independent of any change in reporting frequency, and present these estimates alongside the frequency-reduction savings estimate of $198,000 per issuer per year. The Form 10-Q is a product of decades of layered rulemaking and contains numerous disclosure items whose informational value relative to their preparation cost has not been recently assessed. An analysis presenting the costs and savings achievable through simplification, for all quarterly reporters, alongside the costs and savings of the proposed rule's frequency-reduction mechanism is necessary to ensure the Commission has considered the full range of alternatives available to it.
8. Disaggregation of Frequency and Complexity Costs in PRA Burden Estimates.
The Commission should conduct an analysis distinguishing frequency-driven costs from complexity-driven costs within its Paperwork Reduction Act (“PRA”) compliance burden methodology, and present the breakdown by filer category. The Commission's current PRA burden estimate for Form 10-Q conflates costs associated with the cadence of filing with costs associated with the scope and complexity of disclosure. Only the former are reduced by the proposed rule. Without this disaggregation, the Commission's cost savings estimate cannot be validated, and the economic case for the proposed rule's principal benefit rests on an undifferentiated and potentially overstated number. This analysis is essential to the Commission's ability to defend the benefit side of its cost-benefit framework.
9. Determine the Break-even Point at Which Increased Financing Costs
Eliminate the Proposal’s Estimated Benefits. The Commission should determine the increase in issuers' cost of capital that would offset its estimated compliance-cost savings and evaluate whether that threshold is likely to be exceeded under the proposed rule.

10. The Commission should supplement its economic analysis with a revised baseline that accounts for the expected effects of concurrent deregulatory initiatives.
The Commission should evaluate how these concurrent initiatives interact with the proposed rule with respect to public company compliance costs, IPO activity, and short-termism. The Commission should explain why the proposed rule is necessary to achieve the Commission's stated objectives in light of the relief already being sought. Absent that analysis, the

Commission's conclusion that the proposed rule generates net benefits is based on a baseline that describes a regulatory world that may not exist when the proposed rule takes effect.
V. Conclusion.
The Commission has proposed a significant change to the reporting framework that has governed U.S. public company disclosure for decades. However, the Commission's economic analysis accompanying the proposed rule does not provide a sufficient basis for determining the rule's likely economic consequences. The Commission's economic analysis of the proposed rule: 1) fails to adequately analyze the mechanisms through which optional semiannual reporting may affect market quality measures such as bid-ask spreads, liquidity, trading volume, price efficiency, and the cost of capital; 2) fails to consider that semiannual reporting would potentially make cross-company comparisons more difficult thus increasing costs for investors seeking to identify economically similar firms or conduct peer-group analysis, relative value analysis or performance benchmarking; 3) overstates the cost savings likely to result from reduced reporting frequency; 4) fails to consider that optional semiannual reporting creates the potential for adverse selection in the choice of reporting frequency; 5) fails to adequately consider how reducing reporting frequency may increase principal-agent costs by inhibiting the ability of investors to monitor managerial performance and to intervene to hold management accountable; 6) fails to provide a complete review of the relevant economics and accounting literature with respect to reporting frequency; 7) fails to adequately consider the legal and contractual constraints that may make the election unavailable or economically infeasible regardless of the issuer's preferences; and 8) fails to address interactive and cumulative effects of the SEC's full set of initiatives aimed at reducing the regulatory burdens of being a public company.
Page 35
This report describes a set of supplemental analyses the SEC could conduct to bolster the proposed rule's economic analysis prior to determining whether the Commission has a reasoned basis for exercising its rulemaking authority.
In summary, the Commission's economic analysis fails to demonstrate that the proposed rule is likely to promote efficiency, competition, and capital formation.

Ms. Vanessa Countryman
Secretary
U.S. Securities and Exchange Commission
100 F Street NE
Washington, DC 20549 -1090

Submitted via : SEC's Internet Submission Form
July 6, 2026
Dear Ms. Countryman:
Semiannual Reporting (File No. S7 -2026 -15)
The Alternative Investment Management Association ("AIMA" or "we")1 appreciates the opportunity to
submit this response to the Securities and Exchange Commission ("SEC" or "Commission") on its proposed amendments to allow companies to file semiannual reports on new Form 10 -S in lieu of quarterly reports on Form 10 -Q (the "Proposal"). 2 We support the Commission's broader efforts t o promote public markets by reducing unnecessary costs and burdens associated with being a public company. We cannot , however, support the Proposal . If adopted, it will increase information asymmetries, reduce market transparency and make U.S. capital markets less efficient , less competitive and less attractive.
As the Commission pursues its goal to "make IPOs great again", 3 it should prioritize reforms that streamline , modernize or simplify existing disclosure requirements , not reforms that reduce the timely
1 AIMA is the world's largest membership association for alternative investments managers. Its membership has more firms,
managing more assets than any other industry body, and, through our 10 offices located around the world, we serve over
2,000 members in 60 different countries. AIMA's mission, which includes that of its private credit affiliate, the Alternative
Credit Council is to ensure that our industry of hedge funds, private market funds and digital asset funds is always best
positioned for success. Success in our industry is defined by its contribution to capital formation, economic growth and
positive outcomes for investors, while being able to operate efficiently within appropriate and proportionate regulatory
frameworks. AIMA's many peer groups , events, educational sessions and publications, available exclusively to members,
enable firms to actively refine their business practices, policies and processes to secure their place in that success.

and material information available to investors . Once these improvements and their benefits are ascertained , only then should the Commission contemplate to the reporting frequency. Instead, the Commission has opted to begin with a will reduce transparency and negatively affect investors.
have been implemented
potential changes
proposed change th at

The Proposal is unlikely to advance the Commission's stated objectives and instead is more likely to harm investors and U.S. public markets. The Proposal rests primarily on two unsubstantiated premises:
(i) that less frequent reporting will reduce management short -termism and (ii) that it will meaningfully lower the costs associated with being a public company. The Commission fails to demonstrate that either benefit is likely to materialize. Indeed, the Commission's own Economic Analysis acknowledges
signifi cant costs associated with optional semiannual reporting, while the academic literature consistently documents the benefits of more frequent corporate reporting and the costs associated with reduced transparency.
Optional reporting will compound the Proposal's deficiencies – it will create inconsistent reporting practices across issuers, industries and investment products, thereby reducing comparability and increasing information asymmetries. The Proposal also appears to contemplate that issuers electing to report semiannually could nevertheless choose to provide selected quarterly financial information or earnings releases on a voluntary basis. Yet it provides no meaningful standards governing the timing, content , completeness or consistency of those disclosures. As a result, investors could face a
patchwork of reporting practices in which some companies provide comprehensive quarterly updates,
others disclose only selected metrics and others provide no interim information at all. That uncertainty
would undermine one of the principal benefits of the current reporting framework: a predictable cadence of timely, standardized and comparable public disclosur e.
The Proposal, if adopted, will also have disparate and negative consequences and costs for market investors and even issuers. For example, less frequent disclosures will reduce the timeliness and comparability of information. This harms investors by weaken ing valuation decisions and can lead to
less efficient allocation of capital , thereby harming both markets and issuers. Reduced transparency can further entrench corporate management, weakening their accountability to shareholders who are less able to timely monitor their performance and st rategy execution. An extension of time periods without public updates via quarterly reporting increases the quantum of material nonpublic information
("MNPI") at a given time , which brings with it a heightened potential for misuse.
s,
Considering the above points, which are elaborated further upon in the attached Annex, the Commission should withdraw the Proposal and direct its efforts and resources on other avenues to enhance the going -public and public company experiences.

Cc: Hon. Paul S. Atkins , Chairman
Hon. Hester M. Peirce, Commissioner
Hon. Mark T. Uyeda , Commissioner
Mr. James Moloney , Director, Division of Corporation Finan ce

ANNEX
1. The Commission should withdraw the Proposal and instead can reduce the burdens associated with being a public company .
focus on other means by which it
Since the change in administration in early 2025, the SEC has renewed its focus and energy on capital
formation and enhancing the vibrancy of U.S. public markets. In a December 2025 speech, Chairman
Atkins emphasized that , “One of my priorities as Chairman is to reform the SEC’s disclosure rules with
two goals in mind. First, the SEC must root its disclosure requirements in the concept of financial materiality. Second, these requirements must scale with a company’s size and maturity.” 4 A month later, Chairman Atkins published a statement in which he indicated his instruction to the Division of Corporation Finance to engage in a comprehensive review of Regulation S -K and solicited comments
on potential improvements thereto. 5
We broadly support the Chairman’s and Commission’s efforts to promote public markets and reduce the costs and burdens associated with being a public company . However, the Commission has departed from this course by issuing the Proposal ahead of meaningful and less harmful improvements
to the SEC’s disclosure r egime and concurrently with , or ahead of, other rulemakings that seek to achieve the same goals.
Initial Reforms Should F ocus on Materiality , Not Reducing Transparency
Based on the above comments and the Commission ’s agenda, it should begin its reform efforts by addressing the substance of corporate disclosure s, rather than unnecessarily moving away from the quarterly reporting requirement . Such a decision is even more surprising given the Commission’s own
admission – in multiple instances – that a reduced frequency of periodic disclosures would lead to decreased transparency and ultimately harm investors, issuers and markets. 6
Financial and non -financial disclosures should be rooted in materiality, not duplicative, extraneous or
boilerplate reporting. E liminating these latter, and often unhelpful disclosures, would give companies more confidence to exclude nonessential (immaterial) information. This common -sense improvement
would make corporate reporting more efficient and less costly for issuers and easier to analyze and understand for investors. The Commission could also create a publicly available repository for data that i s mandated to be reprinted in every disclosure. These suggestions are low -hanging fruit that would alleviate some of the costs associated with being a public company and are changes that rightfully maintain the quarterly reporting cadence and its well -established benefits.
It is also worth noting that t he Proposal’s Economic Analysis includes a Reasonable Alternatives section regarding potential changes to the n inadequate discussion in its
substance of Form 10 -Q and
potential cost savings. This is all the more surprising given the separate, concurrent initiatives the Commission is pursuing or those it plans to embark upon in the coming months.

Reform Efforts Should Be Thoughtfully Sequenced and Their Interconnectedness Examined
As we explained in our response to the request for comments on Regulation S chang es to the disclosure rules should be pursued in a thoughtful, deliberate manner through overlapping and/or interconnected rulemakings.
-K enhancements, 7
rather than
T he Commission is simultaneously considering other initiatives that are also designed to accomplish
some of the same goals the Proposal endeavors to achieve , e.g., reduce compliance costs, streamline
disclosure obligations and encourage more companies to go public. However, the Proposal has been
analyzed in a vacuum, despite its interconnectedness to other ongoing or future reforms, which almost
certainly will affect the costs and benefits associated with the Proposal. Along with the aforementioned potential reforms to Regulation S -K , these include , among others : Enhancement of
Emerging Growth Company Accommodations and Simplification of Filer Status for Reporting Companies ;8 Registered Offering Reform ;9 and Executive Compensation Disclosure Reform. 10
Becaus e the Commission has chosen to begin with reducing the reporting frequency, evaluate the Proposal from a baseline that includes the other reforms it is pursuing that seek to achieve
the same goals. This undermines the Commission's own Economic Analysis and inhibits it cannot the ability of
both issuers and investors to more fully analyze the Proposal , ascertain its impact and its interplay with
other concurrent and pending rulemakings.
The IAC Does Not Support the Proposal
On June 4, 2026, the SEC held a meeting of its Investor Advisory Committee (the "IAC"), during which
the IAC adopted a rec ommendation that evaluates the policy rationale for the Proposal and examines
its potential impact on investors. 11 In short, the IAC indicated that it "does not favor the [Proposal]" and "recommends that the SEC retain quarterly reporting requirements for public companies. "12 In reaching this conclusion, the IAC Recommendation provides an in -depth and data -supported narrative
of the Proposal's inadequate policy rationale and the negative impact on investors . Some excerpts are included below:
• "If semiannual reporting is utilized selectively by some companies to shield performance deficiencies or exploited by insiders to reap illicit gains, investors and the market at large will suffer the consequences ."13

5
• “[F]irms that do voluntarily report quarterly will tend to be those with positive or neutral news to share . . . This is precisely the type of selective disclosure dynamic that the federal mandatory disclosure regime was designed to prevent.” 14
• “[E]liminating today .”15
a quarterly reporting mandate will likely mean that investors remain invested in
poorer performing companies or companies with diminished outlooks for longer than they would
• “The success of passive investing depends on active, fundamentally driven investors [like AIMA’s members] incorporating material information into market prices. Therefore , depriving active investors of standardized quarterly financial information would harm not only active managers, but also the millions of retail investors whose index -fund returns depend on efficient price discovery .” 16
Although the IAC does not directly call for withdrawal of the Proposal, it clearly articulates why proceeding with a reduction in the frequency of corporate reporting would do much more harm than good. We respectfully question how or why the Commission would proceed with adopting the Proposal if its own advisory committee does not support it. Again, we believe the Commission should
withdraw the Proposal.
2. The Commission should preserve its quarterly reporting established benefits and the clear harm from less frequent reporting.
framework because of its well -
Quarterly reporting has been a cornerstone of U.S. capital markets for more than 50 years and has served as part of the framework that has helped make them the global standard. Th e consistency and
regularity of periodic reporting ha ve been relied upon by investors (both institutional and retail) and other market participants, analysts, lenders , rating agencies and regulators as they look to deploy capital , estimate future earning s or performance or ensur e compliance with securities laws and regulations. Unfortunately, the Proposal seeks to dismantle this well -established and largely beneficial
framework.
Less Transparency Harms Markets
Less transparency will have disparate negative effects for market participants and markets generally. 17
For starters, a reduction in reporting frequency will lead to information asymmetries that will impair price discovery, making markets less efficient . Investors will receive less timely information that will compromise their ability to make well -informed investment decisions. Specifically , for AIMA’s members, this c ould ultimately have a negative impact on the rate of return they are able to achieve fo r their fund investors . This analysis is largely absent from the Proposal.
Not only would the Proposal change the frequency of reporting, but it would also eliminate investors’ ability to compare disclosures across companies . A reduction in comparability intensifies the

information asymmetries that will result from less frequent reporting. T he inability to compare disclosures between companies or across sectors will correspondingly increase investors' and other

17 Some of these are d iscussed further below in sectio n 4 .

market participants' costs associated with processing or analyzing information contained in the periodic disclosures.

Academic Literature Suppo rts Regular Reporting

The benefits of regular corporate reporting have been well articulated throughout academic literature.

Indeed , most academics who have examined this issue have reached the same conclusion: regular corporate reporting is a net benefit, while infrequent or ad hoc reporting can harm markets, investors and issuers . Academic res earch demonstrates that frequent reporting:

• Improves Corporate Investment Decision -Making: R ecent research has shown that more frequent reporting enables managers to learn from market signals and make better Moreover, even if the levels of corporate investment vary, the quality of -informed decisions.

management's investment

decisions improves. 18

• Enhance s Analyst Coverage and Research : Mandatory quarterly reporting has been shown to significantly lower annual earning s forecast erro rs, reduce forecast dispersion and improve profitability of analysts' recommendations. Alternatively, companies that opted for semiannual reporting after the UK mandate was lifted saw a reduction in analyst coverage. 19

• Lowers a Company's Cost of Capital: More frequent reporting reduces both bid -ask spreads and cost of equity because such regular reporting reduces information asymmetry, increases market liquidity and lowers firms' cost of capital. 20

• Better Informs In vestors and Improves Markets: Investors can rely upon a regular cadence of corporate disclosures , rather than seeking out or relying upon less robust data sources. and regular reporting leads to, among other benefits, less stock -price volatility Frequent

and better pricing. 21

• Bolsters Comparability: Market participants can better compare and contrast issuer performance and outlook when the frequency and substance of corporate disclosures are aligned across industry and size . This cuts down on information -processing costs and improves portfolio construction, benchmarking and capital allocation decisions. Research has shown that s tock

7
prices are negatively impact ed when reporting becomes less frequent because less firm -specific information is incorporate d into the stock price. 22
Given the clear benefits of regular corporate reporting, we question the Commission’s determination to proceed with a rulemaking that seeks to undermine such a framework. Although the Proposal’s Economic Analysis explore s these benefits in depth, it is in the context of the economic or market costs of proceeding with the Proposal . This underscores th e need to withdraw the Proposal and for the Commission to reassess its rulemaking agenda (and sequencing thereof) to improve its corporate
disclosure framework.
3. The justifications and purported benefits of the Proposal are entirely insufficient to warrant reducing the reporting frequency.
The Commission ’s justifications for issuing the Proposal and resulting benefits, in the aggregate, are
insufficient to warrant its issuance and adoption. Specifically, the Commission find s that semiannual reporting could: (i) promote more IPOs; (ii) reduce short -termism among management; and (iii) lead to
c ompliance -related cost savings . The Commission cites the Proposal’s optionality co mponent to overcome opposition to the Proposal at large. However, in our view, optionality makes the Proposal more problematic . We address each of these below .
An Increase in IPOs
Again, we fully support the Commission’s goals to “make IPOs great again”; however, the Proposal is
the wrong means t o further this goal. Throughout the Proposal, the Commissio n speculates that allowing corporate issuers to report semiannually could lead to more private companies deciding to go public . However, the Proposal fails to provide much, if any, evidence that this will be the case. Companies that are considering making the jump to public markets face myriad considerations that are likely far more consequential and impactful to their decision -making than periodic public reporting.
Market conditions on a macro level are a critical determinant of whether a company proceeds down the path towards an IPO . Even if market conditions are appealing for an IPO, private companies may
nevertheless choose to stay private due to the diverse set of financing sources that they may avail themselves of without having to face the legal scrutiny – specifically, litigation risk – that comes with being a public company. Securities litigation and disclosure -related liability are one of the most significant cost considerations built into being or becoming a public company.
The Proposal neglects to thoroughly address these deterrents to going public. Even a ssuming that less frequent public reporting c ould lead to more companies going public, one would expect the Proposal’s Economic Analysis to provide at least some estimate as to the number of companies that would consider going public . However, the Proposal fails to include such an estimate .
Short -Termism
The Commission asserts that semiannual reporting will allow corporate management to be focused on long -term value creation and reduce short -termism. We do not believe, nor see, how more an

Evidence," Journal of International
Accounting, Auditing and Taxation (2022); Bornemann et al., "The Consequences of Abandoning the Quarterly Reporting
Mandate in the Prime Market Segment," European Accounting Review (2025).
8
additional three months between reporting periods will have a material , measurable impact on corporate strategy. It appears the Commission cannot even fully support this theory, acknowledging that reporting frequency may have little effect on decisions involving long -term business decisions. the Commission cannot endorse this suggested benefit , it only further undermines the legitimacy for the Proposal .
23
If
Reduced Compliance Costs
The Commission , like most rulemakings, undertakes an analysis of the potential cost savings should
the Proposal be adopted . In some instances, there is ample academic research, studies or other information that the Commission may rely upon in conducting such an analysis. Here, the Commission
relies mostly on a single survey conducted by a single stock exchange. The 2019 survey involved a mere 187 companies – out of about 3,100 listed companies on that exchange – who completed the optional survey. We do not believe that the Commission ca n legitimately extrapolate the survey's finding s across all companies that could be eligible for semiannual reporting.
According to the survey, respondents' employees spent an average of 853 hours on compliance with quarterly reporting, with a median of 300 hours and a maximum of 20,000 hours. In terms of monetary
costs , the survey indicated average monetary costs each quarter of $3 34,698, a median of $75,000 and a maximum of $7,000,000. The veracity of these findings is unclear at best and unreliable at worst, yet the Commission relies heavily on them in its analysis .
The Commission assumes that 1,195 affected issuers 24 would opt for semiannual reporting . It then multiplies the average cost per issuer associated with filing three Form 10 -Qs ($330,000), which it takes from the exchange 's survey, to conclude that the annual aggregate cost savings across 1,195 firms would be $394,350,000. If these same 1,195 issuers file proposed Form 10 -S, they would incur
annual estimated direct compliance costs of $132,000 per issuer or $157,740,000 across all firms , i.e.,
an average savings of approximately $198,000 annually.
The Commission's assumptions are questionable and worth examination . First, i t relies largely upon a
question in the exchange 's survey to determine that 20% of affected issuers (i.e., 1, 195) would opt for
semiannual reporting. The survey question was, "Do you believe that your company and/or your investors would benefit from moving to a semi -annual reporting model?" 25 However, there is a dearth
of academic research that supports the notion that investor s would benefit – let alone want – less frequent disclosure.
Second, the Economic Analysis finds that preparing new Form 10 -S will cost an average of $132,000
per issuer, while the average cost per issuer of filing Form 10 -Q is $110,000. We respectfully question
how the Commission concludes that filing a report that includes an additional three months' worth of data cost s only about $12,000 more. This slight cost increase seems even more questionable when Form 10 -S would include substantially the same substantive information (e.g., financial statements

and
23 It is also worth noting, and alluded to above, that academic literature shows investment decisions when there is frequent reporting. See supra , n. 1 8 .
24 The Commission estimates that 5,976 companies filed on domestic forms during calendar year 2024 and a file quarterly reports on Form 10 -Q.
25 Proposal, supra note 2, at 25013, n. 332.
that managers make better -informed
re required to
9
management certifications) and requirements support for this assumption.
(e.g., XBRL tagging). The Proposal is absent of any
Moreover, these costs are often fixed; they do not simply disappear if a company reports every six months instead of three. Accordingly, the actual cost savings , if any, are likely less than the Commission estimates. It is also worth noting , as the Proposal acknowledges, that many companies will still be required to prepare and provide quarterly financial information pursuant to contractual obligations and/or covenants in certain debt instruments. This could ultimately render any cost savings associated with reporting semiannually immaterial or de minimis.
Third , the estimated average cost savings of $198,000 are not necessarily inconsequential . However,
we question the extent to which these cost savings , albeit based on limited or questionable data, outweigh the importanc e and benefits of frequent corporate reporting and the harm that can accrue from less transparency and reduced comparability , as demonstrated by the academic literature cited
in section 2. T hese minimal estimated cost savings are an insufficient basis on which to justify the Proposal.
Optionality Component
The Commission relies upon the Proposal's optionality component to mitigate its multiple shortcomings . However, in our view, optionality makes the Proposal more problematic . As discussed
above, optionality will ultimately lead to bifurcation and fragmentation, the result of which will be a more
complex and less comparable disclosure regime.
If adopted, the Proposal would create three c ategories of reporters: (i) semiannual report ers ; (ii) hybrid
reporters; (iii) and quarterly reporters. These categories have their own permutations. For example, a company may opt to report semiannually but voluntarily provide certain information on a quarterly basis . Other similarly situated companies or industry peers may report on entirely different schedules .
In other words, optionality would replace the uniformity and benefit of the current reporting framework
with a n unnecessarily complex and less comparable regime , which will only harm investors , other market participants and markets generally.
To take advantage of this optionality, an issuer simply needs to check a box on the cover page of Form 10 -K. The Proposal indicates that this box -checking exercise would disclose the selected reporting frequency to investors and market participants. Although there seems to be some assumption that management would consult with shareholders and other stake holders before opting for semiannual reporting , the Proposal is nonetheless absent of any formal (or even informal) consultation requirement. For such a significant change, at least some engagement should be required.
its
Another concern created by the Proposal's optionality component has to do with hybrid reporters. Hybrid reporters could seemingly report quarterly earnings or disclose other information ad hoc. We

question how this would work in practice. For example, would the hybrid reporter need to announce that it will be releasing earnings on a certain date, and if so, how much advance notice would need to
be given? Also, could the hybrid reporter release earnings for one quarter but not the next and what precedent or expectations does that create for investors, markets and regulators?
10
T hese ad hoc disclosures would not be subject to XBRL requirements and would therefore not provide
the benefits from structured data, unless they are voluntarily tagged. Furthermore, as the Economic Analysis explains , certain voluntary disclosures, like quarterly earnings, are believed or trusted by markets because they are subsequently confirmed by mandatory disclosures – i.e., via Form 10 -Q – that cover materially the same information. Without more parameters in place, the concept of a hybrid
reporter will likely be unworkable.
4. Beyond information asymmetries and the resulting harm and costs discussed above, there are other concerns that underscore the Proposal's shortcomings.
Although we highlighted the information asymmetry concerns and corresponding market, investor and
issuer impact above, there are other costs and concerns if the Commission proceeds with adopting the Proposal.
First, it is clear the Proposal would result in less transparency. Along with a reduction in transparency ,
comes an increase in insider -trading risks and concerns . T he quantum of MNPI grow s with a move to
semiannual reporting as the gap between public disclosures widens. If there are longer blackout period s , the value of alternative means to gather information increases, e.g., through corporate access
or other forms of engagement with management.
Second , for some investors a move to semiannual reporting increases the amount of time they are restricted from trading in a particular company when those investor s receive inter -quarter performance information or forward -looking projections . For instances like these, investors may trade
in the company once the next periodic report that includes such information is published. Semiannual
reporting would therefore exte nd the blackout period for these investors , which could have several negative effects . Fo r example, an investor may forgo engaging w ith the company so that it is not prohibited from trading the company 's securities during the prolonged blackout period. This, in turn, ma y disrupt the investor's strategy and therefore its anticipated rate of return.
Third , a move to semiannual reporting creates inconsistencies across investment products, not just across markets and issuers. For example, although an issuer may opt to report semiannually, if it is raising external capital in a securities offering, underwriters or other parties may still demand quarterly
financial information. These same companies may also face a contractual demand for quarterly financial information if they are issuing debt instruments because, as the Proposal acknowledges, syndicated loans a lmost always include loan covenants based on financial information. Separately, for
ETFs and indices, a bifurcated framework further impedes comparability and portfolio construction.
Fourth, as discussed above, the Proposal would not only harm investors, markets and other stakeholders, but it would also negatively affect corporate issuers and/or their management. For example, fewer reporting events and therefore long er blackout periods would company's management and/or board members to transact in the company's securities.
limit the flexibility for a

Joanna Mallers, Secretary, PTG — Jul 6, 2026
July 6, 2026
Vanessa A. Countryman
Secretary
U.S. Securities and Exchange Commission
100 F Street, NE
Washington, DC 20549-1090
RE: Semiannual Reporting
(File No. S7-2026-15; Release Nos. 33-11414; 34-105368; 39-2563; IC-36140)
Dear Ms. Countryman:
PTG appreciates the opportunity to provide comments in response to the Securities and Exchange Commission's ("Commission" or "SEC") proposed amendments to permit optional semiannual reporting by public companies (the "Proposal"). PTG is a trade association of principal trading firms ("PTFs") that commit their own capital to provide liquidity across equity, options, fixed income, cryptocurrency, and futures markets. PTG members include market makers and quantitative trading firms whose businesses depend on the ability to accurately price risk, manage volatility, and provide continuous liquidity across thousands of securities and derivatives.
PTG members play an important role supporting U.S. public markets as liquidity providers and share the Commission's goal of promoting vibrant, competitive, and accessible capital markets. PTG supports efforts to encourage more companies to access the public markets, broaden investor participation, and reduce unnecessary regulatory burdens associated with being a public company. However, the Commission can and should pursue those objectives through targeted reforms that directly address compliance costs and other barriers to public-company formation. What it should not do is weaken a disclosure framework that supports market quality, market integrity, and the information environment upon which investors and market participants rely.
PTFs rely on a wide range of information, including market prices, order flow, volatility, and correlations to assess risk and provide liquidity. Their risk management systems operate in real-time, calibrating market data across thousands of securities and derivatives simultaneously. Yet even in markets characterized by continuous price formation and rapid information processing, the frequency, predictability, consistency, comparability and integrity of corporate financial disclosures shape the information landscape in which PTG members manage risk, design models, and make continuous liquidity provision decisions.

As discussed below, reducing the frequency of mandatory, auditor-reviewed financial disclosures would impair market quality, weaken important accountability mechanisms, increase market-integrity concerns, and ultimately raise issuers' cost of capital. These effects are likely to be particularly acute in smaller and less-liquid securities, where timely public disclosure often serves as one of the most important safeguards supporting transparency, liquidity, and investor confidence.
For the reasons discussed in detail below, the Commission should not move forward with the Proposal. Instead, the Commission should pursue targeted reforms that reduce unnecessary regulatory burdens while preserving the benefits of timely, standardized, and reliable disclosure. The current disclosure framework has contributed significantly to the transparency, liquidity, efficiency, and integrity of U.S. capital markets, and the Commission has not demonstrated that the speculative benefits of reducing reporting frequency justify the resulting costs.
I. Quarterly Reporting Promotes Accountability and Market Discipline

Quarterly reporting promotes accountability and market discipline by requiring public companies to regularly provide investors with a comprehensive, standardized, and auditor-reviewed account of their financial condition and operating performance. The requirement that management periodically disclose the full financial picture helps ensure that corporate communications remain accurate, balanced, and grounded in underlying financial reality.

This function is particularly important because voluntary corporate communications and mandatory SEC filings serve fundamentally different purposes. Earnings releases, earnings calls, and other investor communications are company-controlled disclosures that allow management to determine which information to emphasize, how that information is presented, and which aspects of performance receive attention. Such communications often contain selected financial highlights, non-GAAP metrics, and management commentary, but do not include the full range of disclosures required by Form 10-Q.

Form 10-Q, by contrast, is a standardized, SEC-mandated filing that provides investors with a comprehensive and independently reviewed record of the company's financial condition. It includes detailed financial statements, footnotes, management discussion and analysis, risk factor updates, legal proceedings disclosures, and other information necessary to evaluate management's public statements. More importantly, management knows that any voluntary earnings release will ultimately be followed by a mandatory filing containing the full financial picture. The auditor review process, Sarbanes-Oxley certifications, and legal consequences associated with SEC filings create powerful incentives for accuracy that voluntary communications alone do not provide.

The Proposal would weaken that discipline. By reducing the frequency of mandatory, auditor-reviewed disclosures, it would shift the balance of the disclosure framework away from standardized and independently reviewed information and toward voluntary corporate communications. The result would be a disclosure regime that relies more heavily on management discretion and less heavily on the accountability mechanisms that have long been a cornerstone of the federal securities laws.

Some issuers may continue providing interim information voluntarily. Others may not. Some may provide updates during periods of strong performance while reducing disclosure when results are weaker or uncertainty is greater. The Commission cannot predict which issuers will continue providing quarterly updates, what information they will disclose, or whether those practices will remain consistent over time. What is clear, however, is that voluntary disclosures are not a substitute for mandatory Form 10-Q filings. The Proposal would therefore weaken an important safeguard that promotes accountability, supports investor confidence, and strengthens the integrity of U.S. capital markets.

II. Reduced Disclosure Frequency Impairs Market Quality

Less frequent disclosure increases information asymmetries, impairs price discovery, and reduces the amount of firm-specific information incorporated into market prices. Research has shown that longer reporting intervals create an "information vacuum" in which investors increasingly rely on alternative and often less reliable sources of information, including industry peers, rumors, market speculation, and other indirect signals.1 The result is greater stock-price volatility, increased mispricing, and less efficient capital allocation.

These effects have direct consequences for liquidity provision. Market makers provide liquidity most efficiently when prices reflect reliable information and uncertainty regarding issuer fundamentals is relatively low. When information becomes less frequent and less reliable, market participants face greater uncertainty regarding issuer value, future price movements, and the risks associated with facilitating trading activity. Liquidity providers respond by requiring greater risk premia to intermediate those transactions, which is ultimately reflected in wider bid-ask spreads, reduced market depth, and higher transaction costs for investors.

The Proposal will disproportionately affect liquidity provision in smaller and less-liquid securities.

Market participants may be able to partially offset reduced disclosure for certain large and well-followed issuers through proprietary research, alternative datasets, and direct engagement with management, but such alternatives are often unavailable or far less effective for smaller and newer issuers. As informational disparities widen and uncertainty regarding issuer fundamentals increases, liquidity becomes more expensive to provide and more difficult to sustain. The resulting deterioration in market quality is reflected in wider bid-ask spreads, poorer execution quality, and higher transaction costs for investors.

The Commission appears to view optionality as a mitigating feature of the Proposal. From a market-structure perspective, it has the opposite effect. One of the principal strengths of the current disclosure framework is that investors and market participants generally know when material financial information will be released and what information will be provided. That uniformity promotes comparability across issuers, reduces information-processing costs, and facilitates efficient price discovery. For PTFs, comparability is not merely a convenience. Quantitative models, risk-management systems, and liquidity-provision strategies depend upon the ability to evaluate securities using consistent and comparable information. As disclosure practices diverge

1 Arif & De George, “The Dark Side of Low Financial Reporting Frequency,” The Accounting Review (2020).

across issuers and reporting periods, uncertainty increases and risk becomes more difficult to assess and manage. Liquidity providers must therefore devote additional resources to processing and normalizing information and require greater compensation for bearing the resulting uncertainty. Rather than mitigating the Proposal’s harms, optionality would amplify them by weakening one of the most valuable attributes of the current disclosure framework: consistency and comparability.

III. The Proposal Creates Market Integrity Concerns

The Proposal would materially increase the amount of nonpublic information held within companies between mandatory reporting periods. As the interval between required disclosures expands, more information accumulates within the issuer, more individuals gain access to that information, and investors become increasingly dependent upon management-controlled communications and other less reliable sources of information. The Commission's own proposing release acknowledges that longer reporting intervals may increase information asymmetries and selective disclosure risks. Those concerns deserve far greater attention than the Proposal provides. The resulting risks are particularly acute in smaller and less-liquid securities. PTG and others have previously expressed concerns regarding microcap issuers and the heightened risks of manipulation, promotional activity, and other abusive trading practices that can arise when information is limited and market liquidity is thin.2 Regulators, exchanges, and market participants are simultaneously pursuing initiatives designed to strengthen standards applicable to precisely these issuers and improve market integrity. Yet the Proposal would move in the opposite direction by reducing the frequency of mandatory disclosures and increasing informational gaps in the market. Timely and standardized disclosure is often one of the most important safeguards available to market participants trading these securities.

The quarterly Form 10-Q is a significant fraud deterrent. The auditor review process, the officer certifications required under Sarbanes-Oxley, and the legal consequences of material misstatements in SEC filings create powerful incentives for accuracy that voluntary earnings releases do not carry. Professor Seligman made this point directly in his SEC Investor Advisory Committee submission: “The ultimate question for those concerned with investor protection concerns the incidence of fraud. Will it increase with the reduction of mandatory disclosure reporting that would occur by ending quarterly reports? The burden is on the SEC to explain based on empirical data why it believes that fraud will not materially increase with its proposal or why the increase is otherwise tolerable.” The Commission’s proposing release does not adequately

discharge that burden.
For PTFs, these concerns are not merely theoretical. As discussed above, when information asymmetries increase and the reliability of public information declines, liquidity becomes more costly to provide and more difficult to sustain. This causes bid-ask spreads to widen, reduces market depth, and increases costs to issuers and investors alike.
2 https://www.sec.gov/comments/SR-NASDAQ-2026-004/srnasdaq2026004-794199-2402626.pdf

IV. The Proposal Would Increase the Cost of Capital
The deterioration in market quality and information integrity described above has a direct and predictable consequence: a higher cost of capital for affected issuers. Market participants demand compensation for bearing uncertainty. When information asymmetries increase, price discovery becomes less efficient, liquidity declines, and market integrity concerns become more pronounced, investors require higher expected returns to hold those securities.
By reducing the frequency, consistency, and comparability of mandatory disclosures, it would increase uncertainty regarding issuer fundamentals and weaken the information environment upon which investors rely. If the Proposal resulted in even a small increase in the cost of capital, it would quickly overwhelm the Proposal's purported compliance-cost savings. The Commission estimates that issuers electing semiannual reporting may save approximately $198,000 annually. Yet for many public companies, a small increase in financing costs would substantially overshadow that.
V. PTG Supports Targeted Disclosure Reform That Preserves Mandatory Reporting Frequency
PTG recognizes that there are genuine opportunities to reduce unnecessary disclosure burdens on public companies without reducing the frequency of mandatory, auditor-reviewed financial reporting and without triggering the cost of capital, liquidity, and market-integrity concerns described above.
In January, the Commission announced a comprehensive review of Regulation S-K and solicited public comment on opportunities to better focus disclosure requirements on material information. That effort goes directly to the problem the Commission is attempting to solve: reducing unnecessary compliance burdens while preserving the benefits of public-company disclosure. For example, commenters have suggested adopting a clearer and more consistently applied materiality standard that would allow companies to omit disclosures that are not material to their particular business. Risk factor disclosures in particular have increasingly become lengthy liability-protection exercises rather than focused discussions of genuine business risks. A more principles-based approach, coupled with clearer safe harbors for forward-looking statements, could reduce compliance costs, shorten disclosure documents, and improve information quality without reducing reporting frequency. Reducing immaterial disclosures would also make it easier for investors to identify and evaluate information that actually matters.
The Commission is also pursuing several other initiatives designed to improve the public company disclosure framework, including reviews of executive compensation disclosure requirements,3 amendments to the gun-jumping rules,4 and the rescission of climate-related disclosure
3 Statement on the Upcoming Executive Compensation Roundtable, Chair Atkins (May 16, 2025) available at

governance.

requirements.5 These initiatives more directly address many of the costs and burdens associated with being a public company. The Commission should carefully evaluate the feedback it receives on these proposals before weakening a core component of the federal disclosure framework. Thoughtful, targeted reforms can reduce compliance costs while preserving the transparency, comparability, market-quality, and investor-protection benefits associated with quarterly reporting.

PTG also supports continued modernization of EDGAR and broader efforts to improve the use of structured data and machine-readable disclosures. PTFs already rely on sophisticated systems to ingest, validate, and analyze financial information from multiple sources. Modernizing the format in which disclosures are prepared and disseminated could significantly reduce compliance costs while improving accessibility, usability, and data integrity. These types of targeted reforms address legitimate concerns regarding public-company burdens without weakening the disclosure framework upon which investors and markets rely.

VI. Conclusion

The Proposal would weaken important accountability mechanisms, impair market quality, increase market-integrity concerns, and ultimately raise the cost of capital for affected issuers. The Commission has not demonstrated that the speculative benefits of reducing reporting frequency outweigh these costs. To the contrary, the Proposal risks weakening a disclosure framework that has long contributed to the transparency, liquidity, efficiency, and integrity of U.S. capital markets. PTG therefore urges the Commission not to move forward with the Proposal and instead pursue targeted reforms that reduce unnecessary regulatory burdens while preserving the benefits of timely, standardized, and reliable disclosure.

Sincerely,
PTG

Attention: Vanessa Countryman, Secretary
July 6, 2026
RE: Semiannual Reporting: S7-2026-15
Ladies and Gentlemen:
I appreciate the opportunity to comment on the Securities and Exchange Commission's (the "SEC" or the “Commission”) proposed amendments that would permit registrants to satisfy their interim reporting obligations under the Securities Exchange Act of 1934 (the "Exchange Act") through semiannual reports on proposed Form 10-S rather than quarterly reports on Form 10-Q.
The SEC's mission is to protect investors, maintain fair, orderly, and efficient markets, and facilitate capital formation. In my view, the proposed amendments are inconsistent with these objectives. Quarterly financial reporting serves as a cornerstone of the U.S. disclosure system by providing investors with timely, standardized, and independently reviewed financial information that reduces information asymmetry between corporate insiders and outside investors. By allowing registrants to replace quarterly reporting with semiannual reporting, the proposal would increase the length of time investors must operate without verified firm-specific financial information, thereby increasing uncertainty regarding firm performance and value.
Importantly, reducing reporting frequency will not reduce investors' demand for information. Rather, investors are likely to substitute toward alternative information sources, including analyst forecasts, peer-firm disclosures, media reports, and private information channels, to bridge the resulting information gap. As information becomes less transparent and less evenly distributed, sophisticated market participants are likely to gain a greater advantage over ordinary investors, increasing information asymmetry and undermining the level playing field that has long been a central objective of the federal securities laws.
While semiannual reporting may appear to reduce compliance costs for some registrants, the Commission should carefully evaluate whether those costs arise from the frequency of reporting itself or from specific disclosure requirements that could be streamlined without reducing the timely flow of financial information to investors. Likewise, concerns regarding managerial short-

termism should be addressed through governance and compensation mechanisms rather than by reducing transparency in the capital markets.
1
Ultimately, the proposal presents a fundamental tradeoff between modest potential cost savings for registrants and a reduction in the quality and timeliness of information available to investors. The evidence suggests that investors value more frequent financial reporting, not less. Accordingly, the Commission should carefully consider whether permitting firms to opt out of quarterly reporting is consistent with its longstanding mission of protecting investors, promoting market efficiency, and facilitating capital formation. In the comments that follow, I outline several concerns regarding the likely consequences of the proposed amendments.

Periodic Reporting as a Market Discipline Mechanism

It is important for the SEC to consider the fundamental purpose of periodic reporting under the Exchange Act. The primary benefit of quarterly reporting is not simply the disclosure of information contained in Form 10-Q filings, but the discipline created by requiring management to periodically provide standardized, GAAP-based financial results to the investing public. Regular reporting reduces uncertainty about firm performance and imposes accountability on managers by requiring them to publicly reconcile market expectations with actual operating results.

Prior research demonstrates that investors rely on a variety of information sources when valuing firms. Beyer, Cohen, Lys, and Walther (2010) identify management forecasts, analyst forecasts, earnings pre-announcements, earnings releases, and SEC filings among the most important sources
of information available to capital market participants. 1While these disclosures contribute to the information environment, they vary substantially in terms of reliability, comparability, and verification. In contrast, periodic reports provide investors with comprehensive financial information prepared in accordance with U.S. GAAP and subject to independent assurance through either audit or review procedures.

The existence of quarterly reporting creates a regular mechanism through which market expectations are evaluated against verified financial results. Between reporting dates, investors, analysts, and other market participants continually update their expectations regarding firm performance. Earnings announcements and periodic filings provide a critical opportunity for those expectations to be assessed against actual GAAP-based outcomes, allowing markets to recalibrate and incorporate credible information into prices. This process promotes transparency, reduces information asymmetry, and enhances market efficiency.

Reducing the frequency of periodic reporting from quarterly to semiannual intervals would lengthen the period during which investors must rely on less comprehensive and less reliable sources of information. As the time between verified financial disclosures increases, so too does the potential for information asymmetry between informed and less-informed market participants. Sophisticated investors and individuals with superior access to firm-specific information may be better positioned to navigate these information gaps, while ordinary investors face greater uncertainty regarding firm performance and value. As a result, the proposed amendment risks undermining the level playing field that has long been a central objective of the federal securities laws. Rather than improving investor protection, the proposal may disproportionately benefit those

recent literature. Journal of Accounting and Economics 50: 296–343.

2
with information and sophistication advantages while increasing information risk for the broader investing public.

Evidence from Semiannual Reporting Jurisdictions: Investors Value Quarterly Disclosure

While some international jurisdictions permit semiannual rather than quarterly reporting, it is important to consider how investors respond in those environments and whether such reporting regimes adequately meet investors' information needs. In this regard, I draw the SEC's attention to

Arif and De George (2020)2, who examine investor behavior in settings where certain firms report on a semiannual basis while other firms provide mandatory quarterly reports. The authors find robust evidence that investors in semiannual-reporting firms are approximately twice as sensitive to the earnings announcements of U.S. bellwether firms that report quarterly. Their findings suggest that, in the absence of timely firm-specific financial information, investors increasingly rely on the reported results of peer and benchmark firms to infer the performance and value of companies that have not yet disclosed their own financial results.

These findings are highly relevant to the Commission's consideration of the proposed rule. The evidence suggests that investors have a strong demand for timely, GAAP-based financial information and seek alternative sources of information when such disclosures are unavailable. Rather than eliminating the need for information, less frequent reporting appears to shift investors toward using indirect and potentially less precise signals to assess firm fundamentals. Consequently, stock prices may become more dependent on extrapolations from peer firms and industry trends rather than on company-specific financial performance.

From an investor protection perspective, this outcome is concerning. As the availability of firm-specific financial information declines, information asymmetries are likely to increase. Sophisticated investors and market participants with greater analytical resources may be better positioned to interpret alternative information sources and infer underlying firm performance, while less sophisticated investors face greater uncertainty. In this manner, reducing reporting frequency may widen informational disparities across investors rather than promote the level playing field that has long been a cornerstone of the federal securities laws.

More broadly, the evidence indicates that investors value and actively seek more frequent financial reporting. The behavior documented by Arif and De George suggests that investors attempt to replicate the informational benefits of quarterly reporting when those disclosures are unavailable. This demand for timely accounting information should be carefully considered by the Commission when evaluating whether the proposed transition from quarterly to semiannual reporting would further its mission to protect investors, maintain fair, orderly, and efficient markets, and facilitate capital formation.

2Arif, S. and E. De George. 2020. The dark side of low financial reporting frequency: Investors' reliance on
alternative sources of earnings news and excessive information spillovers. The Accounting Review. 95 (6): 23-49.

Disclosure Choice and the Limits of Voluntary Reporting

The proposed amendment would allow registrants to choose between quarterly and semiannual financial reporting. Underlying this proposal is the notion that management, in consultation with investors, can determine the appropriate tradeoff between the costs and benefits of more frequent reporting. Implicitly, this approach moves the reporting regime toward a more voluntary disclosure framework in which firms are afforded greater discretion over the timing and frequency of financial reporting.

Economic theory suggests that disclosure choices can serve as signals to external investors. Under the unraveling principle, firms with favorable attributes have incentives to distinguish themselves through greater transparency, while firms with less favorable attributes may choose to disclose less information. Applied to the proposed amendment, this theory would predict that firms with strong governance, high-quality reporting practices, and a commitment to transparency would continue to provide quarterly disclosures, whereas firms facing greater uncertainty, weaker governance, or poorer performance may have stronger incentives to transition to semiannual reporting. In an environment with fully informed and rational investors, disclosure choices would be interpreted appropriately, and security prices would adjust efficiently to reflect the information conveyed by the firm's reporting decision.

However, the effectiveness of such a regime depends critically on investor sophistication and the market's ability to accurately interpret disclosure choices. This assumption warrants careful

consideration. Barton and Waymire (2004)3 examine corporate reporting and governance practices during the period preceding the Securities Acts of the 1930s, when financial reporting requirements were far less prescriptive. They document substantial variation in reporting quality, including the absence of audited financial statements for many firms and the provision of incomplete financial information to investors. Their evidence suggests that voluntary reporting regimes do not necessarily result in the level of transparency that investors require to make informed investment decisions.

Importantly, the historical evidence raises questions about whether investors consistently recognize and appropriately price differences in disclosure quality. If disclosure choices were always fully understood and incorporated into market prices, firms providing limited transparency would face strong market penalties. Yet historical experience suggests that many investors may not fully appreciate the implications of reduced disclosure for valuation uncertainty, information risk, and governance quality. As a result, disclosure choices may not convey information as effectively as theory would predict.

These concerns are directly relevant to the Commission's proposal. Allowing firms to choose between quarterly and semiannual reporting could introduce considerable variation in the transparency of public companies. While some investors may correctly interpret a decision to reduce reporting frequency as a signal regarding disclosure quality or managerial incentives, others may not fully understand the implications of that choice. Consequently, the benefits of

3Barton, J. and G. Waymire. 2004. Investor protection under unregulated financial reporting. Journal of Accounting
and Economics. 38: 65-116.

transparency may be difficult for some investors to distinguish from the apparent cost savings cited by management.

From an investor protection perspective, the risk is that reduced reporting frequency may disproportionately increase information uncertainty among less sophisticated investors while providing advantages to market participants with greater financial expertise and analytical resources. For this reason, the Commission should carefully consider whether a voluntary approach to reporting frequency is consistent with its longstanding objectives of promoting transparency, reducing information asymmetry, and maintaining fair, orderly, and efficient capital markets.

Managerial Myopia Is a Governance Problem, Not a Reporting Frequency Problem

In both the SEC's 2017 concept release and the current proposal, the Commission has cited concerns that quarterly reporting may contribute to managerial myopia by encouraging executives to prioritize short-term financial performance at the expense of long-term value creation. Consistent with this concern, Kraft, Vashishtha, and Venkatachalam (2018)4 examine the SEC's historical transition from semiannual to quarterly reporting during the 1950-1970 period and provide evidence that more frequent reporting can be associated with reductions in certain forms of long-term investment. These findings warrant careful consideration and highlight the importance of understanding the potential costs associated with reporting regulation.

However, the existence of a relation between reporting frequency and managerial behavior does not necessarily imply that reporting frequency is the root cause of short-term decision-making. Rather, managerial myopia is likely driven by a broader set of incentives created by firms' governance structures, compensation arrangements, and capital market pressures. In particular, executive compensation plans that place substantial weight on near-term stock price performance may encourage managers to focus on short-term outcomes regardless of the frequency of periodic reporting. Similarly, pressure from certain investors and boards of directors to meet short-term performance targets may contribute to managerial behavior that sacrifices long-term value creation.

From this perspective, reducing reporting frequency may address a symptom rather than the underlying cause of the problem. The incentives that drive managerial decision-making are largely

determined by a firm's governance mechanisms and compensation contracts. If policymakers are concerned that managers are underinvesting in long-term projects, the more direct remedy is to encourage compensation structures and governance practices that reward long-term performance rather than short-term stock price fluctuations.

Moreover, quarterly reporting provides important benefits to investors and capital markets by reducing information asymmetry and improving transparency. Eliminating or reducing reporting frequency in an effort to mitigate managerial myopia requires balancing these well-established benefits against the potential costs associated with short-term managerial behavior. In my view, the evidence does not support the conclusion that less frequent reporting is the appropriate policy

4Kraft. A., R. Vashishtha, M. Venkatachalam. 2018. Frequent financial reporting and managerial myopia. The
Accounting Review. 93 (2): 249-275.

solution. Instead, reducing reporting frequency risks weakening the information environment for investors while leaving the fundamental incentive problems that contribute to managerial myopia largely unchanged.

Accordingly, the Commission should be cautious in viewing semiannual reporting as a mechanism for addressing short-termism. The more effective approach is to address the governance and compensation practices that shape managerial incentives directly, while preserving the transparency and investor protection benefits associated with timely periodic financial reporting.

Reducing Reporting Costs Without Reducing Reporting Frequency

The Commission cites the costs associated with preparing periodic reports as a rationale for allowing registrants to choose between quarterly and semiannual reporting. While reporting costs deserve careful consideration, it is important to identify which aspects of the reporting process generate those costs and whether reducing reporting frequency is the most effective solution.

A substantial portion of the preparation costs associated with periodic filings arises from the production, review, and legal vetting of recurring disclosures that change little from one reporting period to the next. Indeed, comparisons of successive periodic reports often reveal that much of the disclosure remains substantially unchanged, with the most decision-useful and incrementally informative content concentrated in management's discussion and analysis and the updated financial statements and accompanying footnotes. Consequently, rather than reducing the frequency of financial reporting, the Commission may wish to evaluate whether certain recurring disclosures could be streamlined, modernized, or shifted to an annual reporting cycle while preserving the timely dissemination of financially material information.

This distinction is important. The policy question facing the Commission is not simply whether firms should report quarterly or semiannually. Rather, the more fundamental question is how to provide investors with the most useful information in the most efficient manner.

Summary Remarks

The proposed shift from quarterly to semiannual reporting would reduce the supply of the most credible, standardized, and independently reviewed financial information available to investors while doing little to address the underlying concerns that motivate the proposal. Quarterly reporting serves a critical market function by reducing information asymmetry, disciplining managers, and providing investors with regular opportunities to evaluate market expectations against actual GAAP-based performance. When those disclosures are delayed, investors do not stop demanding information. Instead, they turn to alternative sources, including analyst forecasts, peer-firm disclosures, rumors, and private information channels, that are often less reliable and less equally available across market participants.

As a result, semiannual reporting is unlikely to reduce information demand; it merely changes how that demand is satisfied. The inevitable consequence is a market environment characterized by greater uncertainty, greater reliance on inference and speculation, and larger information

advantages for sophisticated investors. In effect, the proposal risks transferring value from

ordinary investors to those who possess superior information, resources, or analytical capabilities. Moreover, the principal justification for the proposal, managerial short-termism, is fundamentally a governance and incentive problem rather than a reporting-frequency problem. If executives focus excessively on short-term outcomes, the source of that behavior is more likely found in compensation contracts, board oversight, and investor pressures than in the requirement to provide quarterly financial statements. Reducing reporting frequency does not eliminate those incentives; it merely reduces transparency.

Likewise, if the SEC's concern is compliance costs, the more appropriate solution is to modernize and streamline disclosures that provide limited incremental value rather than reduce the frequency of financially meaningful information. Investors consistently demonstrate a strong demand for timely financial information, and technological advancements continue to reduce the costs of producing and disseminating that information. In an era where firms generate financial data continuously and investors expect greater transparency, moving from quarterly to semiannual reporting represents a step backward rather than forward.

Ultimately, the question is not whether quarterly reporting imposes costs. It does. The question is whether those costs are outweighed by the benefits of reducing information asymmetry, promoting market efficiency, protecting investors, and supporting capital formation. For nearly a century, the SEC has concluded that timely and recurring financial disclosure is essential to fair and orderly markets. The evidence suggests that investors continue to value those disclosures today. Accordingly, permitting firms to opt out of quarterly reporting would weaken one of the SEC's most effective mechanisms for protecting investors and promoting transparent capital markets while offering only limited benefits in return.

I conclude with a very short summary of the above:

Semiannual reporting does not eliminate the market's demand for information, it simply replaces timely, verified, GAAP-based disclosures with greater uncertainty, greater information asymmetry, and greater advantages for informed traders, making it difficult to reconcile the proposal with the SEC's mission of protecting investors and maintaining fair, orderly, and efficient markets.

Please feel free to contact me at (jhschroe@iu.edu) if you have any question about my commentary. Thank you for the opportunity to comment on the proposed amendment.

SIFMA, with offices in New York and Washington, D.C., is the U.S. regional member of the Global Financial Markets Association (GFMA). For more information, visit http://www.sifma.org.

2 See Semiannual Reporting, Release Nos. 33-11414, 34-105368, IC-36140, 39-2563; File No. S7-2026-15 (May 5, 2026), 91 FR 24968 (May 7, 2026) (the "Proposing Release" or "Proposal").

members' views on the Proposal from an investor perspective as well as from a research analyst coverage and secondary market trading perspective.3

I. Introduction and Executive Summary

SIFMA supports efficient public capital markets and the Commission's objective of reducing unnecessary reporting burdens while preserving investor protection and capital formation.

From an underwriting perspective, SIFMA's concern is that the Proposal, as drafted, could unintentionally impair capital raising if semiannual filers cannot provide underwriters4 and investors with customary comfort, current financial information, and diligence support at the time of an offering. Under existing professional standards, an underwriter's ability to obtain a customary comfort letter — and, with it, important support for the statutory due diligence defense

— is tied to the existence of a recent audit or interim review by the issuer's independent accountants.5 Because under the Proposal a semiannual filer would, by definition, have its interim financial information reviewed only twice a year, an issuer that has not voluntarily obtained a quarterly review could be unable to have its independent accountants provide customary comfort for significant periods of time of each fiscal year. The Commission itself recognizes this tension and requests comment on whether changes to Public Company Accounting Oversight Board ("PCAOB") standards are needed.6 Without corresponding action by the PCAOB to adapt its auditing standards, and without clarifying guidance from the Commission concerning the

3 SIFMA AMG brings the asset management community together to provide views on U.S. and global policy and to create industry best practices. SIFMA AMG's members represent U.S. and global asset management firms that manage more than 50% of global AUM. The clients of SIFMA AMG member firms include, among others, tens of millions of individual investors, registered investment companies, endowments, public and private pension funds, UCITS and private funds such as hedge funds and private equity funds. 4 For ease of reading, as used in this comment letter, the term "underwriters" refers to broker-dealers acting as financial intermediaries in SEC registered offerings (in which the broker-dealers are often referred to as "underwriters") for which liability under Section 11 of the Securities Act of 1933, as amended (the "Securities Act"), and Securities Act Section 12(a)(2) may attach and in "Rule 144A" and other non-registered primary offerings (in which the broker-dealers act as "initial purchasers" or "dealers") to which liability under Rule 10b-5 may attach.

5 15 U.S.C. § 77k. Securities Act Section 11 imposes liability for material misstatements in, or omissions from, a registration statement. Underwriters may establish a "due diligence" defense under Section 11(b)(3) by showing that, after reasonable investigation, they had reasonable ground to believe and did believe that the statements were true and not misleading. See also 15 U.S.C. § 77l(a)(2) Securities Act Section 12(a)(2) imposes liability for material untrue statement in, or omissions from, a prospectus. Underwriters may avoid liability by showing that they did not know, and in the exercise of reasonable care could not have known, of the untruth or omission. Exchange Act Rule 10b-5 makes unlawful any material misstatements or omissions in connection with the purchase or sale of any security. While there is no explicit statutory due diligence defense to a claim under Rule 10b-5, "due diligence" can be used to rebut the existence of scienter or recklessness which is a judicially required element of Rule 10b-5. 17 CFR § 240.10b-5.

6 See Proposing Release, supra note 2, Request for Comment No. 27 (asking whether, "to comport with semiannual reporting," changes are needed to AS 6101 "to permit independent public accountants to provide comfort letters

expressing negative assurance on changes subsequent to the date and period of the latest financial statements”).

mechanics of offerings by semiannual filers, the Proposal risks creating a two-tier public market in which companies that elect semiannual reporting face significant practical barriers for almost six months of a given year to accessing the capital markets opportunistically.

Accordingly, to the extent the Commission moves forward with the Proposal, SIFMA respectfully recommends that the Commission:

• coordinate with the PCAOB and other relevant parties (e.g., the American Institute of Certified Public Accountants) before adoption, and not finalize the rule — or at least not make it effective — until a workable comfort-letter framework is in place for semiannual filers;

• provide offering-specific guidance confirming how semiannual filers can conduct shelf takedowns, “at-the-market” (“ATM”) and other continuous-offering programs, and other SEC registered and exempt capital-markets transactions without reducing customary diligence protections;

• preserve the current liability framework for voluntary quarterly earnings releases so that semiannual filers are not discouraged from continuing to provide quarterly information to the market;

• confirm that earnings releases furnished on Form 8-K can satisfy the “generally available” earnings-statement requirement under Section 11(a) of the Securities Act and Rule 158; and

• coordinate implementation with the national securities exchanges, banking regulators, and other authorities whose rules continue to reference quarterly reporting.

II. Overview of the Proposal

The Proposal would amend Exchange Act Rules 13a-13 and 15d-13 to allow a reporting company to elect to file one semiannual report on new Form 10-S, in lieu of quarterly reports on Form 10-Q, for the first three quarters of each fiscal year.7 Form 10-S would require substantially the same narrative and financial disclosures as Form 10-Q but would cover a six-month fiscal period; the semiannual financial statements would be prepared in accordance with U.S. GAAP and reviewed by an independent accountant, though not audited.8 A semiannual filer would have the

7 See 17 CFR § 240.13a-13 and 17 CFR § 240.15d-13. Under the current rules, reporting companies file three quarterly reports on Form 10-Q each fiscal year, with the fourth fiscal quarter subsumed within the annual report on Form 10-K.

8 See Proposing Release, supra note 2. Form 10-S would require substantially the same narrative and financial disclosures as Form 10-Q but cover a six-month period.

same filing deadline as a quarterly filer — 40 or 45 days after the end of the period, depending on filer status.9

A reporting company would elect semiannual reporting by marking a check box on the cover page of its annual report on Form 10-K (or, for a newly public company, on the applicable Securities Act or Exchange Act registration statement), and would be required to renew that election each year.10 The Proposal would also amend Regulation S-X to revise and consolidate the

rules governing the age of financial statements so that a semiannual filer's financial statements are not treated as "stale" under requirements built around a quarterly cadence.11

From the perspective of the capital-raising process, three features of the Proposal warrant particular attention: (i) interim financial information would be prepared and reviewed only semiannually rather than quarterly; (ii) for much of the year, the most recent reviewed interim period could be more than four months old at the time an issuer seeks to access the capital markets; and (iii) the interaction of these changes with existing auditing standards, earnings-release practice, and the federal securities-law liability framework is not fully addressed in the Proposal. The balance of this letter addresses each in turn.

III. SIFMA's Principal Concern from an Underwriting Perspective: Preservation of Customary Comfort-Letter Practice

Securities offerings in the United States depend on a well-developed market practice in which underwriters conduct a reasonable investigation of the issuer and obtain a comfort letter from the issuer's independent accountants. That practice is not a mere convention; it is a direct consequence of the liability provisions of federal securities laws. Section 11 of the Securities Act imposes liability on underwriters for material misstatements in, or omissions from, a registration statement, subject to a "due diligence" defense available to an underwriter that, after reasonable investigation, had reasonable grounds to believe, and did believe, that the registration statement was accurate.12 Section 12(a)(2) imposes liability on any person who offers or sells a security by means of a prospectus who "shall not sustain the burden of proof that he did not know, and in the exercise of reasonable care could not have known" of the alleged untruth or omission of a material fact.13 While there is no explicit statutory due diligence defense to a claim under Exchange Act

9 See Form 10-Q, General Instruction A.1 (large accelerated and accelerated filers must file within 40 days, and all other reporting companies within 45 days, after the end of the fiscal quarter). The Proposing Release would provide the same 40- or 45-day deadlines for Form 10-S, measured from the end of the first semiannual period.

10 See Proposing Release, supra note 2 (a reporting company would elect semiannual reporting by marking a check box on the cover page of its Form 10-K (or, for newly public companies, the applicable registration statement), and would be required to make the election again each year).

11 See Proposing Release, supra note 2 (proposing to amend Regulation S-X to revise the requirements governing the age of financial statements so that the financial statements of semiannual filers are not treated as "stale" under rules built along a quarterly framework, and to consolidate the age-of-financial-statements requirements in a single rule).

Cf. 17 CFR § 210.3-12.

12 Section 11(b)(3)(A) of the Securities Act, 15 U.S.C. § 77k(b)(3)(A).

13 Section 12(a)(2) of the Securities Act, 15 U.S.C. § 77l(a)(2).

Rule 10b-5, a due diligence defense can be used to rebut an allegation of scienter or recklessness, which is a central element of 10b-5 liability.14

Comfort letters15 are a central component of the reasonable investigation that underwriters undertake to establish the due diligence defense under the securities laws for financial information not itself required to be certified.16

The availability of customary comfort is governed by PCAOB Auditing Standard 6101.

Under AS 6101 (Letters for Underwriters and Certain Other Requesting Parties), when an accountant has not conducted a review of interim financial information in accordance with AS 4105 (Reviews of Interim Financial Information), the accountant may not comment in the form of negative assurance and is instead limited to reporting the procedures performed and findings obtained.17 Even where a review has been performed, AS 6101 permits negative assurance as to subsequent changes in specified financial-statement items only "as of a date less than 135 days from the end of the most recent period for which the accountants have performed an audit or a review."18

These standards were calibrated to a quarterly-reporting regime, in which three AS 4105 reviews occur each fiscal year, creating regular review touchpoints approximately 90 days apart. This cadence ensures that, throughout the year, underwriters can generally obtain comfort from an issuer's independent auditors that falls within the 135-day window. For a company accessing the market on, for example, December of a given year, a third-quarter Form 10-Q reviewed as of September 30 would be available, and the accountant's comfort letter would cover the period from September 30 to the closing of the offering — a window well within 135 days.

14 17 CFR § 210.10b-5. See In re Software Toolworks, Inc. Securities Litigation, 789 F. Supp. 1489 (N.D. Cal. 1992), aff'd in part, rev'd in part, 38 F.3d 1078 (9th Cir. 1994). ("As the Court previously found, the Underwriters carried out a reasonable investigation on all aspects of Toolworks . . . Their actions with respect to these alleged misrepresentation or omissions cannot be considered reckless.")

15 See PCAOB Auditing Standard 6101, Letters for Underwriters and Certain Other Requesting Parties. As the Commission notes, comfort letters provide "negative assurance" — a statement that nothing came to the accountant's attention that caused it to believe the unaudited financial information is not fairly presented. See Proposing Release, supra note 2, at n.90.

16 See, Phillips v. Kidder, Peabody & Co., 933 F. Supp. 303, 323 (S.D.N.Y. 1996) (mem. op.), aff'd, 108 F.3d 1370 (2d Cir. 1997) (the underwriters "relied in large part on the cold comfort letters provided by Arthur Andersen"); and In re WorldCom, Inc. Securities Litigation, 346 F. Supp. 2d 628, 683–84 (S.D.N.Y. 2004) ("[i]n assessing the reasonableness of the investigation, [the underwriters'] receipt of the comfort letters will be important evidence, but it is insufficient by itself to establish the defense.")

17 See PCAOB Auditing Standard 6101, ¶ .37 (providing that when accountants have not conducted a review in accordance with AS 4105, they may not comment in the form of negative assurance); PCAOB Auditing Standard 4105, Reviews of Interim Financial Information. See also Proposing Release, supra note 2, at n.92.

18 See PCAOB Auditing Standard 6101, ¶ .46 (permitting negative assurance as to subsequent changes in specified financial statement items only as of a date less than 135 days from the end of the most recent period for which the accountants have performed an audit or a review); See also Proposing Release, supra note 2, at n.93.

Under semiannual reporting, that would no longer be the case. If a company elects semiannual reporting, the only AS 4105 review during the fiscal year occurs at mid-year, covering the six-month period ending, for a calendar-year company, on June 30. Form 10-S is due by August 9 (for large accelerated and accelerated filers) or August 14 (for other filers) following that period end.19 Any offering that prices or closes more than 134 days after June 30 (i.e., any offering pricing or closing after approximately November 12) falls outside the window during which an accountant can provide negative assurance pursuant to current AS 6101, absent an additional AS 4105 review or an audit.20 A similar problem would arise for offerings which occur more than 134 days after the end of the fiscal year. Thus, for the approximately six months each year (in the case of calendar year companies, from May 14 (134 days after December 31) until approximately August 15 (when the Form 10-S is filed) and from November 11 (134 days after June 30) until approximately February 15 or later (when the Form 10-K is filed)), a semiannual filer seeking to execute an offering would be unable to obtain conventional comfort with respect to its most recent financial information.21 In the absence of customary comfort, investment banks would face substantial Section 11, Section 12 and Rule 10b-5 exposure and potentially be unwilling to serve as underwriters. The result is that, absent action by the PCAOB or the Commission, semiannual filers could be effectively unable to access the public or public-style private markets for a meaningful portion of each year or could be forced to incur the very quarterly review costs the Proposal is intended to eliminate. A rule that effectively forecloses conventional comfort for nearly six months out of the year would impose a significant structural disadvantage on any company that elects semiannual reporting and that also seeks to be an active capital markets participant or wants the flexibility to readily access the capital markets during favorable market windows.

The Commission expressly recognizes this issue. In Request for Comment No. 27, the Commission asks whether underwriters' requests for comfort letters would lead semiannual filers to continue to retain accountants to conduct quarterly reviews, and whether changes to AS 6101 are needed "to permit independent public accountants to provide comfort letters expressing negative assurance on changes subsequent to the date and period of the latest financial statements."22 SIFMA believes this question goes to the heart of whether the Proposal will, in practice, facilitate or impede capital formation.

Moreover, revising the 135-day limitation, while necessary, would not by itself be sufficient to preserve customary comfort. A typical comfort letter includes "negative assurance" regarding changes in specified financial-statement items (for example, changes in net sales, in total or per-share income, or in long-term debt) since the date of the most recent reviewed or audited financial statements. Under AS 6101, accountants provide negative assurance for changes post-period end by reading and comparing the issuer's internal interim financial statements and

19 Proposing Release, supra note 2, at 54.

20 PCAOB AS 6101. The 135-day limitation runs from the end of the most recently reviewed period, not from the filing date of Form 10-S. Accordingly, for a calendar-year semiannual filer with a June 30 first-period end, the window closes on approximately November 12.

21 The auditors would be able to give a comfort letter beginning on the date the 10-K is filed.

22 Proposing Release, supra note 2, at 41.

underlying accounting records as of the relevant cut-off date.23 In practice, where a company does not prepare interim financial statements for the relevant period (e.g., internal monthly financial statements), the accountants will be unable to provide this negative assurance.

This dependency on interim financial statements is particularly significant for semiannual

filers. A company that elects semiannual reporting but continues to release only selected quarterly financial metrics without preparing the complete interim financial statements that underlie a comfort letter may still be unable to obtain negative assurance on subsequent changes, even if the 135-day constraint were eliminated. The relief needed to preserve customary comfort therefore extends beyond the timing limitation in AS 6101 ¶ .46: it also requires either that semiannual filers continue to prepare interim financial statements sufficient to support negative-assurance procedures, or that the Commission and the PCAOB identify an alternative basis on which accountants may provide comfort on the quarterly metrics that semiannual filers choose to disclose. SIFMA encourages the Commission and the PCAOB to address this practical dependency directly, so that the comfort-letter framework for semiannual filers is workable in fact and not merely in form.

SIFMA therefore recommends that the Commission not finalize the Proposal or, at a minimum, not make it effective, until the PCAOB has adopted or clarified standards that permit underwriters to obtain customary comfort in a semiannual-reporting environment. We would encourage the Commission and the PCAOB to consider, among other approaches, whether AS 6101 should be revised to permit an accountant to provide negative assurance based on interim financial information contained in a quarterly earnings release or similar disclosure, without requiring a full AS 4105 review of that information, and to revisit the 135-day limit as applied to semiannual filers. SIFMA and its members would welcome the opportunity to work with the Commission and the PCAOB on the technical aspects of any such changes.

IV. Due Diligence During Interim Periods

Beyond the comfort letter issue, semiannual reporting would affect underwriters' ability to conduct due diligence on changes in an issuer's business and financial condition during interim periods. The periodic reporting cadence is itself an important diligence input: quarterly reports give underwriters a regular, independently reviewed, and publicly available baseline against which to assess developments since the last audited or reviewed period. This is a particularly acute concern for companies in rapidly changing industries, undergoing significant operational transformation, or that are in the process of integrating acquisitions. With only semiannual reports, underwriters would have fewer such reference points and would need to rely more heavily on management representations and issuer prepared information. Auditors' review

23 See PCAOB Auditing Standard 6101, ¶¶ .46–.50. The customary "subsequent changes" procedures contemplate that the accountants read the issuer's available interim financial statements and accounting records and make inquiries of company officials as of the cut-off date. Where no interim financial statements (such as internal monthly financial statements) exist for the comparison period, the accountants are limited to reporting the procedures performed and the findings obtained and cannot express negative assurance. See also id. ¶ .37.

of issuer financial statements serves as a critical step in the diligence process given their expertise in this area; expertise that the underwriters do not possess.

SIFMA recommends that the Commission address these issues in any final rule or accompanying guidance, and whether and under what circumstances a semiannual filer could voluntarily furnish quarterly financial information via Form 8-K to address information asymmetry without triggering the "filed" status consequences discussed in Section VI below.

V. Capital Formation and Offering Execution

Companies, both public and private, frequently access the capital markets opportunistically, launching offerings during narrow and sometimes unpredictable market

windows. The ability to execute quickly depends on the issuer being “offering ready,” including the availability of current financial information and customary comfort. Shelf takedowns under Rule 415, and in particular ATM and other continuous-offering programs, are especially sensitive to the absence of quarterly comfort, because they contemplate sales throughout the year on the strength of continuously available diligence support.24 We note in this regard the Commission’s recent registered offering reform proposal that would increase the availability of shelf registration statements to a broader category of issuers.25

For companies that are frequent issuers under Rule 415, this could mean that, for nearly six months of each fiscal year, the company cannot execute a takedown from its shelf without either (i) commissioning a voluntary quarterly audit review, (ii) waiting for the next Form 10-S or Form 10-K, or (iii) pressuring underwriters to proceed without conventional comfort — none of which is a satisfactory option. ATM programs are particularly implicated. Under an ATM equity distribution agreement, a company may sell shares into the market on an ongoing basis pursuant to a prospectus supplement linked to an effective shelf registration statement. Underwriters and sales agents acting under ATM agreements customarily receive comfort letters on a periodic or per-trade basis, and the ability to obtain ongoing comfort is often a condition precedent to the sales agent’s obligation to sell. If a semiannual filer maintains an ATM program, the sales agent may be unwilling to sell after the 135-day comfort window closes following the last AS 4105 review or audit.

If a semiannual filer must, as a practical matter, obtain a voluntary quarterly review, prepare additional financial statements, or wait until its next Form 10-S or Form 10-K before launching an offering, the Proposal may impair rather than facilitate capital formation. Such issuers would face delays, execution risks, and the same recurring review costs that the Proposal is designed to remove. The proposed amendments to the Regulation S-X age-of-financial-statements rules would helpfully reduce the risk that a semiannual filer’s financial statements are deemed

24 See 17 CFR § 230.415 (shelf registration); 17 CFR § 230.405 (defining “well-known seasoned issuer”). ATM programs and other continuous offerings are conducted as takedowns off effective shelf registration statements and depend on the continuous availability of customary diligence support, including comfort letters.

25 See Registered Offering Reform, Release Nos. 33-11418, 34-105513; File No. S7-2026-17 (May 19, 2026), 91 FR 31022 (May 26, 2026).

“stale” for registration statement purposes,26 but those amendments do not address the separate comfort-letter constraint, which is a function of professional auditing standards rather than the age-of-financial-statements rules.

One area where additional staff guidance will likely be required is how to prepare pro forma financial information for companies with different reporting cadences. The Division of Corporation Finance Financial Reporting Manual provides guidance on preparing pro forma information in special situations,27 including for companies with different fiscal years28 and for acquisitions of foreign private issuers that report only six month interim financial information, but does not provide guidance for domestic companies with different reporting cadences.

SIFMA recommends that the Commission provide clear guidance on how semiannual filers can conduct the full range of customary capital-markets transactions — including shelf takedowns, marketed and overnight registered offerings, Rule 144A offerings, ATM and other continuous-offering programs, acquisition financings, and liability-management transactions involving the issuance of a new security — without losing customary diligence protections. To the extent any such transaction would, under the Proposal, require a voluntary interim review by an issuer’s

independent accountants, the Commission should make that expectation explicit so that issuers, auditors, and underwriters can plan accordingly. Finally, SIFMA recommends that the staff of the Commission provide guidance on the preparation of pro forma and other financial disclosure in the context of the combination of issuers with different reporting cadences.

VI. Earnings Releases and the Liability Framework

Many semiannual filers would likely continue to issue quarterly earnings releases, whether due to investor and analyst expectations, contractual obligations, index or data-vendor requirements, or established market practice. Voluntary quarterly disclosure of this kind benefits the market, and the framework governing it should not be structured in a way that discourages it. Under current rules, an Item 2.02 earnings release is "furnished" rather than "filed," and is therefore not subject to Exchange Act Section 18 liability and is not automatically incorporated by reference into Securities Act registration statements.29 The Proposing Release asks whether, for semiannual filers, Item 2.02 Form 8-K submissions should instead be "filed" — subjecting them to Section 18 (and potentially Securities Act Section 11 and Rule 10b-5) liability — and whether first- and third-quarter earnings-release information should be required to be reviewed by an

26 While these staleness rules do not technically apply to Rule 144A and other exempt offerings, underwriters
typically look to SEC rules for guidance on many issues, including the age of financial statements and thus these
staleness concerns are relevant in those contexts as well.

27 See Section 3300 of the Division of Corporation Finance Financial Reporting Manual.

28 See Section 3301.1 of the Division of Corporation Finance Financial Reporting Manual.

29 Item 2.02 of Form 8-K governs the disclosure of results of operations and financial condition. Information furnished
under Item 2.02 is generally "furnished" rather than "filed," and therefore is not subject to Exchange Act Section 18
liability and is not automatically incorporated by reference into Securities Act registration statements. See Form 8-K,
Item 2.02; 15 U.S.C. § 78r.

independent accountant.30 SIFMA appreciates the investor-protection rationale for these questions, but cautions that mandatory "filed" status could discourage semiannual filers from voluntarily issuing quarterly earnings releases at all as it exposes them and their underwriters to liability without any corresponding comfort letter benefit, thereby reducing rather than increasing the information available to the market. Moreover, many earnings releases contain earnings guidance which neither the issuer nor its underwriters would want "filed" and subject to the liability provisions of Exchange Act Section 18 (and potentially Securities Act Section 11 and Rule 10b-5) liability.

Mandatory "filed" status would also compound the comfort-letter problem described in Part III. Filing an earnings release does not cause the underlying interim financial information to have been reviewed under AS 4105; absent such a review, the issuer's accountants still could not provide negative assurance on that information, even though investors and underwriters might now place greater weight on it.

SIFMA recommends that the Commission confirm, in any final rule or accompanying guidance, that semiannual filers may continue to furnish quarterly earnings releases on Form 8-K under Item 2.02 on a "furnished" basis, and that such voluntary quarterly disclosure does not trigger filing obligations under Rules 13a-13 or 15d-13. SIFMA further recommends that the Commission not finalize the Proposal until the PCAOB clarifies that such quarterly earnings releases or voluntary quarterly financial disclosures may be used as the basis for negative

assurance in a comfort letter under AS 6101 without requiring those disclosures to be “filed” with the Commission.

VII. Section 11(a) and Rule 158

Section 11(a) of the Securities Act imposes strict liability on issuers, and potential liability on underwriters, for material misstatements and omissions in registration statements. Section 11(e) creates an affirmative defense for issuers and certain other persons in actions brought more than one year after the effective date of a registration statement, conditioned on the issuer having “made generally available to its security holders an earnings statement” covering the twelve-month period beginning after the effective date of the registration statement.31 Rule 158 under the Securities Act provides that an annual report on Form 10-K, or a quarterly report on Form 10-Q containing the relevant twelve-month period, satisfies the “made generally available” requirement for purposes of this defense.32 Underwriters of securities being issued by a semiannual filer would thus potentially have to wait an additional three months before being able to take advantage of the benefits afforded by Rule 158.

30 See Proposing Release, supra note 2, Requests for Comment Nos. 19 and 20 (asking whether Item 2.02 Form 8-K
submissions should be “filed” rather than “furnished” for semiannual filers, and whether first- and third-quarter
earnings release financial information should be reviewed by an independent public accountant).

31 Section 11(a) of the Securities Act, 15 U.S.C. § 77k(a).

32 Rule 158 under the Securities Act, 17 C.F.R. § 230.158.

Moreover, the interplay between Section 11(a), Rule 158, and semiannual reporting is unclear. As noted above, Rule 158 provides that the Section 11(a) earnings statement requirement will be met if the information is contained in one report or any combination of reports either on (i) Form 10-K, Form 10-Q, Form 8-K, or in the annual report to security holders pursuant to Rule 14a-3 under the Exchange Act, or (ii) on Form 20-F, Form 40-F, or Form 6-K.33 While the Proposal would amend Rule 158 to add references to Form 10-S,34 which is helpful, SIFMA recommends that the Commission go further and confirm that information contained in an earnings release furnished on Form 8-K satisfies the requirements of Rule 158 to qualify to make an earnings statement “generally available” for purposes of Section 11(a). Rule 158 currently provides that information contained in a filed Form 8-K satisfies the requirements of Rule 158 but also expressly permits a registrant to “use other methods” to make an earnings statement generally available; making explicit that furnished Forms 8-K would preserve the existing burden-shift mechanics without requiring issuers to alter their disclosure practices.

VIII. Coordination With Other Regulatory Regimes

Quarterly financial reporting is embedded in a wide range of legal and contractual regimes beyond the Commission’s periodic-reporting rules. The rules of the national securities exchanges35 and the reporting requirements of banking regulators36 frequently reference quarterly periods or require the delivery of quarterly financial information. If the Commission adopts optional semiannual reporting without coordinated changes to these regimes, semiannual filers may remain subject to de facto quarterly information obligations, again undercutting the intended cost savings. The Commission acknowledges part of this concern in asking whether changes to exchange rules are necessary.37

SIFMA recommends that, before any compliance date, the Commission coordinate implementation with the national securities exchanges, the PCAOB, the banking regulators, and other relevant authorities, so that the various regimes that reference quarterly reporting are addressed in a consistent and orderly manner.

* * *

SIFMA supports efforts to improve the efficiency of the public-company reporting
framework and appreciates the Commission's ongoing commitment to evaluating ways to reduce

33 17 CFR § 230.158(a)(2)

34 See Proposing Release, supra note 2 (proposing to amend Rule 158 to add references to Form 10-S).

35 See, e.g., NYSE Listed Company Manual § 203.01 (requiring prompt disclosure of material information),
§ 802.01E (treating failure to timely file a Form 10-Q as a listing delinquency); Nasdaq Listing Rule 5250(b)
(periodic reporting obligations of listed companies).

36 See, e.g., 12 C.F.R. § 16.6 (requiring incorporation of Forms 10-Q into offering documents for certain bank-issued
debt securities, commonly issued in reliance on an exemption provided in Securities Act Section 3(a)(2)).

37 See Proposing Release, supra note 2, Request for Comment No. 29 (asking whether changes to the rules of securities
exchanges are necessary or appropriate to effectuate semiannual reporting).

unnecessary regulatory burdens. However, investor protection and capital formation require a semiannual reporting regime that functions effectively in practice.

To the extent the Commission moves forward with the Proposal, SIFMA urges the Commission to:

1. 2. 3. 4. Condition effectiveness on PCAOB action. Make the final rule effective only after the PCAOB has adopted or clarified standards permitting customary negative assurance in registered offerings by semiannual filers, including through the use of voluntary quarterly earnings releases or similar disclosures as a basis for providing negative assurance comfort.

Clarify earnings release treatment. Confirm that quarterly earnings releases by semiannual filers may be furnished on Form 8-K without triggering filing obligations or the liability consequences of "filed" status.

Amend Rule 158. Expressly provide that voluntary quarterly earnings releases furnished on Form 8-K, satisfy the Section 11(a) "made generally available" requirement for purposes of the limitations-period defense.

Coordinate with other regulators. Engage with the PCAOB, national securities exchanges, banking regulators, and other relevant authorities, and condition the compliance date of any final rule on the satisfactory completion of that coordination.

Without these safeguards, the Proposal could reduce the availability of standardized public financial information while simultaneously leaving active capital markets issuers subject to de facto quarterly-review costs — thereby undercutting both the intended cost savings and the Commission's capital formation goals.

SIFMA greatly appreciates the Commission's consideration of these comments, and to the extent the Commission moves forward with the Proposal, would welcome the opportunity to work with the Commission and the PCAOB on the technical amendments discussed above. If you have any questions or would like to discuss these comments further, please contact Joe Corcoran at (jcorcoran@sifma.org), or SIFMA's outside counsel on this letter, Eddie Best (EBest@willkie.com) at Willkie Farr & Gallagher LLP.

Sincerely,

Joseph P. Corcoran

U.S. Securities and Exchange Commission
100 F Street, NE
Washington, DC 20549-1090
Re: File Number S7-2026-15 - 2026 Semiannual Reporting Proposing Release
Dear Ms. Countryman:
The Interfaith Center on Corporate Responsibility ("ICCR") opposes the Commission's proposal to allow companies to file interim reports semiannually rather than quarterly. The very purpose of quarterly reporting is for companies to furnish shareholders with "a reasonably complete and up-to-date statement of the business and operations of registered companies."1 Even quarterly reporting has been deemed potentially insufficient, which is why Form 8-K continues to exist.
For the reasons set forth below, facilitating reduced reporting robs investors, such as our members, of the timely information the Commission has long acknowledged investors need in order to make informed investment and voting decisions. Moreover, reducing the timeliness of disclosures puts companies at risk of violating their obligations to keep information current, which leads to the risk of material omissions or institutional investors relying on stale information that is potentially misleading.
ICCR is a coalition of members representing a cross section of religious investors, foundations, asset managers, pension funds, and other long-term institutional investors. The organization has been at the forefront of shareholder advocacy for over 50 years, and its members collectively represent over $4 trillion in invested capital.
As stewards of financial assets, our members rely on up-to-date disclosures, including quarterly reports, to satisfy their fiduciary obligations. They understand that robust management of a company's business risks, which include how companies address environmental, social, and governance matters, have a material impact on and are a driver of superior long-term performance. The ability to gauge those risks depends on access to sufficient relevant information on a timely basis obtained from company disclosure documents.
1 Securities and Exchange Commission's 36th Annual Report to Congress (1970) at 11; SEC's Institutional Investor Study Report to the 92nd Congress, 1st Session, House Document No. 92-64 at Part 1 p. XXVII (March 10, 1971) (emphasis supplied).

I. Investor Access to Up-to-Date Information is Best Achieved Through the

Current Disclosure Regime Requiring Quarterly Reports on Form 10-Q, Supplemented as Needed with Disclosures on Form 8-K.

The SEC adopted Form 10-Q in 19702 to facilitate orderly quarterly reporting. Quarterly reporting is an essential tool for investors striving to make prudent decisions as fiduciaries. It is critical that disclosures be up to date to ensure that investors base decisions on information that continues to be accurate. Indeed, as noted in the SEC's 36th Annual Report to Congress in 1970, as well as in its Institutional Investor Study Report to Congress in 1971, the SEC has long recognized investors' need for ongoing, updated disclosures.
3

The SEC adopted Form 10-Q after concluding its 1969 disclosure study known as the Wheat Report.
4 The Wheat Report identified the need for structure and uniformity after "[t]he study carefully examined a significant sample of quarterly financial reports and releases provided by the [New York and American Stock] [E]xchanges," where it was "readily apparent ... that they varied from extremely useful to extremely poor and uninformative."5

At the time the SEC adopted Form 10-Q, the SEC was also in the midst of a study Congress mandated in 19686 that the SEC undertake to examine the impact of the increase in numbers of institutional investors participating in the market so that "Congress may determine what measures, if any, may be necessary and appropriate in the public interest and for the protection of investors."7 The Institutional Investor Study concluded with the SEC's 1971 Institutional Investor Report to Congress, which approvingly referenced the SEC's adoption of quarterly financial reports.
8

The SEC's conclusions that led to adoption of structured quarterly reporting was reinforced by these studies identifying both the problems as well as how best to address

2 Exchange Act. Rel No. 34-9004, 35 Fed. Reg. 17523 at 17537. Though the SEC adopted the form in 1970, the concept of quarterly reporting was already well-established as a necessary means of providing periodic updates to the annual report.

3 See supra note 1.

4 Disclosure to Investors: A Reappraisal of Federal Administrative Policies Under the '33 and '34 Acts (the "Wheat Report") (April 19, 1969).

5 Id., Chapter 1 at p. 39 and Chapter 10 at p. 357.

6 Public Law 90-438 (July 28, 1968).

7 Id., quoting the amendment to Exchange Act Section 19 at 15 U.S.C. § 78(s)(e)(1)(D) mandating the Institutional Investor Study.

8 SEC's Institutional Investor Study, supra note 1, at p. XXVII.

the identified need for more timely disclosure to replace the less frequent, non-structured information that lacked the usefulness required by investors.

The 1969 Wheat Report "attempted to balance the requirements which it considered essential for meaningful current reports against the time to be allowed for filing them. It also considered how such reports could best be coordinated with other sources of disclosure. The conclusion reached was that a regular, quarterly report would be more useful than the [then-] present, irregular 8-K report."9

The 2026 Semiannual Reporting Proposing Release acknowledges the 1969 Wheat Report, but merely dismisses it without suggesting how one or more event-specific 8-K reports could meaningfully fill the gap of information between a report issued up to six months prior and a current need to make investment and voting

decisions. Indeed, even with quarterly reporting, the period towards the end of a new quarter risks at least some information being stale or omitted. But that risk is measurably shorter for a three- versus a six-month period.

The SEC has not demonstrated in its 2026 Semiannual Reporting Proposing Release that the conclusions reached as a result of its own earlier in-depth studies are no longer true. It has offered no credible support for overturning the findings of the Commission that led to the current, well-structured rules requiring quarterly reporting. Rather, the 2026 Semiannual Reporting Proposing Release suggests that the fact that the "cadence of quarterly interim reporting" has not changed since 1970 somehow makes it suspect.

In that connection, the SEC recognized at the time of its earlier studies that in-depth, empirical studies should continue to be undertaken going forward in order to maintain the most effective disclosure regime possible. Nevertheless, notwithstanding citations to an impressive number of studies in the 2026 Semiannual Reporting Proposing Release, not one appeared to be by the SEC. Given the SEC's specific investor-protection mandate, an SEC study would be a reasonable approach. Yet there is no reference to any recent, structured research initiative by the SEC itself to support a recommendation that investors could reasonably rely on semiannual reporting with periodic 8-K reports for up-to-date information.

The SEC posits in its 2026 Semiannual Reporting Proposing Release (at p. 19) that the information required in Form 8-K is more robust than it was in 1970, and therefore should be sufficient for updating information. It even acknowledges the Wheat Report's recommendation supporting the continuation of quarterly reports and the subsequent adoption of the 1970s-era Form 10-Q to facilitate those reports. But the SEC fails in its 2026 Semiannual Reporting Proposing Release meaningfully to acknowledge the problems with attempting to use an event-driven Form 8-K with its limited focus as a substitute for the more comprehensive quarterly report on Form 10-Q.

9 The Wheat Report at 39.

Moreover, the 1970 Form 10-Q adopting release10 made it clear that the SEC had considered having Form 10-Q replace Form 8-K, but ultimately concluded that investors need both, as each has its distinct purpose: Form 10-Q provides summary quarterly financial information, and Form 8-K requires the reporting of important events on a more timely basis than the required financial look-back provisions of Form 10-Q. They are fundamentally different, and both provide investors with essential information. Preparing quarterly financials and being on the lookout for reportable events both forge a practice discipline for reporting companies. Those features also enable investors to assess financial information on an ongoing basis, which is an imperative for institutional investors acting as stewards of the assets they manage.

II. The Proposed Changes Will Neither Promote Long-Termism nor IPO's, and Risk Misleading Investors

A. The Proposed Changes Will Not Promote Long-Termism

The 2026 Semiannual Reporting Proposing Release suggests that semiannual reporting could foster a more long-term approach to value creation.11 However, empirical evidence contradicts that theory. Shivaram Rajgopal, whose paper "The Impact of Reporting Frequency on UK Public Companies" is cited in the 2026 Semiannual Proposing Release,12 states that the Commission has gotten things backward. The quarterly report "is the scoreboard, not the game." Instead, pressures to make quarterly numbers "comes from the broader incentive architecture: analyst consensus estimates, quarterly earnings guidance, compensation tied to EPS, and

institutional investor focus on near-term results." Rajgopal concludes that "[r]emoving the scoreboard does not change how the game is played."13

A different study by Rajgopal and two colleagues used the natural experiment resulting from the UK's mandating of quarterly reporting in 2007 and subsequent abandonment of that requirement in 2014. It found that the imposition of quarterly reporting did not have a statistically significant impact on UK firms' investment as

10 Exchange Act Release No. 34-9004, 35 Fed. Reg. 17523 at 17537.

11 See https://www.sec.gov/files/rules/proposed/2026/33-11414.pdf, at 76.

12 Semiannual Reporting Proposing Release at 21 n.62. The 2017 paper is cited for the proposition that only 10% of UK companies returned to semiannual reporting after that country repealed its quarterly reporting requirement in 2014. Earlier this year, however, Rajgopal updated that figure, pointing to a 2024 Goldman Sachs study finding that "most" UK companies had returned to semiannual reporting at that time. See https://www.forbes.com/sites/shivaramrajgopal/2026/05/05/the-secs-semi-annual-reporting-proposal-a-solution-in-search-of-a-problem/

13 https://www.forbes.com/sites/shivaramrajgopal/2026/05/05/the-secs-semi-annual-reporting-proposal-a-solution-in-search-of-a-problem/

measured by capital expenditures, research and development spending, and net property, plant and equipment.14 (The 2026 Semiannual Reporting Proposing Release listed reduction of capital expenditures, including research and development, among examples of short-termism.15) Likewise, there was no statistically-significant difference in levels of investment between companies that stopped reporting quarterly after 2014 and those that continued doing so.

16

Rajgopal and his co-authors concluded that "moving from quarterly to semiannual reporting is not an effective remedy for undue corporate emphasis on short-termism."17 They suggested that regulators concerned about short-termism instead alter executive incentive pay, encourage asset manager engagement with portfolio companies, and develop company performance metrics that are "directly relevant to long-term value creation."18 We encourage the Commission to work with other regulators to craft reforms to address aspects of the incentive architecture that encourage short-termism, without sacrificing the transparency our members need to make informed investment and stewardship decisions.

B. The Proposed Changes Will Not Encourage Companies to Go Public

The 2026 Semiannual Reporting Proposing Release also states that the lower costs associated with semiannual reporting "could potentially influence a company's decision to become or remain a reporting company and encourage more companies to go or remain public."19 As we pointed out in ICCR's comment on potential changes to Regulation S-K,20 empirical research shows that regulatory and compliance costs are a relatively small factor in a company's decision to go public through an initial public offering ("IPO") or to stay public:

A 2021 empirical study affirmed the relatively small role played by regulation, concluding that "regulatory costs only explain a small fraction of the disappeared IPOs, in contrast to the popular claim," and those costs "do not appear to be a significant driver of going private decisions." Specifically, the study found that "[r]emoving all estimated regulatory costs increases the average IPO likelihood after 2000 from 0.95% to 1.4%,

which explains only 7.4% of the decline in IPO likelihood from pre-2000 to post-2000."21 (footnote omitted).
The availability of abundant capital in the private markets, the expansion of which was facilitated by the Commission's own regulatory initiatives, and the increased importance of scale to company success, which leads smaller companies to merge rather than go public, are widely recognized as the most important factors in the decline in IPOs since the 1990s.22 We note that cost savings will be lower for companies that are required to make quarterly reports to lenders, creditors, swap counterparties, and other entities; we are concerned that small investors, who (unlike large institutional investors) lack ties to such entities, will be disproportionately harmed by a move to semiannual reporting.
Rajgopal and two colleagues studied the natural experiment resulting from the UK's mandating of quarterly reporting in 2007 and its abandonment of the requirement in 2014. They found that the gradual return to semiannual reporting did not lead to higher valuations, a lower cost of capital, or more IPOs. Instead, "[t]he drift to semi-annual reporting tracked a period during which the London Stock Exchange struggled to attract new listings and retain existing ones."23 Given the small role compliance costs play in the decision to go or stay public, the disadvantages of depriving investors of current information far outweigh any capital formation benefits of the Proposal.
C. Semiannual Reporting by the Least Sophisticated Companies Risks Misleading Investors
For a variety of reasons, large, experienced public filers may determine that it is in the company's best interest to continue to file quarterly reports, regardless of the rule permitting less frequent filings. This will be particularly true for companies issuing new securities that need to rely on incorporating by reference their Securities Act filings rather than bearing the costs of producing and distributing a new offering document. It is one thing for a company to evaluate whether disclosures are accurate since the date of the company's last quarterly filing, but quite another where up to six months may have passed since its filing or its latest 8-K material event notice.
In this context, the idea of promoting more companies to go public with fewer guardrails in place risks having those new, inexperienced filers violate the law. Companies will be coming into a sophisticated market, offering additional securities while shareholders receive incomplete information.

22 See studies cited in https://www.sec.gov/comments/cll-15/cll15-745947-2311375.pdf, at 3-4.
23 https://www.forbes.com/sites/shivaramrajgopal/2026/05/05/the-secs-semi-annual-reporting-proposal-a-solution-in-search-of-a-problem.

Company disclosure obligations are in place to ensure that investors receive sufficient information on which to rely in order to base their investment and voting decisions. While large public companies generally have robust internal controls and

procedures in place to manage those risks, newer public companies have yet to develop them. And without the guidance of compliance rules such as quarterly report filings, those companies run a strong risk of not fully appreciating or having the discipline in place to determine when prior information may have changed. Those changes, in turn, may cause the company to have in place materially deficient information on which potential and current shareholders rely to their detriment, putting the company at risk of suit from shareholders as well as enforcement actions by the SEC.
* * *
ICCR and its members have consistently advocated for comprehensive mandatory disclosures that inform investors about issuers' businesses, risks, and governance. Mandatory time-constrained disclosures are a vital source of information ICCR members use to make security buy/sell decisions and to inform stewardship actions such as proxy voting and engagement.
For these reasons, ICCR strongly opposes the Commission's proposal to allow companies to file interim reports semiannually rather than quarterly. ICCR appreciates the opportunity to provide our perspective on the substance of the 2026 Semiannual Proposing Release. For further discussion, please contact me at jzinner@iccr.org.
Sincerely,
Josh Zinner

Joshua Shleffar — Jul 6, 2026
Subject: File No. S7-2026-15 From: Joshua Shleffar This proposal is a step in the wrong direction, less information provided to those who do not have major affiliations is simply a way to keep individual investors in the dark and, therefore, less able to chase the dreams and opportunity America has always been built on (though that seems likely a selling point to many with influence now who clearly do not want ALL Americans to prosper).

Joshua Tucker — Jul 6, 2026
Subject: File No. S7-2026-15 From: Joshua Tucker I would prefer you keep reporting to quarterly. Why would you want to go back to something that was removed over 70+ years ago. This would be a step in the wrong direction by allowing companies to only report twice a year it keeps too much financial information from consumers in an even more connected world/ economy. In a fast paced world where everything is connected why would it be necessary to go back to less reporting. For an administration that's done so much for the American people I hope you all do what's right and keep reporting quarterly.

Jowanna Lewis — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jowanna Lewis This policy will hurt everyday investors by limiting their ability to participate in investment opportunities. It could also increase risk and fraud by concentrating investment among a smaller group of insiders or wealthy investors, while reducing transparency and public accountability. In effect, it disenfranchises ordinary people from investing

and leaves companies with less accountability to the broader public.

Jude Schwegel — Jul 6, 2026
Subject: File No. S7-2026-15 From: Jude Schwegel I want accountability from executives.

Judy Ward PWC Retired Partner — Jul 6, 2026
Subject: File No. S7-2026-15 From: Judy Ward As an active investor, I do not support reducing the amount of reporting by publicly traded companies. I think with new tools such as AI the cost of providing this information is much reduced from prior years. It’s also the cost of having investors in your company.

Julia Trites Individual Investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Julia Trites As an investor I rely on quarterly reports in making decisions about where my money is invested. I have had confidence in the past about the ability of the U.S. to give mostly reliable data from it’s companies in the years I have invested. However, when the rulers of the game are allowed to change, than economic goalposts are also moved into vague and ill-defined positions. This is especially so when companies may be allowed the option to give semiannual reports rather than the current rule of quarterly reports, a rule that has been in place for at least five decades. Change the rules and the the whole economic game changes. A playing field is only as good as having stable rules with consistent enforcement that applies to all. An economy runs best when the rules are stable and consistently enforced for all players. After reviewing the SEC’s report on basic background history of report frequency and a review of general economic history from the 1930’s to the present it is apparent to me that the requirement for quarterly reports is a very sound practice and should stay as is. To change the rule is to allow companies the option of to keep investors, like myself, in the dark about the health and viability of any given company and by extension the general U.S. economy when analyzed collectively. I want to know about what kind of volatility is present in a company I invest in or wish to do so. Quarterly reports help make this possible. Reliable economic data from public companies makes for the opportunity to make sound financial decisions for an individual investor, any needed public policy changes to encourage growth, rapid responses to adverse external political pressures, job creation, and soft power influence in general global affairs. The world is more interconnected more than ever where events on one place can rapidly precipitate financial consequences within a day. It is safe to say that interconnection will only increase in the future. The U.S. should attempt to maintain it’s economic position in the world by being a reliable provider of rule enforcement for all and reliable data. If data or rules become unreliable, than the U.S. is choosing to give up that status. Keep the requirement for quarterly reporting in place for all public companies.

Julie Schober — Jul 6, 2026
Subject: File No. S7-2026-15 From: Julie Schober So you're blatantly just screwing over the public because the Democrats have shown to be ineffective and stopping Trump and his administrations corruption. They may not be able to stop you but "we the people" are watching your blatant corruption. You are not getting away with anything. I hope Trump is alive long enough to be able to read what it will say in the history books about his presidency. I used to be a Republican but I don't even recognize that party anymore and they certainly aren't working for the people but working for

the super powerful instead. You're turning us into Nicaragua! I have many Republican friends that voted for you that now regret it. Even your own people are turning against you. We're not as dumb as you think.

Julie Schonfeld — Jul 6, 2026
Subject: File No. S7-2026-15 From: Julie Schonfeld Keep quarterly reporting so all investors can track the health of the companies.

Justin C. — Jul 6, 2026
Subject: File No. S7-2026-15 From: Justin C. To the Securities and Exchange Commission: I am a full-time individual investor and trader, and I oppose the proposal to move issuer reporting from a quarterly to a semiannual cycle. Quarterly 10-Qs are the only timely, standardized, and comparable window into company performance available to independent investors like me. Doubling the dark period between reports from three months to six widens the information gap between insiders and everyone else, forces markets to trade on leaks, rumors, and stale data for half the year, and produces sharper repricings, wider spreads, and higher volatility when results finally land. Those costs fall on ordinary market participants: namely, the roughly 167 million Americans who own stocks. The claimed benefits do not withstand scrutiny. When the U.K. and E.U. abandoned mandatory quarterly reporting, research found no meaningful reduction in short-termism and no boost to long-term investment. The cost of preparing a 10-Q is trivial next to the pricing efficiency of trillions of dollars in market value, and six-month gaps give fraud and deteriorating fundamentals twice as long to compound undetected. Quarterly transparency is a core reason U.S. markets command the world's trust and premium valuations. I urge the Commission not to adopt this proposal.

K Goldstein — Jul 6, 2026
Subject: File No. S7-2026-15 From: K Goldstein Don't keep investors in the dark about company data. Do not end quarterly reporting.

K. Smith — Jul 6, 2026
Subject: File No. S7-2026-15 From: K. Smith Please do not implement this change, Investors should have quarterly reports at a minimum to make informed choices when investing. Reverting to a twice a year system would force investors to rely on outdated information. This is particularly harmful for individuals who cannot afford the loss which may come from outdated data . In order to grow our economy and individual wealth, people need reliable information from quarterly reports.

Kaitara Cullum — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kaitara Cullum Under this proposal, owners would receive only half as many official updates about the businesses they own. Less transparency doesn’t eliminate uncertainty. It increases it. And when information finally does arrive, the surprises are likely to be bigger, the reactions sharper, and the volatility greater.

Kalen Krempely — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kalen Krempely - Do not reduce transparency for all investors. Keep quarterly reporting. We are regressing if transparency diminishes. - Research from the CFA Institute, which studied this exact maneuver in the U.K. market, shows that reporting frequency has no measurable effect on corporate investment behavior - The American stock market is still the leading market in the world - where is the burden on these companies? Its a false notion. Do not be fooled.

Kalia Ramirez — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kalia Ramirez I support quarterly reporting. The more transparent information is, the better. Fraud and system abuse prevention should be the goal of everyone here. Limitation of information access can only benefit those who don't want their activities known….and we the people, have a right to know.

Kamal Aljayeh. Retired government employee. As a US citizen I care about integrity and transparency when it comes to tax payers money — Jul 6, 2026

Kamla Cusick — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kamla Cusick I am writing to oppose the proposal to allow public companies to report financial results only twice a year instead of every quarter. As an individual investor, I rely on quarterly reports to make informed decisions about my investments. I also have retirement savings invested through professionally managed accounts. Whether I am making decisions myself or relying on others to manage my retirement, timely and accurate financial information is essential. Reporting only twice a year means investors will have less current information and companies will be able to go longer without publicly reporting how they are performing. That makes our markets less transparent and leaves individual investors at a disadvantage. I understand the concern that quarterly reporting may encourage companies to focus too much on short-term results. If that is true, the answer is not to give investors less information. Transparency and long-term planning can—and should—go hand in hand. Public companies benefit from access to the investments of millions of Americans. In return, they should provide regular, timely, and consistent information about their financial condition. That is a reasonable expectation. This proposal would primarily make life easier for companies while reducing the information available to the people whose money they depend on. I do not believe that is in the best interest of investors or the public. Please keep the current quarterly reporting requirements in place. Transparent markets benefit everyone, and ordinary investors deserve timely access to the information they need to make sound financial decisions. Thank you for considering my comment.

Karen Allison — Jul 6, 2026

hold their feet to the fire from now on

Karen E Leyse Retired, trustee for 2 trusts — Jul 6, 2026
Subject: File No. S7-2026-15 From: Karen E Leyse We should have learned our lessons. Experience shows that reducing reporting requirements and other protections for investors will destabilize the economy. Corporations are not required to manage investments in the public interest. In order to keep corporations more honest: quarterly reporting is needed to keep investors better informed. I am one investor who will surely be less interested in investing more when there are fewer protections for the consumer.

Katherine Lewis President, Tax Aces LLC — Jul 6, 2026
Subject: File No. S7-2026-15 From: Katherine Lewis The proposal to permit public companies to reduce their reporting frequency from quarterly to semiannual raises significant concerns. At its core, equity investing represents an ownership interest. Shareholders rely on consistent, timely, and transparent disclosures to evaluate the performance and direction of the companies they own. Reducing the frequency of required reporting risks weakening that fundamental relationship between issuers and investors. Proponents suggest that fewer reporting obligations could lower compliance costs. While that may have been a more compelling argument in the past, advances in technology—including automation and AI-driven reporting tools—have substantially reduced the burden associated with preparing periodic disclosures. As a result, the cost-saving rationale is less persuasive today. Others argue that reducing reporting frequency may help alleviate short-term market pressures. However, short-termism is driven more by investor behavior and market dynamics than by the mere availability of information. Limiting disclosures does not inherently promote long-term thinking; instead, it restricts access to information that investors use to make informed decisions. What remains clear is that reducing the availability of information does not improve investor understanding. Less frequent reporting means investors receive fewer formal updates on business performance, strategy execution, and operational developments—even though these activities continue on a daily basis. In practice, this change would result in longer intervals between updates, increasing the likelihood that material developments accumulate without disclosure. When information is eventually released, it may lead to more pronounced market reactions, greater uncertainty, and increased volatility. In sum, reducing reporting frequency would likely diminish transparency, impair investor insight, and weaken market efficiency, without meaningfully addressing the underlying concerns it seeks to resolve.

Kathleen L Nazar Retiree — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kathleen L Nazar Keep quarterly reporting!!! PLEASE!

Kathleen Zaracki — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kathleen Zaracki SEC Commissioners, I strongly object to the proposed elimination of quarterly reporting. All individuals, funds, etc. that invest in the US stock market need access to quarterly financial information on companies traded on the US exchanges. We need more transparency not less.

Kathryn Cartwright — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kathryn Cartwright As an individual investor, to have the knowledge that a company is having success or difficulties quarterly is critical. Much like individuals need to have financial reviews regularly, so do companies. As someone who also holds investment accounts as well managed by other individuals, I expect those individuals to be able to review financial statements regularly. Since we are in an age of automation and computers, the cost of running reports for a quarterly statement of a public company is minimal. All this proposal does is to minimize the trust that investors have in companies and that will make the market more volatile. We certainly don't need our markets to be more volatile than they are currently. Especially as almost every American has their retirement wrapped up in the stock market and needs to be able to create reasonable decisions for their portfolios after retirement.

Kathryn L Trevithick — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kathryn L Trevithick The more accountability the better. Leave it quarterly. Less temptation for problems.

Kay Hardgrave — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kay Hardgrave News article

---

Keith Gulledge — Jul 6, 2026
Subject: File No. S7-2026-15 From: Keith Gulledge It is essential to retail investors, as well as to larger institutional investors, to retain the quarterly filing and signatory requirements that have been in effect for over 50 years. Quarterly filing is a regulatory requirement that helps to keep business executives honest. To go six months without information concerning financial structure, profitability, cash flow, and balance sheet analysis would be a huge disservice to investors. It also is a check against executive dishonesty, fraud, self-dealing, and other illegal actions. Please keep quarter reporting as a protection to investors!

---

kelly maybee — Jul 6, 2026
Subject: File No. S7-2026-15 From: kelly maybee I would like to express my disdain to the possible changes to filings reports. These need to continue to be quarterly and not semiannual. How is one to guage the financial stability of companies for possible growth and investment if not reported quarterly. Investors and possible investors need to have this information available at more than a semiannual basis.

Dear Ms. Countryman:
The Massachusetts Biotechnology Council (MassBio) appreciates the opportunity to comment on the
Commission's proposed rule to allow reporting companies the option of filing semiannual reports on new Form 10-S in lieu of quarterly reports on Form 10-Q. MassBio represents more than 1,600 members
across the Massachusetts life sciences ecosystem, including hundreds of small and emerging biotechnology companies working to discover and develop the next generation of treatments for patients. We write today in strong support of this proposal, which offers a meaningful opportunity to right-size disclosure obligations for these companies without compromising the investor protections at
the heart of our public markets.
An Opportunity to Right-Size Regulation for Small and Emerging Biotechs
The vast majority of publicly traded biotechnology companies are small, pre-revenue enterprises. They
have no products on the market, no sales to report, and no earnings to announce. Their value is instead
built on scientific progress: advancing candidates through preclinical development, initiating and completing clinical trials, and reaching regulatory milestones. For these companies, the quarterly reporting regime designed with mature, revenue-generating corporations in mind imposes obligations
that are poorly matched to their business reality.
Each Form 10-Q requires significant time from a small company's finance, legal, and executive teams,
along with meaningful outside expenditures on auditors, counsel, and consultants. For a large company,
these costs are absorbed with little notice. For an emerging biotech operating on finite investor capital
and a fixed cash runway, every dollar spent on compliance is a dollar not spent on research and development. The proposal would allow these companies to redirect substantial compliance savings toward their scientific programs, extending runway and, ultimately, improving the odds that promising medicines reach patients.
700 Technology Square, 5th Floor
Cambridge, MA 02139
617.674.5100 | massbio.org
Right-sizing regulations like this may also improve the calculus for private biotechs weighing an initial
public offering. Going public offers access to the deep pools of capital that drug development requires,
but that benefit comes at the price of significant ongoing compliance and reporting costs, a price that weighs heaviest on small, pre-revenue companies. By reducing that burden without diminishing the information available to investors, the proposal makes the public markets a more attractive source of funding for the companies that need them most, supporting capital formation across the sector.
Biotech Investors Are Focused on Clinical Milestones, Not Quarterly Readouts
The Commission correctly observes in the proposing release that investors in pre-revenue biotechnology
companies focus primarily on progress in product development and regulatory decisions rather than

interim financial results. Our members' experience confirms this. Biotech investors are sophisticated and long-term oriented by necessity: drug development is measured in years, not quarters. A clinical trial may take two to five years to read out, and the financial statements filed in the interim change little from one quarter to the next, typically reflecting only operating expenses and cash position against a story that investors already understand.

The information that actually moves a biotech company's valuation, including trial initiations, enrollment progress, data readouts, and partnership transactions, is already disclosed promptly when these events occur. Companies announce material developments through press releases and current reports filed with the Commission on Form 8-K, typically due within four business days of the triggering event, and Regulation FD ensures that any material information shared with analysts or investors is simultaneously made available to the entire market. This framework delivers information to investors within days, not months.

Quarterly reports for these companies rarely convey new decision-useful information to investors; they largely restate what the market already knows, at real cost to the company. A semiannual cadence, supplemented by the robust current-reporting system that has developed over the past several decades, is well suited to how biotechnology companies are analyzed and valued in today's markets.

An Optional Regime Preserves Choice for Companies and Investors Alike

Critically, the proposal mandates nothing. It is an optional reporting regime that allows companies to determine a reporting cadence that best serves their shareholders. Management teams and boards who are best positioned to weigh the preferences of their particular investor base would simply gain the flexibility to make that judgment for themselves.

This flexibility is a win for biotechnology companies and investors alike. Companies gain the ability to align their disclosure obligations with the realities of their business model and stage of development.

700 Technology Square, 5th Floor
Cambridge, MA 02139
617.674.5100 | massbio.org

Investors retain timely access to all material information through the current-reporting framework, along with the assurance that any move to semiannual reporting reflects a considered judgment by the company's management about what best serves its shareholders. And the market itself will provide discipline: companies whose investors value quarterly reporting will face strong incentives to maintain it.

The experience of other jurisdictions bears this out. As the Commission notes in the proposing release, when the United Kingdom eliminated its quarterly reporting requirement in 2014, fewer than 10 percent of companies stopped issuing quarterly reports in the period that followed. The European Union, the United Kingdom, Hong Kong, and Japan all operate on semiannual reporting regimes today, and their capital markets continue to attract investment. Given flexibility, companies will still make disclosure decisions that reflect the expectations of their investors.

Conclusion
MassBio commends the Commission for advancing a thoughtful, balanced proposal that recognizes one
size does not fit all in interim reporting. For small and emerging biotechnology companies, the option of
semiannual reporting would reduce unnecessary compliance costs, free resources for the research that
drives value for patients and investors, and better align disclosure with the long timelines on which drug
development actually operates. We encourage the Commission to adopt the proposal, and we would welcome the opportunity to serve as a resource as the Commission finalizes this rulemaking.
Thank you for your consideration.
Respectfully,
Kendalle Burlin O'Connell
President & CEO
Massachusetts Biotechnology Council

Kenneth Hayward No affiliation other than my life savings in the market. — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kenneth Hayward I oppose the change of quarterly reports to every 6 months . I propose monthly reports due to advancements in artificial intelligence. More information provided enables a better decision. Thank You

Kenneth R. Gragg Motley Fool Community — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kenneth R. Gragg I have been investing in publicly held stocks for 60 years. I have always felt at a disadvantage to institutional investors when trying to keep up with the progress of the companies I invest in. Institutions have the luxury of being able to keep up with their investments by hiring people for that express purpose. They develop contacts and sometimes extract information in a more timely context than individual investors. I feel the proposed Semiannual reporting rule being propose, would put myself and other individual investors at yet a greater disadvantage than we are presently. Further, I don't see how reporting every 3 months could result in much cost difference than reporting every 6 months. The data reported is kept up on daily and quite easily in this AI age, so having the CEO and CFO spend an hour out of each 3 months, addressing the concerns of stockholders does not seem a demanding or costly exercise.

Kevin Rowe — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kevin Rowe The optional structure does not neutralize the risk to investors — it concentrates it. Election is voluntary, so the companies most likely to opt into reduced reporting are those with the most to gain from reduced scrutiny: smaller issuers, pre-revenue firms, and companies with deteriorating fundamentals. This creates a two-tier market where reduced transparency correlates precisely with the companies investors most need to monitor. A 180-day disclosure gap, double the current maximum, gives material problems — fraud, failed products, liquidity strain — far more time to compound before investors have any official visibility. European markets that reduced reporting frequency saw investors overreact to peer-firm disclosures in the absence of company-specific data, producing more volatile, less efficient pricing — not the stability this proposal assumes. The Commission's cited cost savings (~$198,000/issuer annually) are marginal against existing audit and controls spending, which occurs regardless of filing

frequency, and don't justify this tradeoff. I urge the Commission to withdraw this proposal, or at minimum restrict any reduced-frequency option to issuers below a defined market-cap or public-float threshold.

Kimberly Lamm Professor, Duke University — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kimberly Lamm To the SEC Chairman, I am shocked that this rule change is even being considered. It is clear fraud and corruption are rampant in this current historical moment. Are we going to just succumb to the trend by giving the top 5% the opportunity to transact business under the cloak of darkness for 6 months? The enactment of this rule will take us back to the era before the great depression. I do not want the middle class to be wiped out. If it is, who will buy the products and services these publicly traded corporations are selling? It is your ethical obligation to be the hard regulatory agency that keeps corporate greed in check. Do not approve this scam of a rule. It will have devastating market repercussions down the line. Sincerely yours, Kimberly Lamm

Kiran Patel — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kiran Patel Quarterly reporting helps the investor stay more informed about the hard earned money they invested in the market. This helps the investor make better decisions. I do not agree with reducing quarterly reporting.

Kristen West — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kristen West As a mutual and index fund investor, I strongly oppose the proposed shift to semiannual reporting. Leaving a six-month information gap will trigger massive, erratic price swings on earnings days, making index rebalancing highly inefficient. Furthermore, big institutional players will just buy expensive alternative data to fill the gaps, putting retail and passive investors at a massive disadvantage. Extending the reporting window also invites more insider trading and allows corporate fraud or failures, which are already a problem, to go unnoticed for longer. Quarterly reporting is a proven standard for market integrity. Cutting disclosures to save a bit of corporate paperwork is bad for investors. Please drop this proposal.

Kristina Vicidominj — Jul 6, 2026
Subject: File No. S7-2026-15 From: Kristina Vicidominj Please do not loosen regulations and/or reporting. CEO's have proven time and again the dishonest ones will push any limit of that is in their best interest. This regulation helps keep them honest which is in the best interest of stockholders and employees. The rule was put in place for a reason and that reason has not gone away.

L. Martin Licensed Social Worker — Jul 6, 2026
Subject: File No. S7-2026-15 From: L. Martin Reporting needs to stay as frequent as possible so that there is enough time to hold companies accountable when discrepancies arise. As someone who does not have a ton of money, I rely on businesses doing the right thing and government holding them accountable. History shows when left unchecked how companies move in the direction of boosting their own profits without concern of the common man. Let's keep quarterly reporting in

place.

---

Laurie-Ann Preston Individual Investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Laurie-Ann Preston My first comment is WHY?? The SEC did this before and it was a failure, flop. Truthfully, I really want to know why and who is pushing the SEC to do this. On your website you have your organization's purpose is "we’re the agency that protects investors from misconduct, promotes fairness & efficiency in the securities markets, and facilitates capital formation for those looking to hire, innovate, and grow." With that mission statement, investors and companies need timely information to make investment and business decisions. On a personal level, I review my income, investments and expenses on a quarterly basis to make sure I am on track to fulfill my goals. I don't understand why the SEC would allow companies to hide information for six months from investors. Are you doing this to help facilitate more insider trading? Because that is what is going to happen. Reducing the reporting frequency will reduce investing. I know I'm going to very hesitant to invest if I don't have timely information and understand the trends. People in other countries invest in the US due to our laws, regulations and information transparency. These investments will decline if we only have reporting 2x/year! If the P/E drops out of the blue people will loose large amounts of $$$ We're going to have another financial meltdown and this time I hope the Government doesn't bail these companies out. Other countries that have moved to the six-month reporting have less prestige, weaker investments. Please don't do this to our economy. You and we will regret it.

Lawrence Conway III None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Lawrence Conway III I am opposed to changing the time period for reporting to the SEC. Less oversight led to past problems, like ENRON, when less reporting was allowed. Let's not repeat the mistakes of the past.

Lawrence Seltzer — Jul 6, 2026

Subject: File No. S7-2026-15 From: Lawrence Seltzer Dear Secretary, I am writing to tell you I oppose this new ruling change. As an investor nearing retirement, I rely on the quarterly reporting to keep stability with my investments. I rely on the executive sign-offs, and the incentives set making CEOs responsible for what they publicly report. It is my understanding that there will now be a gap in reporting, which the SEC is proposing to close. Why would you need to close a gap? There shouldn't be a gap in reporting. It seems that this proposal benefits certain companies from having to report financial problems, as opposed to what it's supposed to do: inform the public and their investors. I remember what happened with Enron, when these rules were put in place to stop something like that from happening again. The stability of our economy is at stake, and we cannot afford to these organizations. They will not "do the right thing," and we must regulate them. This is not a hardship, and I see no benefit to the public by implementing the change. Thank you.

Lee Sanders US military retired — Jul 6, 2026
Subject: File No. S7-2026-15 From: Lee Sanders Tannin Sanders, SSG combat medic in the army. I use quarterly reporting to make financial decisions. It is unfair to investors like me to have even less precise information to make decisions on, while insiders will already know even more than they do now about the performance of companies.

Lesley Bingham — Jul 6, 2026
Subject: File No. S7-2026-15 From: Lesley Bingham Transparency is key to a fair, open market. All buyers and sellers must be on a level playing field to prevent fraud and allow for accountability. Quarterly reporting is one way that everyone can have adequate, timely information. More information leads to more faith in companies and the markets that trade in their securities. Moving to twice yearly reporting would allow fraud to flourish undetected and allow corporate leaders to trick investors. This is a terrible terrible idea that will lead to distrust in the markets and curb investment in US-based companies.

Leslie Roberts — Jul 6, 2026
Subject: File No. S7-2026-15 From: Leslie Roberts As a retired person, monitoring the financial well being of companies in which I have invested is critical to ensuring I am not flying blind for six months at a time. A lifetime of saving for retirement could be greatly diminished or destroyed if timely information is delayed. An extra three months also gives those who commit fraud more time for irreparable harm to be done before it is discovered. Even though reporting every six months will be “optional”, it is certain that it will become the norm, to the detriment of the ordinary investors. The companies still have to keep their books. It is a modest cost for the company to file quarterly - a cost of doing business. It is a small price to pay for the privilege of generating capital from the public - from people like me. As an investor, I should be afforded the right to quarterly reports. Keep the reporting requirements as they are.

Leslie Smith — Jul 6, 2026
Subject: File No. S7-2026-15 From: Leslie Smith To Whom It Concerns at the SEC, The switch from quarterly reporting to semiannual reporting has no positive net effect for citizens and investors; it only benefits a company to decrease the number of reporting options in a year. I'm personally not an experienced investor, but the people I trust with my money are, and for them and on my behalf (and

on the behalf of millions of other average Americans), they should have access to more up-to-date information on which to make informed decisions. The benefits to companies, whether through reduced costs of reporting or increased profit, aren't worth the costs to average citizens. As with many things currently happening in our country, this seems to be a strategy to benefit only a certain group - big businesses and the rich people behind them. According to USA . gov, "The Securities and Exchange Commission (SEC) oversees securities exchanges, securities brokers and dealers, investment advisors, and mutual funds in an effort to promote fair dealing, the disclosure of important market information, and to prevent fraud." Semiannual reports would go against promoting fair dealing, disclosing important market information, and preventing fraud. I urge you to keep in place the quarterly reporting requirement rather than changing it to benefit the few. Sincerely, Leslie Smith

---

Linda Davidson — Jul 6, 2026
Subject: File No. S7-2026-15 From: Linda Davidson I am opposed to this proposed change to reduce the frequency of required reporting by publicly traded companies. Less transparent reporting will not only potentially allow fraud to occur without oversight, but also serve to hide company losses. Both would have consequences for millions of Americans investing for their retirement. Along with this administrations other reckless actions, this change will create negative economic impacts and hurt the American people.

Linda L — Jul 6, 2026
Subject: File No. S7-2026-15 From: Linda L Please keep reporting on a quarterly basis. I am retired and depend upon knowing that my retirement funds are being well managed.

Linda Mihalik — Jul 6, 2026
Subject: File No. S7-2026-15 From: Linda Mihalik The U.S. Securities and Exchange Commission website states, “The SEC’s mission is to protect investors; maintain fair, orderly, and efficient markets; and facilitate capital formation.” Maintaining quarterly reporting is essential to preserving transparency, accountability, and investor confidence in the U.S. capital markets; essential to meeting the SEC mission. Transitioning to semi-annual reporting would increase the length of time between required disclosures, potentially reducing market transparency and allowing material developments to go unreported for extended periods. Therefore, I respectfully request the SEC does not change from quarterly reporting.

Linda Schober — Jul 6, 2026
Subject: File No. S7-2026-15 From: Linda Schober Actually, I think the reporting should be monthly! As a retired person with limited income, but some investments, I need the relevant information to be accurate and updated as often as possible, in order to make logical and safe decisions about my investments.

Re: Release Nos. 33-11414; 34-105368; 39-2563; IC-36140; File No. S7-2026-15
Semiannual Reporting
Dear Ms. Countryman:
The Asset Management Group of the Securities Industry and Financial Markets Association ("SIFMA AMG")1 appreciates the opportunity to provide comments to the Securities and Exchange Commission ("SEC" or "Commission") regarding the Commission's Proposed Semiannual Reporting Rule ("the Proposal"), which would allow companies to file semiannual reports in lieu of quarterly reports to meet their interim reporting obligations under the Securities Exchange Act of 1934.2
The Proposal is part of a larger initiative to encourage more companies to go and remain public by reducing the costs and burdens associated with Exchange Act reporting.3 We strongly support this overarching objective and share the Commission's view that "a robust public capital market – with more emerging companies and small businesses choosing to become public companies through initial public offerings or other paths – benefits companies and investors alike."4 From an asset management perspective, expanding the universe of public companies available to invest in promotes portfolio diversification, improves market transparency, and creates more opportunities to invest in growth-stage issuers.
1 SIFMA AMG brings the asset management community together to provide views on U.S. and global policy and to
create industry best practices. SIFMA AMG's members represent U.S. and global asset management firms that
manage more than 50% of global AUM. The clients of SIFMA AMG member firms include, among others, tens of
millions of individual investors, registered investment companies, endowments, public and private pension funds,
UCITS and private funds such as hedge funds and private equity funds. For more information, visit http://www.sifma.org/amg
2 SEC Semiannual Reporting, 91 F.R. 24968 (May 7, 2026) ("Semiannual Reporting Proposal"), https://www.govinfo.gov/content/pkg/FR-2026-05-07/pdf/2026-09095.pdf.
3 Id. at 24976.
4 Id.

In advancing this objective, we recognize the necessity of reducing potentially duplicative or otherwise overly burdensome reporting requirements, which may impose costs without yielding proportionate benefits to investors. However, while reforms designed to address unnecessary compliance costs are worthy of consideration, quarterly reporting remains an important source of timely information for investors. As we describe in detail throughout our comments, eliminating mandatory quarterly reporting requirements could result in a range of unintended consequences that have the potential to negatively impact investor outcomes, market quality, and the Commission's broader capital formation goals.
Accordingly, we encourage the Commission not to move forward with the current Proposal and instead recommend an alternative approach that focuses on reducing duplicative, immaterial, or otherwise unnecessary reporting burdens as part of the Commission's broader review of public-company disclosure requirements.

As Chairman Atkins observed in his Statement on the Proposing Release, a significant part of incentivizing companies to go and stay public is ensuring that the disclosure mandated in interim reports (both financial and non-financial) is guided by materiality as the north star, regardless of reporting cadence.[5] We have long-supported SEC initiatives focused on reducing reporting burdens for companies without decreasing the usefulness of such reports to investors,[6] and we would welcome the opportunity to work with the Commission and staff to identify specific elements of Form 10-Q that could be improved as part of the Commission's broader disclosure modernization initiative.

For clarity, we also note that SIFMA is submitting a separate comment letter focusing on the Proposal's potential implications from an underwriting perspective.

Executive Summary

SIFMA AMG strongly supports the Commission's overarching objective of reducing reporting burdens for companies and facilitating public market capital formation. However, we believe that an approach focused on reporting content rather than cadence, would be most effective in achieving the Commission's goals. While the Proposal would affect different participants across the capital-markets ecosystem in different ways, our main concerns from an investor perspective are discussed below:

5 Statement on Proposing Release for Semiannual Reporting, Paul S. Atkins, Chairman SEC (May 5, 2026), https://www.sec.gov/newsroom/speeches-statements/atkins-statement-proposing-release-semiannual-reporting-050526.

6 Letter from Mary Kay Scucci, SIFMA Global Financial Institutions Accounting Committee and the Asset Management Accounting Policy Committee (Mar. 21, 2019), available at https://www.sec.gov/comments/s7-26-18/s72618-5165051-183441.pdf.

- The Proposal would make it more difficult for asset managers to evaluate companies and make informed investment decisions on behalf of their clients.
- The Proposal could have a negative impact on research analyst coverage for smaller issuers, complicating the Commission's capital formation objectives and compounding informational concerns.
- The Proposal could result in unintended consequences that offset or outweigh the efficiency gains associated with reduced reporting frequency.
- The Proposal raises additional considerations regarding secondary market trading that could have potential impacts for investors.
- The Proposal's assumptions regarding short-termism and IPO activity are not sufficiently supported by empirical evidence.
- Given these concerns, we recommend an alternative approach that focuses on reporting burden rather than reporting cadence.

I. The Proposal would make it more difficult for asset managers to evaluate companies and make informed investment decisions on behalf of their clients.

Timely access to material information is critical for asset managers to make informed investment decisions on behalf of their clients. When assessing whether to buy, sell, or hold the securities issued by a given company, the information contained in the company's interim reports – such as interim financial statements reviewed by an independent public accountant – serve as

an important reference point for investors to assess business fundamentals, risks, and potential investment upside. The greater the frequency of such reporting, the better equipped investors are to make informed decisions. Delays in the reporting of material information make it more difficult for investors to adequately assess these factors in a fast-paced market environment.
The Proposal, if finalized, would eliminate the existing quarterly reporting requirements for public issuers (filed via Form 10-Q) and instead give companies the option to file reports on a semiannual basis on the newly established Form 10-S.7 Because companies would have the option to file reports on a semiannual basis or continue to report quarterly, the specific number of companies that would elect to file Form 10-S is unknown, making it difficult to judge the overall impact on access to information across the public capital markets. However, in making such a change, the Commission acknowledges that a "reduction in the frequency of interim reporting could result in delayed disclosure of material information, reduced comparability, and some lost information."8
Though the Commission recognizes these risks, the Proposal ultimately rests on the premise that the flexibility provided under the Proposal allows companies to choose the reporting
7 Id. at 24971.
8 Id. at 24987-88.

frequency that best aligns with their business needs and investor expectations.9 While the informational needs of investors may vary depending on the specific characteristics of individual companies, moving away from standardized quarterly reporting could raise serious challenges from an investor perspective that have implications beyond any individual company's decision to report on a semi-annual basis.
In practice under the Proposal, companies would have the option to: (i) continue filing quarterly Form 10-Qs; (ii) switch to semiannual reporting and only file Form 10-S; (iii) file Form 10-S but continue releasing quarterly earnings on a voluntary basis; (iv) file Form 10-S while providing quarterly earnings and audited financial information on a voluntary basis; or (v) move among these voluntary approaches depending on what is considered most advantageous in a particular quarter.
10 Depending on how reporting practices develop, this range of potential reporting combinations across a wide portfolio could make it more challenging for investors to digest, compare, and model information when disclosure practices vary across issuers, even those within the same sector, and also have the potential to change over time. Crucially, the informational impact of an individual company's decision to report on a semi-annual basis would not be limited to that company. Investors would also lose a valuable reference point for evaluating competitors and broader sector trends.
Recognizing that one result of the Proposal will be a reduction in the frequency of interim reports for some reporting companies, the Proposal notes that current reports on Form 8-K regarding certain material events have become timelier and more robust since quarterly reporting was originally implemented by the SEC, mitigating concerns about information delays.
11 We agree that Form-8 K can be a meaningful notification mechanism for discrete material events in certain circumstances. However, notification of the occurrence of a material event is not an appropriate substitute for timely disclosure of the financial impact of those events. If the Proposal is adopted and a substantial number of companies elect to report on a semiannual basis, longer intervals between the notification of material events and financial disclosure would become more common, presenting further challenges for investors who lack timely access to material information.
II. The Proposal could have a negative impact on research analyst coverage for

smaller issuers, complicating the Commission's capital formation objectives and compounding informational concerns.
9 Id. at 24987.
10 Under the Proposal, once a company elects its interim reporting frequency (quarterly or semiannual), it would be
committed to that reporting frequency for the remainder of that fiscal year. See Proposal at 24978. However,
companies electing to file Form 10-S would have the ability to publish quarterly earnings releases and financial
information on voluntary basis, raising potential concerns regarding consistency and comparability.
11 Id. at 24974-75.

Research analyst coverage serves as an important tool for asset managers to aggregate information about companies and ultimately inform investment strategies. As noted in the 2022 SEC Staff Report on the Issues Affecting the Provision of and Reliance Upon Investment Research Into Small Issuers:
"The Commission has frequently acknowledged the important role
of research to U.S. capital markets, in particular its significance in discovering issuer information and sifting, digesting and transmitting it in a manner that may be used by investors."12
While the benefits of robust research analyst coverage for both companies and investors have been well documented, the 2022 Staff Report describes several structural pressures that have contributed to a reduction in the supply of fundamental research, particularly for smaller issuers.13 According to the SEC's Office of the Advocate for Small Business Capital Formation, 44% of small- and mid-cap stocks currently have no analyst coverage, compared to only 3% of large-cap stocks.14
The decline in analyst coverage for smaller issuers has significant implications for capital formation. Commissioner Uyeda recently described these effects, explaining: "A healthy IPO market depends on the ecosystem that surrounds the transaction—the analyst coverage that generates investor awareness, the market-making that provides post-IPO liquidity, and the institutional interest that contributes to price discovery in the aftermarket. For small companies, that ecosystem has quietly eroded over the years [Citing the above OASB data on analyst coverage] … Without coverage, investors may be more hesitant to take positions, which can negatively affect liquidity. Thus, for a small company contemplating an IPO, going public makes little sense if the costs exceed the benefits"
15
.
Notably, the challenges associated with declining analyst coverage described above are ongoing and pre-date the current Proposal. However, the experiences of other jursdictions that have moved to voluntary semiannual reporting systems show that the Proposal would likely have the effect of compounding these existing problems for companies that elect report on a semiannual basis. For example, a 2017 FCA study of the effects of eliminating quarterly reporting requirements in the United Kingdon found a general decline in analyst coverage for companies that opted out of quarterly reporting when such requirements were eliminated in
12 SEC Staff Report on the Issues Affecting the Provision of and Reliance Upon Investment Research Into Small

2014.
16 Academic studies also suggest that smaller issuers would be most impacted by such a decline in analyst coverage, as smaller firms are most likely to stop reporting on a quarterly basis.
17 In contrast, as the Commission points out in the Proposal, studies find that higher frequency of mandatory interim reporting is associated with increased analyst coverage.
18
From an investor perspective, concerns regarding potential information loss resulting from delays in the disclosure of material information could be compounded by a parallel decline in analyst coverage. Though the ultimate informational impact of the Proposal depends on issuer adoption and a range of other factors that may influence analyst coverage, we share the concern expressed in the Proposal that: “To the extent that a reduction in reporting frequency reduces analyst following for an issuer, the incremental information that would have been provided by the discontinuing analysts would be lost as well, further increasing information asymmetry.”19 Such an acceleration of information asymmetry resulting from a decline in analyst coverage would present further challenges for managers weighing potential investment decisions on behalf of clients.
III. The Proposal could result in unintended consequences that offset or outweigh the efficiency gains associated with reduced reporting frequency.
The core benefit that the Commission has identified in allowing companies to file interim reports on a semiannual basis is that interim reports can be costly and time consuming to prepare, and that allowing companies to report on a semiannual rather than quarterly basis would free up company time and resources that could then be re-directed to other business priorities.
20 The
Commission estimates that companies electing to file on a semiannual basis could see a net reduction in direct compliance costs equal to $198,000 per fiscal year, in addition to other potential indirect savings.
21 As we have noted, we commend the Commission for seeking ways
to right size the costs associated with Exchange Act reporting, and we recognize that the savings contemplated under the Proposal could benefit some public issuers in a meaningful way.

19 Id.
20 Id. at 24987.

21 Id. at 25000.

However, in many cases, these potential direct compliance cost-savings could be offset or substantially outweighed by an increase in the "cost of capital" that investors are willing to pay for a company's securities as a result of having less access to timely information. The Proposal does not attempt to quantify these potential costs, however, the Commission acknowledges that "decreased transparency may make it more difficult for investors to make well-informed decisions and may increase the expected return (i.e., the cost of capital) that they demand for holding a company's securities."22 In essence, investors are likely to demand a higher risk premia for purchasing a company's securities if they lack access to material information as a result of a company electing to file on Form 10-S. This in turn, would raise the cost of capital for companies and negatively impact market quality if this concern were to materialize at scale.
The Proposal ultimately concludes that despite this concern, individual companies are best suited to weigh these tradeoffs based on their own unique needs. However, the direct cost savings resulting from the switch to semiannual reporting (estimated at $198,000 annually) would likely be marginal for many public companies when weighed against potentially higher capital costs, especially for sizable companies that have daily trading volumes measured in millions and sometimes billions of dollars.
With respect to the direct compliance costs that the Proposal estimates, the annual estimated savings for a company reporting on Form 10-S is calculated by comparing the costs that an issuer would typically incur in preparing three Form 10-Q reports within a fiscal year (estimated at $330,000 total) and subtracting the estimated cost of preparing a single Form 10-S instead ($132,000), producing a total estimated savings of $198,000 per fiscal year.23 In practice, this savings analysis is not as simple, as many costs associated with preparing interim reports are static and would not vary depending on the number of reports prepared within a given year. For instance, much of a company's internal infrastructure (including accounting, legal, and compliance staff) would continue to remain in place to gather and process relevant information throughout the fiscal year regardless of whether such information is filed to the SEC on a quarterly or semiannual basis. The Proposal's estimated savings could also be further reduced in the future as a result of concurrent SEC disclosure reforms and potential advances in artificial intelligence that may bring down reporting costs for companies generally.
Another factor that would likely limit the practical cost savings associated with semiannual reporting is the prevalence of pre-existing commercial commitments that require many companies to furnish financial information to counterparties on a regular basis. The Proposal acknowledges that for some companies,
"the magnitude of realized compliance cost
savings may be attenuated by private contractual reporting obligations. Debt agreements, lending arrangements, and other creditor contracts frequently require the provision of quarterly or even monthly financial information to the lender, often irrespective of the frequency of mandatory
22 Id. at 24988.
23 Id. at 24999-25000.

reporting under the Federal securities laws."24 These contractual commitments could have the practical effect of limiting the cost savings for potential 10-S filers, as companies would continue to produce much of the same information for lenders, counterparties, and other private stakeholders. As a result, potential 10-S filers could incur similar costs preparing financial

information on a quarterly basis, though such information would only be furnished to private counterparties and would not be available to public market investors.

IV. The Proposal raises additional considerations regarding secondary market trading that could have potential impacts for investors.

In general, securities markets are intricate systems where countless interactions – between investors, intermediaries, trading venues, technologies, and regulations – shape outcomes in ways that are rarely linear or predictable. Even small changes in market structure have the potential to ripple through liquidity provision, price discovery, execution quality, and competition, producing effects that differ across investor types and trading strategies. Given this complexity, assessing market impacts requires careful attention to nuanced topics with a recognition that seemingly straightforward mechanisms can produce subtle and unexpected consequences.

Though the specific number of companies that may elect to report on a semiannual basis if the Proposal is adopted is unknown, allowing companies to report on a semiannual basis could have potential secondary market impacts that, should they come to fruition, could have negative impacts on markets and investors. As we have described throughout our comments, the potential decline in information regarding company fundamentals could lead to information gaps. These gaps could negatively impact liquidity and increase transactions costs, which may ultimately be borne by end investors.

For example, market makers function as important liquidity providers in the secondary market, and are required to post firm, continuous, two-sided markets. When fundamentals are updated less often, market makers' internal models could become less accurate, and the distribution of possible fair values could widen. Quoting around a wider uncertainty band, market makers might have to widen spreads to cover the larger valuation error risk. Additionally, when issuer information is stale, price discovery could become more challenging.

Moreover, the Proposal observes that smaller issuers may be the most motivated to elect semiannual reporting.[25] Investors in some small cap companies already face information challenges, as such companies receive limited analyst coverage and therefore may be less attractive to institutional investors. For investors in these companies, periodic SEC reports are the primary source of reliable, standardized information about the issuer.

24 Id. at 25001.

25 Id. at 25005.

Because many companies with low valuations (and therefore low stock prices) are in the early or growth stage of the business lifecycle, by nature these stocks may be subject to structural fragilities like higher volatility, lower liquidity, and wider bid-ask spreads. Some low-priced stocks are also disproportionately the targets of manipulative schemes and trading tactics.[26] In this area, timely disclosure of material information is more important, not less. Timely, structured reporting helps reduce information asymmetries between insiders and public investors and supports informed price discovery. Though the Proposal notes that smaller issuers may be most motivated to elect to report on Form 10-S, semiannual reporting could be particularly harmful in this segment of the market where investors are already exposed to elevated informational risks.

V. The Proposal's assumptions regarding short-termism and IPO activity are not sufficiently supported by empirical evidence.

In addition to addressing the costs associated with Exchange Act reporting, the Proposal also discusses concerns regarding "short-termism", described as "a focus on short-term results instead of long-term business strategies and short-term actions by a company that can have a

negative long-term impact on the company".27 In general, we are supportive of a thoughtful assessment of regulatory factors that may influence corporate time-horizons and would welcome the opportunity to work with the Commission to identify potential changes that could encourage companies to focus on long-term growth.

However, while there are a variety of factors from a regulatory and market perspective that may contribute to trends in long-term corporate decision-making, there is little evidence that allowing companies to report on a semiannual basis compared to a quarterly basis would meaningfully impact long-term corporate investment.

The Proposal itself acknowledges that reductions in reporting frequency "are less likely to affect decision-making regarding long-horizon outcomes, such as investment decisions that are intended to generate profits five or ten years down the road."28 The most informative datapoint on this specific question comes from the "natural experiment" that occurred in the United Kingdom between 2007 and 2014, when companies were required to begin issuing quarterly reports in 2007, and were then permitted to stop reporting on a quarterly basis when

26 See, e.g., letter from Katie Kolchin and Gerald O'Hara, SIFMA (Jun. 2, 2026), available at https://www.sec.gov/comments/SR-NASDAQ-2026-004/srnasdaq2026004-798379-2414846.pdf; Letter from Katie Kolchin and Gerald O'Hara, SIFMA (Mar. 27, 2026), available at https://www.sec.gov/comments/sr-nasdaq-2026-009/srnasdaq2026009-735767-2287674.pdf.

27 Id. at 24974, n. 44.

28 Semiannual Reporting Proposal at 24991.

regulatory requirements changed in 2014.29 Empirical analysis of corporate behavior during this period found that "the imposition of mandatory quarterly reporting has virtually no impact on firms' investment decisions. Companies that voluntarily moved back from quarterly to semi-annual reporting after 2014 have experienced a reduction in analyst coverage, but no detectable increases in their levels of corporate investments."30

A separate, but similar, question that is raised under the Proposal is whether permitting Exchange Act reporting companies to file interim reports on a semiannual basis would encourage more companies to go and remain public.

31 While the Proposal refers to several regulatory reporting requirements and other potential factors that may affect a company's decision to either go public or exit public markets,32 the Proposal does not establish a demonstrable link between reporting cadence and IPO activity.

For example, the Proposal cites an empirical study estimating that regulatory costs may explain only about a 7% decrease in the likelihood of a company going public, and that nonregulatory factors including the availability of private capital, changing economies of scale, and acquisition behavior have likely played a more significant role in IPO trends.

33 While the Proposal notes examples of other regulatory reporting requirements that may influence company decisions to go or stay public (such as regulations established under the Sarbanes Oxley Act),

34 the Proposal does not provide evidence suggesting that reporting cadence plays a role in a company decisions to go public or remain private.

In our members' experience working with companies across the capital-raising lifecycle, reporting cadence is rarely a decisive factor in company's decision whether to undertake a long-term project, or whether to go public or remain private. Given these hypothetical benefits and known tradeoffs discussed throughout our comments, we encourage the Commission not to

move forward with the current Proposal and instead pursue an alternative approach that focuses on easing company reporting burdens while maintaining the current quarterly reporting cadence.
29 Nallareddy, supra n. 17.
30 See id., Abstract.
31 Semiannual Reporting Proposal at 24979 (Question #16).
32 Id., n. 138.
33 Id. See, e.g., Michael Ewens et al., Regulatory Costs of Being Public: Evidence from Bunching Estimation, 153 J.
Fin. Econ. 103775 (2024).
34 Id., n. 138.

VI. We recommend an alternative approach that focuses on reporting burden rather than reporting cadence.
SIFMA AMG strongly supports the Commission's effort to encourage more companies to go and remain public by reducing the costs and burdens associated with Exchange Act reporting. As the Commission considers potential reforms, we concur with the view expressed by Commissioner Peirce that "an approach that focuses on slimming down the Form 10-Q—instead of or in addition to making it optional—could be helpful."35
We have long encouraged this approach. As we explained in our response to the Commission's 2018 Request for Comment on Earnings Releases and Quarterly Reports, "the
Commission should continue to explore options for reducing the burdens imposed on companies in preparing Form 10-Qs without decreasing the usefulness of the reports for investors. Over time, quarterly reporting regulations have evolved from requiring only material updates to requiring expansive detailed and repetitive disclosures that do not represent significant changes to the reporting company's business and are costly and time-consuming to prepare."36
Focusing on content—eliminating duplicative, immaterial, or boilerplate disclosures—would reduce real compliance costs for issuers (including smaller and emerging companies), preserve the informational frequency that supports efficient pricing and fiduciary decision-making, maintain peer comparability, and fit naturally within the Commission's broader modernization of Regulation S-K and S-X.37 We would welcome the opportunity to work with the Commission and staff to identify specific elements of Form 10-Q that could be streamlined as part of that effort.

Lisa Cannon Personal Investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Lisa Cannon I am absolutely opposed to allowing companies to report to the SEC on anything more than a quarterly basis. Truthfully, it should be more often, but I'm sure they'd whine about 'administrative burden' or some such nonsense. These companies expect us to invest our hard-earned dollars in their plans for business; the least they can do is report on their progress in a timely manner.

Washington, DC 20549
Re: Request for Comment — Semiannual Reporting (Release No. 33-11414; File Number S7-

2026-15)
Dear Vanessa Countryman:
The New York State Common Retirement Fund (Fund), one of the largest public pension funds in the United States with an estimated value of $295.4 billion as of March 31, 2026 , holds and invests the assets of the New York State and Local Retirement System on behalf of its 1.3 million members, retirees, and beneficiaries. As a long-term investor, the Fund and its external managers rely on consistent, comparable, reliable disclosures across the marketplace to assess risk, allocate capital, and cast informed proxy votes.
We appreciate the Commission's request for public input on potential changes to quarterly reporting requirements. Specifically, the proposed amendments under Release No. 33-11414 (File Number S7-2026-15) would establish a voluntary framework allowing public issuers to replace mandatory quarterly Form 10-Q filings with a semiannual financial report under the proposal which includes a newly created Form 10-S.
For more than half a century, public companies have been required to report their financial results every three months. The proposed amendments, which would allow some companies to reduce periodic financial reporting from four times a year to two are the wrong approach. The Fund believes that this proposal would impair key investor protections, weaken market integrity, create information asymmetries between corporate insiders and the public, and undermine the Commission's core statutory mandate to protect investors and maintain fair, orderly, and efficient markets.
The Fund's primary concerns with the proposal include:
Impaired Decision-Making: A decrease in reporting frequency would result in less informed decision-making, possibly leading to less accurate valuations, greater market mispricing, and the misallocation of capital. Some investors may seek a higher risk premium or avoid companies that opt to step down to semiannual reporting. Artificially adjusting Regulation S-X standards to tolerate older financial data in registration statements does not mitigate the real-world risk to institutional buyers pricing capital market transactions.
Information Asymmetry: The primary goal of the Securities Exchange Act of 1934 is to eliminate information asymmetry between corporate insiders and outside investors. Absent a quarterly mandate to disclose, investors would have to wait up to half a year to receive financial information that has been externally reviewed and attested to.
Elevated Insider Trading Risk: A six-month disclosure window widens the period where material developments may stay hidden from the public, increasing the informational advantage of corporate insiders and expanding opportunities for its misuse. It also lengthens the period where reporting fraud or earnings management can compound undetected by external gatekeepers. Furthermore, eliminating the definitive filing dates of Form 10-Q disrupts the established, standard cooling-off periods required for Rule 10b5-1 executive trading plans. This may create confusing, lengthy blackout windows for corporate insiders and will add unnecessary governance friction for corporate boards.
Inadequate Fraud Safeguards: The proposal inadequately addresses fraud risk despite a well-documented history of major securities violations being enabled or prolonged by the absence of financial reporting. Quarterly filings provide enforcement authorities and private litigants with contemporaneous standardized financial data that can be compared and scrutinized in a timely manner.
Flawed International Comparisons: Proponents of this rule cite regulatory regimes in the U.K., E.U., and Australia, but those jurisdictions pair semiannual reporting with strict continuous disclosure requirements—mandating the immediate release of any material information. In contrast, the U.S. markets rely on the specific limited item triggers of Form 8-K, which creates an event-driven framework. This means U.S. companies are only required to disclose isolated, major events—like a bankruptcy or a CEO resignation—rather than continuous operational updates. Under an optional semiannual system, a company could experience six months of steadily deteriorating profit margins, declining sales, or competitive losses without ever

triggering a mandatory Form 8-K. Management could legally hide this gradual operational decay from the public for half a year, potentially resulting in severe market shocks when the semiannual report is finally released. This is entirely contrary to the Commission's mandate to maintain fair and efficient markets.
Defeated Peer Benchmarking: Allowing semiannual filers and quarterly filers to coexist within a single industry fragments the disclosure landscape and defeats peer benchmarking that informs a wide array of decision-making. Aside from capital allocation decisions, for broadly diversified, largely indexed investors, consistent and comparable interim data across industry sectors is necessary for the prudent exercise of shareholder rights.
2
Stale Information During Proxy Voting: Most issuers hold annual meetings in the spring. Under the current quarterly reporting framework, first-quarter results directly inform crucial votes including the election of directors. Under semiannual reporting, investors would vote on year-end data that is five- or six-months stale. For a long-term investor that votes thousands of ballots and engages issuers year-round, that is incompatible with informed ownership.
Ineffective at Curing Short-Termism: The proposal will not address drivers of short-termism. Research following the U.K. and E.U. transitions away from mandatory quarterly reporting found no measurable reduction in short-termism, but did find reduced analyst coverage and a weaker overall information environment.1 If the Commission's aim is to encourage longer horizons, the targeted measure, long urged by the Council of Institutional Investors, is to discourage voluntary forward quarterly earnings guidance (the practice tied to "meet-or-beat" behavior), rather than the historical reporting investors depend on.2
The Fund respectfully urges the Commission to withdraw the proposal and to retain mandatory quarterly reporting for all reporting companies. The Fund appreciates this opportunity to comment and would welcome continued engagement with the Commission and Staff as this review proceeds.
Sincerely,
Liz Gordon

Logan Flanagan Reserve Analyst / Capital Planning Expert — Jul 6, 2026
Subject: File No. S7-2026-15 From: Logan Flanagan As a young person invested in the stock market, I would be incentivized to move my money into other assets as I do not trust the current major companies to be reporting their financials only twice per year. I see no reason to change it! The benefits do not outweigh the potential for increased fraud.

Luan Jenifer, CEO & President, Miller/Howard Investments, Inc. — Jul 6, 2026
6 July 2026

Paul S. Atkins
SEC Chairman
U.S. Securiﬀes and Exchange Commission
100 F Street NE
Washington DC 20549 Submited via SEC Portal
Re: S7-2026-15 Proposed Amendments to Permit Opﬀonal Semiannual Reporﬀng by Public Companies
Dear Mr. Atkins,
Miller/Howard Investments, Inc. (Miller/Howard) appreciates the opportunity to submit comments regarding
the proposed amendments to permit opﬀonal semiannual reporﬀng by public companies.
Miller/Howard is an employee-owned, research-driven firm managing porﬀolios for a range of investors, from
high-net-worth individuals to large insﬀtuﬀons. We focus on income-producing equiﬀes, with an emphasis on
high-quality stocks with strong prospects for long-term value creaﬀon, and we rouﬀnely assess the resilience,
governance, and risk profiles of the companies in which we invest.
We support maintaining quarterly reporﬀng requirements for public companies because we believe less-
frequent reporﬀng would impose new costs on investors least able to absorb them and could easily lead to
market distorﬀon – not because mandatory quarterly reporﬀng is perfect in all situaﬀons. We readily
acknowledge that mandatory quarterly reporﬀng is not without its burdens, parﬀcularly for small- and mid-
cap companies, but replacing it wholesale with semi-annual reporﬀng is not necessary to miﬀgate those
burdens. From an investment manager's perspecﬀve, quarterly and standardized disclosure promotes market
transparency, supports informed capital allocaﬀon, and strengthens investor confidence. The risk of
informaﬀon asymmetry alone gives us immediate pause. If reporﬀng windows are extended to 6 months, only
the largest and best-resourced investment enﬀﬀes may be able to construct or access meaningful interim
data, leaving a wide swathe of Main Street investors and other stakeholders waiﬀng for that next public
report. We believe investors are best served by the more even playing field created by a quarterly reporﬀng
cycle, without which investors may be leﬀ navigaﬀng significantly longer periods with limited public
informaﬀon, making real-ﬀme risk monitoring more difficult and increasing uncertainty in the marketplace.
A chief virtue of the quarterly reporﬀng requirement is that it ensures all market parﬀcipants receive
meaningful informaﬀon from all issuers on a predictable and consistent basis. We emphasize that less
frequent reporﬀng would also disproporﬀonately benefit investors who have alternaﬀve informaﬀon

channels, extensive management access, or greater research resources. Retail investors and smaller asset
managers rely heavily on periodic public disclosures to evaluate businesses and make informed investment
decisions.
Further, because semiannual reporﬁng would be voluntary, investors would likely face an inconsistent
reporﬁng landscape in which some companies conﬁnue providing quarterly updates while others do not. This
lack of uniformity would make it more difficult to compare companies, evaluate relaﬁve performance, and
monitor risks across porﬁolios. Companies themselves may also face informaﬁon gaps when evaluaﬁng
potenﬁal merger or acquisiﬁon transacﬁons, counterparty risks, and other business opportuniﬁes: reporﬁng
by companies can be valuable for other companies.
The value of quarterly reporﬁng extends beyond supporﬁng buy/hold/sell decisions. It also supports more
efficient, valuable, and producﬁve discussions between companies and their investors, parﬁcularly those
seeking to engage construcﬁvely with management teams and boards on material concerns. Such
conversaﬁons and engagement depend on ﬁmely informaﬁon about a company's performance, strategy
execuﬁon, capital allocaﬁon, and emerging risks. Regular quarterly reporﬁng supports a more informed and
producﬁve engagement process, ulﬁmately benefiﬁng both companies and shareholders through improved
accountability and governance.
Markets today operate at a pace that makes six-month informaﬁon gaps increasingly problemaﬁc. Economic
condiﬁons, compeﬁﬁve dynamics, interest rates, and business performance can change materially within a
single quarter. Timely reporﬁng allows investors to idenﬁfy emerging risks and opportuniﬁes, adjust porﬁolios
appropriately, and contribute to more efficient price discovery.
While reporﬁng requirements impose costs on issuers, access to public markets is criﬁcal for issuers – and the
benefits of transparency, market integrity, and investor protecﬁon outweigh those costs. Mandatory quarterly
reporﬁng is, we believe, a reasonable minimum standard. The availability of more informaﬁon—not less—is
essenﬁal to well-funcﬁoning capital markets.
For these reasons, we strongly support retaining quarterly reporﬁng requirements for public companies.
Sincerely,
Luan Jenifer

Lucas Bonner — Jul 6, 2026
Subject: File No. S7-2026-15 From: Lucas Bonner You cant fool me on semiannual reporting. There is no assurance this reduces reporting burdens on organizations that would be a job killer for America. This is just a ploy to reduce consumer protections for individual investors and tuck more profits in the pockets of billionaires.

Lynn Leitner — Jul 6, 2026
Subject: File No. S7-2026-15 From: Lynn Leitner If a company is public, then the public should know what is happening, and on quarterly basis. Every 6 months is too long of a time frame. If companies want to withhold that information, go private. That’s the trade off. You want to use public funds? You need to provide information to the public.

Lynn Lopez von Huben Retired — Jul 6, 2026
Subject: File No. S7-2026-15 From: Lynn Lopez von Huben Much of my retirement wealth is invested in various companies. Without quarterly reports, my retirement nest egg is more vulnerable and I will not have access to information in a timely manner to protect my investments. Letting companies choose to forego quarterly reports--and just producing semiannual reports--puts many Americans' security at risk. I urge you to KEEP the quarterly reports.

Lynn Scott — Jul 6, 2026
Subject: File No. S7-2026-15 From: Lynn Scott I totally object to this proposed rule. As a small investor I need information gathered quarterly in order to protect my investments. Please change this rule and help investors by holding the companies accountable.

Lynne Cobb retiree — Jul 6, 2026
Subject: File No. S7-2026-15 From: Lynne Cobb Dear SEC: I am a retired schoolteacher who has been saving and investing for most of my adult life. I depend upon my IRAs, 401k, and small teaching pension to keep me financially solvent in my retirement years. I am writing to tell you to keep the quarterly reporting as is for 3 basic reasons. 1. Six months is a long time in the financial world, and a great deal does and could happen in that time. All investors, small and large, need timely information that allows them to make decisions in their best interests. 2. I am old enough to have remembered and experienced the run-up to 2008 with the financial fraud and crashes of

Enron, WorldCom and Madoff. While a short window can't prevent fraud, it shortens the time that it can stay hidden under the radar. 3. The savings accrued will most likely flow to the company and executives, not ordinary investors like me. Again, I am old enough to have lived through the "rising tide lifts all boats" myth of cutting taxes for the wealthy and corporations, expecting we will all prosper. Yet, CEO pay has ballooned in comparison to working people. Keep the current structure in place. It is the only action to take! Do the right thing and keep all investors in the know! Sincerely, Lynne Cobb

---

Maleia LaFleur — Jul 6, 2026
Subject: File No. S7-2026-15 From: Maleia LaFleur I support maintaining quarterly reporting requirements for public companies. Regular financial disclosures promote transparency, accountability, and informed decision-making for investors. As an individual investor and retirement saver, I rely on timely public information to understand how companies are performing. Reducing reporting frequency could make it harder to identify risks early and would provide less transparency for everyday investors. Please preserve quarterly reporting requirements.

Marc Chapman Procurement Analyst, The Boeing Company — Jul 6, 2026
Subject: File No. S7-2026-15 From: Marc Chapman Quarterly financials are a must. Semiannual financials should never be an option. If anything, monthly financials should be considered even if they are more burdensome. As an investor, I won’t invest in companies that can go dark for six months. Smart investors will pull out from companies who don’t report financials publicly, at least, on a quarterly basis.

Margaret Goreau — Jul 6, 2026
Subject: File No. S7-2026-15 From: Margaret Goreau I am in favor of quarterly reporting because this is important for the protection of small investors by increasing transparency and making fraud more difficult. It also allows small investors to keep a finger on the pulse when evaluating and making investment decisions. Margaret Goreau, retired

---

Margaret Smith — Jul 6, 2026
Subject: File No. S7-2026-15 From: Margaret Smith It should be kept quarterly so that it doesn’t appear to /cannot cheat! That companies show what they are doing to further increase profits for their shareholders and not just themselves.

Maria Baker — Jul 6, 2026
Subject: File No. S7-2026-15 From: Maria Baker Transparency is paramount. Maintain the quality reporting requirement.

María Kalb Registered Representative , individual investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: María Kalb To Whom It May Concern: I am writing as a retail

investor to voice my strong opposition to the SEC's proposed rule allowing public companies to opt out of quarterly financial reporting. As an individual managing my own investments, I rely entirely on regular, standardized, and timely public disclosures to make informed financial decisions. The SEC's primary mission is to protect investors and maintain fair, orderly markets. This proposal directly contradicts that mission by tipping the scales heavily in favor of large institutional investors and corporate insiders. I oppose this change for the following reasons: * Creates an Unfair Playing Field: Wall Street firms have access to proprietary data, industry channels, and direct management access. Retail investors do not. Quarterly reporting is the great equalizer that ensures everyone gets the same financial truth at the same time. Six months of silence will force retail investors to trade in the dark. * Exposes Everyday Investors to Greater Risk: A half-year reporting cycle allows operational failures, hidden liabilities, or poor management decisions to stay buried for six months. By the time a retail investor reads about a problem in a semiannual report, institutional investors will have already dumped the stock, leaving individual savers holding the bag. * Forces High Volatility on Small Accounts: Spacing reports out by six months turns every earnings release into a massive gamble. The extreme stock price swings resulting from six months of pent-up data will disproportionately wipe out smaller investors who cannot absorb sudden, massive losses. * Invites Strategic Hiding of Bad News: Allowing companies to choose their reporting frequency annually gives underperforming management teams an easy way to hide. Companies will abuse this rule to switch to semiannual reporting the moment they anticipate a bad year, destroying transparency when investors need it most. Reducing paperwork for corporations should never be prioritized over the safety and confidence of the investing public. If retail investors cannot trust that they have access to current financial realities, they will lose faith in the integrity of the U.S. markets. I strongly urge the Commission to reject this proposal and protect the mandatory quarterly reporting framework.

Maria Ortiz-Malte Retail Investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Maria Ortiz-Malte I manage my own retirement savings and check in on my holdings regularly — quarterly earnings are one of the few times I get a clear, standardized look at how a company is actually doing, not just what a press release or an analyst says. Cutting that down to twice a year means I'd be finding out about problems six months later than I do now, while institutional investors and company insiders still get more frequent updates through calls, meetings, and other channels I don't have access to. Making this optional doesn't fix that gap — it widens it, and makes it harder to even compare one company to another if some report quarterly and some don't. As someone who's spent years watching the market to make informed decisions with my own money, I'd ask the Commission to keep quarterly reporting mandatory for all public companies. Thank you for considering my comment. Maria Ortiz-Malte

mark constable Retired individual investor. — Jul 6, 2026
Subject: File No. S7-2026-15 From: mark constable I'm shocked that the SEC is considering allowing corporations to report every six months. I see no good coming from that change. As a retiree and individual investor, I rely on the stock market for most of my income. This change puts my income and my future wellbeing in jeopardy. I've been investing for long enough to know that you just can't trust some, if not all corporations. They'll do anything to make a buck for themselves. Notice I said "for themselves". Not for the shareholder. For themselves. Someone has to keep them in check. One of the few checks is quarterly reporting. Yes, it costs shareholders money but it's needed to ensure things don't get out of hand. Major stock price changes as a result of an unexpected quarterly report can be devastating to a stock price but that would pale compared to changes with six month reporting. Six month reporting would significantly increase the volatility of the market as well. One of the benefits of investing in the US market is the market's stability. Increased volatility would undermine the relative stability the US market has enjoyed for decades. Foreign capital would seek more stable markets if the US market was to become more volatile. I've been investing for over 40 years and have seen case after case of corporations trying to swindle investors. Can you say Enron or Bernie Madoff? We need this oversight to keep corporations in line. Please do not change what few protections we have.

Mark Crisci Retired investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mark Crisci As an investor, I do not support this proposed action. I can see that the government wants to make life easier for corporations and big companies, but believe the government should prioritize protecting citizens and investors like me. Our country has a long history of fraud, especially in the financial and investing domain. Making it easier for companies to conceal important financial information, key to individual investor decisions is a grave mistake. I believe this will significantly harm confidence in public companies and be detrimental to our financial markets. If this is approved, I will be pulling my investment dollars from American companies and investing in foreign companies where greater protections exist.

Mark Fresolone Consultant, Broadcom, Inc. — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mark Fresolone You cannot relax reporting to be semi-annual. This will destabilize investments, and increase the size of investor financial losses when a security begins to fail. S7-2026-15 must not proceed. Mark

RE: File No. S7-2026-15: Semiannual Reporting
Dear Ms. Countryman:
On behalf of the North American Securities Administrators Association, Inc. ("NASAA"),1
I am writing in response to U.S. Securities and Exchange Commission ("SEC" or the "Commission") Release No. 33-11414, Semiannual Reporting (the "Proposal"), which seeks to permit companies that make periodic filings under the Securities Exchange Act of 1934 ("Exchange Act") to elect to file semiannual reports on a new Form 10-S in lieu of quarterly reports on Form 10-Q. The Proposal would also make conforming amendments to Regulation S-X and related reporting requirements.
Form 10-Q and the existing reporting framework ensure that all investors receive timely and standardized updates on a public company's financial condition and performance, thereby supporting market transparency and informed investment decisions. When the Commission originally proposed the quarterly reporting requirement, it explained that Form 10-Q would provide detailed information to supplement timely disclosure policies and establish uniform reporting standards across all Exchange Act reporting companies.2 While the Commission has reassessed periodic reporting requirements in recent years, it has generally refined or simplified disclosure rules to improve the quality of disclosure rather than making changes that would result in materially less disclosure, such as by altering reporting frequency.
1 Organized in 1919, NASAA is the oldest international organization devoted to investor protection.

NASAA's
membership consists of the securities administrators in the 50 states, the District of Columbia, Canada, México, Puerto
Rico, the U.S. Virgin Islands, and Guam. NASAA is the voice of securities agencies responsible for grass-roots
investor protection and efficient capital formation.
2 See Proposal at 10.
President: Marni Rock Gibson (Kentucky) President-Elect: Elizabeth Bowling (Tennessee) Past-President: Leslie M. Van Buskirk (Wisconsin) Executive Director: Joseph Brady Secretary: Stephen Bouchard (District of Columbia) Treasurer: Jane Anderson, K.C. (Nova Scotia) Directors: Melanie Senter Lubin (Maryland)
Jesse A. Devine (Maine)
Erin Houston (Nevada)
Eric Slee (Mississippi)
Vanessa A. Countryman

NASAA has consistently advocated for robust public markets, rooted in the long-standing principle that the federal securities laws are built on the virtues of disclosure. That philosophy involves a fundamental bargain; namely, if a company wishes to sell its securities to the general public, then it must disclose detailed information about the business publicly. This disclosure framework has required public companies to register with the SEC, file detailed disclosures on Forms 10-K, 10-Q, and 8-K, and ensure that all material facts and associated risks are made available to prospective investors so they can make informed decisions. While the Commission has embarked on a new effort it believes will increase the number of public offerings along with other changes intended to revitalize our capital markets, it must do so in fidelity to this time-tested fundamental bargain by which companies can enjoy broad access to investors in return for fulsome disclosure where investors are empowered to make informed decisions.
NASAA stands ready to work with the Commission to improve the vitality of our public
markets but believes there are better alternatives to achieve this laudable goal, especially given the adverse impact this proposal will have on critical investor protections and trust in our markets. Therefore, for the reasons explained below, we cannot support the Proposal. The record makes clear the Proposal would raise capital costs, reduce liquidity, weaken investor confidence, facilitate fraud, and exacerbate certain reporting risks. Such costs are not justifiable, especially given data which shows that other jurisdictions who have made this change have experienced no significant stimulation to their public markets. Further, both prominent investors and sound research agree that changing to semiannual reporting will not fix short-termism and may in fact make it worse.
I. The Proposal Fails to Analyze Why Public Company Listings Have Declined.
The Commission states that the Proposal is "one step in a broader Commission effort to encourage more companies to go and remain public by reducing the costs and burdens of Exchange Act reporting."3 But the Proposal does almost nothing to diagnose the reasons for the decline in public company listings. Regulatory proposals must be rationally connected to the problems they are offered to fix.
4 Accordingly, the Commission needs to offer a fulsome diagnosis of the reasons
public markets are lagging to make the case that the Proposal will be effective. It has not done so.
3 Id. at 23.
4 See Business Roundtable et al. v. SEC, 647 F.3d 1144, 1148 (D.C. Cir. 2011) (stating that "[w]e must assure
ourselves the agency has 'examine[d] the relevant data and articulate[d] a satisfactory explanation for its action
including a rational connection between the facts found and the choices made.'") (quoting Motor Vehicle Mfrs. Ass'n.

of U.S., Inc. v. State Farm Mut. Auto. Ins. Co., 463 U.S. 29, 43 (1983) (internal quotations omitted)).
2

To the extent that eliminating mandatory quarterly reporting might materially increase the number of public company listings, any such outcome would be eroded by rules and policies designed to expand the private markets. In February 2023, we issued the NASAA Report and Recommendations for Reinvigorating our Capital Markets ("NASAA Report"),
5 which explained
that prior efforts to reinvigorate the public markets, particularly through the Jumpstart Our Business Startups Act of 2012, did not achieve a sustained increase in public company listings. Public market enhancing efforts – such as the emerging growth company onramp, confidential registration statement review, and relief from the auditor attestation requirements instituted from the Sarbanes-Oxley Act of 2002 – were largely offset by efforts to expand the private markets that took place at the same time, including a new crowdfunding exemption, the expansion of Regulation A, allowing general solicitation under Regulation D Rule 506(c), and changing the "shareholder of record" threshold under Exchange Act Section 12(g).
6 Collectively, these private
market enhancements allowed issuers to "raise unlimited amounts of capital in the private markets and forestall indefinitely the need to become a public reporting company,
" thereby reducing the
size, diversity, and growth of companies in the public markets.7
The Commission offers no reason to conclude that the Proposal will meaningfully shift the declining trend in public company listings given proposals and actions designed to further expand the private markets. Recent examples include the Department of Labor's ("DOL") proposal to allow plan fiduciaries under the Employee Retirement Income Security Act of 1974 ("ERISA") greater flexibility to consider alternative investments,
8 the Commission's decision to lift the 15
percent restriction on closed-end fund private investments,
9 and the Commission's plan to
"facilitate capital formation and simplify the pathways for raising capital for, and investor access
5 NASAA REPORT AND RECOMMENDATIONS FOR REINVIGORATING OUR CAPITAL MARKETS (Feb. 7, 2023)
("NASAA Report").
6 Id. at 11-12; see also Michael Ewens & Joan Farre-Mensa, Private or Public Equity? The Evolving Entrepreneurial Finance Landscape at 13-16 (Nat'l Bureau of Econ. Rsch., Working Paper No. 29532, 2021, revised
2022) (reviewing regulatory changes in the public equity markets and several regulatory changes that have impacted
private equity markets which have, according to the authors, likely helped increase the supply of private capital).
Along with the release of the NASAA Report, Faith Anderson, then Chief of Registration & Regulatory Affairs in the
Securities Division of the Washington Department of Financial Institutions and Chair of NASAA's Small
Business/Limited Offerings Project Group, testified inter alia that offerings issued under Regulation D Rule 506
"eclipsed the amount of registered offerings by public companies.... "becom[ing] the dominant form of capital
formation in this country." Faith Anderson, Written Statement for the SEC Investor Advisory Committee Panel

to, private businesses.
”10
. As the NASAA Report found, similar policies led to the “astronomical
growth” of exempt offerings, and that the federal government “was not successful in getting more companies to conduct IPOs [initial public offerings].”11
Indeed, current private market enhancement efforts may further weaken public markets. As
the CFA Institute reasoned, “[i]f private companies can access public capital through investment funds, they may have even less incentive to pursue an IPO.”12 Further, Columbia University Professor Shivaram Rajgopal has pointed out that the Proposal would “make[] the IPO market less attractive, not more,” by causing skeptical investors to demand a higher risk premium to buy shares in newly public companies committed to reporting semiannually.
13 Before undertaking to
fundamentally change the nature of U.S. public company reporting, the Commission should more fully analyze and report on the impact efforts to expand the private markets have had on the public markets and then explain why it expects the Proposal to succeed where prior public market changes have had limited effect. Absent a clear explanation of how the Proposal would materially shift the years-long trend in the growth of the private markets, the Commission has not made the case that the Proposal will be worth the disruptions it will cause.
II. The Proposal Will Not Fix Short-Termism.
In addition to not considering the root causes of the decline of public company listings to
tailor a workable solution, the Proposal misses the mark when it comes to the specific problem it is purportedly being offered to fix.
The Commission asserts that the Proposal is necessary to address “short-termism,” which
it defines as “a focus on short-term results instead of long-term business strategies and short-term actions by a company that can have a negative long-term impact on the company ….”14 However, while the Proposal suggests that quarterly reporting may cause short-termism, the Commission also acknowledges other potential culprits, including “executive compensation design or messaging to investors through, for example, earnings guidance.
”15 It is problematic that the
10 SEC Proposed Rule on Updating the Exempt Offering Pathways (Spring 2025), Unified Agenda of

13 Shivaram Rajgopal, The SEC’s Semi-Annual Reporting Proposal: A Solution In Search Of A Problem, FORBES
(May 7, 2026, at 8:14 EDT) (“Rajgopal Article”).
14 Proposal at 15 n. 44.

15 Proposal at 77. The same ambivalence appears in the support cited by the Commission. For the proposition
that quarterly reporting causes short-termism, the Commission repeatedly cites Frank Gigler et al., How Frequent
Financial Reporting Can Cause Managerial Short-Termism: An Analysis of the Costs and Benefits of Increasing
Reporting Frequency, 52 J. ACCT. RSCH. 357 (2014), and also cites Arthur G. Kraft et al., Frequent Financial

Commission would propose to fundamentally change the nature of U.S. public company reporting while being equivocal about the reasons for needing to do so.

Some of America's most prominent investors are more certain that quarterly earnings guidance is the root of short-termism, not quarterly reporting. In their Wall Street Journal opinion piece, Short-Termism Is Harming the Economy, Warren Buffett and Jamie Dimon "encourag[e] all public companies to consider moving away from providing quarterly earnings-per-share guidance" because they believe that such guidance contributes both to "a shift away from long-term investments" and "the decline in the number of public companies in America over the past two decades." 16 However, and critical to the discussion surrounding this Proposal, they do not lay blame on quarterly reporting:

"Our views on quarterly earnings forecasts should not be misconstrued as opposition to quarterly and annual reporting. Transparency about financial and operating results is an essential aspect of US public markets, and we support being open with shareholders about actual financial and operational metrics. U.S. public companies will continue to provide annual and quarterly reporting that offers a retrospective look at actual performance so that the public, including shareholders and other stakeholders, can reliably assess real progress."17

The California Public Employees' Retirement System ("CalPERS"), the largest public pension fund in the United States, agrees on both points. In its comment letter to the Commission, CalPERS writes "[i]f the Commission's objective is to lengthen corporate decision-making horizons, then the more effective and well-targeted lever, as we have urged in prior comment letters, is to discourage the voluntary issuance of forward quarterly earnings guidance, not to dilute the historical financial reporting on which investors depend."18

Reporting and Managerial Myopia, 93 ACCT. REV. 249 (2018). Gigler et al. do not assert that quarterly reporting
causes short-termism. Instead, they make an almost common-sense theoretical prediction based on statistical reasoning
that more frequent reporting "imposes greater discipline on the firm's investment so that the probability of investing
in negative net present value projects is strictly smaller in the frequent reporting regime than in the infrequent reporting
regime." Gigler et al. at 378. Further, while Kraft et al. report economically significant declines in investments
associated with greater issuer reporting over the period from 1950 to 1970, most consistent with a finding of
managerial myopia, they also acknowledge in describing their work that "the decline could be a manifestation of
improved monitoring by stakeholders stemming from frequent reporting," that "prior studies identify different sources
of capital market pressures that can induce myopia," and that "frequent financial reporting is another

mechanism that
can encourage myopic managerial behavior." Kraft et al., Real Effects of Frequent Financial Reporting, HARV. L. SCH.
F. ON CORP. GOVERNANCE (Sept. 19, 2014).
16 Jamie Dimon & Warren E. Buffett, Short-Termism Is Harming the Economy, WALL ST. J. (June 6, 2018, at
22:00 ET).
17 Id.
18 CalPERS, Comment Letter on Semiannual Reporting Proposal at 1 (June 19, 2026).

Prominent voices in research have reached the same conclusions. Professor Rajgopal asserts that short-termism is not caused by quarterly reporting, but instead:
"The pressure comes from the broader incentive architecture: analyst consensus estimates, quarterly earnings guidance, compensation tied to [earnings per share], and institutional investor focus on near-term results. The 10-Q is the scoreboard, not the game. Removing the scoreboard does not change how the game is played.
"19
The CFA Institute likewise found from its own research that "quarterly earnings guidance can create short-term pressures as it builds expectations whereas quarterly reporting simply reports results."20
The weight of informed opinions from multiple quarters is critical to understanding the shortcomings of the approach suggested by the Commission. If earnings guidance rather than quarterly reporting drives short-termism, then the Proposal does nothing to address the problem, and in fact could exacerbate it. The Proposal makes clear that it would make no changes to voluntary earnings release decisions or earnings guidance practices,
21 and instead it states that
"[w]e expect that a company's individual characteristics, facts, and circumstances will determine whether it would make quarterly earnings releases or announcements after electing to report semiannually."22 Columbia University Professor John C. Coffee, Jr., makes the point that moving to semiannual reporting could exacerbate the problem of short-termism, and could even lead to improper earnings management, reasoning that:
"If we shift to six-month reporting, financial managers may face even greater pressure to meet their earnings target (or the consensus forecast). After all, impatient investors will have waited longer and faced greater uncertainty. The failure to 'meet your forecast' would cast even a greater cloud on management's reputation and competence."23
19 Rajgopal Article, supra note 13 (emphasis added).
20 CFA Investor Perspectives, supra note 12, at 28 n. 18.
21 Proposal at 22.
22 Id. at 20-21.
23 John C. Coffee, Jr., What Really Drives "Short-Termism"?, COLUM. L. SCH. BLUE SKY BLOG (Aug. 27,
2018).

Given all of the above, the Proposal would most likely lift the safeguards of quality reporting – namely, certifications, auditor-reviewed U.S. GAAP financial statements, and specified

required disclosures – to no positive effect. Worse, once rid of such burdens, managers may feel emboldened to approach quarterly reporting more as a selective marketing opportunity rather than an exercise in good disclosure. Or, on the other hand, management may feel greater fear to meet forecasts demanded by investors. Either way, as these views from industry and academia make clear, stimulating such behaviors is the opposite of combatting short-termism.

III. The Proposal Does Not Adequately Consider Investor Protection.

The Proposal fails to adequately analyze the effect semiannual reporting would have on investor protection.

With slight wording differences, Section 2(b) of the Securities Act of 1933 ("Securities Act") and Exchange Act Section 3(f) both state that "[w]henever … the Commission is engaged in rulemaking … and is required to consider or determine whether an action is necessary or appropriate in the public interest, the Commission shall also consider, in addition to the protection of investors, whether the action will promote efficiency, competition, and capital formation." The Proposal spends significant time focused on efficiency, competition, and capital formation, and, as it must, dedicates a section of the economic analysis portion of the Proposal to these factors.24 On the other hand, as compared to its evaluation of efficiency, competition, and capital formation factors, the Proposal makes virtually no effort to analyze the investor protection effects of removing the obligation to file quarterly reports. No section of the Proposal is devoted to it, and references to "investor protection" often appear in the form of conclusory statements, such as:

"Our proposal would provide an Exchange Act reporting company with the flexibility to determine the frequency of interim reporting that best suits its particular circumstances, such as its ability to bear the costs of preparing the quarterly reports, the stage of its business development, and the expectations of its investors, without undermining fundamental investor protections."25

24 Proposal at 130-34. This is now standard practice for Commission rulemakings following a series of court losses finding that the Commission did not engage in proper rulemaking procedures, followed by reports from the Government Accountability Office and the SEC's Office of Inspector General and Congressional inquiries, all taking issue with Commission failures to engage in proper and fulsome economic analyses. See Memorandum from the Division of Risk, Strategy, and Financial Innovation and the Office of the General Counsel to the Staff of the Rulewriting Divisions and Offices Regarding Current Guidance on Economic Analysis in SEC Rulemakings at 1 (Mar. 16, 2012) ("RSFI and OGC Memorandum").

25 Proposal at 7 (emphasis added).

The Proposal fails to satisfy the Commission's statutory mission by neglecting to consider whether quarterly reports are essential to investor protection, and therefore whether the Proposal is likely to harm investors. Securities Act Section 2(b) and Exchange Act Section 3(f) were both added to those acts by Section 106 of the National Securities Markets Improvement Act of 1996 ("NSMIA"). The text of these two provisions makes clear that the SEC must consider all of these factors in order to determine that a proposed rulemaking is in the public interest. Indeed, Congress's construction of these provisions makes clear that "efficiency, competition, and capital formation" considerations are secondary to the primary consideration of investor protection found throughout the Securities Act and the Exchange Act.

26 The legislative history of NSMIA supports
that view by making clear that investor protection remains the threshold consideration underlying all SEC rulemaking. When the Commerce Committee of the House of Representatives reported out H.R. 3005 – the bill from which this text emanates – it affirmed the preeminence of the Commission's investor protection mandate by stating that:

"[Exchange Act Section 3(f)] makes clear that matters relating to efficiency, competition, and capital formation are only part of the public interest determination, which also includes, among other things, consideration of the protection of investors. For 62 years, the foremost mission of the Commission has been investor protection, and this section does not alter the Commission's mission.
"27

The language ultimately reported out, and ultimately passed into law, followed the advocacy of SEC Chairman Arthur Levitt who opposed prior draft language that would have amended the stated mission of the Commission. As Chairman Levitt wrote to Ranking Member John Dingell during the drafting of NSMIA:

"The primacy of investor protection enshrined in the securities laws has been one of the greatest boons to capital formation in U.S. history. To compromise on this point, even symbolically, would serve no one well.
"28

26 To illustrate the primacy of investor protection, consider that most references to public interest determinations
in the Securities Act and the Exchange Act appear alongside references to investor protection. As just a few examples,
see Securities Act Sections 3(a)(2), 3(b)(1), 7(b)(2), 8(a) and 18(b)(3), and Exchange Act Sections 3(a)(12)(A)(vii),
11(a)(2), 12(g)(3) and 12(k)(2)(A). See also Nat'l Assn. of Private Fund Mgrs. v. SEC, 103 F.4th 1097, 1111 (5th Cir.
2024) (finding that '"[i]t is a fundamental canon of statutory construction that the words of a statute must be read in
their context and with a view to their place in the overall statutory scheme"') (quoting Roberts v. Sea-Land Servs.,
Inc., 566 U.S. 93, 101 (2012) (citation omitted)).

27 H.R. REP. NO. 104-622 at 39 (1996) (emphases added). Although the same question was not joined on the
Senate side, the legislative history of S. 1815 expresses similar sentiments. See S. REPORT NO. 104-293 at 9 (1996)
(stating that "[a]ll things being equal, however, the Committee expects the SEC to take appropriate action to ensure
investor protection.").

28 Scot J. Paltrow, Levitt Opposes Bill to Change Securities Laws, L.A. Times (Mar. 7, 1996).

Both the resulting language of Securities Act Section 2(b) and Exchange Act Section 3(f) and the history surrounding it make clear that any rulemaking proposal that does not fully take investor protection into account ignores the judgment of Congress and the resulting legislative requirements for determining the public interest and is therefore deficient.

Further, the Commission's own guidance directs the staff to consider "including the alternative of not adopting a rule."29 Put another way, the current amount of investor protection provided by quarterly reporting is part of the existing baseline that the Commission must take into

account in its analysis of the costs and benefits of the Proposal.30 For the reasons explained below, maintaining the status quo is the only course of action that protects investors, and the Commission's failure to consider it is a fundamental rulemaking flaw.
31

IV . The Proposal Will Harm Efficiency, Competition, and Capital Formation.

Many commenting investors and academics recognize that allowing semiannual reporting will increase issuer information asymmetry, particularly for retail investors. While the Commission recognizes the possibility that the Proposal could increase information asymmetry and offers possible ways to mitigate its negative effects,
32 the Commission does not grapple with the likelihood or degree to which informational asymmetries will undermine efficiency, competition and capital formation in our public markets. The record from other jurisdictions that have taken this approach, however, is highly instructive and shows that the likely effect for those issuers who choose semiannual reporting is negative and that the effect of unpredictable issuer reporting could harm the market itself.

A. Semiannual Reporting Will Depress Valuations and Harm Liquidity.

Multiple studies conclude that less frequent periodic reporting depresses issuer valuations. In one study, using collected interim reporting frequency data from U.S. public issuers for the time period from 1951 to 1973, when U.S. firms transitioned from semiannual to quarterly reporting, data significantly indicated that firms with higher reporting frequency had lower information

29 RSFI and OGC Memorandum, supra note 24, at 1.

30 See Shivaram Rajgopal, Comment Letter on Semiannual Reporting Proposal (June 3, 2026) ("Rajgopal Comment Letter") (explaining that "[t]he proposing release's economic analysis suffers from a foundational asymmetry: it counts the issuer's savings in concrete figures while leaving the costs imposed on the market's downstream users either unquantified or unacknowledged. This is not a minor gap. It is the analytical defect that undermines the proposal's entire cost-benefit framework.").

31 See Chamber of Commerce of United States v. SEC, 85 F.4th 760, 774 (5th Cir. 2023) (stating that the Commission must respond to comments that "'can be thought to challenge a fundamental premise underlying the proposed agency decision'") (quoting Carlson v. Postal Regul. Comm'n, 938 F.3d 337, 344 (D.C. Cir. 2019) (internal quotation omitted)).

32 Proposal at 72-74, 110.

asymmetry and lower costs of equity.33 The corollary, namely that firms that reduce their reporting frequency increase their relative information asymmetry and thereby experience higher capital costs, is also supported. A study analyzing Frankfurt Stock Exchange data from 2012 through 2019, conducted in the wake of Germany's deregulation of corporate reporting, found that deregulation of quarterly reporting "reverses beneficial regulatory effects [of quarterly reporting] and, on average, increases information asymmetry and decreases firm value."34

There is a similar correlation between periodic reporting frequency and issuer liquidity. Studies have found that firms that report quarterly have lower average bid-ask spreads and higher abnormal share turnover than firms that report semiannually, indicating that more frequent

reporting facilitates trading and reduces transaction costs for investors.35 Further, a study analyzing firms on the Vienna Stock Exchange that either terminated quarterly reporting or substantially reduced quarterly report content found economically significant reductions in liquidity.
36
Against a consensus of studies analyzing the negative real-world effects of the proposed change, the Commission suggests that "there could be an increase in net capital formation" due to issuer cost savings.37 That view runs counter to the experiences observed in other markets that allow semiannual reporting. For example, Professor Rajgopal reports that Goldman Sachs

33 Renhui Fu et al., Financial Reporting Frequency, Information Asymmetry, and the Cost of Equity, 54 J. ACCT. & ECON. 132, at 3-4 (Jul. 10, 2012).

34 Vanessa Behrmann et al., The deregulation of quarterly reporting and its effects on information asymmetry and firm value, 64 REV. QUANTITATIVE FIN. & ACCT. 1221 (Sep. 11, 2024) (also reviewing literature and concluding that "[o]verall, there seems to be a consensus that regulation in the form of expanded disclosures has had a positive impact on liquidity and firm value.").

35 See Joshua R. Mitts, Quarterly Reporting and Market Liquidity, COLUM. L. SCH. BLUE SKY BLOG (Aug. 27, 2018) (arguing that wider information asymmetry increases bid-ask spreads, which function as a transaction tax imposing deadweight losses on all market participants and, after discussing relevant literature on the correlation between information asymmetry and bid-ask spreads, concluding that "[i]n short, quarterly reporting makes markets more efficient."); see also Faten Lakhal, Stock market liquidity and information asymmetry around Voluntary earnings announcements: New evidence from France at 4, 7, 11 (Dec. 2004) (analyzing a sample of 309 voluntary earnings announcements in France, including 93 quarterly earnings disclosures, and finding that quarterly earnings announcements enhance market liquidity by reducing effective relative bid-ask spreads and increasing trading volumes in the announcement window, while also finding that earnings forecasts exacerbate information asymmetry).

36 Tobias Bornemann et al., The Consequences of Abandoning the Quarterly Reporting Mandate in the Prime Market Segment, EUR. ACCT. REV., at 5, 27 (July 14, 2023). The study also found that the Vienna Stock Exchange itself experienced "statistically and economically significant" abnormal negative returns around the announcement of the termination of the quarterly reporting mandate on February 25, 2019, which the authors found "suggest that a quarterly reporting frequency is important to investors." Id. at 5, 29-30. See also Jörg-Markus Hitz et al., Turning back the clock on disclosure regulation? – Evidence from the termination of the quarterly reporting mandate in Europe at 6 (Sept. 2019) (finding similar liquidity depressing effects for firms that chose to terminate quarterly reporting following EU deregulation but also containing findings that suggest terminating firms increased investments relative to control

firms).
37 Proposal at 133.

European equity strategists found that for companies in the United Kingdom who took advantage of the ability to switch to semiannual reporting…
"the outcomes were not obviously favorable: not better valuations, not better capital raising, and not a healthier IPO market. The drift to semi-annual reporting tracked a period during which the London Stock Exchange struggled to attract new listings and retain existing ones." 38
Related work by Professor Rajgopal and others also found that "the frequency of financial reports had no material impact on levels of corporate investment."39 The Commission's goal to deepen the public markets by allowing semiannual reporting is simply not born out by the research.
Recognizing the conclusions reached in this same research and other materials, the Commission's Investor Advisory Committee has recommended that the Commission retain quarterly reporting requirements.
40
Overall, the Commission's consideration of costs and benefits treats both positive and negative capital formation outcomes as equivalent possibilities, but the record demonstrates they are not. Historical and contemporary evidence demonstrate that semiannual reporting depresses valuations, harms liquidity, and does not improve public market capitalization.
B. Semiannual Reporting Risks Undermining the Public Markets.
Unfortunately, retail investors already believe they are at a disadvantage relative to institutional and well-funded market participants. Academic literature has recognized that those without an informational edge are likely to conclude that markets are not fair and that investors with superior resources and connections profit at their expense.41 Survey data has also found that 56 percent of investors agreed that the stock market is "rigged against individual investors," demonstrating that concerns regarding structural and informational disadvantages have persisted among retail investors.42 Separate polling has found that 69 percent of Americans agree that the economy is "rigged to advantage the rich and powerful."43

2021).
43 IPSOS, SYSTEM IS BROKEN: TOPLINE RESULTS at 3 (Mar. 2023).

These concerns arise at a time when investor participation and risk tolerance appear

increasingly fragile. According to the FINRA Foundation's 2024 National Financial Capability Study, the percentage of adults under age 35 who invest declined from 32 percent in 2021 to 26 percent in 2024.44 Investor willingness to assume substantial risk has likewise deteriorated. Among all investors, the percentage willing to take substantial investment risk fell from 12 percent in 2021 to eight percent in 2024.45 These trends suggest that retail investors have become more sensitive to uncertainty and less willing to commit capital in volatile environments. Where investor confidence appears to be weakening, increasing information asymmetries will further discourage participation by investors who perceive that they are competing on unequal terms.

Broader economic conditions reinforce these concerns. Gallup recently reported that its Economic Confidence Index fell to -45, its lowest level since October 2022, reflecting increasingly negative assessments of both current and future economic conditions.46 Only 16 percent of Americans rated current economic conditions as excellent or good, while 49 percent described conditions as poor. At the same time, 76 percent believed economic conditions were getting worse, compared with only 20 percent who believed they were improving.47 Against this backdrop of economic dissatisfaction, reducing the frequency of publicly available disclosures risks reinforcing perceptions that ordinary investors lack access to the same information available to sophisticated market participants, thereby increasing the likelihood that retail investors will reduce their participation in public markets.

47 Id.

The potential damage to investor participation is not just theoretical; it is evident in the comment record for this Proposal, which contains significant opposition from individual investors.48 Representative excerpts from the comment file include:

"If you create a two-tiered system, where company insiders and institutional investors know critical news months before everyday investors, those everyday/individual investors will choose to remove their capital from the market."49

"If adopted, this rule will effectively re-privatize public market information, pricing out the everyday investor and turning back the clock on decades of transparency reforms."50

"Requiring corporations to submit audited, personally signed filings on a quarterly basis allows me to stay on top of corporate earnings and identify both solid investments, and also to identify when those investments are turning sour . . . Please reconsider this short sighted decision – it only benefits the top 1% and will hurt individual investors, and voters, like me."51

"While retail investors, regulatory watchdogs, and the general public are left completely in the dark for half the year, corporate executives and well-connected insiders will have free rein to exploit the system. They know exactly what is going on behind closed doors, and this rule gives them a six-month runway to maneuver, trade on non-public knowledge, and shield themselves from immediate accountability. This is a total betrayal of the public trust. The market is already heavily skewed to favor the wealthy and the well-connected.

”52
48 See Tzachi Zach, SEC Semi-Annual Reporting Proposal Tracker (S7-2026-15) (outside of form comments,
finding that 7925 of 8011 comments filed (or 99% of the total) opposed the Proposal, while 34 comments (or 0%)
approved) (last viewed July 6, 2026, 12:00 PM ET).

51 Chris Parisi, Comment on Semiannual Reporting Proposal (May 27, 2026).
52 Matt Norris, Comment on Semiannual Reporting Proposal (May 22, 2026).

Further, even professional investors espouse the view that they would choose quarterly reporting markets over semiannual reporting markets.53 Among the comments received by the CFA Institute in its survey of views on the prospect of moving U.S. markets to semiannual reporting was the following:
“Even a country like Australia that has low levels of corruption and rule based order
has succumbed to wide spread insider information by its investment community
because of semiannual reporting. The temptation is too great and over time the
practice has become normalised. This is why I choose to invest overseas, as I can
not compete with these insiders, and quarterly reporting greatly increases my
comfort in investing in US companies in particular.
”54
Here the message is clear; quarterly reporting brings investors to the United States. That is a critical consideration because foreign holdings of U.S. securities are incredibly substantial.
55 Therefore,
the corollary must be true as well; semiannual reporting will drive some investors away. Another professional investor expressed opposition as follows:
“As an equity analyst, I strongly oppose any SEC change that could heighten
market volatility or weaken confidence in public markets.”56
These sentiments from both retail and professional investors make clear that the Proposal is inadequate because it does not recognize or quantify the possibility of capital flight or reduced participation. Investors of all stripes oppose the Proposal for a wide variety of reasons, most of which boil down to the belief that the Proposal does nothing to protect them. The Commission should not disregard these concerns about the Proposal’s adverse impact on investor protection, even for the prospect of, at best, potential cost savings for public companies.
53 See IAC Recommendation, supra note 40, at 4 (finding that “institutional investors, including asset managers,
pension funds and hedge funds that own the majority of U.S. public companies, have repeatedly expressed a preference
for quarterly reports . . . .”) (citation omitted).
54 CFA Investor Perspectives, supra note 12, at 117; see also Tracy Ayers, CPA, Cerex Advisory, Comment
Letter on Semiannual Reporting Proposal (June 7, 2026) (noting that the Proposal “could impair, rather than enhance,
the ability of U.S. public markets to attract and retain foreign institutional capital,” and cautioning that “[i]f the
disclosure reduction causes even a modest reallocation of foreign institutional capital away from the issuer categories
most likely to elect semiannual reporting, the net effect on capital formation in those categories may

be negative, not
positive.”).
55 See, e.g., U.S. DEP’T TREASURY, Preliminary Report on Foreign Portfolio Holdings of U.S. Securities at End-
June 2025 (Feb. 27, 2026) (compiling data from the U.S. Treasury Department’s Treasury International Capital survey,
which showed that, as of the end of the reporting period, foreign investment in U.S. capital markets totaled
approximately $35.3 trillion, comprised of approximately $19.8 trillion in equities, $13.8 trillion in long-term debt
securities, and $1.7 trillion in short-term debt).
56 CFA Investor Perspectives, supra note 12, at 44.

Again, the remarks of Chairman Levitt during the drafting of NSMIA are instructive to
today’s debate:
“I’ve tried to show you, in several ways, why investor protection is and should
continue to be the foremost concern of the SEC. I’ve offered historical reasons; I’ve
offered economic reasons; I’ve offered competitive reasons; and I’ve offered
market-based reasons. But there’s one other reason, and it’s the most compelling of
all.
“There are plenty of things a market can do without.
“You can have a market without quotes on the eighth or three-day settlement of
trades.
“You can have a market without the Big Board or the small screen.
“You can even have a market without brokers or bankers.
“But you can’t have a market without investors.
“That’s why their interests must come first. For as long as America has taken care
of investors, investors have taken care of America. And that’s a record we at the
SEC will do everything in our power to preserve.”57
Robust public markets depend not only on the number of public companies, but a deep investor
pool willing to take risks and commit capital to those companies. The Commission should
therefore take into account the views of the very investors the Proposal is meant to benefit because
not doing so runs the risk of jeopardizing the Commission’s intended goals.

(May 17, 1996).

V . The Proposal Will Facilitate Fraud and Certain Reporting Risks.
A. The Proposal Will Lead to More Insider Trading.
Commenters and academics have pointed out that semiannual reporting will lead to an
increase in insider trading.58 Recognizing this likelihood, the Commission asks if companies could
“enhance their insider trading policies or improve their self-enforcement of these policies to help
address this concern?”59
Company policies are only a small part of the issue. The Commission’s question misses
important aspects of the increased threat of insider trading. First, company policies have no effect
on insider trading through misappropriation by third parties, such as lawyers, accountants and

others with access to material nonpublic information ("MNPI").
60 Second, much insider trading
occurs through tippees who are not company employees.61 Last, and perhaps most important,
58 See, e.g., Karl T. Muth, Comment Letter on Semiannual Reporting Proposal (June 7, 2026) (noting that the
Proposal expands the window for problematic insider trading where insiders have a "six-month runway" to "quietly
reallocate assets, leverage sophisticated hedging strategies, or initiate structured sales well before the bad news hits
the retail market."); and IAC Recommendation at 10 (stating that "[a] shift to semi-annual reporting would also
increase insider-trading concerns because more frequent disclosure reduces insiders' ability to profit from nonpublic
information. By extending the interval between mandatory reports, semiannual reporting would widen the gap between
inside and public information, increasing the risk that insiders could trade while possessing material information not
yet available to the market."); see also Robert C. Pozen et al., Those Short-Sighted Attacks on Quarterly Earnings,
HARV. L. SCH. F. ON CORP. GOVERNANCE (Oct. 8, 2015) (arguing that "[w]ith semiannual reporting, actual earnings
will more frequently drift further away from management's projections, giving companies more reason to smooth
earnings semi-annually. Worse, with companies going dark for six months, the gap between inside information and
public information will widen—increasing the temptation for insider trading."); Alan L. Beller, Director, Div. of Corp.
Fin., SEC, Regulation in a Global Environment, Speech to the American Academy in Berlin (Apr. 20, 2004),
(suggesting that eliminating quarterly reporting likely increases the risk of insider trading).
59 Proposal at 44, Question 32.
60 See, e.g., SAC Capital Portfolio Manager Mathew Martoma Sentenced in Manhattan Federal Court to Nine
Years for Insider Trading, U.S. ATT'Y'S OFF. S.D.N.Y. (Sept. 8, 2014) (describing scheme in which hedge fund
manager responsible for investment decisions in health care sector public companies obtained MNPI from principal
investigators associated with drug trial); Morris County Man Who Misappropriated Confidential Documents from
Girlfriend's Employer Indicted for $2.7 Million Insider Trading Scheme, DEP'T OF JUST., U.S. ATT'Y'S OFF. DIST. OF
N.J. (June 23, 2026) (alleging trader made over $2.7 million using MNPI stolen from public relations firm using his
girlfriend's employer-issued laptop); Former Deloitte Partner Sentenced to 21 Months in Prison for Profiting
$420,000 from Insider Trading Involving Firm's Clients, FBI (Oct. 26, 2012) (announcing sentencing of accounting
firm advisory partner who obtained MNPI about publicly traded clients).
61 See, e.g., SEC Charges Former KPMG Partner & Friend with Insider Trading, SEC (Apr. 11, 2013)
(charging KPMG audit partner for tipping friend with confidential details about KPMG audit clients); William T.

“Billy” Walters Sentenced in Manhattan Federal Court for $43 Million Insider Trading Scheme, U.S. ATT'Y'S OFF.
S.D.N.Y. (July 27, 2017) (involving professional gambler who received confidential corporate information from
company director); SEC Obtains Final Judgments Against Credit Ratings Analyst and Two Friends Charged with

insider trading is often detected by regulatory authorities who notice correlations between pre-announcement trading and post-announcement price movements.62 Those correlations are easier to notice when they are closer in time to each other. Therefore, moving to semiannual reporting will not only increase the likelihood of insider trading, but will also undermine the most effective means to detect it.

B. The Proposal Will Lead to More Accounting Fraud.

Accounting frauds come in a variety of flavors, including by recognizing revenues before they are earned and by taking or releasing reserves improperly to manage earnings. However, accounting frauds often fall under their own weight because the issuer’s financial statements begin to no longer make sense when fraudulent borrowing from future periods becomes unsustainable, or when current earnings no longer make sense in light of operating results. The Proposal would double the amount of time during which all of these types of frauds can proliferate, and it would cut the points of public accountability in half.

Quarterly reporting keeps accounting fraud at bay in two ways. First, fraudulent manipulation of financial results on a quarterly basis becomes evident more quickly. Accordingly, quarterly results hasten the need to make restatements to address out-of-balance financial results. Indeed, scrutiny of quarterly results can cause significant accounting frauds to topple.63 Second, chief executive and chief financial officers are required to certify quarterly financial results. The legal liability for fraudulent results stays the hands of would-be corporate fraudsters. Also, the sub-certification process that occurs in order to allow chief executive and chief financial officers to make Sarbanes-Oxley certifications keeps lower-level accounting and finance employees in line.

Insider Trading, SEC (Jan. 2, 2020) (announcing entry of final judgments against S&P analyst who learned of public
company’s confidential acquisition plans and tipped his friends).

62 See FINRA Plays a Vital Role in Exposing Insider Trading, FINRA (Apr. 4, 2024) (explaining FINRA’s
Insider Trading Detection Program, which uses sophisticated analytics combining trading data with public sources
and information from companies and FINRA firms to identify trading activity prior to material news announcements
and to link those trades to individuals who may have had knowledge of the impending events).

63 See Janet McFarland, Nortel Executives Clashed with Auditors, Trial Told, THE GLOBE AND MAIL (May 23,
2012) (recounting trial testimony explaining that Nortel Networks was forced to restate its financial statements after
outside auditors refused to allow Nortel to release accounting reserves in the second quarter of 2003, which then
uncovered almost $1 billion in liabilities, including $733 million of reserves that had been misstated in the first and
second quarters of 2003).

Semiannual reporting removes all of those protections. It can even affect the strength of outside auditing itself. One study found that auditing spend for issuers who move to semiannual reporting fell significantly.
64 Again, like the increased threat of insider trading, moving to
semiannual reporting will both increase the likelihood of misconduct and undermine the means to detect that misconduct.
Even with quarterly reporting, the consequences of accounting fraud can be devastating.65 Semiannual reporting increases the chances that accounting frauds will go on for longer and be more substantial before they are detected.
B. Business Development Companies Should Not Be Allowed to Select
Semiannual Reporting.
The Proposal asks whether certain companies, such as business development companies ("BDCs"), should be excluded from the option to select semiannual reporting.66 BDCs are a special area of concern, and not appropriate candidates for semiannual reporting. Investors in non-traded BDCs, for example, do not enjoy other forms of price discovery that apply to publicly-traded stocks, such as active trading markets. Exchange Act reporting is therefore of greater importance for these issuers. Further, while BDC investors may get periodic net asset value reporting, the information provided does not approach the level contained in a Form 10-Q, such as full financial statements with notes that include information such as net investment income and detailed leverage and asset coverage. This relative dearth of price discovery information is compounded by the fact that BDCs hold private equity and debt, where events such as debt covenant violations or accrued but not realized losses can materially change the value of BDC investments.
67 Therefore, robust
and frequent valuation information is critical for investors who need to determine whether to exercise redemption rights, which are usually offered on a quarterly basis. All of these factors make mandatory quarterly reporting particularly essential to BDC investing.
64 See Keren Bar-Hava, Switching to Semi-annual Financial Statement Reports – Market Reaction, Audit Fee
and Corporate Governance Quality, 9 J. FIN. & ACCT. 249, 256 (2021) (finding, inter alia, that for firms trading on
the Tel-Aviv Stock Exchange that took advantage of the ability to begin filing periodic reports semiannually "pay on
average 19% less to the audit firm although auditing risk increased.").
65 Corporate Finance Institute, Top Accounting Scandals (June 11, 2020) (stating that Enron shareholders lost
$74 billion and WorldCom investors lost $180 billion).
66 Proposal at 33, Question 4.
67 Professor Rajgopal makes a similar point in his comment to the Commission, writing that "[w]hat a BDC
reports on a 10-Q is not operating earnings but the fair value of an illiquid private-credit and private-equity portfolio
marked under judgmental Level 3 inputs. The quarterly mark is the discipline that prevents managers from sitting on
unrealized losses. Stretch the cycle to six months and a manager reluctant to recognize a write down gets twice the
runway to defer it." Rajgopal Comment Letter, supra note 30.

VI. Conclusion
The current reporting framework is rooted in the role that disclosure and transparency have played in distinguishing the U.S. capital markets as the most liquid and trusted markets in the world. The Commission should not now enact rules that will weaken that framework and result in tilting the playing field in favor of well-resourced investors. Our markets work best when they work equally for all investors.
NASAA appreciates the opportunity to comment on the Proposal. Thank you for considering these views. Should you have any questions about this letter, please contact either the undersigned or NASAA's General Counsel, Vince Martinez, at (202) 737-0900.
Sincerely,
Marni Rock Gibson
NASAA President
19

Martha Clark — Jul 6, 2026
Subject: File No. S7-2026-15 From: Martha Clark I am submitting my comments in opposition to Proposed Rule S7-2026-15. The current system works and there is no reason to return to the pre Enron reporting system that benefited the wealthy at the expense of small investors such as myself. There is no reason to discontinue quarterly reporting.

Martha L Kedziora — Jul 6, 2026
Subject: File No. S7-2026-15 From: Martha L Kedziora I The ease of which companies can and have committed fraud against shareholders and the public is high. Bringing down the safety net which reporting quarterly is just encourages these dishonest criminals to try and take as much as possible before anyone can know of this. The effect on innocent employees is devastating.

Mary Bishop — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mary Bishop Do not allow the change from quarterly reporting. It is an invitation to more fraud and insider trading

---

Mary Custer — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mary Custer keep the reporting quarterly. Everything is taken from us now. Allowing companies to only report twice a year will not keep a close eye as to what is going on with companies. Losses will occur with little time to account for it and keep our funds safe

---

Mary Ellen Dobbins — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mary Ellen Dobbins Please vote against changes contained in S7-2026-15. Part of the argument is that "the requirements of Form 8-K elicit important disclosures about material events on a more timely basis than quarterly reports on Form 10-Q. We acknowledge, however, that quarterly earnings releases furnished with an Item 2.02 Form 8-K differ from Form 10-Q financial information because they are not required to be reviewed by an independent public accountant or to comply with the Commission's interim financial statement

requirements or certain other requirements in Form 10-Q." The removal of the review of an independent public accountant is not in a shareholder's interest. It basically allows fraud to be hidden for a longer period of time.

Mary Ellen Dobbins — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mary Ellen Dobbins Keep quarterly reporting. I reviewed quarterly reports regularly in my job in addition to personal inquiries. One of the arguments for the change is to reduce the burden of quarterly reports. In this day and age of information at one's fingertips, this argument does not ring true. Information is important and allowing a company to withhold information an additional 90 days will only serve to damage shareholders and potential investors. Please vote against changes in this proposed rule change, S7-2026-15.

Mary Manness — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mary Manness I support maintaining quarterly reporting requirements for public companies. Regular financial disclosures promote transparency, accountability, and informed decision-making for investors. As an individual investor and retirement saver, I rely on timely public information to understand how companies are performing. Reducing reporting frequency could make it harder to identify risks early and would provide less transparency for everyday investors. Please preserve quarterly reporting requirements.

Mary Murphy None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mary Murphy Dear Secretary, I am writing as an individual retail investor to express my strong opposition to the Commission's proposal to allow public companies to file semiannual reports on From 10-S in lieu of quarterly reports on Form 10-Q. The Commission's core regulatory model depends on disclosure frequency. The SEC's approach to investor protection has always rested on mandatory disclosure rather than merit review — the Commission does not judge whether an investment is wise, but ensures investors have the information needed to judge for themselves. Periodic reporting is not a peripheral feature of that model; it is the primary mechanism through which the disclosure regime functions in practice. Reducing the frequency of mandatory reporting therefore does not merely adjust an administrative detail — it weakens the central tool the Commission uses to fulfill its investor protection mandate. 1. Reduced transparency harms retain investors like me the most. Institutional investors and analysts often have access to management, investor relations teams, and other informal channels of information between filings. Retail investors like me rely heavily on the standardized, audited-adjacent quarterly disclosures required by Form 10-Q as one of our only windows into a company's real financial condition. Cutting that window from four times a year to two would widen the information gap between institutional and retail investors, not narrow it. 2. Six months is an overly long time and will allow problems to compound unnoticed. Financial deterioration, fraud, internal control or other operational problems can develop significantly over a six-month period. Quarterly reporting has historically served as an early warning system that allows investors to react before losses compound. Moving to semiannual reporting increases the risk that a small investor holds a deteriorating position for months longer than they would otherwise in today's environment. 3. This proposed waiver of quarterly reports is optional and would create uneven markets. If some companies disclosed quarterly and others disclosed semiannually, investors would need to track which regime each company they hold has chosen and adjust their due diligence accordingly, on a company-by-company basis. This adds complexity for retail investors like me who don't have the resources of institutional research desks to manage that variability. 4.

Voluntary quarterly earnings releases are not a substitute for Form 10-Q. The proposal notes that companies could still issue voluntary quarterly earnings releases even under semiannual SEC reporting. But voluntary press releases are not subject to the same review, certification, and liability standards as a Form 10-Q. Companies could choose to emphasize favorable metrics in a release while reserving less favorable, legally binding detail for the semiannual filing. This creates an opportunity for selective disclosure that harms unsophisticated investors most. 5. Cost savings for companies should not come at investors' expense. I understand the stated rationale is to reduce compliance costs and let management focus less on short-term reporting cycles. But investor protection is the SEC's core mission, and the costs of reduced disclosure frequency are being externalized onto investors — particularly retail investors who lack the resources to independently monitor companies between filings. For these reasons, I respectfully urge the Commission to withdraw or substantially narrow this proposal, and to prioritize investor access to timely, standardized, audited financial information over reduced compliance burdens for issuers. Sincerely, Mary Murphy Iowa

---

Mary P — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mary P I oppose the change from quarterly to semi-annual reporting. Quarterly reporting benefits all market participants including investors, creditors, analysts, employees and regulators. It provides timely, standardized financial information that promotes transparency and accountability. Less frequent reporting can create information gaps, reduce market efficiency and delay the identification of financial and operating issues. While reducing the reporting may lower compliance costs for companies, those savings come at the expense of transparency and greater uncertainty in the market. Less frequent reporting also means investors and stakeholders must make decisions using older financial information, reducing the ability to accurately access a companies financial condition. For these reason, I support retaining quarterly reporting requirements.

Mary Yu — Jul 6, 2026

MaryAnn Krynock MaryAnn Krynock — Jul 6, 2026
Subject: File No. S7-2026-15 From: MaryAnn Krynock Changing quarterly reporting to semi-annual reporting opens up a cornucopia of problems for individual investors. It will allow opportunities for insider trading and possibilities of private investors' losing. Keep quarterly reporting for transparency.

Matt Murphy, Aerospace Industries Association — Jul 6, 2026
July 6, 2026
Ms. Vanessa Countryman
Secretary
U.S. Securities and Exchange Commission
100 F Street NE
Washington, DC 20549
Subject: AIA Comments on Proposed Rule: Semiannual Reporting (File No. S7-2026-15)

On behalf of the Aerospace Industries Association (AIA), representing the nation's leading aerospace and defense companies, we offer the following comments to the Securities and Exchange Commission's (SEC) proposed rule to permit optional semiannual reporting by public companies.

The aerospace and defense sector operates in a uniquely complex environment, with long-cycle programs and significant reliance on government contracting. In certain cases, evolving geopolitical dynamics, national security concerns, or export control constraints further shape the type of information and level of detail appropriate for public disclosure. We strongly support a regulatory framework driven by principles that enable registrants to provide material, decision-useful information while avoiding duplication or disclosure of sensitive details.

We are supportive of the SEC's proposed rule permitting optional semiannual reporting, which would provide companies with greater flexibility and reduce the reporting burden while maintaining high standards of transparency and investor protection through continuous disclosure obligations. The proposed optional semiannual reporting would allow companies to determine their reporting cadence based on stakeholder needs. Companies could continue reporting quarterly as they do today, choose to report on a semiannual basis, or maintain quarterly earnings releases to provide timely information to investors but without the need to file a Form 10-Q each quarter. We commend the SEC for proposing rules that would increase flexibility.

We are also supportive of the SEC proposal to not amend current requirements to furnish (versus file) earnings releases on a Form 8-K, regardless of whether a company elects the semiannual reporting option. AIA believes that some companies electing semiannual reporting will continue to issue quarterly earnings releases. In this case, the information included in earnings releases may contain forward-looking information such as guidance and non-Generally Accepted Accounting Principles (GAAP) information that is appropriately furnished rather than filed. Specifically, we would be concerned with the application of Item 10(e) of Regulation S-K to filed documents. Item 10(e) imposes more prescriptive requirements on the use of non-GAAP financial measures and may result in companies either: (1) omitting information investors currently rely on; or (2) continuing to report quarterly to retain the ability to furnish earnings releases. For the reasons stated above, we also are supportive of the SEC proposal to maintain current policy which does not require auditors to be involved in reviewing earnings releases.

We have identified several recommendations the SEC can address to provide companies with the full flexibility of these various proposed reporting approaches, as well as observations on challenges companies may face in electing semiannual reporting.

Recommendations to facilitate semiannual reporting

• Comfort letters: AIA appreciates the proposed rule including amendments to Regulation S-X to ensure that financial statements in registration statements filed by semiannual filers would not be considered "stale,
" however, we believe that the Public
Company Accounting Oversight Board (PCAOB) rules also require amendment to fully realize this enhanced flexibility. Specifically, PCAOB Auditing Standard (AS) 6101 – which limits auditors' ability to provide negative assurance in comfort letters beyond 134 days from the most recently audited or reviewed period – must also be amended to accommodate semiannual filers whose financial statements will likely not be audited or reviewed as frequently as quarterly filers. If PCAOB AS 6101 is not amended, it would make companies less likely to adopt the semiannual option as there would be periods when the company may not be able to access capital markets given time limitations on auditor's ability to provide negative assurance in comfort letters. We recommend the SEC work with the PCAOB to amend AS 6101 to extend the 134-day period to align with proposed updates to Regulation S-X for semiannual reporting and to make the effective date of this update consistent with the SEC adoption of semiannual reporting.

• Election of semiannual reporting: Given that quarterly reporting would provide

additional information, we recommend that companies be permitted to report quarterly at any point and not limited to an annual election. This would provide additional flexibility for companies to address changes in stakeholder needs during the year by optionally increasing frequency of reporting.

• Streamline interim reporting requirements: In parallel to optional semiannual reporting, we recommend the SEC also consider streamlining interim reporting requirements to focus on material information and updates occurring since the most recent Form 10-K, regardless of interim reporting cadence. Please see our specific recommendations on the requirements in Regulation S-K for more details.

1 We also recommend that SEC encourage the Financial Accounting Standards Board to initiate a high-priority project to re-evaluate required interim disclosures to focus on material information and updates since the most recent annual financial statements.

Challenges companies may face in electing semiannual reporting

• Trading windows: Companies currently have developed policies related to blackout periods around the close of each fiscal quarter and the subsequent earnings release date for the purpose of reducing the risk that insiders trade while in possession of material non-public information. These policies typically allow for trading after an earnings release and/or Form 10-Q/K have been filed. We believe some companies adopting semiannual reporting would continue to release earnings on a quarterly cadence. For

companies that elect semiannual reporting and choose not to do quarterly earnings releases it could be challenging to define the length of open trading windows. AIA believes that determining the exact timing and scope of sufficient public disclosure represents practical, company-specific governance considerations that semiannual filers will need to address individually under existing insider trading compliance frameworks.

• Debt Covenants and Credit Rating Agencies: AIA recognizes that financial institutions and credit agencies have structured information requirements around the current quarterly reporting framework. However, these current market expectations may limit early adoption of semiannual reporting based either on contractual reporting requirements or potential negative impacts on a company from a transparency perspective. If there is a difference in the cost of debt or how rating agencies determine credit ratings for semiannual filers, it may discourage election of the semiannual option.

• Subsequent Events: Companies that elect semiannual reporting and continue to release earnings on a quarterly basis will need to consider when disclosure is appropriate for subsequent events that occur after an earnings release in the first or third quarter, but prior to the next financial statement filing.

In summary, we applaud the SEC for exploring ways to reduce the reporting burden on public companies while balancing investors' needs for transparency and decision useful information. Thank you in advance for considering our feedback. Please direct any questions to the undersigned at matt.murphy@aia-aerospace.org or 703-358-1020.

Sincerely,

Matt Murphy

Senior Director, Acquisition Policy

Matthew Griesinger — Jul 6, 2026

Subject: File No. S7-2026-15 From: Matthew Griesinger I support maintaining quarterly reporting requirements and oppose replacing Form 10-Q filings with semiannual reporting under SEC File No. S7-2026-15. Quarterly reports provide investors with timely, consistent, and transparent information

necessary to evaluate company performance, assess emerging risks, and make informed investment decisions. Reducing reporting frequency would increase information gaps, diminish market transparency, and potentially disadvantage retail investors who rely on periodic public disclosures rather than direct access to management. The benefits of regular, standardized reporting to investor confidence, market efficiency, and accountability outweigh the burden of preparing quarterly filings

---

Matthew Williams — Jul 6, 2026
Subject: File No. S7-2026-15 From: Matthew Williams Subject: Public Comment on File Number S7-2026-15 (Proposed Modernization of Reporting Frequency / Semiannual Reporting) Dear Secretary Countryman, I am writing to express my strong opposition to the proposed rule change under File Number S7-2026-15, which would allow public companies to opt out of quarterly reporting in favor of a semiannual schedule. As a retail investor (by virtue of having a 401k as my main retirement plan) I believe this rollback to a 1955 standard severely compromises market transparency and harms everyday market participants in the following ways: -Increased Information Asymmetry: Moving to a six-month reporting cycle creates a dangerous information vacuum. Corporate insiders and institutional high-frequency traders will always find alternative paths to real-time corporate data, leaving retail investors to trade on stale, outdated information. -Impaired Price Discovery: Quarterly disclosures (Form 10-Q) are vital for accurate market pricing. Reducing this frequency will inevitably lead to extreme, volatile price swings when six months of accumulated financial data is suddenly released at once. -Risk to Retirement Savings: Forcing retail investors to rely on un-audited press releases and non-GAAP metrics for long stretches of time increases capital risk. Over time, diminished transparency lowers overall market valuations, directly eroding the long-term compounding health of individual retirement accounts. While reducing corporate compliance costs is a notable goal, it should not be achieved by shifting the burden of risk and financial loss onto retail investors. I urge the Commission to withdraw this proposal and maintain the mandatory quarterly reporting framework that has successfully protected and legitimized U.S. capital markets for over fifty years.

Maureen Wentling — Jul 6, 2026
Subject: File No. S7-2026-15 From: Maureen Wentling I oppose the reduction of annual reporting requirements from quarterly to semiannually. As a private investor, I should be able to review and make decisions that benefit my personal investment strategy with the continued transparency of quarterly reports. Thank you.

MC Magee Investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: MC Magee Dear SEC, I read every submission for this proposal until the posting was delayed. At that point, the SEC website has 17,000+ submissions, with approximately 23 that indicated approval for the proposal. I am not one of them. Although there are now (as far as I can tell) approximately 90,000 submissions, the below represents what I took away from the overwhelming response to this proposal: We are teenagers, young adults, middle aged, elderly, working, retired, looking for work. We are self-described: Academics, Accountants, Accounts Receivable Clerks, Advertisers, Advisory Board Members, Employees at the AICPA, Analysts, Architects, Artists, Attorneys, Auditors, Bankers, Bartenders, Blue Collar Workers, Board Members, Boeing Employees, Bookkeepers, Business Analysts, Business Consultants, Business Owners, Business Systems Analysts, Butchers,Carpenters, Cashiers, CEOs, Certified Financial Advisers,

Certified Financial Planners, Chief Financial Officers, Chefs, Civil Engineers, Clergy, Compliance Officers, Construction Workers, Consultants, Controllers, Cooks, CPAs, Data Analysts, Deli Workers, Directors, Doctors, Electrical Engineers, Financial Analysts, Healthcare Workers, Home Inspectors, Investment Club Members, IT Professionals, Museum Workers, Musicians, Nurses, Paralegals, Photographers, Pilots, Production Workers, Retail Employees, Sales Representatives, SEC Professionals, Software Engineers, Stockbrokers, Students, Systems Analysts, Tax Preparers, Teachers, Travel Advisors, UAW Members, Uber Drivers, Veterans, Veterinarians, Warehouse Workers, and Woodworkers. We are Investors. We are Americans. And together, we oppose allowing the public companies that we invest in to reduce 10Q reporting to semiannual reporting. Many people prior to me have stated why quarterly reporting is important to us. Some have politely pleaded, some have been sarcastic, many have been outraged, some have been more articulate than others. I think it is fair to say that most all of us believe in one way or another that the reasons provided for the proposed change are disingenuous at best. Many have made the point that the systems to report quarterly are in place, so it would appear that changing to semiannual reporting would be of little cost benefit. In fact, there is always a cost burden to adopting such a significant change. Companies that have developed strong quarterly controls are unlikely to remove such controls, any more than they would reduce monthly close controls or other weekly, daily, more than daily, or as needed controls that are already in place to appropriately run their businesses and which serve a specific purpose in support of their ICFR certifications. Many have also questioned the practicality of having a choice between quarterly and semiannual reporting, making points that (1) it may be unsustainable to continue quarterly reporting longer term if other companies choose to report semiannually, (2) it will be harder to compare investment opportunities if financial analysts have quarterly data for some and semiannual data for other companies that should otherwise be comparable, (3) the substitution of the 10S or the 8K (which is evetn driven) will not serve the same purpose as full quarterly reporting, and therefore is a false comfort, (4) over-reliance will likely be placed on non-GAAP disclosures and unaudited communications between reporting periods, as well as other arguments. Others have questioned why, at this point in time, with data efficiencies and quarterly close processes automated - many reduced to several days from much longer time periods even in recent years - why there is concern over the burden of preparation of the quarterly financial statements. Indeed, many have acknowledged the short-termism attitude of companies that may cause them to run their businesses poorly. I for one am very skeptical that this proposed change will have any material impact on that. The companies will continue to be in touch with the insiders and will continue to try to game the system when it suits their purposes. Reducing the visibility of audited financial statements will just make it more opaque when what is needed is more transparency. I would also argue that if management is running a company with a short term mind-set, that is a problem of management and should be addressed by the Board of Directors, not by reducing information available to investors. Moving out to the broader picture, many commenters are also skeptical of what appears to be an onslaught against the retail investor's ability to control our own portfolios. In addition to this proposal, there have been other actions and legislative moves that are driving that skepticism. Some have pointed to the unusually favorable ruling on SpaceX IPO to be seemingly immediately included in index funds, the SEC's proposal to drop the rule that trades have to be made at the best available price, as well as other recent proposals and legislation. I am also curious as to why in a public comment period certain commenters (PIMCO, AIMA, Cooley LLP, NCACPA, Donnelly Financial, etc.) are able to have a private audience with the SEC and the only documentation provided for the public to see is that a meeting occurred. Maybe we don't need the transcripts, but it would seem appropriate to provide at least a summary to have a sense of what they agreed with or disagreed with. This feels like it should end in a moment where the people are heard and the machine is stopped or at least paused. I hope that will be the case.

Megan Kennedy — Jul 6, 2026

Subject: File No. S7-2026-15 From: Megan Kennedy I am an individual investor whose 401k is invested in the stock market. My husband and I have worked and saved and invested our entire lives so that we could take care of ourselves during retirement. The stock market is critical to that goal and the companies which are traded on the stock market are key to our success. Allowing companies to withhold critical information for six months would be detrimental to the individual investors and the market as a whole. That information will put investors at a serious disadvantage in decision making and will ultimately undermine confidence in the stock market.

Mei Lee — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mei Lee I disagree with this proposal as this change would impact my ability to assess the soundness of my investments in a timely basis. The information provided on a quarterly basis is crucial to the trust and confidence that I have the US companies. Taking away transparency would reduce the value of my investments because investor confidence would be reduced.

Melinda Shilansky Teacher — Jul 6, 2026
Subject: File No. S7-2026-15 From: Melinda Shilansky Do not change the reporting standards for corporations. If they have to report every six months instead of quarterly, they will be able to hide their gains and losses from their customers and their investors. We deserve more transparency, not less. With less transparency, we will have less trust in the system. We all remember how the people invested in Enron (often their own lower level employees) lost everything, including their entire retirement. The top guys didn’t though- they sold their stocks while preventing anyone else from doing so and then when the truth was revealed, people were destitute. I was in my 20s. Now I’m reaching retirement age and I don’t want that to happen to me. And it will hurt companies too because part of the compensation packages was company stock, which reduces the need for capital on hand. If emoloyees start refusing stock, it will put more pressure on companies to pay people more. We need honesty from corporations, not more dirty tricks.

Michael F. Masters Individual Investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Michael F. Masters Quarterly reporting protects individual investors. Semiannual reporting doubles the information gap between insiders and ordinary shareholders. That gap is where volatility, uncertainty, and mistrust grow. The short-termism diagnosis doesn't justify this remedy. Research from the CFA Institute, which studied this exact maneuver in the U.K. market, shows that reporting frequency has no measurable effect on corporate investment behavior. The SEC is accepting a real cost – less transparency for individual investors – for a benefit that the evidence says simply won't materialize. The companies most likely to opt out are the ones where oversight matters most. Smaller, less-covered businesses operate with less scrutiny. Reducing their reporting requirements makes them harder to monitor, not easier to own. This is the wrong direction. Reg FD moved toward a more level playing field. This proposal moves away from it. What, exactly, is the problem? As the WallStreetBets comment letter put it: "The companies we trade are not being held back from greatness by the obligation to file four reports a year. ... The entire S&P 500 files a 10-Q every quarter, and the S&P 500 is at an all-time high. If quarterly reporting is crushing American capitalism, American capitalism is hiding it well."

Michael Jorgensen Physician — Jul 6, 2026
Subject: File No. S7-2026-15 From: Michael Jorgensen The SEC-required Form 10-Q is essential for understanding a company's financial condition, cash flow, and emerging risks. It is often the first indication that a company has fallen out of compliance with loan covenants or is experiencing other material financial challenges. By providing a timely, three-month snapshot of performance, the 10-Q enables investors to identify trends and assess risk before annual reports are filed. Quarterly reporting also promotes transparency and accountability by limiting companies' ability to delay or obscure adverse developments. Because Form 10-Q is subject to independent auditor review, investors have greater confidence in the reliability of the information disclosed. Less frequent reporting would also increase the risk of insider trading by extending the period during which corporate insiders possess material nonpublic information before it is disclosed. U.S. public companies have been required to file quarterly reports since 1970. Although the number of publicly traded companies has declined in recent years, there is no clear evidence that quarterly reporting requirements are a significant cause. The principal value of Form 10-Q is the timely transparency, accountability, and investor confidence it provides. Weakening these reporting requirements would diminish the quality and timeliness of information available to investors and could undermine confidence in U.S. capital markets. In sum, the proposed rule to replace Form 10-Q with Form 10-S would be bad for investors. The quarterly filings provide information about a company's performance: good, bad, or indifferent. The market and investors can then act based on that information. The financial market would be disadvantaged when timely performance information is not available. My retirement account relies on a strong financial market. Thank you.

Michael L. laurie — Jul 6, 2026
Subject: File No. S7-2026-15 From: Michael L. laurie As a corporate banker and Chartered Financial Analyst, I understand the value of timely information and related notes. Decreasing the frequency of reporting would be grave error. Timely financial information is the keystone to effective risk management, credit evaluation, and valuation decisions. In an era when data and information are increasingly valuable and available, the SEC would be swimming in the wrong direction relative to these trends. The United States has the most robust, liquid, and efficient markets in the world because of regulation and transparency. Although not perfect, we provide investors a standard that transcends the capital markets of any other country. Rescinding the current reporting requirements as suggested would undermine these factors and proffer opportunities for graft, fraud, mismanagement and violations of executive fiduciary responsibility. It would hamper effective risk management. These are not acceptable outcomes.

Semiannual Reporting
Release Nos. 33-11414; 34-105368; 39-2563; IC-36140
File No. S7-2026-15 (May 5, 2026)

Dear Ms. Countryman,

The Retail Industry Leaders Association (“"RILA"), on behalf of its members, appreciates the opportunity to submit this letter in response to the U.S. Securities and Exchange Commission's ("the "Commission") proposal on semiannual reporting for investors (the "Proposed Rule"). Subject to the comments and conditions below, RILA supports the Commission's efforts to offer publicly held companies an additional reporting option.

By way of background, RILA is a trade association of the world's largest, most innovative, and recognizable retail companies and brands. We convene decision-makers, advocate for the retail industry, and promote operational excellence and innovation. RILA members include more than two hundred retailers, product manufacturers, and service suppliers, who together employ over 42 million Americans and account for $2.7 trillion in annual sales and hundreds of thousands of stores, manufacturing facilities, and distribution centers domestically and abroad.

RILA member companies are predominantly large, publicly traded retailers whose investors actively monitor both quarterly performance trends and year-over-year comparisons. Given that profile, we expect most of our members to continue reporting quarterly regardless of the semiannual option availability. That said, RILA appreciates the Commission's evaluation of issuers' reporting burdens and therefore supports the Commission's decision to introduce reporting framework optionality. Accordingly, RILA supports the Proposed Rule, provided that quarterly reporting remains fully available and that the Commission takes appropriate steps to ensure that companies electing semiannual reporting maintain meaningful transparency with investors.

RILA is pleased to provide the following comments, which highlight the importance of maintaining optionality in the final rule, and recommends changes to further strengthen protections for investors:

Semiannual Reporting, Release Nos. 33-11414; 34-105368, 39-2563; IC-36140, File No. S7-2026-15 (May 5, 2026), available at
https://www.sec.gov/files/rules/proposed/2026/33-1 1414.pdf.

I.
Offering Optional Semiannual Reporting is an Appropriate Exercise of Regulatory Flexibility

Considerable changes have occurred in the United States capital markets since 1970, when the Commission mandated quarterly reporting. For example, Form 8-K now requires disclosure of various material events bankruptcies, acquisitions, executive departures, and carningsannouncements oftentimes within four business days. Furthermore, earnings releases and investor calls have become the primary method through which markets receive and process company financial information and typically occur before Form10-Q is filed. This makes the Commission's review of issuer reporting frequency both timely and appropriate.

RILA supports the flexible reporting framework that the Commission brings forward in the Proposed Rule. The Commission is right to ask whether a one-size-fits-all quarterly mandate continues to serve investors and issuers best. Arguably, some companies' performance may be better assessed in semiannual reporting. These may include companies with stable operations, limited analyst coverage, or business cycles that do not map neatly to quarterly timelines. Additionally, this option may be a better fit for early stage companies where innovation, investment, and commercialization are still scaling. Alternatively, many other established companies, including RILA members that are publicly traded, will continue to find quarterly reporting invaluable to maintain investor confidence, analyst engagement, and capital market access.

By making semiannual reporting an opt-in election on the cover of Form 10-K, the Commission allows companies and their boards to choose the reporting structure that best serves their individual circumstances and stakeholders, while providing investors with the material information necessary to make informed decisions. Accordingly, RILA supports this approach, subject to the recommendations below.

II. Market Forces Will Naturally Preserve Quarterly Reporting for Most Large Retailers

When considering the Proposed Rule's impact, analysts may be concerned that reduced reporting frequency would deprive investors of critical information. Retail is among the most investor-scrutinized market sectors. Many publicly traded retailers operate in highly seasonal environments. For example, some RILA member companies have back-to-school and holiday quarters that can represent a disproportionate share of annual revenue. Their investors may expect granular, frequent updates on comparable store sales, inventory levels, gross margins, and other metrics that may vary meaningfully from quarter to quarter.

Analyst coverage of major retailers is thorough, institutional ownership is significant, and the market craves quarterly data. Companies may continue to report quarterly if they believe risks from a switch to semiannual reporting exceed the expected savings. Concerns include that

See Semiannual Reporting, supra note 1, at 9-10 (describing the Commission's 1970 adoption of quarterly reporting requirements and
rescission of the prior semiannual Form 9-K regime).

See id. at 19-20 (discussing the current Form 8-K Item 2.02 earnings release framework).

R

companies that reduce reporting frequency might face higher costs of capital, receive reduced analyst coverage, and court investor uncertainty. Therefore, market forces may inherently compel RILA members to report quarterly even though the Commission's Proposed Rule offers them a semiannual alternative. While the Proposed Rule does not change this dynamic, it offers meaningful reporting flexibility to companies for which it is appropriate and beneficial.

Currently, RILA does not anticipate that the Proposed Rule will produce a wholesale shift away from quarterly reporting by its members. It will, however, enable companies at stages and/or in industries where quarterly reporting may be viewed as adding limited informational value relative to its cost to opt-in and remove two quarters of reporting burden.

III. The Commission Should Ensure that Retail Investors are Adequately Protected Under a Semiannual Reporting Regime

RILA supports the Proposed Rule's optionality framework, but we encourage the Commission to ensure that it is implemented in a manner that protects retail investors. To that end, RILA recommends that the Commission incorporate the following in the Final Rule:

A. Reporting Election Disclosure. When a company elects to shift from quarterly to semiannual reporting, or from semiannual back to quarterly, the company should prominently disclose that election. Investors should not be left to discover a change in reporting cadence when the expected Form10-Q is mnissing. The Commission should require issuers to proactively communicate any change in reporting frequency to the market through a Form 8-K filing, as a step in addition to the Form 10-K checkbox mechanism the Commission has proposed.4

B. Continued Form 8-K obligations. The Commission should emphasize that semiannual filers remain fully subject to all Form 8-K reporting obligations. The real-time disclosure requirements of Form 8-K such as covering material acquisitions, leadership changes, significant agreements, and other consequential events are critical to mitigating the potential effects of reduced frequency of periodic reports. RILA supports retaining these obligations in full for all files regardless of whether they elect quarterly or semiannual reporting.

C. Interim Disclosure Transparency. RILA anticipates that many companies electing semiannual reporting may continue to provide voluntary quarterly

updates through earnings releases, investor presentations, and other means. The Commission should provide clear information about how such voluntary disclosures will interact with the proposed reporting framework, particularly with respect to the Regulation FD obligations and Item 2.02 of Form 8-K. This would serve to ensure that companies can maintain investor dialogue without inadvertently creating additional compliance uncertainty.

'See Semiannual Reporting, supra note 1, at 27 (describing the proposed check box on the cover page of Form 10-K as the proposed sole means by which a reporting company would indicate its annual election of semiannual or quarterly reporting)

S See Semiannual Reporting, supra note 1, at 38 (Request for Comment Question 18, asking about the likelihood that semiannual filers will continue to issue quarterly earnings releases).

R

IV. PCAOB Should Harmonize Auditing Standard 6101 With the Proposed Rule

RILA supports the Commission's call for the Public Company Accounting Oversight Board ("PCAOB") to revisit Auditing Standard6101 (AS 6101), Letters for Underwriters and Certain Other Requesting Parties, considering the proposed shift to optional semiannual reporting.5 Under AS 6101, auditors generally cannot provide comfort letters on financial information older than 135 days.' In a quarterly reporting environment, that threshold is rarely met because issuers cycle through new financial statements every three months.

Under a semiannual reporting structure, however, the 135 days threshold becomes a more prominent obstacle. A semiannual filer with a fiscal first half ending June 30th would face stale financial statements under AS 6101 by approximately mid-November, well before a company opting-in to the Proposed Rule's next periodic filing would be due. Any capital markets transaction during that window could require the preparation of additional interim financial information solely to satisfy the comfort letter requirement undercutting the cost savings the Proposed Rule is designed to deliver.

Left unresolved, this sets up a regulatory inconsistency in which the SEC deems financial information current for periodic reporting purposes while the PCAOB treats the same information as stale for capital markets purposes. Consequently, RILA recommends the Commission work with the PCAOB to extend the comfort letter threshold to approximately 225 days or another period aligned with the semiannual reporting cycle that allows the two frameworks to operate coherently. This figure, like the existing 15-day threshold under quarterly reporting, reflects approximately the length of one full interim reporting period plus a reasonable buffer, enabling the two frameworks to operate coherently.

CONCLUSION

RILA supports the Commission's Proposed Rule offering an optional, semiannual reporting alternative to the current quarterly reporting mandate. Through the Proposed Rule, the Commission introduces flexibility into a framework that has remained largely unchanged since 1970, recognizing that reporting frequency can be adapted to meet the needs of business, investors, and the markets in which they participate.

Very truly yours,

Michael Levine

Michael P. Stein — Jul 6, 2026
Subject: File No. S7-2026-15 From: Michael P. Stein The justification for the proposed rule is to allow companies to choose the reporting period they feel best serves their investors. It is absurd to think that one size fits all for investors. Let us say for the sake of argument that 80% of investors would say, "Sure, I'm OK with semiannual." The other 20% still want quarterly. But going by majority rule is not optimal. The 80% are perfectly free to ignore the alternate quarterlies as if they did not exist to fit their preferences. The 20%, however, do not have their interests served. And really, with software it should be possible to automatically generate semiannuals from the most recent and the previous quarter, fully satisfying both groups of investors. The risk posed by the new rule is that companies will choose the reporting period they feel best serves the interests of the insiders, allowing them to cover up bad news for three extra months. Interest of the investors? Not so much.

Michael Schaffer — Jul 6, 2026
Subject: File No. S7-2026-15 From: Michael Schaffer Taking away quarterly reporting weakens the ability of investors to manage their money and investments safely and allows for greater fraud and risk.

Michael Schuchardt — Jul 6, 2026
Subject: File No. S7-2026-15 From: Michael Schuchardt I'm writing in strong opposition to the SEC's proposal to let public companies drop quarterly reporting in favor of twice-a-year disclosure. We are living through a stretch of markets where price and fundamentals have never felt further apart. Meme stocks rally on social media momentum, valuations detach from earnings, and retail investors are trading in volumes that used to be the province of institutions. In that climate, quarterly reports are one of the few remaining moments where hype has to answer to audited numbers. Cutting that check-in to twice a year doesn't reduce burden so much as it removes a guardrail, right when speculative trading is at its most intense. Six months is a long time for a stock to run on rumor with no fresh, mandated disclosure to correct it. Institutional investors have research teams, private channels, and other ways to stay informed in the gap. Retail investors don't. They rely on the filing calendar itself, and this proposal would make that calendar inconsistent from one company to the next, since reporting cadence would become a company's own choice rather than a shared standard. I understand the appeal of lowering costs and making public life more attractive to companies weighing an IPO. But that goal shouldn't be pursued by loosening the transparency that current shareholders already depend on. The risk of that tradeoff falls on investors, not on the

companies choosing to opt out. I'd urge the Commission to keep quarterly reporting mandatory, especially given how much of today's trading activity is driven by sentiment rather than fundamentals.

Michael Stryer — Jul 6, 2026
Subject: File No. S7-2026-15 From: Michael Stryer As a long term investor, I'm strongly opposed to reducing the reporting requirements from quarterly to semi-annually. This rule was instituted as part of the response to Enron's fraud attempts. The potential harm of making fraud easier is of great concern. I sincerely doubt that the reduction of mandated reporting requirements would achieve the intended aim of shifting Wall Street investor pressure to longer term concerns. In short, this proposal only has downsides.

MICHEL BERCOVIER Professor of computer science ,Hebrew Univeristy of Jerusalem — Jul 6, 2026
Subject: File No. S7-2026-15 From: MICHEL BERCOVIER In the 21rts century, budgets ,costs or dewtailed finacial,could be reported even in real time. Hiding the financial state of a company for 6 month is an open invitation to share manipulations from insiders.

Michele Perkins — Jul 6, 2026
Subject: File No. S7-2026-15 From: Michele Perkins Quarterly reports are necessary to ensure that a repeat of the Wall Street Crash doesn’t reoccur. Keeping transparency to avoid insider trading is critical.

Michelle Gonzales — Jul 6, 2026
Subject: File No. S7-2026-15 From: Michelle Gonzales Quarterly reports are not useless, ceremonial paperwork. These reports keep public markets fair. The Form 10-Q gives outside investors regular, legally structured updates on revenue, margins, cash flow, debt, risk factors, litigation, liquidity, and management’s discussion of results. If that information comes only every six months, the gap between insiders and outsiders widens to the detriment of average investors. Management, board members, lenders, suppliers, large customers, and sophisticated institutions may still have ways to infer what is happening. Ordinary investors will not.

Michelle Hemenway Investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Michelle Hemenway Keep reporting quarterly. With semi-annual reporting, Investors will lose confidence which will stall growth.

Michelle Krieger — Jul 6, 2026
Subject: File No. S7-2026-15 From: Michelle Krieger I oppose this proposed rule change. As an individual investor, quarterly reporting is my best opportunity to find out what a company's management is thinking and what there plans are. I do not have the wealth to run in the circles that

would allow me to socialize with the CEOs of the companies I invest it. And, my emails to investor relations pages most often go unanswered, likely because I do not own enough shares to merit the time of the investor relations staff. I may not have much invested compared to institutional investors and high net worth individuals, but it is everything I have saved for retirement. The quarterly reports protect me and other individual investors. Without out this information, we will be left to guess for 6 month stretches what is going in inside the companies we are invested in. And 6 months is a long time to not know. Especially when you consider that others, with more money, will likely have more access to management teams and make decisions based on their knowledge. England already ran this experiment and rescinded its quarterly reporting requirements. Companies did not stop chasing short term goals and focus more on the long term. This proposed change will not bring about the positive results theorized, and will hurt individual investors. Making it optional for companies to provide quarterly reporting will result in the companies who need the most investor oversight opting out. It will make it easier for companies to spin the hype, without providing any of the receipts for their claims. Please do not make this rule change. It will not cause the positive impacts you believe and it will cause real world negative impacts for myself and the millions of other people trying to plan for retirement and other major life goals through investing in stocks.

Miguel Moreno Chaplain, Saint Augustine High School — Jul 6, 2026
Subject: File No. S7-2026-15 From: Miguel Moreno Dear Sir or Ma'am, as a long time investor who has seen lots of corporate malfeasance over the years, I ask you to maintain quarterly reporting on the part of publicly held corporations. Please abolish your consideration to slacken it to semi-annual reporting. Sincerely, Miguel A. Moreno San Diego, CA

Mikail Sellner — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mikail Sellner Unlike large institutional investors, individual investors often rely heavily on public SEC filings because they do not have direct access to company management, investor-relations teams, or proprietary research. By extending the gap between required reports from three months to six months, important developments such as deteriorating cash flow, rising debt, operational setbacks, or emerging risks could remain undisclosed for longer periods, increasing information asymmetry between ordinary individual investors and large institution participants. As a small individual investor, fairness is a critical consideration when it comes to investing my hard-earned money. The result of this proposal would be greater uncertainty, larger stock-price surprises when information is finally released, and a less transparent market that disproportionately disadvantages the very investors the SEC is charged with protecting.

Mike Tindle — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mike Tindle I must express my strong opposition to the Securities and Exchange Commissions proposed rule that would allow public companies to opt out of quarterly reporting (Form 10-Q) in favor of semiannual reporting on the proposed Form 10-S. The actual consequence will be a severe erosion of market transparency that disproportionately harms retail investors while providing an unfair advantage to institutional markets. The proposed rule undermines the core mission of the SEC to protect investors and maintain fair, orderly, and efficient markets. Reducing corporate compliance costs should never come at the expense of market integrity and investor protection. If adopted, this rule will effectively re-privatize public market information, pricing out the everyday investor and turning back the clock on decades of transparency

reforms. I strongly urge the Commission to withdraw this proposal and maintain mandatory quarterly reporting on Form 10-Q. The health of our public markets depends on equal, timely access to information for all participants, not just the wealthiest institutions. Sincerely,

---

Milo Simone — Jul 6, 2026
Subject: File No. S7-2026-15 From: Milo Simone If large companies are allowed to keep the public in the dark for long periods of time, corporate accountability will be effectively nullified. Large companies operate on such a scale that their mistakes have catastrophic effects. We, as a society, need to be allowed the time and ability to respond to them and hold them responsible.

Miriam Glennie The Motley Fool Community — Jul 6, 2026
Subject: File No. S7-2026-15 From: Miriam Glennie I oppose a move to semi-annual reporting. We have semi-annual reporting in Australia, and it denies individual investors the quantum and frequency of information needed to make informed decisions. Australian firms have below OECD average levels of business investment, weak productivity growth and low long-term shareholder returns, showing semi-annual reporting is not associated with increased firm investment or improved business or market performance. The harm to individual investors can be substantial. Under a quarterly reporting model, individual investors have much greater predictive capacity, as can track business activity and reporting at more frequent intervals. In semi-annual reporting models like Australia, individual investors are left with only two data points per year, making it difficult to differentiate between a pattern and a hiccup. The third bad report in Australia at 18 months may be too late to identify a downward trend or to engage proactively with business via shareholder meetings. Impeding the participation of individual investors in active and informed investing is bad for business performance, as reduces the quality and quantity of investor feedback. It may also be bad for markets, by pushing more individual investors into passive funds and further distorting the power of institutional investors as potential bullies to business or makers of markets. Please recognise the voice of individual investors and support their on-going participation in healthy businesses and healthy markets.

Misha Miller-Sisson — Jul 6, 2026
Subject: File No. S7-2026-15 From: Misha Miller-Sisson The proposed rule change will hurt investors and the economy. Good economic choices are based on data and by restricting the amount of data available to the public you will be limiting the public's ability to properly invest, and shareholder's ability to judge how their investments are being treated.

Mitchell Gruver Service Forester, WV Division of Forestry — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mitchell Gruver My name is Mitchell Gruver, I work for the WV state Division of Forestry. I invest my money in an IRA and a 403(b). Less oversight of the companies in which my portfolio is invested is not the correct policy. I urge you to continue mandating quarterly reporting.

Molly Q — Jul 6, 2026

Subject: File No. S7-2026-15 From: Molly Q I support public companies submitting their earnings quarterly. The current administration wants to change reporting to twice a year. However, more frequent transparency has historically resulted in higher and more equitable returns for the American people. At a time when the economy is the #1 concern for American voters, I urge you to support quarterly earnings reports that also safeguard against corruption. Thank you.

Mollye Cobb — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mollye Cobb I oppose any rule changes that reduce transparency or weaken public company reporting requirements. As an individual investor, I rely on timely, accurate, and consistent disclosures to make informed investment decisions. Public reporting promotes fair markets, improves price discovery, and helps investors identify both risks and opportunities. Reducing reporting obligations would make it more difficult for retail investors to evaluate companies and could increase information asymmetry between large institutional investors and the general public. While I support efforts to eliminate unnecessary administrative burdens, those efforts should not come at the expense of transparency or investor protection. The SEC's mission includes protecting investors, maintaining fair and efficient markets, and facilitating capital formation. Strong disclosure requirements are essential to achieving those goals. I encourage the Commission to preserve robust reporting standards and carefully consider the impact that reduced disclosure could have on investor confidence and market integrity.

Mona Talib Independent — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mona Talib KEEP QUARTERLY REPORTING. this country is on the trajectory to becoming as undemocratic and corrupt as all of our enemies

---

Monica Berson — Jul 6, 2026
Subject: File No. S7-2026-15 From: Monica Berson Dear SEC, I want to express my strong opposition to the proposal to permit companies to file semiannual reports on new Form 10-S in lieu of quarterly reports on Form 10-Q. For a very modest cost savings to companies in semiannual filing instead of quarterly, great harm is being done to individual investors like me. Six months is way too long for things to happen in a company (I'm thinking of Enron, as just one example) that we cannot find out about them. This tilts the playing field in favor of corporate investors and against the small investors like me who have our retirement invested in the stock market. Individual investors don't have the resources to access other means of obtaining information on companies in the six-month period. Keep quarterly reporting. Thank you.

Monica Shaw Retired Special Education Teacher — Jul 6, 2026
Subject: File No. S7-2026-15 From: Monica Shaw Keep the present law in tact working! Keep public companies (somewhat) transparent! Folks are fed up with the present Administration's duplicity, deceit and misinformation. Do NOT allow our public companies opportunities for fraud and deception.

Re: Comments on Proposed Amendments to Permit Optional Semiannual Reporting for Public Companies
(Release No. 34-105368; File No. S7-2026-15)1
Dear Secretary Countryman:
Morningstar, Inc. appreciates the opportunity to comment on the Securities and Exchange Commission's
proposed amendments to permit domestic public companies to elect semiannual reporting in lieu of quarterly
reporting on a new Form 10-S (the "Proposal"). We submit these comments in our dual capacity as a public
company listed on Nasdaq since 2005 and as an independent provider of investment research, data, and
analysis serving individual investors, financial advisors, asset managers, and retirement plan participants
globally. Morningstar's own experience operating as a public company with a long-term investor base provides
direct insight into both the feasibility of the framework the Commission is proposing and the investor-protection
requirements necessary to make it work.
Executive Summary
Morningstar appreciates the Commission's effort to reduce the cost and friction of public company status and
recognizes that the quarterly reporting cadence imposes genuine compliance burdens. We offer the following
observations and recommendations with investor protection as the anchor.
Specifically, we find that:
• An optional semiannual framework can serve both issuers and investors, but only if accompanied by
robust continuous disclosure obligations, mechanisms to encourage voluntary interim communication,
mandatory quarterly reporting for high-risk issuer categories, and meaningful enforcement;
• The Proposal does not address existing stock exchange listing standards that independently require
quarterly financial reporting—a gap that must be resolved for the framework to have practical effect.
2
Morningstar supports the Commission's effort to modernize the periodic reporting framework and reduce
regulatory burdens that may discourage companies from entering or remaining in the public markets. We do
not believe investor interests are served by reducing transparency or the availability of material information.
Rather, the appropriate objective is to reduce the costs and other burdens associated with the preparation of
mandatory quarterly reports while preserving investors' access to timely, decision-useful disclosures. The

recommendations below are intended to help achieve that balance.

1 Securities and Exchange Commission. 2026. Amendments to Permit Optional Semiannual Reporting for Public Companies. Securities Exchange Act Release No. 34-105368; File No. S7-2026-15. May 5, 2026.

2 Nasdaq Sock Market Rule 5250(d)(3)(A) (requiring listed companies to distribute quarterly financial information to shareholders); NYSE Listed Company Manual § 202.06 (specifying that quarterly earnings are news items that should be released immediately per § 202.05).

• The Commission should ensure that any changes to the existing framework are designed to retain investor protection standards.

o Mandatory quarterly reporting should be preserved for high-risk issuer categories—microcaps, pre-revenue companies, financially distressed issuers, and capital-intensive industries—consistent with Australian and Singaporean practice;3

o The Commission should ensure that the disclosure requirements applicable to Form 10-S provide investors with decision-useful information;

o The Commission should reaffirm that issuers remain subject to existing continuous disclosure obligations, including Form 8-K and Regulation FD, under a semiannual reporting framework and should explore mechanisms to promote voluntary investor communications for actionable information;

o The Commission should consistently enforce noncompliance with existing continuous disclosure mechanisms, including Form 8-K and Regulation FD, to ensure investors are provided with timely access to material information between periodic reports;

• The Commission should take affirmative steps to ensure exchange listing standards are conformed to the optional framework before the rule becomes effective.

The following sections provide further details on our observations and recommendations. We answer specific questions posed in the Proposal in Appendix A.

1. Investor Protection Design Requirements

A. Mandatory Quarterly Reporting for High-Risk Issuer Categories

The Proposal is permissive by design, which is the correct structural choice. We recommend that mandatory quarterly disclosure be preserved for the following issuer categories, consistent with the risk-tiered approaches adopted in Australia and Singapore.

4 Australian-listed companies report financials semiannually but operate under continuous-disclosure obligations requiring immediate release of price-sensitive information, and early-stage issuers in sectors such as biotechnology, mining, and oil and gas remain subject to quarterly cash-flow reporting. We recommend an analogous calibration here:

• Microcap issuers, for whom information asymmetry between management and investors is structurally high and analyst coverage is often limited or absent;

• Pre-revenue companies, where quarterly cash burn, runway, and milestone progress are essential to investor assessment of viability;

• Financially distressed issuers, where quarterly disclosure provides critical early warning of deteriorating conditions; and

3 Australian Corporations Act 2001 (Cth) §§ 292–323 (requiring half-year and annual reports for listed entities); ASX Listing Rule 3.1 (imposing continuous disclosure obligations); Monetary Authority of Singapore. 2003. Code of Corporate Governance (Singapore’s comply-or-explain model for

semi-annual reporting).
4 Australian Corporations Act 2001 (Cth) §§ 292–323 (requiring half-year and annual reports for listed entities); ASX Listing Rule 3.1 (imposing
continuous disclosure obligations); Monetary Authority of Singapore. 2003. Code of Corporate Governance (Singapore's comply-or-explain model for
semi-annual reporting).
• Capital-intensive industries with rapid cash consumption cycles, where a six-month reporting lag would materially impair investors' ability to assess financial condition.
B. Disclosure Quality Standards
A reduction in filing frequency is only beneficial if the disclosure obligations that remain are more relevant and
informative, not merely fewer in number. The Commission should establish affirmative guidance on what
constitutes a high-quality Form 10-S filing for a company that has elected semiannual reporting. The Commission should provide principles-based guidance encouraging issuers to disclose the operational and
financial metrics that management uses to evaluate business performance and financial condition, while
preserving flexibility regarding the specific metrics reported. Consistent with Morningstar's view that investor
behavior, rather than reporting frequency alone, is the primary driver of short-termism,5 any guidance
accompanying the semiannual framework should emphasize long-term value creation and avoid encouraging
excessive focus on short-term earnings expectations. The goal is not simply to reduce compliance burdens, but
to allow issuers to provide investors with more decision-useful information through a disclosure framework that
relies less on rote periodic filings and more on timely communication of material developments.
C. Continuous Disclosure Obligations and Voluntary Interim Disclosure
The most consequential investor protection question raised by the Proposal is what happens to corporate
disclosure between the Form 10-S and Form 10-K filings. For companies currently reporting quarterly, the
second and fourth quarters would, under the Proposal, become periods with no required periodic filing. If
companies interpret their disclosure obligations narrowly (e.g., reporting only what triggers 8-K requirements)
investors could face meaningful information gaps that exceed what any reduction in compliance cost could
justify.
The solution is not to require quarterly filings by the back door. It is to ensure that companies have legal clarity
when they choose to communicate proactively. The existing PSLRA safe harbor provides some protection for
forward-looking statements,6 but it does not specifically address the operational and business updates that
investors would value most in periods between mandatory filings under a semiannual framework. The
Commission should consider mechanisms, including guidance, to encourage issuers to provide investors with
meaningful supplemental information, such as the disclosure of financial metrics, between periodic

reports
through voluntary interim communications.
D. Enforcement of Continuous Disclosure Obligations
The value of the Proposal depends entirely on the reliability of the existing continuous disclosure obligations to
ensure investors receive material information in a timely manner. The shift from quarterly to semiannual
reporting will, by its nature, mean that investors receive regular disclosure less frequently and the interim
periods during which the continuous disclosure obligations apply will be longer, increasing the risk for investors
of making decisions based on stale information. The Commission should reaffirm its commitment to vigorous
enforcement of material event disclosure obligations.
5 Kapoor, K. 2026. “I Agree With the SEC on Ending Quarterly Reporting—With Conditions.” Fortune. May 5, 2026.
https://fortune.com/2026/05/05/morningstar-ceo-sec-quarterly-reporting-semiannual-kunal-kapoor/ (noting that Morningstar’s equity research team
found “the most consistent finding across markets is that behavior—not the calendar—drives myopic decision-making,” with quarterly EPS guidance
and incentive structures that reward beating near-term targets the “primary culprits”).
6 Private Securities Litigation Reform Act of 1995, 15 U.S.C. § 78u-5 (providing safe harbor for forward-looking statements accompanied by meaningful
cautionary language).
2. The Exchange Listing Standards Gap
The Proposal creates a direct conflict between the Commission's optional semiannual framework and existing
stock exchange listing requirements. Nasdaq Listing Rule 5250(d)(3) requires listed companies to distribute
quarterly financial information to shareholders, and NYSE listing standards contain analogous obligations. A
company that elects semiannual reporting under Commission rules but remains subject to these exchange
requirements would, as a practical matter, need to continue providing quarterly financial information to
maintain its listing. This issue is significant because a substantial majority of potentially affected issuers are
listed on Nasdaq or the NYSE. As one analysis of the Proposal noted, approximately 56% of affected companies
are Nasdaq-listed and 29% are NYSE-listed, suggesting that most issuers may be unable to realize the benefits
of the optional semiannual reporting framework unless corresponding exchange rule changes are adopted.7
The Commission has authority under Section 19 of the Exchange Act to approve or disapprove proposed rule
changes by self-regulatory organizations,8 and it should direct or request that the exchanges file conforming
rule changes to the listing standards before an optional semiannual framework becomes effective. A clear
statement of expectation in the final rule release, accompanied by a request for exchange rulemaking filings on
a specified timeline, would be an appropriate mechanism.

Conclusion
Morningstar supports the Commission's Proposal as a measured, optional reform that gives companies
flexibility to adopt a formal periodic SEC reporting cadence better suited to their business model and investor
base. We commend the Commission for attending carefully to the investor protection implications of this
change.
As the Commission works toward a final rule, we urge adoption of four investor-protection elements: quarterly
reporting for high-risk issuer categories; affirmative disclosure quality standards; mechanisms to support
interim voluntary disclosure; and vigorous enforcement of continuous disclosure obligations. We also urge the
Commission to address the exchange listing standards gap as a prerequisite to the framework's practical
effectiveness.
We appreciate the Commission's consideration of these comments and welcome the opportunity to discuss
them further. Should you wish to do so, please contact either of us as indicated:

self-regulatory organizations, including national securities exchanges).
Appendix A: Answers to Selected Questions
Proposed Amendments for Semiannual Reporting
1. The proposed amendments would allow Exchange Act reporting companies to elect to file interim reports on a
semiannual basis in lieu of quarterly reports on Form 10-Q. Should companies have this option, or should all
companies continue to be required to file Form 10-Q? What types of companies are likely to elect the option to
file semiannual reports? Are companies in certain industries more likely than those in other industries to elect to
file semiannual reports?
Morningstar supports giving companies the option to file semiannually. Mandatory quarterly reporting can impose significant compliance costs and time commitment from management. An optional

framework preserves investor expectations at companies where the market demands quarterly transparency while reducing friction for companies where it does not.
From Morningstar's own perspective as a publicly listed company: our long-term investor base and research-driven business model would make us a plausible candidate for the semiannual filing election. However, the decision would partially depend on whether exchange listing standards are conformed (see Question 29).
Ultimately, the availability of a semiannual option may also factor in private companies' decisions about
whether to pursue a public listing. Among the frequently cited deterrents to going public is the compliance and other burdens of quarterly reporting. An optional framework that permits companies to
self-select into a reporting cadence appropriate to their business model reduces one of the structural asymmetries between public and private market participation, and may make the public markets more
competitive with private capital as a long-term financing venue.
2. We are proposing amendments that would permit, but not require, all Exchange Act reporting companies that
file Form 10-Q today to file semiannual reports. Should we instead require all companies to file semiannual
reports? What would be the benefits and costs of such a mandatory approach? Would mandatory semiannual
reporting, with the option to file quarterly reports, lead to more companies electing to forgo quarterly reporting?
Morningstar does not support mandatory semiannual reporting. The Commission's permissive design is
correct. A mandatory approach could remove the market discipline that currently pushes high-information-demand companies (large-caps, high analyst coverage, retail-heavy shareholder bases) to
provide quarterly transparency.
Mandatory semiannual reporting could also increase information asymmetry risk systemically rather than allowing it to be calibrated by issuer type — contrary to our recommendation that high-risk issuer
categories (microcaps, pre-revenue, financially distressed) be required to continue quarterly reporting
even within an optional framework.
3. Our proposal would permit semiannual reports for all Exchange Act reporting companies that file Form 10-Q
today, regardless of filer status, revenues, market capitalization, or other criteria. Should the option for
semiannual reporting be available only for Exchange Act reporting companies that satisfy certain criteria? If so,
what criteria should be imposed and why? For example, should only emerging growth companies or smaller
reporting companies be allowed to report semiannually? Should only companies below alternative quantitative
or monetary thresholds be allowed to report semiannually? Should the Commission consider a pilot program to
permit optional semiannual reporting for a subset of reporting companies and, if so, what would be the benefits
of such a pilot program? What types of companies should be included in the pilot program?
Morningstar recommends that the option be available broadly but subject to mandatory quarterly carve-outs for specified high-risk categories. Rather than restricting eligibility by formal filer status

(EGC or SRC), we recommend preserving the option for all but imposing mandatory quarterly requirements for: (i) microcap issuers (where information asymmetry is structurally high and analyst coverage limited); (ii) pre-revenue companies (where cash burn, runway, and milestones are essential
to investor assessment); (iii) financially distressed issuers; and (iv) capital-intensive industries with rapid cash consumption cycles.
This approach is consistent with risk-tiered frameworks adopted in Australia and Singapore and threads the needle between compliance relief and investor protection.
A pilot program is worth considering for empirical data-gathering, but the Commission should move forward with the core framework now and build in a formal post-adoption review mechanism.
4. Under the proposal, reporting companies currently required to file Form 10-Q would have the option instead
to file semiannual reports on Form 10-S. Should any types of companies that currently file Form 10-Q be
excluded from the option of electing semiannual reporting, such as business development companies?
Business development companies (BDCs), whose primary purpose is to give retail investors access to
otherwise inaccessible asset classes, warrant careful consideration. Since BDCs are often the retail interface for credit and private equity strategies, and because their investors may rely more heavily on
quarterly NAV and portfolio disclosure than typical equity investors, the Commission should consider excluding them from the semiannual election or subjecting them to enhanced continuous disclosure requirements as a condition of election.
6. If adopted, would semiannual reporting have an impact on investors' ability to compare same-company
performance over time? Why or why not?
Yes, but the impact is manageable with good design. Comparable-period analysis (Q2 vs. Q2 prior year)
currently relies on quarterly filings; under semiannual reporting, investors could lose the same-quarter
granularity that enables seasonal and cyclical comparison. For companies with meaningful intra-period
variation, this could be a real cost.
The Commission can mitigate this by: (i) encouraging semiannual filers to voluntarily provide quarterly
supplemental tables in their Form 10-S filings; (ii) establishing disclosure quality standards that require
operational metrics beyond GAAP financials; and (iii) requiring that the annual Form 10-K break out second-half and full-year financial data in a manner that enables same-period reconstruction.
7. What effect would our proposal have on investors' ability to compare the relative peer company financial
performance of a quarterly filer to a semiannual filer? For example, can an investor reasonably compare a
quarterly filer to a semiannual filer where the companies have the same fiscal year and the comparison is
sought to be made in the second quarter (when first quarter information that would be subsumed in the
semiannual filer's semiannual report on Form 10-S is not yet available) or made in the fourth quarter (when
third quarter information that would be subsumed in the semiannual filer's annual report on Form 10-K is not

yet available)?
Mixed-cadence peer comparison is a genuine structural complication. A semiannual filer in the second
quarter of the year will not have filed an interim report while its quarterly-filing peer has filed a Q1 10-Q. Analysts and data platforms (including Morningstar's) will need to normalize disclosures across cadences.
The Commission should consider requiring semiannual filers to flag their filing status prominently and
to provide standardized guidance on the appropriate comparator periods. Data tagging requirements under XBRL should explicitly accommodate mixed-cadence comparisons.
16. What impact would the flexibility to file semiannual reports on Form 10-S, instead of quarterly reports on
Form 10-Q, have on a private company's decision to become an Exchange Act reporting company? Would more
companies choose to go public under the proposed flexible approach to interim reporting? What impact would
the proposed flexible approach have on existing Exchange Act reporting companies' desire to remain public
companies?
The semiannual reporting option will likely modestly reduce the regulatory friction of public company status but is unlikely on its own to produce a meaningful reversal of the long-term decline in public listings. Over the past 25 years, the number of listed U.S. companies has roughly halved even as global
private-market assets have surpassed $15 trillion. The calculus for companies staying private involves
compliance cost, litigation exposure, short-term earnings pressure, and access to private capital — semiannual reporting addresses one element of one factor.
18. What is the likelihood that companies that elect semiannual reporting will continue to issue quarterly
earnings releases (to the extent they did so previously when they reported quarterly)? Why would semiannual
filers still issue earnings releases on a quarterly basis? Would this practice create any new or heightened
investor protection concerns? For example, would there be any new investor protection concerns if an Exchange
Act reporting company with a December 31 year-end elects to file semiannual reports and issues an earnings
release for the first quarter of the fiscal year, with the semiannual report for the first six months of the fiscal
year (which includes that first quarter) not due until months later (e.g., in August of that fiscal year)? Would
companies that currently issue quarterly earnings releases but elect to become semiannual filers change their
earnings release practices either: (1) to issue earnings releases semiannually, or (2) to cease issuing earnings
releases? Please provide any data or analysis regarding any experience with earnings releases in foreign
jurisdictions where issuers report semiannually.
Companies with large institutional or analyst followings are likely to continue voluntary quarterly earnings releases even as semiannual filers, because of investor expectations and potential stock price
volatility in the absence of quarterly updates. This is the market discipline effect, and the proposal

appropriately relies on it.
However, there is a risk that companies with smaller followings or weaker investor relations capacity will simply go quiet between Form 10-S filings. For these companies, the disclosure vacuum concern is
real. This is why Morningstar recommends the Commission explore mechanisms to encourage voluntary interim communications for decision-useful information.
22. Would the option for semiannual reporting result in an overall reduction in material information for
investors? Or would other regulatory requirements, such as Form 8-K filing requirements and Regulation FD,
elicit sufficient information to offset the less-frequent interim reports and address any investor protection
concerns? Would market forces or demands on a company's business—such as contractual obligations, investor
expectations, and potential for shareholder activism—encourage semiannual filers to: (1) voluntarily disclose
more information than required, (2) disclose information more frequently than is required, or (3) opt not to
become semiannual filers at all?
On balance, a well-designed semiannual framework need not reduce material information available to
investors. The continuous disclosure obligations, enforced vigorously, are capable of covering the most
consequential corporate developments between interim filings. However, the Commission should consider mechanisms, including guidance, that could encourage issuers to provide voluntary interim communications to investors for decision-useful information that does not rise to the level of regulatory
requirements such as Form 8-K specific triggers.
Market forces will also play a role: investor expectations, short-seller scrutiny, and analyst demands create organic pressure for disclosure. But the Commission should not rely entirely on market forces for
high-risk issuer categories where information asymmetry is already a structural problem.
29. Are any changes to rules of securities exchanges necessary or appropriate to effectuate semiannual
reporting?
Yes. Nasdaq Listing Rule 5250(d)(3) requires listed companies to distribute quarterly financial information to shareholders, and the NYSE has analogous standards. A company that elects semiannual
reporting under the Commission's new framework but remains a listed issuer would face a direct conflict. Practically speaking, it would need to continue quarterly reporting to satisfy its listing obligations.
Given that approximately 56% of affected companies are Nasdaq-listed and 29% are NYSE-listed, this
gap affects the overwhelming majority of potential adopters. The optional framework will be largely ineffectual without exchange conformance.
Morningstar recommends the Commission use its authority under Section 19 of the Exchange Act to direct or request that the exchanges file conforming rule changes, with a specified timeline tied to the
final rule's effective date. A clear statement of expectation in the release accompanying the final rule is
appropriate. The Commission should not finalize this rule without a concrete plan for exchange conformance.

Economic Analysis

48. What would be the benefits to investors from reporting companies' flexibility to file semiannual reports on Form 10-S, instead of quarterly reports on Form 10-Q? Are there certain types of companies or industries for which such benefits would be greater than for others? Would the benefits to investors be limited to the pass-through of cost savings, or would there be other kinds of benefits, such as improved managerial incentives or reallocation of company resources to potentially more productive corporate activities?

The most significant investor benefit is not cost pass-through but the structural change in management incentive that semiannual reporting can enable. Quarterly reporting has entrenched a culture of short-term EPS guidance: companies managed to beat quarterly consensus estimates, buyback programs timed to quarterly liquidity, and investment horizons truncated to match the reporting calendar. Semiannual reporting, combined with the explicit discouragement of short-term EPS guidance practices in the disclosure quality standards that we recommend, gives management permission to communicate in longer-duration terms.

The most consistent finding across equity research markets is that behavior, not the calendar, drives myopic decision-making. The quarterly reporting cadence has become a focal point for short-termism even when it need not be. Removing the quarterly compulsion while preserving voluntary quarterly communication (for companies that genuinely benefit from that cadence) is a better-designed intervention than a blanket rule either way.

Secondary benefits include: freeing management time from the IR and compliance cycle; reducing the legal costs of quarterly SOX certifications and audit review; and improving the signal-to-noise ratio in investor communications by concentrating management attention on twice-yearly strategic updates rather than four quarterly increments.

56. If the proposal were to reduce securities analyst coverage of Exchange Act reporting companies that elect the semiannual reporting option, what effect would this have on investors and companies? How would such a reduction in analyst coverage affect stock market price efficiency? How would such a reduction affect liquidity of semiannual filers' securities?

Reduced analyst coverage is a meaningful risk, particularly for smaller companies. Analyst research relies on quarterly earnings beats, misses, and revisions as a news-flow driver. Semiannual filers will generate fewer such catalysts. Sell-side coverage economics, largely driven by trading commissions and corporate access, may make semiannual filers less attractive to cover, particularly at smaller reporting companies where coverage is already thin.

This is an argument for, not against, a mandatory carve-out for microcaps. For companies below a certain size, where analyst coverage is already minimal, semiannual reporting may accelerate a coverage desert dynamic in which investors have neither quarterly filings nor analyst research to rely on. Those companies should be required to continue quarterly reporting.

For larger and mid-cap companies, analyst coverage reductions are unlikely to be severe; institutional investor demand for quarterly metrics will create organic pressure for voluntary disclosure. The Commission should study coverage data in any post-adoption review.

Mrs. H — Jul 6, 2026
Subject: File No. S7-2026-15 From: Mrs. H I understand the idea of reducing the burden of reporting requirements. However, many average citizens rely on the reported data to make significant decisions. I believe the current reporting frequency should be maintained for transparency. Thank you.

Myrna Doering Myrna Doering — Jul 6, 2026
Subject: File No. S7-2026-15 From: Myrna Doering I am retired and do not have the resources to add to my investments, so timely information on downturns is very important to me. Please keep quarterly reporting!

Nic Rossouw Human Being — Jul 6, 2026
Subject: File No. S7-2026-15 From: Nic Rossouw This is an absurd proposal that allows for insiders to rob a company blind and hide it from regular investors. There is no need for this. I understand that under the rule of Emperor Mango Mussolini 1.2 that greed, fraud, and theft are now considered the greatest virtues, but this is simply wrong. Do not allow this travesty.

Nicholas F Scott — Jul 6, 2026
Subject: File No. S7-2026-15 From: Nicholas F Scott I think it should be Bi-monthly. This is ridiculous and bad for normal Americans.

Nicholas Keleher — Jul 6, 2026
Subject: File No. S7-2026-15 From: Nicholas Keleher There is no justifiable reason that outweighs the possible and likely harms associated with removing 50% of the mandated reportings of companies. Quarterly reporting is on no way an undue burden. The people have a right to know what companies are up to more often, not less. To allow a larger window for fraud, abuse, and malintent to go unnoticed is to court disaster. Corporate america already has too much power and too little oversight.

Nichole Tarquinio Concerned citizen — Jul 6, 2026
Subject: File No. S7-2026-15 From: Nichole Tarquinio Quarterly reporting is a necessary safeguard for people investing in these companies. Giving a company the opportunity to hide their earnings from investors for extended periods of time will only harm investors. Quarterly reports need to be available to the public in order to enhance the stability of the US stock market. You will lose many investor's from the US stock market if you get rid of quarterly reporting.

Nicolai Hooppaw — Jul 6, 2026
Subject: File No. S7-2026-15 From: Nicolai Hooppaw This will be harder on individual investors to make sound decisions. Please do not make this change. Disclosures frequently help make

decisions.

Nicole Rihanek Finance / Founder of QMEN — Jul 6, 2026
Subject: File No. S7-2026-15 From: Nicole Rihanek Nicole Rihanek, background Corporate Finance, also founder of QMEN. This is interesting to see especially now that SpaceX went public. It seems like Elon is always running a grift. Don't you think? I strongly oppose any proposal that allows public companies to stop reporting financial results every quarter and only report every six months. Public companies have reported their financial results every three months for more than half a century. That rhythm matters because ordinary investors rely on timely information to make informed decisions. If companies are allowed to go dark for six months at a time, everyday investors are left in the dark while executives, board members, lawyers, lenders, consultants, and large institutional investors may still have a much clearer view of what is really happening inside the business. That is not transparency. That is an information imbalance. Here is why I believe this is bad for every ordinary investor. 01 - Everyday investors would be flying blind for six months. Six months is a long time in business. A company can lose major customers, miss sales targets, take on more debt, face lawsuits, suffer cybersecurity breaches, lose key executives, fail a product launch, burn through cash, or see margins collapse long before ordinary investors hear about it. A retail investor, retiree, pension holder, 401(k) participant, IRA holder, or parent saving for college should not have to wait half a year to learn that a company they own is deteriorating. Quarterly reporting forces public companies to regularly show the market what is happening. Removing that checkpoint gives companies more room to delay bad news while ordinary investors keep buying, holding, or investing through ETFs and retirement accounts without the full picture. 02 - It gives insiders and powerful players a major advantage. Executives still know the numbers. Boards still know the numbers. Large lenders may still receive updates. Major institutional investors often have better access to management, analysts, and private conversations. But the average person investing through a retirement account does not. That means the people closest to the company may understand the risks long before the public does. This creates a dangerous fairness problem. The market is supposed to work because investors have access to reliable public information. If that information is delayed, the advantage shifts even more toward insiders, Wall Street firms, hedge funds, and large institutions. Ordinary investors should not be the last people to find out what is happening with a company they partially own. 03 - More time for fraud, accounting games, and mismanagement to grow. Quarterly filings do not prevent fraud by themselves, but they create regular public checkpoints. They force companies to disclose revenue, expenses, debt, cash flow, risks, and management discussion on a frequent schedule. When reporting is delayed, problems can grow quietly. We have already seen what happens when opacity builds up in the financial system. Enron, WorldCom, Madoff, and the 2008 financial crisis all showed how dangerous it is when investors do not have clear, timely, honest information. A company hiding declining sales, inflating revenue, delaying impairment charges, understating debt, or masking cash flow problems would have more time to keep the illusion alive. Six months is enough time for serious damage to spread before the public sees the warning signs. 04 - Bad news can be delayed while insiders protect themselves. If a company is struggling, six months gives management a long runway to manage the narrative. They can delay disclosures, soften language, restructure announcements, or wait until damage is already done before the public sees the numbers. Meanwhile, executives may still receive compensation, bonuses, stock awards, or other benefits based on internal information. Large institutions may adjust positions using better signals. Ordinary investors may not realize anything is wrong until the stock already drops. That is not a level playing field. The whole point of public markets is that public investors deserve public information. 05 - “Optional” rules often become the new standard. Even if this is presented as voluntary, I do not believe it would stay truly optional in practice. Once large companies begin reporting only twice a year, other companies may feel pressure to follow. Smaller companies may argue they should not have to meet a higher reporting standard than larger

competitors. Investors may gradually become conditioned to less information. Over time, what starts as an option could become the new normal. That would weaken market transparency across the board. The issue is not just one company choosing less disclosure. The issue is that the entire market could slowly move toward less accountability. 06 - The savings are small compared to the risk. Companies still have to keep their books. They still have to track revenue, expenses, cash flow, debt, payroll, capital spending, legal exposure, and operational performance. They still have to brief executives and boards. They still need internal reporting to run the business. So the real savings from skipping quarterly public filings are mostly legal, accounting, investor relations, and administrative costs. But the cost of worse transparency falls on ordinary investors. That means a company may save some money, while the public takes on more risk. The people with 401(k)s, IRAs, pensions, brokerage accounts, college funds, and index funds are the ones who lose visibility. That is a bad trade. 07 - Retirement accounts and ETFs make this everyone's problem. A lot of people may think this only affects active stock pickers. It does not. Millions of people own public companies indirectly through retirement accounts, pensions, mutual funds, target-date funds, and ETFs. Even if someone never buys an individual stock, they may still be exposed to companies that would report less frequently. If transparency declines, the risk spreads through the entire investment system. This is not just about Wall Street. This affects teachers, nurses, firefighters, small business owners, parents, retirees, students, and working families saving for the future. 08 - Less disclosure weakens trust in the market. Markets depend on trust. Investors need to believe that public companies are being held to consistent disclosure standards. When companies report less often, confidence can weaken because investors have less information to rely on. If ordinary people feel the system is designed for executives and institutions while they are left behind, they may lose trust in public markets altogether. That is not good for investors, companies, or the economy. Public markets should be built on transparency, accountability, and fair access to information. Letting companies go dark for six months at a time moves in the opposite direction. I believe this proposal is bad because it benefits the people who already have the most access while increasing risk for the people who have the least. Ordinary investors deserve more transparency, not less. In additon, This SpaceX IPO is exactly why reduced public-company reporting is dangerous. SpaceX just went public, and within weeks it became one of the most watched stocks in the market. It is already tied to aerospace, satellites, Starlink broadband, defense, launch infrastructure, telecom competition, AI infrastructure, suppliers, ETFs, index funds, short sellers, retail investors, and retirement accounts. That is the point. The market moves in real time. Public disclosure should not move in slow motion. SpaceX's IPO shows how quickly ordinary investors can become exposed to a newly public company through brokerage accounts, ETFs, index funds, retirement funds, pensions, and institutional portfolios. Once a company becomes public, its financial condition is no longer just a private business issue. It becomes a public-market issue. Now imagine a company like that only having to report every six months. A lot can happen in six months: - A major rocket launch can fail. - A major launch can succeed and change future revenue expectations. Starlink subscriber growth could accelerate or slow. - A government contract could be won, delayed, challenged, or lost. - A regulatory issue could affect launch cadence. - A satellite deployment problem could create unexpected costs. - A cyber incident could affect operations. - Debt or capital spending could rise faster than expected. - Margins could weaken. - Suppliers could face bottlenecks. - Insurance exposure could change after a launch incident. - Short sellers could build major positions. - Retail investors could buy into hype without updated financials. - Index funds and retirement accounts could become exposed before ordinary investors understand the risk. That is exactly why quarterly reporting matters. When a company is newly public, highly valued, highly complex, and moving fast, ordinary investors need more transparency not less. Executives, board members, lawyers, lenders, underwriters, large institutions, and insiders may have a much clearer view of what is happening inside the company. But the everyday investor buying through a 401(k), IRA, ETF, pension, brokerage account, or college fund depends on public filings. If reporting is pushed from every three months to every six months, ordinary investors become the last to know. That is not investor protection. That is an information advantage for the people who already have the most access.

SpaceX going public right now is the perfect example of why this SEC proposal is badly timed. We are living in a market where aerospace, AI, defense, energy, telecom, satellites, chips, cyber risk, and infrastructure can change overnight. A six-month information blackout does not fit a real-time economy. Public companies should not get to benefit from public money while reducing public transparency. If ordinary people are expected to carry the risk, ordinary people deserve timely information. This is wrong.

UNITED STATES
Via online submission Date: July 6th, 2026
Re: File No. S7-2026-15 — Semiannual Reporting
We refer to the Securities and Exchange Commission (SEC)'s request for comment on the proposed amendments to allow companies to file semiannual reports on new Form 10-S in lieu of quarterly reports on Form 10-Q to meet their interim reporting obligations under the Securities Exchange Act of
1934. We appreciate the opportunity to contribute our perspective.
Norges Bank Investment Management (NBIM) is the investment management division of the Norwegian Central Bank that manages the Norwegian Government Pension Fund Global. We work to
safeguard and build financial wealth for future generations. As of year-end 2025, we managed over 2
trillion USD in assets, with the United States representing our largest market at 53% of total investments. Within our equity portfolio, 822 billion USD was invested in shares of 1,306 U.S. public companies. We are a minority shareholder in U.S. public companies, with an average equity ownership of 1.18 percent.
As a financial investor, we rely on companies' periodic disclosures to inform our investment decisions,
risk management and shareholder voting. In our 2025 Asset Manager Perspective on corporate reporting frequency and long-term value creation (attached in Annex 2 to this letter), we set out how mandatory quarterly reporting and the associated pressure to meet short-term earnings guidance can
encourage decisions that prioritize near-term results over durable investment and value creation. We believe a well-designed semiannual reporting framework can serve the interests of companies and investors alike, while preserving the transparency and accountability that capital markets depend on.
We support providing companies with the option to report semiannually, subject to risk-based eligibility
criteria, a well-governed transition process and measures to preserve the disclosure quality both in semiannual reports and between filings.
NBIM's responses to selected consultation questions are provided in Annex 1 to this letter. We thank the Commission for considering our perspectives and remain at your disposal should you wish to discuss these matters further.
Yours sincerely
Carine Smith Ihenacho Snorre Gjerde
Chief Governance and Compliance Officer Policy Lead

ANNEX 1: NBIM Responses to Selected Questions in SEC Release No.
33-11414
QUESTION 1
The proposed amendments would allow Exchange Act reporting companies to elect to file interim reports on a semiannual basis in lieu of quarterly reports on Form 10-Q. Should companies have this option, or should all companies continue to be required to file Form 10-Q? What types of companies are likely to elect the option to file semiannual reports? Are companies in certain industries more likely
than those in other industries to elect to file semiannual reports?
NBIM response:
NBIM supports providing companies with the option to file semiannual reports in lieu of quarterly reports. As set out in our Asset Manager Perspective (AMP) attached in Annex 2, mandatory quarterly reporting and the associated pressure to meet short-term earnings guidance can contribute to decisions that prioritize near-term results over long-term investment and value creation1
. We believe that under the right circumstances reduced reporting frequency can allow management to redirect attention from the quarterly earnings cycle to long-term strategy, providing less frequent but more thoughtful updates that offer enhanced insight into a company's value creation prospects.
The flexibility to choose semiannual reporting may be particularly well-suited to companies where quarterly financial results are less informative than other indicators of long-term prospects, for example capital-intensive companies with long investment cycles, or companies where clinical, regulatory, or product milestones are the primary value drivers.
Several major jurisdictions, including the EU, UK, and Singapore, have moved away from mandatory quarterly reporting, and their experience suggests that high-quality semiannual reporting, supplemented by continuous disclosure obligations, can provide an adequate basis for informed investment decisions2
.
As an organization, NBIM has moved from quarterly to semiannual reporting of our own results, and found that doing so allowed greater focus on long-term strategy and value creation.3 Our support is premised on the disclosure framework being appropriately designed across three dimensions: that risk-based safeguards ensure the right companies switch, that the switch is well-governed, and that disclosure quality is maintained both in semiannual reports and between filings. We address each of these in more detail in our responses to Questions 2, 3, 9, 10, 14, and 19-22.

QUESTION 2
We are proposing amendments that would permit, but not require, all Exchange Act reporting companies that file Form 10-Q today to file semiannual reports. Should we instead require all companies to file semiannual reports? What would be the benefits and costs of such a mandatory approach? Would mandatory semiannual reporting, with the option to file quarterly reports, lead to more companies electing to forgo quarterly reporting?
NBIM response:
NBIM supports the proposed optional approach. The optimal reporting frequency can vary across companies and their investor bases, and the academic and practitioner evidence on the effects of reporting frequency is mixed4
. Optionality allows companies to determine the cadence that best
reflects their business model and circumstances, with investor engagement and market discipline providing accountability for that choice. Experience in jurisdictions that have moved away from mandatory quarterly reporting suggests that a significant share of companies continue to report quarterly voluntarily, reflecting investor demand5
. A mandatory approach risks removing that flexibility
without a clear commensurate benefit.
To ensure that elections to switch to semiannual reporting reflect the long-term interests of companies
and their investors, we encourage the Commission to consider whether a risk-based approach to eligibility is appropriate, and how the switch is best effectuated.
The Commission may wish to consider whether certain categories of issuers should remain subject to
mandatory quarterly reporting. Some jurisdictions without mandatory quarterly reporting have introduced risk-based safeguards for transparency and investor protection. Singapore Exchange Regulation (SGX RegCo), for example, applies a risk-based approach whereby a company must report quarterly if it has received a modified audit opinion or going concern uncertainty, or has had

material disclosure breaches or faces issues with material financial impact6
. This approach enables
more effective monitoring of how concerns are being addressed at issuers with higher risk exposure, while allowing other issuers to benefit from reduced reporting frequency.
The Commission should require disclosure of the board's rationale for switching, and companies should provide shareholders with an adequate opportunity to engage prior to the switch taking effect. The election of reporting frequency should be announced and implemented prior to the start of the fiscal year to avoid switching based on interim performance rather than long-term value creation. A minimum commitment period would also help avoid frequent switching between regimes, which could
create its own signaling dynamics and undermine the consistency of the financial data on which investors and other market participants rely.

Docusign Envelope ID: A2A18A1B-8893-8204-8215-660378FA8C89
QUESTION 3
Our proposal would permit semiannual reports for all Exchange Act reporting companies that file Form
10-Q today, regardless of filer status, revenues, market capitalization, or other criteria. Should the option for semiannual reporting be available only for Exchange Act reporting companies that satisfy certain criteria? If so, what criteria should be imposed and why? For example, should only emerging growth companies or smaller reporting companies be allowed to report semiannually? Should only companies below alternative quantitative or monetary thresholds be allowed to report semiannually? Should the Commission consider a pilot program to permit optional semiannual reporting for a subset
of reporting companies and, if so, what would be the benefits of such a pilot program? What types of companies should be included in the pilot program?
NBIM response:
NBIM encourages the Commission to consider whether certain issuers should remain subject to mandatory quarterly reporting. SGX RegCo's risk-based approach, described in our response to Question 2, offers an example of such a model: companies facing audit qualifications, going concern uncertainty, or material disclosure breaches are required to report quarterly. An eligibility framework calibrated to issuer risk would help protect investors in companies where more frequent oversight is

warranted.
QUESTION 9
Under our proposal, companies that want to file semiannual reports instead of quarterly reports would
make their election by checking a box on the cover page of their annual report on Form 10-K for the most recently completed fiscal year. For investors and other market participants, this would mean that
the first indication that a company will file only semiannual reports going forward will be when the company files its most recent Form 10-K. For example, under our proposal, a December 31 fiscal year-end company that files its Form 10-K for fiscal year 2026 in March 2027 would be able to cease filing quarterly reports immediately, with its next interim report being its first Form 10-S for the first six months of fiscal year 2027. Would investors and other market participants benefit from earlier notice of
a company's intent to file semiannual reports instead of quarterly reports? If so, how would investors and others benefit and what would be the magnitude of any benefit? If so, what should the mechanism
be for a company to provide earlier notice of intent to file semiannual reports?
NBIM response:
NBIM supports an advance notice requirement. Under the current proposal the first public signal of a switch is the Form 10-K checkbox, leaving investors without opportunity to engage before the change
takes effect. Companies should be required to announce their intention to switch before the start of the
relevant fiscal year, giving investors time to understand the rationale and engage with management as
needed.
QUESTION 10
Our proposal would require Exchange Act reporting companies that elect to file semiannual reports to
continue with that interim reporting frequency for the rest of the fiscal year in which the election was made. Therefore, companies would not be allowed to file a semiannual report on Form 10-S for the first six months of a fiscal year and then file a quarterly report for the third quarter for that fiscal year.

Docusign Envelope ID: A2A18A1B-8893-8204-8215-660378FA8C89
Likewise, companies would not be allowed to file a quarterly report on Form 10-Q for the first quarter of a fiscal year, file a semiannual report on Form 10-S for the first six months for that fiscal year, and not file a quarterly report on Form 10-Q for the third fiscal quarter. Would this proposed approach help
avoid potential confusion that could be caused by changes in interim reporting frequency during a

fiscal year? Is it necessary to add any language to the proposed rules to make more explicit the requirement to maintain the selected frequency for the full fiscal year? Rather than the proposed approach, should we allow: (1) semiannual filers and quarterly filers to make a change in interim reporting frequency during the fiscal year, or (2) only semiannual filers to switch to filing quarterly reports during the fiscal year? Should issuers that elect semiannual reporting be required to commit to
that disclosure frequency for a certain period of time? Why or why not?
NBIM response:
NBIM supports a minimum commitment period. Frequent switching between reporting regimes could generate signaling dynamics that distort market expectations and undermine data consistency. We refer to our response to Question 2 for further suggestions on how the switch should be effectuated.
QUESTION 14
Proposed Form 10-S would mandate the same narrative and financial information as Form 10-Q, albeit for semiannual periods rather than quarterly periods. Should Form 10-S require narrative or financial information that differs from what is required in Form 10-Q? If so, please specify what information should be different and why this information is or is not needed in Form 10-S.
NBIM response:
In NBIM's view, the benefits of a shift to less frequent interim reporting are premised on companies continuing to provide high-quality information on matters that relate to their long-term strategy and value creation prospects. The Commission is currently reviewing the content and format of narrative disclosures through the Regulation S-K reform initiative. We would encourage consideration of these two workstreams together in order to ensure corporate reporting is optimized in terms of both form and
frequency, realizing the benefits of long-termism for companies and their investors.
On narrative information, we refer to NBIM's April 2026 comment letter on reforming Regulation S-K, where we highlighted the importance of disclosures on risk factor exposure and mitigation, compensation alignment with value creation, and corporate governance matters of importance to investor protection and decision-making[7]
. On financial information, we would encourage the
Commission to consider whether companies should continue to report financial data broken down by quarter within their semiannual filings. This would preserve the comparability and granularity of data series that investors and market participants rely on, without requiring separate quarterly filings.
QUESTION 19
Our proposal generally would not change the current Item 2.02 Form 8-K furnishing requirement for earnings releases (but we are proposing technical amendments to include references to semiannual periods). Should we change these requirements generally for semiannual filers? For example, should
we amend the Form 8-K requirements so that Item 2.02 Form 8-K submissions are "filed," not "furnished," for semiannual filers thereby subjecting the earnings release to additional liability
7 NBIM, Comment Letter on Reforming Regulation S-K (File No. CLL-15), April 2026, available at www.sec.gov/comments/cll-15.

provisions, such as Exchange Act Section 18 (and Securities Act Section 11 if incorporated into a Securities Act registration statement), given that investors could rely more heavily on earnings releases by semiannual filers due to the less frequent interim reporting by such filers as compared to quarterly filers? If we require the filing (not furnishing) of earnings releases for semiannual filers, should we require the incorporation by reference of earnings releases into Securities Act registration statements of those semiannual filers? Would requirements for semiannual filers to file (not furnish) earnings releases discourage semiannual filers from issuing earnings releases? Would requirements for semiannual filers to file (not furnish) earnings releases have an impact on companies' decisions about whether to elect quarterly or semiannual reporting? Are there particular reasons or need for the
information provided in an Item 2.02 Form 8-K submission by a semiannual filer to be treated differently than a similar Item 2.02 Form 8-K submission by a quarterly filer?
NBIM response:
NBIM supports requiring earnings releases by semiannual filers to be filed rather than furnished. Under a semiannual framework, periodic earnings releases become a primary information source between formal filings. Requiring filing would attach appropriate accountability to the information that investors must rely on between formal reporting dates.
QUESTION 20
In connection with any adoption of the proposal, should there be a new requirement for semiannual filers that announce or release earnings for the first or third quarters of their fiscal year (i.e., the periods that would later be subsumed in Forms 10-S and 10-K but for which there would be no quarterly report filed with the Commission) — that financial information in any first or third quarter earnings releases be reviewed by an independent public accountant? If so, would any changes to current auditing standards (e.g., governing reviews) be required?
NBIM response:
NBIM supports requiring independent accountant review of financial information in voluntary first or third quarter releases by semiannual filers, to ensure information quality is being maintained between
formal filings. Our support for less frequent reporting is premised on the information that is provided being of high quality, and a review requirement on voluntary releases reinforces that.
QUESTION 22
Would the option for semiannual reporting result in an overall reduction in material information for investors? Or would other regulatory requirements, such as Form 8-K filing requirements and Regulation FD, elicit sufficient information to offset the less-frequent interim reports and address any investor protection concerns? Would market forces or demands on a company's business — such as
contractual obligations, investor expectations, and potential for shareholder activism — encourage semiannual filers to voluntarily disclose more information than required, disclose information more frequently than required, or opt not to become semiannual filers at all?
NBIM response:
NBIM supports a reporting framework that maintains transparency and accountability while allowing companies to orient their communications and strategic planning toward long-term value creation. The
reliability of such a framework depends significantly on an effective regime for continuous disclosure of
material information between filings. A clear obligation to disclose material information promptly,

supported by robust guidance, can provide investors with sufficient information flow without anchoring
corporate communications to a three-month cycle. For example, when SGX RegCo reviewed its interim reporting framework, it strengthened its guidance on what constitutes material information, emphasizing timely updates on events and conditions that could affect a company's financial position
or strategic direction, and provided guidance on voluntary business updates8
.
The Commission could consider issuing guidance to clarify how existing disclosure obligations under Form 8-K would apply to gradual or cumulative changes in financial condition or business outlook that
are material but do not constitute a discrete triggering event. At the same time, such guidance should
discourage defensive over-filing that would dilute or obscure investor-relevant information. Whether companies provide interim information through Form 8-K or a voluntary quarterly business update, the
rigor of those disclosures should be preserved, including by requiring that such disclosures be filed rather than furnished and that financial information be subject to independent review, as discussed in
our responses to Questions 19 and 20. We encourage the Commission to monitor how semiannual filers use Form 8-K in practice as the framework develops, and to engage with regulators in jurisdictions that have operated less frequent reporting regimes to draw on their experiences.
QUESTION 30
Should we require the second semiannual period financial information (for semiannual filers) or the fourth quarter financial information (for quarterly filers) to be included in Form 10-K so investors do not
need to back out this information if companies do not voluntarily provide it? Would having a longer period (six months for semiannual reports versus three months for quarterly reports) make it more difficult for investors to back out this information? Relatedly, should we require semiannual filers to break out financial statement information for the six-month period covered by Form 10-S into two three-month periods and provide similarly broken-out three-month information for the fiscal year covered by Form 10-K?
NBIM response:
NBIM supports requiring semiannual filers to present six-month figures broken into the two underlying
quarters. Presenting quarterly figures within semiannual filings would preserve comparability without requiring separate filings and would allow investors and other market participants to conduct trend and
benchmarking analysis across issuers and over time, using rigorous and reliable company-reported

data.

Norges Bank Investment Management Report — Jul 6, 2026
1 I 2025
Corporate reporting
frequency and long-
term value creation
Asset manager perspective
This paper discusses the impact of high-frequency corporate reporting on long-term value creation from an asset manager's perspective. We argue that mandatory quarterly reporting, and the associated pressure on management to meet earnings guidance, can lead to short-term decision-making. This hinders sustainable growth and innovation, and may deter companies from accessing public markets. The paper proposes a shift towards higher quality semi-annual reporting,

supplemented by continuous disclosure of material information, to better align management and investor behaviour with long-term investment and value creation.

Date 21/01/2025

The Asset Manager Perspective series articulates Norges Bank Investment Management's views and reflections on issues topical for the financial industry. They are not meant to be definitive; rather they are intended as timely contributions for the benefit of all market participants. The series is written by employees and is informed by our investment research and our experience as a large, long-term asset manager.

The paper also highlights the benefits of high-quality corporate reporting in providing transparency, enhancing investor decision-making, and supporting companies' long-term strategic planning. It examines various jurisdictional approaches to reporting frequency, noting a trend towards

ISSN 2387-6255

deregulation of quarterly reporting to encourage long-termism and reduce reporting burden. It explores how optimised reporting frequency can benefit management decision-making, particularly in R&D-intensive industries, support institutional investors' engagement strategies, and potentially encourage more companies to list and remain public. The paper concludes with recommendations for optimising reporting frequency, alongside high-quality corporate disclosures, to achieve sustainable financial outcomes for companies, investors, and the broader economy.

Introduction

Capital markets play a critical role in mobilising and allocating long-term funds to facilitate capital formation and drive employment and economic development. The most dynamic industries projected to deliver significant economic growth over the next decades require long-term managerial mindsets and investment horizons given their significant capital expenditures and R&D spending needs. To best serve companies, investors and the wider economy, long-termism should be actively cultivated in capital markets.

Well-functioning capital markets are characterised by transparency, effective corporate governance and accountability, and underpinned by robust regulatory frameworks. High quality corporate reporting provides accountability and transparency, limiting information asymmetry. This enables informed decision-making, orderly price discovery, healthy liquidity, and protection of minority and retail investors. Investors use disclosures of material information about companies for their investment decisions, risk management processes and stewardship activities. Regulators and stock exchanges have implemented mandatory periodic

reporting and ongoing disclosure requirements to meet investors' information needs, based on globally accepted financial accounting and sustainability-related disclosure standards.i In addition to mandatory semi-annual and annual reporting, quarterly reporting is either a requirement in some jurisdictions or common voluntary practice in others.

However, frequent mandatory reporting may not be the most effective nor the only means to provide timely, transparent and complete information. Quarterly reporting, and the focus on meeting earnings guidance, can lead to short-term decision making at the expense of long-term investment, value creation and sustainable development. High regulatory reporting burdens may also deter companies from coming to market earlier in their growth phase to access lower cost, longer-term funding. In recognition of these issues, some jurisdictions have moved away from mandatory quarterly reporting.

In this paper, we will outline our perspective on optimising the form and frequency of reporting to promote long-termism in capital markets. Regular semi-annual reporting, supplemented with continuous updates of material information, should adequately meet disclosure requirements. Optimised financial reporting can provide reliable, transparent and timely disclosures of material company information, aiding investors in decision-making, risk management and stewardship. This helps to maximise sustainable financial outcomes for companies, investors and the broader economy over the long term.

i IFRS S1 General Requirements for Disclosure of Sustainability-related Financial Information and IFRS S2 Climate-related Disclosures

For this approach to succeed, we need fundamental changes in how companies and investors act, backed by strong regulatory support. From an asset manager's perspective, we advocate that companies focus on long-term strategic planning, good corporate culture, innovation and investment, and provide high quality corporate reports. Investors can use these improved reports with enhanced stewardship engagement activities to support companies in creating long-term value. These actions must be underpinned by the provision and enforcement of adequate and proportionate disclosure requirements and a move away from mandatory quarterly reporting. Regulators should provide guidance to companies on decision-useful voluntary disclosures, and clarity on rules on sharing forward-looking information.

Impact of quarterly reporting cycle on capital markets

Some capital markets participants see quarterly financial reporting to be necessary for reducing insider trading risk and protecting investors.[1, 2, 3] Higher reporting frequency has been associated with lower information asymmetry.[4]

However, quarterly reporting has also been identified as one of the main drivers and enablers of short-term decision making.[5, 6] CEOs and CFOs have often cited the pressure to meet earnings guidance, rather than quarterly reporting itself, as the cause of this short-termism.[7] Interestingly, the provision of earnings guidance has significantly

increased after the introduction of mandatory quarterly reporting.8
The evidence on the impacts of quarterly financial reporting is mixed, and there is no global consensus on the optimal reporting frequency. Nonetheless, there is widespread concern about growing short-termism in capital markets, with the risk of prioritising short-term profits and meeting analyst forecasts over long-term investment, value creation and sustainable development. 9, 10, 11, 12, 13
Short termism can undermine the benefits of being publicly listed, and discourage companies with longer-term strategies from going or remaining public. 14, 11 Executives feel increasing pressure to deliver short term results, and this, along with a high regulatory reporting burden, may have contributed to the significant decline in the number of listed companies over the past two decades.10, 15 This trend limits investors' ability to diversify risks and achieve their target returns in public markets, while reducing the range of financing options for companies.

Jurisdictional approaches to reporting frequency
Jurisdictions are moving away from mandatory quarterly reporting to discourage short-term performance management, encourage long-term investment, and reduce the compliance burden for listed entities.16, 17
Over the last decade, several jurisdictions have deregulated quarterly reporting, aligning with others that consider mandatory semi-annual and annual financial reporting, along with continuous disclosure obligations, sufficient for timely informationii. They rely on existing enforcement systems to handle fraud and agency conflicts under mandatory disclosure regulation, offering investors access to penalties and remedies.
These jurisdictions have varied views on voluntary quarterly updates. The UK states it will not provide any guidance, whilst Singapore encourages companies to provide updates on their long-term business strategy but leaves them to determine the form and content. On the other end of the spectrum, the EU has explored options to discourage or prohibit voluntary earnings guidance and quarterly reporting for listed companies to foster long-term shareholder engagement and extended shareholding periods.18
Some jurisdictions without mandatory quarterly reporting have added risk-based safeguards for transparency and investor protection. Australia requires quarterly reports for mining and oil and gas production and exploration activities.19 Singapore mandates quarterly reporting for companies with modified audit opinions or material uncertainties related to going concern, signalling higher risk levels to investors.20
Conversely, some jurisdictions maintain mandatory quarterly reporting due to concerns about investor information needs and insider trading risk. The US decided against removing quarterly reporting requirements, and Japan is maintaining quarterly reporting due to concerns about the current quality of disclosures and reputational risk from reduced disclosures. 21, 22
Use of financial reports by stakeholders
A wide range of participants across the financial ecosystem use interim financial reports, including public and private companies, investors with different objectives, regulators enforcing rules, exchanges facilitating

liquidity and price discovery, asset managers, brokers and research firms conducting fundamental analysis, market makers offering liquidity and contributing to price discovery, and news organisations reporting on company results. Companies use the information, typically sales, gross margins and capex, to benchmark performance against peers.

ii

EU, UK, Singapore removed mandatory quarterly reporting, which aligns them with Australia and Hong Kong

These participants have different timeframes and risk appetites, even within the investor category. The market clearing price is influenced by the relative mix of short-term and long-term investors aiming to meet their objectives within their time horizons.

Some short-horizon investors can have a negative influence on investment, long-term value creation and economic growth. Increased ownership by short-horizon investors has been linked to lower investment in research and development.23 Increased pressure from such investors can lead to companies pursuing short-term profit targets and share price appreciation rather than long-term value creation.24

Advantages of optimised reporting frequency

In this section, we provide the asset manager's perspective on the advantages of lower frequency, higher quality reporting on managerial strategy and resource allocation, investor horizons, growth in capital markets and the broader economy.

Longer-term focus for management

Removing mandatory quarterly reporting can reduce short-term earnings management, and allow for more focus on strategic goals, culture, investment, and innovation. 25, 26, 27, 28, 29 Less pressure to meet short-term analyst forecasts can enable better longer-term strategic planning and balance towards long-horizon R&D projects, benefiting companies and investors.

Companies found that a lower frequency reporting regime allows more time for board discussions and focus on strategic goals.16 Shifting from short term earnings management to long-term value creation can be supported by longer lock-in periods for compensation, aligning CEO actions with long-term strategy and shareholder interests. These incentives can replace shorter-term performance share units that may lead to suboptimal decisions.30

The time and monetary cost spent on preparing mandatory quarterly reports is not insignificant.31 Management can redirect resources away from quarterly reporting to develop more insightful and higher quality disclosures that address investors' information gaps, articulate progress against long-term strategic plans, and integrate emerging and longer-term risks such as climate change. Investors can use these enhanced disclosures to analyse the risks and opportunities impacting companies' prospects over different time horizons.

For example, investors have voiced concerns that information about climate-related risks in financial statements was insufficient and inconsistent with material information disclosed in other general purpose financial reports.iii Management can produce more holistic management

iii

Investors expressed a strong demand for IASB to improve the reporting of climate-related risks in

financial
statements during IASB's Third Agenda Consultation in 2021.

commentary that supports connectivity, in line with the upcoming
revised guidance from IASB.iv Enhancing the quality of semi-annual
and annual financial reporting helps investors gain confidence in a
company's long term value creation potential.

R&D and capital expenditures for high growth industries

High growth industries that can drive future economic growth
require long-term managerial mindsets given their significant capital
expenditures and R&D spending needs.v Industries such as technology,
pharmaceuticals and renewable energy, that require significant
upfront investment and extended time horizons to realise returns can
be particularly sensitive to short-term performance monitoring and
managerial mindsets. While long-term transformational R&D to develop
entirely new products and technologies has historically delivered the
best returns, the focus on short-term projects and deliverables has
reduced R&D productivity and returns.32, 33

Longer-term focus for investors

Long-term investors can complement deeper fundamental insights
gained from higher quality reporting with enhanced engagement with
portfolio companies. This is especially useful during transient periods
when companies may be pressured to meet short-term profit targets at
the expense of long-term value creation.34, 35

Institutional investors, such as pension funds and sovereign wealth funds
with patient capital, can support management in realising a company's
long-term growth potential. Their sector expertise allows them to take
contrarian views and invest in companies that may be less profitable in
the short-term but offer long-term compounding potential.

Potential for founders of private companies

In our Asset Manager Perspective on the Listings Ecosystem, we
proposed possible actions to be taken by different stakeholders to
address the decline in the number of company listings.36 Recent
experience suggests that lower mandatory reporting frequency may be
an additional lever to boost IPOs. Earlier market entry allows companies
to access lower cost, longer-term funding from a broader investor
base during their growth phase. This also benefits both public market
retail and institutional investors through increased participation in the
companies' earnings growth potential. In addition, pre-IPO investors can
exit and reinvest sooner in other growth opportunities in line with their
higher risk appetite.

Many regulators and exchanges recognise the need to support earlier
public market entry. In jurisdictions which continue to require mandatory
quarterly reporting, size-based reliefs are often provided to smaller and

iv

These R&D driven industries allocated 10% of revenues to R&D in 2020, double that of other industries. McKinsey Global
Institute (2024) The Next Big Areas of Competition

growth companies, acknowledging their relatively higher compliance
burden and need for adaptation to public markets.vi, 37

Transparency and impact on information
asymmetry

There are concerns that reduced financial reporting frequency may lead
to market volatility and mispricing, as investors may overreact to peer
companies' earnings news during non-reporting periods. This mispricing
tends to correct itself at the next earnings announcement, causing
heightened volatility. 38

The risk of information loss can be mitigated through streamlined
voluntary reporting and better engagement between companies and
shareholders. Voluntary updates on interim business performance
and shareholder stewardship engagements with portfolio companies
can address concerns about information asymmetry and agency
conflicts.39, 40, 41 There is also no conclusive evidence that removing
quarterly reporting causes a reduction in analyst coverage. 16, 8

To manage the transition away from quarterly reporting, jurisdictions
have used different approaches. These include gradual deregulation of
quarterly reporting and encouraging companies to provide voluntary
quarterly updates that contain decision-useful information.42, 43, 16

Regulators have provided guidance on which disclosure items are the
most useful for both voluntary and ongoing disclosures.44 Regulators
have considered offering safe harbour provisions for forward-looking
information, particularly regarding emerging risks such as climate
change to promote disclosure of long-term information.45, 46

Conclusion

Well-functioning capital markets rely on orderly price discovery, market
liquidity, and investor protection. A nuanced approach considering
jurisdiction-specific factors may be more effective in addressing short-
termism through the lens of reporting form and frequency, realising
the benefits of long-termism. This note presents an asset manager's
perspective on balancing reporting frequency with transparent, high
quality corporate reporting to maximise sustainable, financial benefits
for companies, investors and the wider economy.

Pamela Woldow — Jul 6, 2026
Subject: File No. S7-2026-15 From: Pamela Woldow I am writing as an individual investor to oppose the proposed rule allowing public companies to opt for semiannual reporting on Form 10-S in lieu of quarterly reporting on Form 10-Q. Quarterly disclosure exists because six months is a long time for a company's condition to change unnoticed. Failed product launches, mounting debt, litigation, and customer attrition can all develop and worsen well within a single reporting gap. The current quarterly cycle is what forces that information into the open promptly; extending the gap to six months simply gives problems more time to compound before investors learn of them — and gives insiders more time to sell ahead of that disclosure. History is instructive here. Enron, WorldCom, and the fraud that preceded the 2008 financial crisis were not prevented by quarterly filing, but the quarterly cycle limited how long those problems could be concealed. Halving the disclosure frequency doubles the window in which financial misstatements can grow before anyone outside the company can see them. I am also skeptical that this remains truly optional over time. Once large companies begin filing semiannually, smaller competitors will face pressure to match them rather than "over-comply," and investor expectations will shift accordingly. A rule that begins as a company choice has a strong tendency to become the market norm. Finally, the cost savings this proposal is meant to unlock are modest, and they largely accrue to companies and executives in the form of reduced legal and accounting fees. The corresponding cost — a less timely, less complete information stream — falls on ordinary investors, including those whose retirement accounts and index funds hold the affected stock. That is not a favorable trade for the investors the Commission's disclosure rules exist to protect. For these reasons, I urge the Commission to withdraw or substantially narrow this proposal and preserve mandatory quarterly reporting for all public companies. Respectfully submitted, Pamela Woldow, Esq.

Pamela Zimmerman — Jul 6, 2026
Subject: File No. S7-2026-15 From: Pamela Zimmerman To voting members of the SEC: Please do NOT support semi-annual reporting standards for stock market companies reports to shareholders and investors. I’m very sure you are aware, the 1970 change to quarterly reports was enacted to hold administrators of public traded companies accountable. As evidenced in market activity, quarterly reports have allowed for more transparency. Transparency has led to a more stable market and greater market activity. I’m retiring largely with the proceeds earned since the change made in

1970. I respectfully request the quarterly requirements remain in place. Companies have and use tools to make short-term and long-term projections. I must believe the reasons the Quarterly Reports were enacted initially, holding companies administrations accountable for accurate and timely reports, continue today. Transparency benefits all. I really am getting too old to add lack of transparency and resulting actions to my list of things to stress over.

Panos N. Patatoukas, U.C. Berkeley, L.H. Penney Chair in Accounting, U.C. Berkeley, Haas School of Business — Jul 6, 2026
July 6, 2026
Vanessa A. Countryman
Secretary, U.S. Securities and Exchange Commission
100 F Street NE, Washington, DC 20549
Re: Semiannual Reporting (Release No. 33-11414; File No. S7-2026-15)
Dear Ms. Countryman:
We appreciate the opportunity to comment on the Commission's proposed rule on Semiannual Reporting. We are faculty at the Haas School of Business, University of California, Berkeley, and we write to urge that the Commission retain the current quarterly Form 10-Q requirement. If it nevertheless proceeds, we recommend replacing it with a narrower mandatory quarterly filing under a new Form 8-K item that preserves what investors need most while reducing issuer burden.
The proposal's economic analysis distinguishes three groups of reporting companies: quarterly reporters, who would continue filing Form 10-Q; hybrid reporters, who would file semiannually while voluntarily providing first- and third-quarter information; and pure semiannual reporters, who would provide no interim information beyond the proposed semiannual Form 10-S. For quarterly reporters, the proposal changes little. Our comment concerns the other two groups, where we believe the analysis underweights the costs and overstates the benefits.
Hybrid semiannual
reporters: littl
e re
lief or savings in exchange for real information loss
The first group is hybrid reporters: firms that would keep the quarterly earnings release and call, as their analysts and institutional holders expect, while dropping only the filed Form 10-Q. The proposal seeks to relieve short-term performance pressure, but for these firms, it will not: that pressure runs through the earnings number, the release, and the call, all of which the hybrid firm keeps. At the same time, the incremental cost savings for this group are thin. A hybrid firm still runs the quarterly close, produces and reviews the figures, and holds the call; what it saves is primarily the cost of packaging work already done into the filed form.
What the hybrid firm gives up, meanwhile, includes three distinct functions a filed 10-Q supplies that a release does not.
Granularity: Earnings releases are not required to include complete financial statements, and the information they provide varies significantly across firms; releases often omit the statement of cash flows, so investors cannot disaggregate earnings into cash and accrual components at announcement.[1] Disaggregation matters because cash-backed earnings are more persistent than accrual-driven earnings, and the full statements reveal the operating, investing, and financing activity behind the headline numbers. The literature documents that the full set of financial statements in Form 10-Q gives investors the data to better assess the integrity of reported quarterly earnings.[2]
Standardization: A release is issuer-designed, need not follow GAAP , and is not data-tagged,

as the proposal itself notes, while the 10-Q presents GAAP statements on a common structure across all filers, which allows aggregators to standardize and disseminate the information and investors to make cross-sectional and time-series comparisons. The evidence suggests that such comparability improves the accuracy of peer-based valuation models,[3] and that data tagging of filings levels the informational playing field between smaller and larger institutional investors.[4]

Credibility: Announced earnings are credible in part because a reviewed, filed report stands behind them. As the proposal itself acknowledges, an earnings release is not required to be reviewed by an independent accountant or to meet the requirements that apply to a Form 10-Q. The earnings release and the Form 10-Q are thus complements, not substitutes. The verifiability supplied by mandatory, reviewed reporting is what lends credibility to firms' voluntary disclosures.[5]

For the quarters no longer covered by a filing, investors receive information that is less granular, less comparable, and less verifiable. The proposal's economic analysis counts the issuer's burden-relief but underweights what that loss costs investors: greater uncertainty about the quality and composition of announced earnings, wider spreads, and higher volatility as markets price that uncertainty, and more room for discretionary presentation when no reviewed filing stands behind the numbers. The proposal suggests firms could voluntarily supply what the 10-Q supplied. But a hybrid firm that voluntarily provides granular, standardized, reviewed quarterly data has simply rebuilt the Form 10-Q.

Pure semiannual
reporters: the hardest-to-val
ue firms wou
ld report the
l
east

The second group is pure semiannual reporters: firms that would provide no interim information beyond the proposed Form 10-S. The proposal's own analysis indicates who the likely electors are: smaller issuers, which face relatively higher compliance burdens, are most motivated to switch, and already carry higher information asymmetry, thinner analyst coverage, and lower institutional ownership. The option would thus sort companies: the firms most likely to report less are precisely those with the poorest information environments, and because their shareholders are disproportionately retail investors, reduced disclosure would concentrate where it is least affordable. The proposal weighs the burden-relief to these issuers while underweighting the information loss borne by their investors. These are the firms for which interim reporting does the most work.

They are also the firms hardest to value. These likely electors fit the profile the asset-pricing literature identifies: young, loss-making, intangible-intensive businesses whose worth rests on uncertain future outcomes rather than current fundamentals. The literature also finds that the features that make a firm hard to value are the same features that make it hard to arbitrage. Hard-to-value firms tend to come to market with small floating supply, leaving little stock available to borrow, so short selling is scarce and costly precisely where disagreement about value is widest. Their share prices and borrowing fees also tend to be more volatile, making arbitrage risky even for the investors able to locate shares.[6]

When a firm's valuation is uncertain and its shares costly to short, its price tends to be biased upward. When valuation uncertainty and short-sales constraints combine, they create the conditions for overpricing: prices are set by the most optimistic investors while pessimists cannot register their views through short sales, producing overpricing that corrects only as uncertainty resolves and constraints loosen, as documented for new issuers in the IPO aftermarket.[6] Scheduled quarterly disclosures are one important

channel through which that resolution occurs. The switch to semiannual reporting would remove half of them, amplifying the conditions for overpricing and weakening the correction mechanism where mispricing pressure is greatest. Nor would current reporting fill the gap: Form 8-K is triggered by discrete events, not by the passage of time, and no item of it calls for the interim balance sheet and statement of cash flows through which uncertainty about these firms actually resolves.

Unlike a hybrid firm, which continues to announce quarterly results, a pure semiannual reporter provides no interim financial information at all, so the window during which misstatements can go undetected stretches to six months. Detection depends on granular financial data of the kind the 10-Q supplies, reviewed by an independent accountant on a quarterly cadence; for these firms, both the data and the cadence disappear.

The information divide between investors would widen as well. Sophisticated investors with the resources and access to alternative, nonfinancial data relevant to forecasting financial outcomes can substitute at least partially for missing public information. Research shows that investors with access to alternative data, such as satellite imagery of retail traffic, earn significant returns by anticipating earnings results ahead of their release, especially by targeting firms with bad news, and that this unequal access widens information asymmetry among market participants without immediately enhancing price discovery.[7] Stretching the mandatory reporting cycle to six months expands that blind spot: everyday investors lose the quarterly 10-Q as their systematic signal, while sophisticated investors exploit the extended gap, acquiring and processing alternative data and positioning against the overpriced stocks in the securities lending market. The losses fall largely on the retail investors the Commission is charged with protecting.

N
ewl
y public firms: reporting re
lief that attracts the wrong issuers

A stated objective of the proposal is to encourage more companies to go public, so its effect on newly public firms deserves particular attention. Reduced reporting burden may well encourage some companies to go public; the question is which companies. For an issuer whose investors expect quarterly information, the option to report semiannually changes little; it is neither a reason to go public nor a factor once public. The companies for which the relief may be decisive are those that place the least value on reporting to their investors, and a company drawn into the public market by the ability to disclose less is not a random draw from the population of private firms.

This is not just a conjecture. The 2012 Jumpstart Our Business Startups (JOBS) Act allowed emerging growth companies, defined as issuers with pre-IPO revenues under $1 billion, to go public with two years of audited financial statements rather than the three previously

required. Research on the JOBS Act finds that the issuers electing the two-year option had more speculative, lottery-type valuation profiles and lower institutional ownership, and the disclosure choice itself separated outcomes: most of the two-year electors went on to underperform the market in the years after going public, at markedly higher rates than eligible issuers that provided the full three years.[8] The losses were not borne evenly: institutional investors used publicly available fundamentals to avoid the worst offerings, while individual investors, who favor these lottery-type stocks, were disproportionately exposed. Nor did the option remain a niche election: within a few years, the two-year election went from a minority practice among eligible issuers to the majority practice.

A lesson from the JOBS Act is that disclosure relief may buy quantity at quality's expense. The proposal weighs the benefit of increased listings while underweighting this cost: attracting the issuers least likely to provide investor-protective disclosure, whose shareholders bear the highest aftermarket mispricing risk. The proposal would, in effect,

rerun the JOBS Act experiment: a private company would elect semiannual reporting by check box on its IPO registration statement. And for the new issuers that come to market this way, the mechanism of our second comment applies directly. These are the firms with the greatest valuation uncertainty, having no public track record, and, through lockup constraints, the most binding limits on short selling; moving from quarterly to semiannual reporting would raise that uncertainty further and strengthen the conditions for aftermarket overpricing, exposing retail investors to an elevated risk of sharp price reversals. A rule meant to bring companies public would thus select for the offerings investors most need protection from.

Recommendation

The proposal describes itself as one step in a broader effort to encourage more companies to go and remain public by reducing the costs and burdens of Exchange Act reporting. We share that goal; our disagreement is with the means. Across all three groups we have discussed, the proposal's economic analysis counts the burden-relief to issuers while underweighting the costs to their investors. For hybrid reporters, optional semiannual reporting would leave the quarterly earnings cycle and its pressure in place while removing the filed Form 10-Q beneath it, trading information loss for little relief or savings. For pure semiannual reporters, who are more likely to be smaller, harder-to-value firms held by everyday investors, it would withdraw interim reporting where valuation uncertainty and the risk of overpricing are already elevated. And in the IPO market, it would grow listings by selecting for the offerings least suited to reduced disclosure, when the relevant objective is not more listings but high-quality capital formation.

If the concern is the burden the Form 10-Q imposes, that burden can be reduced directly while preserving the form's frequency. The proposal itself asks whether revising the disclosure requirements of Form 10-Q would be a preferable alternative to semiannual reporting (Question 15), and it notes that several Form 10-Q requirements largely duplicate Form 8-K disclosures. Our answer to Question 15 is yes: the Commission can reduce the form's burden through its content, whether through the candidates the proposal identifies or through its ongoing review of disclosure requirements more broadly, without

reducing the form's frequency. We therefore urge the Commission to retain the quarterly Form 10-Q requirement.

If the Commission nevertheless adopts the semiannual option, we recommend that it pair the elimination of Form 10-Q with a narrower quarterly financial-statement filing. This would allow the Commission to reduce the burdens associated with the full Form 10-Q while preserving the information investors need most: standardized quarterly financial statements.

Specifically, a Form 10-S filer should be required to file standardized quarterly financial statements for the first and third quarters, for example, through a new Form 8-K item, distinct from existing Item 2.02, which would leave the furnished treatment of ordinary earnings releases undisturbed. Those financial statements should include the income statement, balance sheet, and statement of cash flows; key notes to the financial statements; standardized GAAP presentation; machine-readable tagging; and independent accountant review. The Commission could exclude other Form 10-Q requirements that impose meaningful compliance burden but provide more limited incremental benefit in the quarterly setting.

This approach would address the Commission's burden concern while avoiding the principal investor costs described above. For hybrid semiannual reporters, it would preserve the filed financial statements needed to evaluate quarterly earnings releases. For pure semiannual reporters, it would preserve a recurring public financial signal where alternative information channels are likely weakest and valuation uncertainty is likely highest. In substance, the Commission would reduce the Form 10-Q to the components

most important to investors, rather than eliminating the quarterly financial information on which investors rely. In drawing those lines, we encourage the Commission to avoid the imbalance we have described throughout this letter, weighing not only the compliance savings to issuers but also the downstream costs to their investors.

Respectfully submitted,

Patricia Girard — Jul 6, 2026

Subject: File No. S7-26-18 From: Patricia Girard I do not agree with the proposal to reduce the periodic disclosure requirements of companies. As an investor, quarterly reporting is essential to the decision making process of purchasing or selling stocks in companies. Less frequent reporting will significantly impact the timely information available on the performance of companies. Perhaps more importantly, less frequent reporting will also weaken the monitoring of corporate conduct. An executive's review, presumed agreement with the information and signature on those results may not get the attention the financial statistics receive but does not lessen it's importance in the process. While some financial information may be duplicated in voluntary releases to their investors, I cannot believe the voluntary and required reports are tabulated by hand and imposes a hardship on the companies. Please do not change the regulation regarding quarterly disclosures.

Patricia M. Dorner — Jul 6, 2026
Subject: File No. S7-2026-15 From: Patricia M. Dorner Please keep quarterly reports in place, Q10 . This is critical for being aware of state of my financial accounts and offers critical financial protection.

Patrick Phelps Individual Investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Patrick Phelps I'm opposed to the SEC making changes to reporting requirements. Investors and the public deserve transparency from companies. The quarterly requirements must remain. Thank you.

Paul F Washington, Chief Executive Officer, Society for Corporate Governance — Jul 6, 2026

Ms. Vanessa Countryman
Secretary
Securities and Exchange Commission
100 F Street N.E.
Washington, D.C. 20549-1090
Submitted Electronically
Re: Request for Comment on Semiannual Reporting (File Number S7-2026-15)
Dear Ms. Countryman:
The Society for Corporate Governance ("Society") appreciates the opportunity to share our views with the Securities and Exchange Commission ("SEC" or "Commission") in response to the Commission's Proposed Rule and Request for Comment on Semiannual Reporting (the "Release").1
Founded in 1946, the Society is a professional membership association of more than 3,700 corporate and assistant secretaries, chief legal officers, in-house counsel, outside counsel, and other governance professionals who serve approximately 1,600 entities, including 1,000 public, private, and nonprofit organizations of almost every size and industry. Our organization has nearly 80 years of experience empowering professionals to shape and advance corporate governance within their organizations, in part through providing the knowledge and tools they need to advise their boards and executive management on corporate governance, regulatory and legal developments, and public company reporting requirements. Society members are uniquely positioned to understand the practical burdens associated with reporting under the Securities Exchange Act of 1934, as amended (the "Exchange Act"), the information investors value, and the market practices that develop around public company disclosures.
The Society applauds the SEC's ongoing efforts to "encourage more companies to go and remain public by reducing the costs and burdens associated with Exchange Act reporting."2 In the Release, the Commission has asked important questions about whether the current quarterly reporting framework appropriately serves the Commission's objectives of investor protection, capital formation, and fair, orderly, and efficient capital markets.
1 SEC, Semiannual Reporting, Securities Act Release No. 33-11414, 91 Fed. Reg. 24968 (May 7, 2026), available at
https://www.sec.gov/files/rules/proposed/2026/33-11414.pdf.
2 Id.

While the current framework provides investors with robust information on a quarterly basis, it

also imposes recurring, peak-cycle burdens on companies across their legal, finance, accounting, investor relations, management, and board functions. Those costs are not limited to outside professional legal, audit, and other consulting fees; they also include substantial internal time across multiple functions and significant management focus. This creates opportunity costs that can divert attention from strategic planning, operating performance, capital allocation, risk oversight, and direct engagement with investors on the matters most significant to long-term value creation.

The relevant question is not whether regular financial reporting has value. It plainly does. The more precise question is whether the same federally mandated quarterly periodic reporting disclosure content and cadence is necessary for every Exchange Act reporting company, in every industry, at every stage of development, and in every market environment.

The Society believes the answer is no. The Society supports a properly designed optional semiannual reporting cadence alongside streamlined disclosure content for interim periodic reporting. This combination would permit each company to determine whether quarterly or semiannual periodic reporting provides the more appropriate balance of benefits and costs while maintaining a principles-based disclosure framework.

The Society's recommendations are based on the real-world experience of its members and are informed by data gathered through a Society survey of public and private company members addressing issues raised by the Release[3] and an approximately 50-member working group.

I. Executive Summary of Recommendations

The Society recommends that the Commission modernize the interim reporting framework in a manner that preserves investor protection while reducing unnecessary costs and burdens. Specifically, the Society recommends that the Commission:

1. permit all domestic Exchange Act reporting companies currently required to file Form 10-Q the option to elect semiannual periodic reporting;
2. avoid replacing the current quarterly reporting mandate with a mandatory semiannual reporting regime and, instead, provide companies with the flexibility to determine, on an annual basis, whether to adopt semiannual reporting or continue a quarterly reporting cadence;
3. preserve the current earnings release framework, including the voluntary nature of earnings releases and investor updates, and decline to require earnings releases, in their current or an enhanced form, in the first and third quarters for companies that elect semiannual reporting;
4. provide that earnings releases issued by companies electing any periodic reporting cadence should continue to be furnished rather than filed, unless an issuer expressly provides that such earnings release, or a portion thereof, is "filed" or incorporated by reference into a filed periodic report or Securities Act registration statement; and

[3] The Society survey was conducted in late May and early June 2026 and attracted 100 responses from Society members representing primarily public companies.

5. pursue a materially streamlined interim periodic reporting framework as an alternative or complement to optional semiannual reporting.

These recommendations reflect a principles-based approach to interim reporting. They would allow companies to reduce low-value compliance burdens while preserving material information and timely periodic reporting obligations appropriate for each company. They would also further the Commission's stated interest in encouraging companies to go and remain public by reducing unnecessary Exchange Act reporting costs. The following is a discussion of the data and reasoning supporting each of the above recommendations.

II. Quarterly Reporting Imposes Significant Recurring Costs and Opportunity Costs

Preparing a Form 10-Q involves multiple departments[4] within companies, a substantial amount of time, and operating on a compressed timetable during a peak time of corporate activity.

Among Society survey respondents:
- 71% reported that more than 20 internal personnel are meaningfully involved in preparing, reviewing, or approving each Form 10-Q; and
- 41% reported that more than 40 internal personnel are involved.

Additionally:
- nearly one-third of respondents reported spending more than 1,000 internal person-hours on average on each Form 10-Q process; and
- 17% reported spending more than 2,000 internal person-hours.

These figures do not capture the full organizational burden of the Form 10-Q reporting cycle because the preparation of quarterly reporting is so cross-functional within a company that approximately 32% of survey respondents were unable to estimate the total number of hours spent on 10-Q workstreams. And, perhaps more importantly, these data underrepresent the full issuer burden because they do not include the potential opportunity costs associated with diverting management, board, and professional time and focus from strategic and operational priorities. Additionally, this recurring work often occurs while finance and legal teams are already taxed with completing quarter-end close, coordinating with auditors, preparing earnings materials, advising management, and supporting board oversight.

Society survey respondents reported some expected benefits of semiannual reporting as compared to the current 10-Q reporting regime, including reductions in:
- finance and accounting burden (67%);
- audit or review burden (55%);
- board or audit committee time (52%);
- XBRL burden (55%);
- legal burden (50%); and
- management distraction (45%).

4 Survey respondents reported material involvement from accounting/controller (100%), legal (98%), corporate secretary and governance teams (90%), treasury (77%), tax (77%), internal audit (68%), investor relations (82%), business unit leadership (57%), executive officers (85%), disclosure committees (93%), and board or audit committees (93%).

These benefits not only represent cost savings but also reflect resources that could be redirected toward improving the quality of disclosure, prioritizing strategic risk oversight, engaging with investors, supporting long-term strategy, and addressing operational priorities.

While semiannual reporting is expected to result in some cost and resource savings, survey respondents and working group members reported that work currently associated with Form 10-Qs will not be eliminated altogether for semiannual reporters. For example, when asked to assume their company adopted a semiannual reporting cadence:
- 38% of survey respondents reported they would maintain substantially the same quarterly disclosure controls process even during the first and third quarters when not filing a periodic report;
- 21% reported they would maintain those controls only if they were issuing earnings releases;
- 14% reported a lighter review in the first and third quarters when a periodic report is not filed;
- 27% reported that their disclosure process would depend on advisor guidance and peer practice; and
- no respondents reported they would shift to a semiannual disclosure controls process.

These data underscore that the majority of companies expect to maintain robust disclosure controls in all quarters even if they shift to semiannual reporting.

The Society recognizes that where material developments occur between interim reports, the federal securities laws already provide mechanisms that require and/or permit both mandatory and voluntary timely disclosure, including Form 8-K, the anti-fraud rules, and the broader materiality-based integrated disclosure framework. The survey data suggests that these mechanisms and their internal support processes are more likely to be relied upon by companies electing semiannual reporting. Of survey respondents:

- 70% expect semiannual reporting will result in more pressure on selective disclosure/ Regulation FD;
- 63% expect increased reliance on Form 8-K and other voluntary and current disclosure determinations by semiannual reporters;
- 63% expect a greater possibility of identifying stale disclosures in offerings or similar circumstances for semiannual reporters; and
- 59% expect more pressure on earnings release controls for semiannual reporters.

Additionally, 71% of respondents expect that semiannual reporting will increase pressure on companies' blackout windows and insider trading monitoring and compliance due to longer periods between public reporting increasing the potential for developments of material, nonpublic information. Only 12% of respondents believe that semiannual reporting will result in no additional governance or controls risks.

Despite greater pressure on real-time reporting processes, survey respondents generally appear confident that semiannual reporting companies' controls and procedures will be effective in elevating current issues for disclosure consideration. Approximately 73% of survey respondents reported that semiannual reporting is unlikely to result in less frequent internal surfacing to financial reporting and disclosure teams of issues related to business performance and risk, less

frequent audit committee or board oversight, or an increased likelihood of control deficiencies that are not timely detected or communicated to independent accountants. And approximately 83% of respondents believe semiannual reporting will not create additional pressure on auditor reviews.

Taking all considerations together, Society survey respondents offered mixed views as to whether semiannual reporting would result in a burden reduction for their companies. Of survey respondents:

- 50% expect at least moderate burden reduction from semiannual reporting as compared to quarterly reporting on the current Form 10-Q; and
- 37% expect minimal or no burden reduction from semiannual reporting as compared to quarterly reporting on the current Form 10-Q.

These results underscore why, as noted below, the Society supports companies being able to voluntarily choose whether to adopt semiannual reporting if the Commission determines to offer it.

III. Semiannual Reporting Should Be Optional and Available to All Domestic Reporting Companies

Just as mandatory quarterly reporting may not be the optimal cadence for every company, neither is semiannual reporting. Some companies may reasonably conclude that quarterly reporting continues to serve their investors well. Others, such as pre-revenue biotechnology companies, development-stage companies, companies in highly seasonal or capital-intensive industries, early-stage technology companies, companies whose investors focus primarily on clinical, regulatory, or operational milestones rather than quarterly financial results, or other newly public registrants, may determine that semiannual periodic reports, combined with current reporting and voluntary investor communications, would provide an equal or better mix for disclosing material information, management focus, and long-term orientation.

The flexibility for companies to choose between semiannual and quarterly reporting is strongly supported by Society survey results where:

- 73% of respondents stated that semiannual reporting should be optional;

- 19% of respondents supported making semiannual reporting mandatory; and
- only 4% believed semiannual reporting should not be permitted.

The importance of the optional nature of semiannual reporting is reinforced by companies' projected likelihood of adoption of that cadence. Of Society survey respondents:

- only 8% are very likely to adopt semiannual reporting in the first three years, with another 11% indicating they are somewhat likely to adopt that cadence during that period;
- 41% were somewhat or very unlikely to adopt semiannual reporting in the first three years; and
- 33% reported that adoption would depend on peer company and market practice.

Investor expectations are central to companies' decisions as to whether to adopt semiannual reporting. The vast majority of survey respondents reported that they are concerned about investor or analyst reaction to the adoption of semiannual reporting, with 56% indicating that

they were very concerned, an additional 23% noting that they were somewhat concerned, and 11% indicating that they were neutral or uncertain. Only 8% of survey respondents were not very concerned about investor or analyst reaction, and only 2% of respondents reported that they were not concerned at all.

When asked about the five most important factors influencing their company's determination as to whether to elect semiannual reporting, Society survey respondents reported:

- investor expectations/analyst coverage (97%);
- industry/peer company practice (82%);
- debt/equity offering compliance requirements or other contractual obligations (58%);
- credit rating agency expectations (40%); and
- underwriter/capital markets needs or advice (comfort letters, due diligence defense, etc.) (32%).

Other factors respondents noted they are likely to consider include reduced preparation burden/distraction (31%), concerns about information asymmetry and insider trading (29%), exchange requirements or guidance (26%), concerns about stock price volatility (17%), ability to maintain strong and timely internal and disclosure control systems (17%), audit firm input (9%), and other regulatory requirements (7%).

While the Society's members have varying views on whether semiannual reporting is right for their company, the majority of survey respondents prefer that the semiannual reporting option be available to all domestic Exchange Act reporting companies that are currently required to file Form 10-Q. Of survey respondents:

- 61% prefer that the semiannual reporting option be available to all domestic Exchange Act reporting companies that are currently required to file Form 10-Q;
- 21% favor limiting availability by specified public float or revenue thresholds; and
- 3% favored limiting it to non-accelerated filers.

The Society believes that an optional semiannual reporting framework would better advance investor protection and capital formation because the appropriate reporting cadence varies by issuer. Larger registrants often have more complex filings and extensive audit committee, disclosure committee, and cross-functional review processes, while smaller registrants may have fewer specialized personnel and less capacity to absorb recurring compliance costs. Reporting needs also differ across industries and business models, including for seasonal, regulated, acquisitive, capital-intensive, newly public, and pre-revenue companies.

The Society's member discussions and survey results confirm that the benefits and risks of semiannual reporting depend on factors such as company size, industry, maturity, capital-markets profile, shareholder composition, and investor expectations. For some registrants, semiannual reporting could reduce recurring, low-value burdens without impairing investor protection; for others, quarterly reporting will remain more appropriate. Companies are best positioned to make that determination in light of their business, investor base, peer practices, and

communications strategy.
The Society therefore urges the Commission to adopt a flexible framework that allows companies, informed by investor expectations and market practice, to select the cadence that best
6
balances decision-useful disclosure with the Commission's objectives of investor protection, capital formation, and fair, orderly, and efficient capital markets.

IV. Earnings Releases Should Remain Voluntary and Furnished, Not Converted into a Shadow Form 10-Q

Under any reporting cadence framework, the Society urges the Commission to avoid transforming voluntary earnings releases into a substitute quarterly filing regime. If companies that elect semiannual reporting are required to issue first and third quarter earnings releases in their current or an enhanced form, or if such releases are required to be filed rather than furnished, the principal burden-reduction benefits of semiannual reporting would be materially diminished. The result could be a shadow Form 10-Q: less clearly defined than the current framework, but still subject to compressed timelines, extensive internal review, outside advisor involvement, prescriptive requirements that may not apply to all companies, and heightened liability concerns. Put simply, changing earnings releases from their current voluntary and default furnished state is likely to force the same issuer burden as quarterly reporting with less countervailing investor benefit.

The Society's survey data indicate that voluntary investor communications such as earnings releases will likely continue where companies and investors find them useful and appropriately tailored to the company. When survey respondents were asked whether they would continue issuing earnings releases if they were to adopt a semiannual reporting framework:

- 40% reported the decision as to form of earnings release would depend on circumstances such as peer practices and investor reaction;
- 32% reported that they would continue their current-format earnings release;
- 18% reported that they would provide more robust or modified updates in the first and third quarters when they were not filing periodic reports; and
- only 2% of respondents reported that they likely would not provide quarterly earnings releases or similar quarterly investor updates if they were to adopt semiannual reporting.

Perhaps because of these expectations as to voluntary earnings release cadence and content:

- 59% of survey respondents were not supportive of required first and third quarter earnings releases in their current or an enhanced form for companies that elect semiannual reporting;
- 28% were unsure; and
- only 11% of survey respondents supported mandatory earnings releases in the first and third quarters for semiannual reporters.

In addition, the Society recommends that the Commission preserve the default furnished status of earnings releases and is opposed to any modifications that would result in issuers being required to file any portion of an earnings release. A majority of survey respondents (57%) opposed requiring companies that elect semiannual reporting but issue first and third quarter earnings releases to file those releases rather than furnish them on Form 8-K and an additional 13% responded that the answer depends on the content.5

5 In the event the Commission adopts the semiannual reporting cadence, the Society supports the Commission's

7

Earnings releases are not, and should not be, shadow periodic reports or subject to prescribed requirements. Earnings releases are designed to distill and promptly communicate certain financial results and performance measures, operating developments, and, where appropriate, forward-looking earnings guidance to investors, analysts, and other market participants, typically in conjunction with earnings calls. Requiring earnings releases to be filed with the SEC would

convert a flexible investor-useful communications tool into a more formal SEC filing, increasing liability exposure and likely making companies less willing to provide earnings guidance, operational and forward-looking color, appropriate non-GAAP discussions, and other investor-useful information not otherwise required in the same form or level of detail in an SEC-filed document.

Mandatory filed status also likely would increase audit-related costs and process burdens. Earnings releases already undergo significant internal controls, disclosure committee review, management and legal review, Regulation FD and non-GAAP compliance analysis, and, where appropriate, board or audit committee oversight. If SEC filing were required, external auditors might seek additional review, management comfort, or procedures before issuance, particularly for releases with detailed financial measures, reconciliations, segment information, or forward-looking commentary. That could lengthen the earnings release process, increase fees, and delay material information reaching the market without necessarily improving disclosure quality. The Commission should not disrupt a disclosure mechanism that efficiently disseminates investor-useful information, particularly where doing so may chill voluntary disclosure and impose additional, unnecessary costs, which is the very thing the Commission is striving to reduce.

The Society urges the Commission to retain the current earnings release regime in which the entirety of an earnings release is by default voluntary, furnished, and not required to be filed, regardless of interim reporting cadence. If the Commission determines that semiannual reporting companies are required to file certain information typically presented in earnings releases during the first and third quarters, the filed status should attach only to those portions of the earnings releases specifically identified by the issuer as being filed rather than furnished, and issuers should be permitted to continue furnishing such additional earnings release content as they determine to be relevant to their investors without that additional information being deemed filed.

V. The Commission Should Also Develop Streamlined Interim Periodic Reporting Requirements

While the Society supports optional semiannual reporting, our survey data make clear that a larger percentage of companies find greater benefit in, and would more likely utilize, a streamlined Form 10-Q as compared to optional semiannual reporting. This is not an argument against voluntary semiannual reporting – indeed, a Form 10-S would benefit from many of the same streamlining reforms as a Form 10-Q. Instead, it is an argument for a broader menu of modernized disclosure tools that allow companies to reduce low-value compliance burdens while continuing to provide material information to investors.

When asked whether substantially streamlined Form 10-Q requirements or semiannual reporting would offer greater benefits for each respondent's company, the substantial majority of survey proposed technical amendments to Form 8-K to include references to semiannual periods.

8

respondents pointed to a streamlined Form 10-Q. Of survey respondents asked which cadence offers greater benefits to their company:

- 63% selected streamlined Form 10-Q requirements;
- 18% selected semiannual reporting; and
- 10% selected both streamlined Form 10-Q requirements and semiannual reporting as offering comparable benefits.

These results suggest that, for many companies, the burden arises not solely from the quarterly cadence, but also from the scope, duplication, and technical complexity of the current Form 10-Q requirements. Further supporting this view, of survey respondents:

- 73% reported that at least a moderate portion of the current Form 10-Q burden is driven by disclosures that are repetitive, immaterial, or of limited incremental investor value;
- 29% reported that a very significant portion or significant portion of the current Form 10-Q burden is driven by such disclosures; and

 no respondents believe that the current Form 10-Q is entirely free of
disclosures that are repetitive, immaterial, or of limited incremental investor value.
Streamlining interim periodic reporting requirements could preserve the core investor-protection function of interim reporting while eliminating or reducing requirements that are duplicative, immaterial, technical, or better addressed elsewhere in the disclosure framework.
In the Society survey, respondents expressed support for eliminating a number of current Form 10-Q requirements to achieve a more streamlined report, including:
 directors and officers Rule 10b5-1 plan disclosure under Item 408(a) (64%);
 market risk disclosure under Item 305 (62%);
 unregistered equity security sales and use of proceeds under Item 701 (57%); and
 XBRL tagging (53%).
Respondents also identified burdens associated with legal proceedings, risk factors, market risks, exhibits, management discussion and analysis ("MD&A"), and internal control-related disclosures in circumstances where the disclosure is repetitive or not materially additive.
The point is not that these topics can never be material. Rather, the current framework too often requires prescriptive interim periodic disclosure or technical compliance work without regard to whether meaningful new information is being provided to investors. A more principles-based interim periodic reporting framework should focus on material changes since the last report, core interim financial information, and company-specific developments that are decision-useful to investors.6 It should not require registrants to reproduce disclosure that is unchanged, duplicative of other sections, or already available in other Commission filings.
When asked to consider which reporting cadence best balances the interests of issuers and investors:
6 The Society acknowledges that effective streamlining of interim financial reporting requirements would require
coordination with the Financial Accounting Standards Board (FASB).

 58% of survey respondents reported quarterly reporting on a streamlined Form 10-Q;
 16% reported semiannual reporting;
 12% reported semiannual reporting in combination with a robust earnings release in
the first and third quarters; and
 only 5% reported the current Form 10-Q reporting regime.
These results overwhelmingly suggest that the current Form 10-Q reporting regime is due for modernization.
The Society urges the Commission to pursue streamlined interim periodic reporting reform in parallel with optional semiannual reporting. Some companies may elect semiannual reporting. Others may continue quarterly reporting because investor expectations, peer practices, or business circumstances make that cadence appropriate. For both sets of companies, a streamlined interim reporting framework would provide meaningful relief and better focus information provided to investors. This dual approach would better serve investors and registrants than any single mandatory model.
The Society submitted a comprehensive comment letter in response to Chair Atkins' Statement on Reforming Regulation S-K.7 That letter includes a summary of the Society's recommendations with respect to Regulation S-K disclosure along with proposed redlined changes to regulatory text for certain Regulation S-K items. Each recommendation included in that letter was based on surveys and involvement of our members and the relative costs and benefits associated with each corresponding disclosure item. We encourage the Commission to review that submission, attached as Appendix A, in conjunction with efforts to streamline Form 10-Q and, if adopted, Form 10-S.
7 See Letter from the Society for Corporate Governance to Vanessa A. Countryman, Secretary, U.S. Securities and
Exchange Commission, re: Statement on Reforming Regulation S-K (File No. CLL-15) (Apr. 13,

2026), available at
https://www.sec.gov/comments/cll-15/cll15-748671-2315735.pdf.
10
VI. Technical Semiannual Reporting Form Matters
The Commission's proposed rules for semiannual reporting requested feedback on a number of technical questions related to the proposed Form 10-S and transition issues. While the volume of the questions exceeded the Society's ability to request member input, we identified the following areas for member feedback and include the Society's positioning on each.
MD&A Coverage. Should Form 10-S require MD&A for the six-month period only, or should it also require separate discussion of each quarter within the six-month period? Of survey respondents:
- 61% reported six-month period only;
- 20% reported separate quarterly discussion only if material;
- 5% of survey respondents reported that the Form 10-S should always require a separate quarterly discussion; and
- 3% of survey respondents reported that a quarterly discussion should be required only if used by the chief operating decision-maker.

Comparative Quarterly Information. When asked whether semiannual filers should be required to provide comparative quarterly information in future filings if they later return to quarterly reporting:
- 59% of survey respondents were opposed to requiring retrospective quarterly information, including 18% who would favor inclusion only if reasonably available without undue burden;
- 18% of respondents were unsure; and
- 23% supported requiring retrospective comparative quarterly information.

Annual Checkbox. Of survey respondents asked whether annual election through a Form 10-K checkbox is an appropriate mechanism for choosing semiannual reporting:
- 74% responded yes;
- no issuers responded yes, but only if electing from semiannual to quarterly; and
- 19% of survey respondents answered no, including 13% indicating companies should be required to provide a separate Form 8-K notice, 3% indicating an earlier notice should be required, and 2% reporting that companies should be required to abide by election on registration statements.

Mid-Year Reporting Frequency Change. When asked whether companies should be allowed to change reporting frequency mid-year:
- 32% of respondents reported yes, but only from semiannual back to quarterly;
- 15% reported yes, but only with Form 8-K notice;
- only 2% of respondents said yes without additional conditions;
- 37% of respondents answered no, annual elections should be binding for the fiscal year; and
- the remainder of respondents were unsure.

11
XBRL. The Society conducted a separate survey of 80 members regarding XBRL and has formed a separate working group. While this work continues, certain themes have emerged to date. Members overwhelmingly reported that XBRL adds material workload to already strained public company financial reporting teams;8 it is technical,9 time-consuming,10 and error prone;11 it requires specialized skills,12 significant issuer costs,13 and resourcing; and it is often structured in a way that is a "single point of failure" for issuers' financial reporting processes. Members also reported that they do not see evidence of XBRL use by either investors or their companies.14 The Society understands that some data aggregators currently use XBRL-tagged data as a framework for their platform's data gathering and reporting. The Society is seeking to understand the extent of that use currently, whether that use is necessary in a future where

artificial intelligence and other technologies are more predominately adopted by market participants. The Society is also interested in determining whether there are ways to streamline XBRL tagging requirements, particularly with respect to narrative and block-text disclosures and non-material numeric disclosures, in a manner that better balances issuer burden with investor benefit.

Transition Issues. When asked what transition issues associated with semiannual reporting will need to be addressed before adoption of semiannual reporting, respondents noted:

8 Of survey respondents, 85% find XBRL numeric tagging (financial statements, tables, quantitative disclosures) burdensome, with 57% finding it significantly or highly burdensome. For narrative disclosures (non-numerical including financial footnotes), 90% of respondents find tagging burdensome with 56% finding it significantly or highly burdensome.

9 Of survey respondents, 88% reported they must hire vendors to complete their XBRL tagging, with 32% fully outsourcing the work.

10 Of survey respondents, 28% reported spending more than 100 hours per year on XBRL tagging, with another 20% reporting between 75 and 100 hours per year.

11 Respondents reported XBRL errors require correction or rework regularly, with 38% reporting frequently or constantly and a similar number reporting “occasionally.” The most significant challenges encountered by issuers in numeric XBRL tagging include time required for review/quality assurance (83%), validation errors (58%), mapping to standard taxonomy elements (48%), and need for custom extensions (48%). The most significant challenges encountered by issuers in narrative XBRL tagging include low perceived usefulness of output (60%), heavy reliance on vendors (60%), time-intensive review process (60%), limited internal expertise (42%), and ambiguity in tagging requirements (44%).

12 Of survey respondents, 88% reported that without vendors their organizations could not reasonably comply with XBRL, pointing to additional staffing-up requirements to bring work in-house.

13 Of survey respondents, 10% reported spending more than $100,000 per year on XBRL with another 18% of respondents spending between $50,000 and $100,000, and 38% of respondents reporting spend of between $25,000 and $50,000 annually. Members reported that these XBRL spend levels generally correlate with company size and reporting complexity, with smaller companies bearing a higher proportional burden of XBRL compliance.

14 Survey respondents reported that investors rarely or never engage with representatives of the company on XBRL numeric (financial statements, tables, quantitative disclosures) tagging (92%) or narrative (financial footnotes and other block-text tagging) (94%). As such, 88% of survey respondents believe that issuer costs for XBRL exceed investor value. The Society acknowledges that investors unknowingly may be using XBRL-tagged data through data

aggregators.
12
- comparative financial information (77%);
- audit standards/Public Company Accounting Oversight Board ("PCAOB") rules (73%);
- Regulation S-X (73%);
- prior-period recasting (68%);
- listing exchange rules (64%);
- debt/equity covenant reporting (61%);
- registration statements (56%); and
- S-3 eligibility (55%).

Members also noted the importance of addressing transition issues associated with 10b5-1 plans15 and PCAOB auditing standards, including the 135-day rule in PCAOB AS 6101.

VII. Conclusion

The Society appreciates the Commission's willingness to examine whether the interim reporting framework remains appropriately tailored to modern capital markets. Quarterly reporting has value, but it also carries significant costs, including recurring cross-functional burdens, management focus, board and audit committee time, and opportunity costs that are not always visible in a traditional economic analysis. The Commission can reduce those costs while preserving investor protection by allowing companies to determine the appropriate reporting cadence and by streamlining interim periodic reports.

For the reasons discussed above, the Society recommends that the Commission adopt an optional semiannual reporting framework available to all domestic Exchange Act reporting companies currently required to file Form 10-Q; preserve the voluntary and default furnished nature of earnings releases and investor updates; and pursue streamlined interim periodic reporting requirements focused on providing material, decision-useful information. Taken together, these reforms would provide registrants with meaningful flexibility, reduce low-value compliance burdens, preserve established current-reporting and anti-fraud protections, and better align the interim reporting system with the Commission's core objectives of protecting investors, facilitating capital formation, and maintaining fair, orderly, and efficient markets. The Society welcomes the opportunity to continue engaging with the Commission and its staff as the Commission considers these important issues.

Respectfully submitted,

Paul F. Washington
President & Chief Executive Officer
Society for Corporate Governance

15 Some members suggest that an earnings release containing a balance sheet, cash flow statement, and income
statement would be sufficient to end the 10b5-1 cooling-off period in the first and third quarters for companies that
elect semiannual reporting.

Securities and Exchange Commission
100 F Street N.E.
Washington, D.C. 20549-1090

Submitted Electronically

Re: Statement on Reforming Regulation S-K (File Number CLL-15)

Dear Ms. Countryman:

The Society for Corporate Governance ("Society") appreciates the opportunity to share our views with the
Securities and Exchange Commission ("SEC" or "Commission") in response to its solicitation of comments on Regulation S-K (other than executive compensation disclosure under Item 402 of Regulation S-K).1
Founded in 1946, the Society is a professional membership association of approximately 3,700 corporate
and assistant secretaries, chief legal officers, in-house counsel, outside counsel, and other governance
professionals who serve approximately 1,600 entities, including 1,000 public, private, and nonprofit organizations of almost every size and industry. Our organization has nearly 80 years of experience empowering professionals to shape and advance corporate governance within their organizations, in part
through providing the knowledge and tools they need to advise their boards and executive management
on corporate governance, regulatory and legal developments, and public company reporting requirements.
Our members are uniquely positioned to understand the practical burden imposed by Regulation S-K as
well as the materiality of the information presented and the frequency with which investors engage with
registrants on particular disclosures.
The Society commends the Commission for requesting input on how to implement reforms to Regulation
S-K, the Commission's "central repository" for filer disclosure requirements outside of the financial statements. Society members have firsthand experience with the practical application and challenges of
Regulation S-K requirements, which have become increasingly complex, burdensome, and costly over
time. As the Society has indicated in prior comment letters, certain current Regulation S-K disclosure requirements are unmoored from the fundamental principles of materiality or fail to account for

1 The Society previously provided a comprehensive comment letter on Item 402 of Regulation S-K in connection with the
Commission's Executive Compensation Roundtable. See Letter from Society for Corporate Governance to Vanessa Countryman,
Secretary, SEC, re: Executive Compensation Roundtable (File No. 4-855) (Aug. 27, 2025), available at
https://higherlogicdownload.s3.amazonaws.com/GOVERNANCEPROFESSIONALS/5d47927b-105a-4bc7-9aef-
821536f3505b/UploadedImages/2025_08_27-Society_Comment_Letter_on_SEC_Executive_Compensation_Disclosure_Rules-
FINAL_.pdf.

distinctions in the disclosure requirements that should apply to registrants of different sizes and at different stages of development.2
The Society's recommendations are based on real-world experience and data gathered through multiple
working group meetings and sub-group meetings engaging more than 70 Society members, as well as
surveys of the Society's public company registrant and law firm members.3
While grounded in empirical information, given the regulatory timeline the Society's recommendations

are necessarily preliminary, and we welcome the opportunity to refine them in response to any proposed
rulemaking. Except as otherwise noted, the recommendations in this letter exclude executive compensation disclosures, on which the Society previously commented. Our recommendations do not
address potential overlap with other concurrent SEC rulemaking initiatives.4 Nor has the Society included comprehensive recommendations pertaining to Regulation S-X, but we note that harmonization
of Regulations S-K and S-X would better achieve the Commission's stated goal of "revising the requirements to focus on eliciting disclosure of material information and avoid compelling the disclosure
of immaterial information."5
Our recommendations reflect a principles-based approach to disclosure requirements that affords flexibility to registrants while providing clear, coherent, and material information to the marketplace. Our
recommendations focus on: (i) reorienting disclosure requirements based on principles of materiality; (ii)
eliminating boilerplate, duplicative, or otherwise low-value disclosure; and (iii) lowering the cost and burden of compliance while safeguarding investor protection. Across multiple disclosure requirements,
the Society recommends the Commission expressly permit broader use of cross-referencing across Regulation S-K to reduce duplication while preserving the accessibility of material information. The Commission should also consider proposing appropriately designed safe harbors and reaffirming applicable materiality-based standards to reduce defensive over-disclosure while preserving investor protection.6
We include a summary of our recommendations in Appendix A, along with proposed redlined changes to
regulatory text for certain Regulation S-K items in Appendix B.
7 Each recommendation incorporates the

FINAL_.pdf.
3 The Society deployed a total of three surveys with responses from 80 registrants, 85 registrants, and 20 law firms, respectively.
4 The SEC's current rulemaking agenda and projects that may overlap with the Regulation S-K

reform project include the
proposals examining the elimination of quarterly reporting, simplification of filer status, and rationalization of disclosure
rulemaking agenda items. The Society looks forward to separate engagement on such proposals.
5 Paul S. Atkins, Chairman, U.S. Sec. & Exch. Comm'n, Statement on Reforming Regulation S-K (Jan. 13, 2026),
https://www.sec.gov/newsroom/speeches-statements/atkins-statement-reforming-regulation-s-k-011326
6 For the avoidance of doubt, in each instance that the Society calls for "materiality-based" disclosure, we mean materiality as
traditionally determined under the federal securities laws, not a novel, expanded, or item-specific formulation.
7 In circumstances in which the Society has recommended elimination of an Item entirely, we have not included a redline of that
Item.

Society's views, based on surveys and involvement of our members, of the relative costs and benefits
associated with the corresponding disclosure item. While we encourage the Commission to include all
the recommendations that we provide in any notice-and-comment rulemaking proposal, we believe action
on any of the recommendations could provide meaningful improvement.

I. Regulation S-K Cost and Benefit Assessment

As a threshold matter, we encourage the SEC throughout this process to consider the full extent of the
costs and benefits of existing disclosure requirements and any proposed changes to Regulation S-K.

A. Scope of Disclosure Costs

Disclosure costs extend well beyond outside legal and accounting fees. Each disclosure requirement creates a broad compliance burden across an organization, requiring repeated fact-gathering, drafting,
verification, and internal review by personnel in the business operations, accounting, financial reporting,
legal/corporate secretary, risk, compliance, internal audit, and investor relations functions. These processes require significant management time, extensive coordination, and multiple internal reviews.
Disclosures are then typically reviewed by outside counsel, external auditors, disclosure committees, senior management, and boards of directors. For example, some Society members report that it is not
unusual for a full related party transaction reporting cycle to engage more than 50 people, with manual
processes repeated each quarter.
Current Regulation S-K also imposes significant opportunity costs for all involved, including senior management and boards of directors. Resources devoted to producing, validating, and reviewing disclosure necessarily displace time spent on capital allocation, strategy, risk oversight, operating performance, and direct engagement with investors on more significant matters.
Moreover, disclosure-related costs are not borne solely by registrants. Investors, analysts, and other intermediaries also incur opportunity costs in allocating time to review and process filings. When material information is embedded in dense, repetitive, or immaterial disclosure provided solely to satisfy
a Regulation S-K item, users incur higher search, comparison, and processing costs, and material information becomes more difficult to identify and evaluate.

These costs are systemic and contribute to a disclosure framework that is less usable and less decision-
useful than it should be. The Supreme Court recognized the risk of information overload in TSC Industries, cautioning against burying investors in an "avalanche of trivial information."8 That concern is
directly implicated where Regulation S-K drives the inclusion of immaterial or repetitive information. At
some point, additional mandated disclosure does not enhance transparency—it obscures it.
Further, disclosure costs and burdens disproportionately impact smaller reporting companies and emerging growth companies, which have fewer specialized personnel and less ability to absorb recurring
compliance costs.9 Disclosure requirements that result in low-value or immaterial disclosure can therefore operate as a disproportionate cost of becoming or remaining a public company.10 In addition,

8 TSC Indus., Inc. v. Northway, Inc., 426 U.S. 438, 448-49 (1976).

9 In addition, as the Commission has previously articulated, many smaller companies choose not to go public because the costs of
being a public company are too high relative to the benefits. The ongoing expense of current compliance regimes can consume
capital and management time that smaller companies need to grow their business.

10 Mark T. Uyeda, Comm'r, U.S. Sec. & Exch. Comm'n, Capital, Choice, and the Pursuit of Happiness: Remarks at The SEC
Speaks in 2026 (Mar. 19, 2026), https://www.sec.gov/newsroom/speeches-statements/uyeda-remarks-sec-speaks-031926 ("For
too long, the disclosure framework for public companies was built around a one-size-fits-all model that imposed the same
disclosure burdens on smaller companies as on large, seasoned conglomerates. Recalibrating the EGC and SRC thresholds is not

when investors and analysts must work harder to extract material information from disclosure, market
efficiency is adversely affected.11
The Society notes that there has been commentary suggesting that disclosure cost concerns may be less
relevant in the age of artificial intelligence ("AI"). The Society does not believe that AI will meaningfully reduce the burdens associated with public company disclosure. While AI tools may assist
in drafting, organizing, and synthesizing information, registrants must still devote substantial human time
and judgment throughout the disclosure process, including in drafting and organizing content, identifying
relevant information, evaluating materiality, confirming accuracy, coordinating across functions, and making disclosure decisions. Boards, auditors, and advisors must likewise continue to apply human judgment in reviewing, interpreting, and assessing disclosures, and investors and analysts remain responsible for exercising independent judgment to satisfy their fiduciary duties.
Moreover, advances in AI do not mitigate the legal and liability considerations that contribute to defensive over-disclosure. AI tools are equally available to the plaintiffs' bar and make it faster and easier than ever to quickly review and collate corporate disclosures in support of demand letters and litigation for securities law claims. Importantly, the availability of such tools also does not alter the Commission's materiality-based disclosure framework or justify the inclusion of immaterial or duplicative information, nor does it support expanding disclosure beyond what is material. AI may change the mechanics of preparing and processing disclosure, but it does not eliminate the

underlying
human, legal, and compliance costs associated with exercising judgment, nor does it reduce the negative
effects of excessive or overly prescriptive disclosure requirements.

B. Quantification of Disclosure Costs

Importantly, the Commission does not need precise disclosure costs for each Regulation S-K Item to effect appropriate reforms. Its economic analysis guidance expressly contemplates both qualitative and
quantitative costs and benefits, requires identifying a baseline and reasonable alternatives, and recognizes
that certain effects may be difficult to quantify. The D.C. Circuit's decisions in Chamber of Commerce and Business Roundtable underscore that, while the Commission must assess economic consequences and
alternatives in a reasoned manner, it is not required to quantify every effect or demonstrate precise net
benefits before adopting a better-tailored approach.12 The relevant question is whether the Commission
can reasonably conclude, based on available information and experience, that a more modernized Regulation S-K would preserve material information while reducing unnecessary burdens and associated
costs. The Society believes the answer is yes.

To assist the Commission in its analysis of future Regulation S-K reform, the Society's assessment of the
current rules and our recommendations focus on whether a particular disclosure requirement elicits material information, protects investors, promotes fair, efficient, and orderly markets, and facilitates capital formation. We relied on surveys to inform our qualitative and quantitative analysis and collected
data reflecting the time demands, burdens, and costs Regulation S-K imposes on registrants. We also
drew on our members' subject matter expertise regarding materiality and investor engagement regarding
a matter of lowering standards. It is a matter of ensuring that regulatory burdens correspond to the size, sophistication, and
regulatory risk profile of each company, and that smaller issuers are not driven out of the public markets before they ever have an
opportunity to grow into them.").

11 See Letter from Society for Corporate Governance to Paul Atkins, Chairman, SEC, re: Suggestions on Modifying and Scaling
the Disclosure Obligations of Small- and Mid-Cap Public Companies (June 20, 2025), available at https://higherlogicdownload.s3.amazonaws.com/GOVERNANCEPROFESSIONALS/5d47927b-105a-4bc7-9aef-
821536f3505b/UploadedImages/SMCC_Reporting_Thresholds__Scaled_Disclosure_Letter_June_20_2025__final_signed_.pdf.

12 Chamber of Commerce v. SEC, 412 F.3d 133, 143-45 (D.C. Cir. 2005); Business Roundtable v. SEC, 647 F.3d 1144, 1148-56
(D.C. Cir. 2011); SEC, Current Guidance on Economic Analysis in SEC Rulemakings 2, 8-12 (Mar. 16, 2012).

specific disclosures. While there are inherent challenges to fully capturing all the tangible and intangible
costs and benefits associated with particular Regulation S-K disclosure requirements and their reform, 13

we believe the data we have collected provide meaningful insight into the overall costs and benefits of
certain Regulation S-K disclosures. Regulation S-K should be evaluated not by the volume of disclosure
it generates, but by whether it produces decision-useful information at a cost that is justified in the public
company reporting system.

II. Executive Summary of Recommendations

Based on our assessment of the costs and utility of disclosures, the Society has prepared a number of
recommendations to support reforms of Regulation S-K that better serve the Commission's goals of investor protection, efficiency, competition, and capital formation. The Society offers the following specific recommendations to modernize Regulation S-K, which we have categorized as follows:

1. Items for which the information disclosed generally is considered by survey respondents to be financially material and engaged with by investors, but for which disclosure compliance is somewhat or substantially burdensome to registrants. This category includes Items 101, 105, and 303. For these Items, the Society proposes retaining the Items with refinements to better serve investors' and registrants' interests.
2. Items for which the information disclosed generally may be considered by survey respondents to be financially material and engaged with by investors, but for which disclosure compliance is burdensome to registrants. This category includes Items 103, 403, 407, 601, and for some registrants, 305.14 For these Items, the Society proposes retaining the Items with more significant revisions that better serve investors' and registrants' interests.
3. Items for which the information disclosed generally is not considered by survey respondents to be financially material or engaged with by investors, and for which disclosure compliance is significantly burdensome to registrants. This category includes Items 102, 106, 201, 404, 405, 408, 701, 703 and specialized disclosure on conflict minerals, resource extraction, and mine safety. For these Items, the Society proposes substantially revising, eliminating, or consolidating certain components into other Regulation S-K Items to better serve investors' and registrants' interests.

III. Recommendations for Refinements of Items Considered by Survey Respondents to be Material:

A. Item 101 – Description of Business

Investors and registrants broadly consider Item 101 disclosures to be material. Among Society registrants
surveyed,15 42% rank Item 101(a) among the top four most financially material Regulation S-K disclosures, and 63% report engaging with investors frequently or occasionally on those disclosures. While Item 101 elicits disclosure that is material to an investor's understanding of a registrant's business
and other disclosures, the Society recommends several refinements to clarify that immaterial disclosures
are not required and to facilitate providing material information to investors.

13 SEC, Current Guidance on Economic Analysis in SEC Rulemakings 9-12 (Mar. 16, 2012).

14 Society members report that Item 305 may contain material information for certain industries, such as financial services and
banking.

15 Society "registrants surveyed" refers to the number of Society member registrants who responded to the survey and answered
the applicable question.

Focus disclosure on material aspects of the business. The Society recommends revising Item 101(c)(1)

to be more expressly principles-based by clarifying that disclosure regarding the registrant's business is
required to include information only to the extent material to an understanding of the registrant's business
taken as a whole. At the same time, the Commission should make clear that registrants retain discretion
to provide additional information that, while not material, may help an investor better understand the business.
Remove disclosure on discrete topics that are not material to all registrants. The Society
recommends revising Item 101(c) to remove the emphasis placed on certain discrete topics that are not
material to all registrants, including the lists of examples and qualifiers in the rule that steer disclosure
toward particular topics. In its current form, Item 101(c)(2) effectively emphasizes certain aspects of
business-government regulation and human capital management. The practical impact of including these
topics is that a greater number of registrants provide responsive disclosures even when they are not
material to their business, clouding investors' ability to determine the registrants for which these topics
are material. We recommend revising Item 101(c) to be more expressly principles-based, calling on all
registrants to consider what is material to an understanding of their business. Finally, we also recommend
revising Item 101(c) to incorporate the disclosure currently in Item 102 to the extent it provides
information material to understanding the business. See Section V.A.
Eliminate emphasis on segment disclosure when immaterial. The Society recommends revising Item
101(c)(1) to eliminate its undue emphasis on segment-level disclosure as the organizing principle of the
business section. As currently drafted, the rule directs registrants to describe their business "focusing
upon the registrant's dominant segment or each reportable segment," which elevates segment structure
above a more holistic understanding of the business. This formulation can obscure rather than clarify the
registrant's overall operations in Item 101. The rule would be better served by a principles-based
approach that calls for segment disclosure only to the extent material to an understanding of the
registrant's business taken as a whole. In that regard, we recommend that the Commission reconsider the
continued inclusion of Instructions 1 and 2 to Item 101(c). These provisions are complex and difficult to
apply consistently, contributing to overreporting of segment information when describing the business.
The Society notes that a more meaningful and appropriate discussion of segments to the extent material to
understanding the business occurs in Item 303, Management's Discussion and Analysis of Financial
Condition and Results of Operations ("MD&A").
Eliminate antiquated "available information" language. Item 101(e)'s "available information"
requirements should be eliminated. SEC filings are now universally available through EDGAR, and most
registrants also make them readily accessible through the investor relations sections of their websites,
both of which are accessible by a quick internet search.

B. Item 105 – Risk Factors

Surveyed Society registrants almost universally report that they need to include risk factor disclosure that is adequate to protect their company from liability. Their liability concerns are twofold: (1) that the failure to identify a particular risk or to comprehensively describe its potential consequences will result in the risk factors failing to shield the registrant from liability under the Private Securities Litigation Reform Act, and (2) that alleged misstatements or omissions in the risk factors will themselves become a source of liability.16 Society registrants surveyed report that the strongest drivers for including immaterial

16 See, e.g., Construction Laborers Pension Trust of Greater St. Louis, et al. v. Funko Inc., et al., No. 24-4909 (9th Cir. Feb. 4, 2026) (permitting claims to proceed with regard to risk factors that disclosed the future risks of failing to manage inventory when its business had already been adversely impacted by a failure to manage inventory); In re Facebook, Inc. Sec. Litig., 87 F.4th 934, 949-50 (9th Cir. 2023) (holding that risk disclosure is materially misleading if it fails to disclose past instances of a risk

disclosure in Item 105 are: fear of litigation if risk factor language is reduced or eliminated (84%), desire to align with peer practices (82%), and concerns about omissions being second-guessed in hindsight (79%). Registrants fear liability if they omit risks disclosed by other registrants or if they fail to comprehensively catalog all past, present, and reasonably foreseeable risks and their potential impacts, even if such risks are not unique to their company or are less likely to materialize. The SEC has previously acknowledged that these concerns are common.17

To address these concerns, the Society recommends that the SEC focus on addressing registrants' legitimate concerns about litigation and enforcement actions by providing clear limiting principles on what risk factors are (and are not) required to address and/or a safe harbor from liability for reasonably tailored risk factor disclosures, which should have the effect of streamlining disclosures, rather than mandating predetermined prescriptive presentation formats or page limits.

Clarify risk factor disclosure requirements and adopt a safe harbor from liability for risk factor disclosures that satisfy those requirements. The Society recommends that the SEC clarify the standards for risk factor disclosures under Item 105 through an introductory note or instruction, and adopt a safe harbor for registrants from liability for risk factor disclosures that satisfy those standards (similar to the safe harbor set forth in Item 305(d) of Regulation S-K).18 The note or instruction should confirm that:

x Risk factors are illustrative examples, not an exhaustive list of all possible risks.
x Risk factor disclosures are forward-looking opinions and do not constitute express or implied assertions concerning any current or past fact (e.g., the use of the conditional tense in a risk factor does not imply any fact about the past).
x Any past risk examples provided are not required, are illustrative, and are not a complete record or prediction of future likelihood.
x Risk factors do not need to duplicate disclosures required under other regulatory rules.
x Widely known national or global events generally do not require specific disclosure.

These changes would facilitate registrants' tailoring Item 105 disclosure to their material risks, as

Chairman Atkins recently noted19 and our survey results support—more than two-thirds of respondents
materializing, even if the past events present no known risk of harm).
17 See Modernization of Regulation S-K Items 101, 103, and 105, available at https://www.sec.gov/files/rules/final/2020/33-
10825.pdf (noting "[c]ommenters on the Concept Release attributed the growing length of risk factor disclosure to the fear of
litigation for failing to disclose risks if events turn negative"); Commissioner Hester M. Peirce, Speech, Statement at Open
Meeting on Modernization of Regulation S-K 101, 103, and 105 (Aug. 26, 2020), available at
https://www.sec.gov/newsroom/speeches-statements/peirce-reg-s-k-2020-08-26 (describing the risk factor summary as "a bit of
an experiment" and questioning whether the "penalty of having to prepare a summary [will] be sufficient to overcome the fear of
litigation that pushes companies to disclose many pages of risks"); Commissioners Hester M. Peirce & Mark T. Uyeda,
Statement, Statement Regarding Administrative Proceedings Against SolarWinds Customers (Oct. 22, 2024), available at
https://www.sec.gov/newsroom/speeches-statements/peirce-uyeda-statement-solarwinds-102224 ("Whether risk factors need to
be updated because certain hypothetical risks have materialized is not always a straightforward matter, and the Commission
should be judicious in bringing charges in this area. If the Commission does not exercise restraint, it could find a violation in
every company's risk disclosure because risk factors cover a wide range of topics and are inherently disclosure of hypothetical
events. Aggressive enforcement by the Commission may cause companies to fill their risk disclosures with occurrences of
immaterial events, for fear of being second-guessed by the Commission. Such a result would frustrate the Commission's goal of
preventing a lengthy risk factor section filled with immaterial disclosure.").
18 This instruction or safe harbor would explicitly exclude protections from affirmative material misrepresentations.
19 Chairman Paul S. Atkins, Speech, Remarks at the Texas A&M School of Law Corporate Law Symposium (Feb. 17, 2026),
available at https://www.sec.gov/newsroom/speeches-statements/atkins-02-17-2026-remarks-texas-am-school-law-corporate-

report that their risk factors would shorten in length without affecting material information if a safe harbor
were adopted. Additionally, 84% of Society members indicate their risk factors' length would be reduced
if it were clear that risk factors only need to identify examples of risks and not set forth a comprehensive
description of all potential risks and the ways in which they could impact the registrant. Further, by clarifying the purpose and scope of Item 105 disclosures, registrants and investors could more easily focus on other required disclosures to understand other material aspects of a registrant's operations and
financial results. For example, material events and uncertainties known to a registrant's management that
are reasonably likely to cause reported financial information not to be necessarily indicative of future operating results or of future financial condition would continue to be reported pursuant to Item 303

(MD&A), and registrants would not be required to also amend their risk factor disclosures to address those same events or uncertainties.20

To supplement these changes, the following revisions are also recommended to further encourage registrants to tailor the risk factor discussion to their unique, material risks:

Reinforce concise risk effect descriptions. Item 105 should include an instruction encouraging registrants to avoid duplicative risk impact disclosure and to assume that reasonable investors will understand how disclosed risks could affect them. For example, the instruction could encourage registrants to provide a description at the beginning of their risk factors that lists in one place the ways any of the disclosed risks could negatively affect the registrant or its securities. This approach would reduce overall length by eliminating the need to restate the same potential consequences of each risk identified within each individual risk factor.

Eliminate the risk factor summary. In practice, the risk factor summary adds to registrants' reporting burdens and lengthens Item 105 disclosure with duplicative information that provides limited additional information to investors.

Encourage reasonable disclosure lengths. While the Society does not support strict page limits, the Commission could include non-binding guidance that most registrants should be able to describe their most material risks concisely and without unnecessary duplication. Most Society registrants surveyed (87%) do not support the adoption of strict page limits, and the Commission has rejected a page-limit proposal at least twice (in 2019 and 1997).21 A page limit could also curtail a registrant's ability to include disclosure that is informative for investors and protective for the registrant, and therefore would be inconsistent with the Commission's principles-based approach and the best interests of registrants and their investors.

Clarify general risk factors. Society registrants surveyed indicate that if the SEC adopted and maintained a list of general risk factors, nearly 76% of respondents are very or somewhat likely to utilize

law-symposium ("The Commission could adopt a rule stating that failure to disclose impacts from publicized events that are reasonably likely to affect most companies will not constitute material omissions for purposes of some or all of the federal securities laws' anti-fraud rules. Such a safe harbor could incentivize companies to include fewer generic risk factors by shielding them from liability for events related to those generic risks. After all, if companies are not compelled to catalogue nearly every conceivable contingency to guard against hindsight litigation, then they can focus on risks that are more distinctive to their business.").

20 Commissioners Hester M. Peirce & Mark T. Uyeda, Statement, Statement Regarding Administrative Proceedings Against SolarWinds Customers (Oct. 22, 2024), available at https://www.sec.gov/newsroom/speeches-statements/peirce-uyeda-statement-solarwinds-102224 ("To the extent that an event has occurred and has materially affected the company, it is generally required to be disclosed in another part of a filing [other than the risk factors]"); Brief of the Society for Corporate Governance as

Amicus Curiae in Support of Petitioners at Section II (Aug. 2024), Facebook, Inc. v. Amalgamated Bank, 604 U.S. 4 (2024)
(describing the areas of the Form 10-K beyond the risk factors "that require companies to describe the recent activities and
condition of the company, including materialized risks" as Items 101, 103, 303, and 106 of Reg. S-K).
21 Modernization of Regulation S-K Items 101, 103, and 105, available at https://www.sec.gov/files/rules/final/2020/33-
10825.pdf (discussing the SEC's rejection of a strict page limit in both 1997 and 2020).

it. To avoid the need for constant updating, Item 105 could provide a relatively high-level list of examples of the types of risks that typically impact most or all registrants. Examples could include the
risks from: failures in internal controls or disclosure procedures; stock market volatility; global or national
economic events, such as recessions or financial crises; global public health events; and geopolitical events, such as wars and armed conflicts. Outlining these risk categories could make it more feasible for
registrants to pare back disclosure on those topics and instead focus only on the ways those events present
materially different or significant risks for that registrant (e.g., it has: a history of material weaknesses in
its internal controls; a low level of trading that makes it particularly susceptible to significant market swings; a business highly dependent on imported goods, and so tariffs have outsized impacts; or a majority of its business operates in or relies on the particular region(s) in conflict).22

C. Item 303 – Management's Discussion and Analysis of Financial Condition and
Results of Operations

Society members recognize Item 303 as the single most financially material and investor-useful narrative
disclosure in a registrant's SEC reports. Ninety-three percent of responding registrants and 85% of responding law firms rank MD&A as a top four financially material item. Of Society registrants surveyed, 78% indicate they frequently or occasionally engage with investors regarding MD&A. At the
same time, nearly 60% of Society registrants surveyed believe the resources required to gather, review,
and approve MD&A disclosures are disproportionately burdensome to the level of financial materiality
and investor interest. It is precisely because MD&A is so important that the following targeted refinements beyond those made in the 2020 amendments could meaningfully improve both the quality of
material information conveyed to investors and the efficiency with which registrants prepare these disclosures. The Society's recommendations seek to reduce duplication, focus disclosure on material
trends and performance drivers, and give registrants greater flexibility to present their business narratives
in a manner that is genuinely useful and informative.

Reinforce that MD&A disclosure is principles-based. The Society recommends that the Commission solidify the traditional, principles-based approach to MD&A that empowers registrants to focus their narrative on the matters most material to their business. While the 2020 amendments sought to address
this with targeted changes, frequent staff comments asking for granular detail on the drivers of individual

changes have led to MD&A disclosures that frequently give a dry line-by-line recitation of changes in each financial statement line item rather than providing an insightful look into management's views. The
Society recommends explicit guidance that discussing immaterial line items is not required.
The core principle underlying MD&A—providing investors with management's perspective on the company's financial condition, results of operations, and known trends and uncertainties, as articulated in
the objectives section added by the 2020 amendments—should remain the organizing framework. However, remaining prescriptive sub-items that require disclosing information that is not material to the
registrant's business and are duplicative of information disclosed elsewhere in the filing should be made
expressly subject to a materiality qualifier. If the Commission retains a list of suggested discussion topics, it should make clear that registrants need only address those topics that are material to their particular business.
22 We acknowledge that the SEC chose not to take this approach when adopting the 2020 amendments to Item 105.
Modernization of Regulation S-K Items 101, 103, and 105, available at https://www.sec.gov/files/rules/final/2020/33-10825.pdf
("[W]e do not believe that additional clarification is necessary regarding the types of risks that would constitute a general risk
factor, as suggested by some commenters. Because the existing rule requires registrants to explain how a risk affects them, we
believe registrants should be well-positioned to determine the particular nature of a risk."). The many generic, boilerplate risk
factor disclosures made by companies since those amendments were adopted suggest that such a clarification could have been
helpful.
9
Eliminate duplication within the periodic report. Society members consistently identify duplication across sections of the periodic report as one of the most burdensome aspects of MD&A preparation. Despite the 2020 amendments eliminating certain duplicative requirements (such as the contractual obligations table), substantially similar information continues to appear across multiple sections of the
periodic reports, including the business description (Item 101), legal proceedings (Item 103), risk factors
(Item 105), the financial statements and related footnotes, and MD&A itself.
While the Society's members recognize that each of these sections serves a distinct purpose, coordinating
substantially overlapping disclosure across these sections is among the most time-consuming aspects of
annual and quarterly report preparation. This requires extensive involvement from internal disclosure teams, financial reporting staff, business unit leaders, and outside counsel, and the risk of inadvertent
inconsistencies across sections adds an additional layer of review and compliance cost.
Similarly, Item 303(b)(3) requires disclosure of critical accounting estimates—an area that substantially
overlaps with the financial statement footnote disclosures required by U.S. generally accepted accounting
principles. Society members report that this disclosure is often a near repetition of footnote content, repackaged in narrative form to satisfy the Item 303 requirement. Eliminating this Item or permitting cross-reference to the financial statements would reduce preparation burdens and avoid the

interpretive
tension that arises from presenting what is essentially the same information under two different frameworks.
The Society recommends that the Commission take three complementary steps to address the pervasive
duplication described above:
x First, expressly permit registrants to use cross-references across sections of the periodic report to avoid repeating substantially similar disclosure. Some cross-referencing is currently permitted, and the 2020 amendments added Instruction 3 to Item 303(b) to emphasize that MD&A should supplement rather than duplicate disclosure already provided in the filing. However, an express, broad permission would give registrants the confidence to streamline their filings without concern that omitting information in one section will be treated as a material omission even when the information is clearly presented elsewhere.
x Second, work to allocate specific disclosure topics to specific sections of the periodic report, thereby reducing the instances in which multiple Items require disclosure of the same or similar information. The Society recognizes that this is a broader, long-term undertaking, but believes it is essential to the Commission's stated goal of streamlining Regulation S-K. In the interim, expressly permitting cross-references would provide meaningful near-term relief. The Society also encourages the Commission to coordinate with accounting standard setters to align the requirements of MD&A with the financial statement footnote requirements, further reducing unnecessary duplication.
x Third, synchronize revisions to Regulation S-K with a review of Regulation S-X to reduce inconsistent or misaligned disclosure requirements, eliminate unnecessary duplication, and enhance usability of disclosures23
.
23 The Society recommends that there be a more general harmonization of the Regulation S-K and Regulation S-X requirements.

Require year-to-date interim reporting requirements only when they provide additive material information. Item 303(c) requires management to discuss material changes in results of operations with
respect to year-to-date periods. For registrants filing quarterly reports, this often produces a second, substantially overlapping discussion of the same trends and variances already covered in the quarterly
comparison. While year-to-date analysis may be material for certain businesses with significant seasonality, for many registrants it adds length to an already extensive section without adding meaningfully new or material information.
The Society recommends that the year-to-date discussion in interim reports be expressly optional, permitting registrants to include year-to-date analysis when it provides material information not already
conveyed in the quarterly discussion (e.g., for businesses with significant seasonality), but not requiring it
as a default. This revision would reduce registrant burden for the many registrants for which the year-to-
date discussion is largely repetitive of the quarterly discussion, while preserving the ability of registrants
to provide year-to-date information when it is material to their business.
Expressly allow registrants to focus on material updates since the last periodic report. Without express permission to omit background information provided in the Form 10-K or to remove prior interim
period disclosures since the Form 10-K was filed, MD&A sections tend to grow in length from period to

period as registrants add new discussion without removing prior period content that is not relevant to the
current quarter.
The Society recommends revising Item 303 to make clear that, in interim period filings, registrants may
provide MD&A disclosure in the form of material updates relevant to that quarter without repeating
background discussion already included in the most current Form 10-K. Where the prior annual report
has described the underlying business, known trends, key drivers, liquidity framework, and other baseline
matters, requiring registrants to restate that same information in quarterly filings drives duplicative, long,
and boilerplate disclosure. Registrants should be expressly empowered to focus interim MD&A on
material changes since the last annual report or prior interim disclosure, including developments in results
of operations, liquidity, capital resources, and known trends and uncertainties, while incorporating prior
background or foundational disclosure by reference or assuming that investors have access to registrants'
prior periodic reports through EDGAR or the registrant's website. This approach would better align
interim MD&A with its core purpose of explaining what has changed and why it matters, reduce
repetitive disclosure that obscures genuinely important developments, and improve readability for
investors without depriving them of material information.
Consider reforms so that fear of litigation does not hamper good faith, informative disclosures. One
of the most significant challenges Society members identify is that fear of litigation risk shapes disclosure
decisions. MD&A expressly calls for forward-looking discussion of known trends and uncertainties.24
The concept of "known uncertainties" can be difficult to apply in practice, particularly when assessing
forward-looking developments, and these statements can form the basis of securities fraud claims if
subsequent events develop differently than anticipated, whether due to a failure to identify a known trend
or uncertainty, or because disclosed trends do not materialize as anticipated.
24 Item 303(a) states that MD&A "must focus specifically on material events and uncertainties known to management that are
reasonably likely to cause reported financial information not to be necessarily indicative of future operating results or of future
financial condition. This includes descriptions and amounts of matters that have had a material impact on reported operations, as
well as matters that are reasonably likely based on management's assessment to have a material impact on future operations."
Item 303(b) contains requirements to identify "known trends or any known demands, commitments, events or uncertainties that
will result in or that are reasonably likely to result in the registrant's liquidity increasing or decreasing in any material way" and
"[d]escribe any known material trends, favorable or unfavorable, in the registrant's capital resources."

The Society encourages the Commission to consider structural reforms that could reduce the chilling
effect of litigation risk on MD&A disclosure. For example, the Commission could provide clearer
guidance on the application of the Private Securities Litigation Reform Act's safe harbor for forward-
looking statements in the MD&A context. Alternatively, the Commission could revise Item 303 to
suggest, rather than mandate, forward-looking disclosures.

IV. Recommendations for More Significant Revisions to Items that May Be Considered Material by Survey Respondents:

A. Item 103 – Legal Proceedings

The Society recognizes that information regarding certain legal proceedings can be financially material and a point of investor engagement. Of Society registrants surveyed, 29% report occasional investor engagement and 2% report frequent investor engagement on litigation matters, while 69% report engaging with investors on litigation rarely or never. However, current Item 103 disclosure is frequently duplicative of other disclosures, forces disclosure that is premature and therefore potentially confusing or misleading and overemphasizes certain categories of legal proceedings such as environmental litigation that may be immaterial to registrants. Society members report that the current framework requires significant internal and external resources, particularly in assessing early-stage matters and applying separate, immaterial standards for environmental proceedings. Expressly codifying a simplified, principles-based materiality standard across litigation matters would reduce registrants' burden, improve consistency, and provide more predictable disclosure obligations, while reducing the risk that the disclosure itself confuses investors or becomes a catalyst for litigation. This approach would also better highlight material information for investors. The Society offers the following specific recommendations.

Require disclosures when proceedings have been filed or are known to be formally commenced. Item 103(a)'s requirement to disclose legal proceedings that are "pending" or "known to be contemplated" by governmental authorities requires registrants to speculate about whether potential litigants will follow through with suits they have threatened verbally or in a demand letter or whether preliminary governmental inquiries will advance to a formal investigation. This speculation can result in premature disclosure of matters that may never advance or become material. In fact, 59% of Society registrants surveyed report disclosing immaterial matters under Item 103 due to fear of being second-guessed. Society members also report that some plaintiffs (or their attorneys) are aware of this disclosure threshold and opportunistically attempt to use it to force settling meritless claims. The Society recommends revising Item 103 to only require disclosing material legal proceedings that have actually been filed or are known to be formally commenced and eliminate the "known to be contemplated" standard in Item 103(a). This formulation would provide investors with information at a stage where meaningful assessment is possible, while reducing speculative and potentially confusing or misleading disclosure regarding matters that may never materialize.

Eliminate the separate, fixed threshold for environmental matters. The separate disclosure threshold for environmental proceedings under Item 103(c)(3) is difficult to apply and can inappropriately emphasize environmental litigation when that category of proceedings may otherwise be immaterial to a registrant's business. Of Society registrants surveyed, 57% report that they have been required to include immaterial disclosures under this Item. The Society recommends eliminating the separate disclosure thresholds under Item 103(c)(3)(ii)-(iii) for environmental proceedings in favor of the same principles-based materiality standard that governs disclosure of all other legal proceedings. A unified standard would better align disclosure with investor needs by focusing attention on proceedings that are

material to
an understanding of the registrant's financial condition and operations regardless of the cause of litigation.
12
Revise Item 103 to not give rise, itself, to litigation risk. Society members have expressed significant concern about requirements to include legal demand amounts, settlement amounts, or other uncertain
quantitative exposure data. This information is inherently speculative and potentially misleading as it pertains to a registrant's potential liability, especially early in legal proceedings. Additionally, Society members note that such disclosures can give current litigants leverage and attract additional litigation,
including strike suits.
The Society recommends the Commission revise Item 103 to clarify that a registrant is not required to
disclose a legal proceeding at its inception where, based on the facts then known and a good-faith application of the traditional federal securities law materiality standard, the registrant reasonably concludes that the matter is not material. At the outset of a proceeding, the operative facts, legal theories,
potential exposure, procedural posture, and likelihood of adverse outcome are often uncertain, and a rule
that effectively compels early disclosure in the face of that uncertainty encourages protective over-disclosure rather than decision-useful information. The Item should further clarify that a registrant may
determine, as developments occur, that a previously undisclosed matter has become material, and may
commence disclosure at that time without implying that the earlier omission was improper. Express clarification of this kind would better align Item 103 with core materiality principles, reduce immaterial and potentially misleading disclosure, and promote candid, ongoing reassessment as a proceeding evolves.25
B. Item 403 – Security Ownership of Certain Beneficial Owners and Management
Of Society registrants surveyed, 85% report that the effort to gather, review, and approve Item 403 disclosures is burdensome given the level of investor engagement and financial materiality of the disclosures.26 The Society recommends the following revisions to modernize beneficial ownership disclosure and realign it with how investors actually access and use ownership information today.
Revise Item 403(a) to identify significant shareholders by name only or eliminate significant shareholder reporting altogether. Requiring registrants to identify and quantify 5% beneficial owners is duplicative of the Section 13 reporting regime, which provides ongoing, event-driven beneficial ownership reporting, including distinctions between active and passive investors and, where applicable,
disclosure of investment intent. These filings are publicly available to investors and registrants simultaneously on EDGAR. In addition, transactional disclosure requirements, such as those applicable
to mergers, tender offers, and significant equity issuances, provide enhanced ownership and control information at moments when investor decision-making risk is highest. Having registrants repeat this information under Item 403 adds little and requires registrants to assume unnecessary risk for inaccurate
information derived from third-party filings. That is especially true today, when ownership of public companies is concentrated to a significant degree in large institutional investors holding passive index or
other broadly diversified funds.
The rule's usefulness is also impacted by a timing mismatch: Item 403 requires disclosure as of the most

recent practicable date known to the registrant, but Schedule 13G amendments to initial ownership reporting are now due 45 days after the calendar quarter in which the beneficial owner determines a material change in ownership has occurred rather than 45 days after the calendar year in which any

25 The Society additionally notes that Accounting Standards Codification 450 provides guidance regarding litigation disclosures,
including when litigation, and what related amounts, must be disclosed in the commitments and contingencies note in a
registrant's periodic reports on Form 10-K. Similarly, Rule 10-01 of Regulation S-X governs when material litigation
contingencies and related amounts must be disclosed in interim financial statements included in a Form 10-Q.

26 Item 403 requires a public company to disclose in tabular form information about the beneficial ownership of its equity
securities by directors, executive officers, director nominees, significant stockholders (generally those owning more than 5%),
and management as a group, using the SEC's beneficial ownership standard set forth in Rule 13d-3.

change occurred. This formulation presents two issues for registrants. First, because Schedule 13G filers
are required to amend only after the end of a calendar quarter in which a material change occurred, registrants do not have the ability to rely on the most recent annual 13G filing. Instead, registrants are not
likely to have public information that a large institutional investor's position has changed until after the
investor determines that the change was material and the investor's quarter closes, which can leave registrants including known stale institutional ownership information in their own filing. Second, even in
those circumstances in which investors do file a 13G, the due date is 45 days after the investors' quarter-
end, which may be incongruous with the registrants' filing schedules. This practically results in registrants being compelled to file information that they know is either from a stale 13G filing (which may now be more than a year old), or more current information from the registrants' shareholder services
department that may be inaccurate or incomplete.

To remedy these issues, the Society recommends modifying Item 403(a) to (i) identify significant shareholders by name only, or (ii) eliminate significant shareholders (who are not insiders) from Item 403(a) altogether, given that the information is accessible to investors and the registrant at the same time
– when the Form 13G is filed by the reporting holder. If the Commission determines to keep this requirement, the Society recommends the rule include a safe harbor for information registrants derive in
good faith from the most recent Form 13G or 13D filings or from registrants' more recent records.

Revise Item 403(b) to permit registrants to provide information in a tabular format as of the end of the last fiscal year rather than "the most recent practicable date" for disclosures in the annual report and proxy statement. "The most recent practicable date" is ambiguous, and registrants have historically received comment letters suggesting it may mean something more current than the end of the
prior fiscal year. Society members report that gathering, compiling, and drafting information required by
403(b) is a time-consuming and lengthy process, requiring interdependencies with third parties and multiple departments across a registrant. For example, to gather an officer's current security ownership, it

is common to engage with separate administrators for all of the accounts in which the officer may hold
stock or stock interests, including 401(k) plans, individual retirement accounts, deferred compensation
plans, the registrant's captive broker, private brokerage accounts, employee stock purchase plans, equity
compensation plans, and shareholder services, particularly when those accounts are enrolled in a dividend
reinvestment program or are in 401(k) accounts with auto-investment. Practically, there are time intervals
between sending requests for information to separate administrators, receiving reports back, validating
those reports, compiling those reports into a unified ownership number, drafting the disclosure, and
completing a multi-party disclosure review process. Often these inquiries are done in conjunction with
year-end inquiries of these parties in connection with preparing the registrant's Form 10-K. Given that
context and the lengthy timelines required for preparing the disclosure, the Commission should clarify
that the end of the prior fiscal year is sufficiently "recent" for providing 403(b) disclosures in the annual
report or a proxy statement for a regularly scheduled shareholder meeting. This approach preserves the
relevance of the information provided to investors while accounting for the practicalities of producing the
disclosures.27

Revise Item 403(b) to give registrants the flexibility to include information relevant to an insider's
total stock holdings in supplemental columns of the table to more closely align this table with the
Section 16 reporting regime. Society registrants note that current Item 403(b) disclosure requirements
result in unnecessary burdens, the inclusion of immaterial information, and the underreporting of
beneficial owners' true economic interests by relying on the beneficial ownership test in Rule 13d-1. Of
Society registrants surveyed, 81% report immaterial disclosures are generated by narrative footnotes
describing indirect ownership or attribution that add complexity without investor value. Society members

27 The Society further notes that real-time disclosures regarding volitional changes in director and named executive officer
ownership changes are transparently available to investors in Section 16 filings.

also report that the tabular presentation is confusing to investors because it is inconsistent with ownership
information available to investors in Section 16 filings and often omits a significant number of shares
owned but not exercisable within 60 days (such as those located in deferred compensation plans or other
retirement accounts). Giving registrants the flexibility to include in the table information relevant to
insiders' total holdings such as all direct and indirect holdings, or synchronizing the presentation of
information in this table with the registrants' Section 16 filings, rather than relying on the 13d-1
beneficial ownership test, would provide investors with a more accurate picture of insiders' economic
interest in the registrant.

Revise Item 403(b) to eliminate group director and executive officer disclosure. Item 403(b)'s

requirement to disclose the total number of shares owned by all current directors, nominees, and executive officers as a group is time-consuming for registrants to prepare, does not add material information, and does not meaningfully improve investor understanding. If the Commission determines
to keep Item 403(b), the Society recommends that this group presentation be included only if the directors
and officers as a group own 5% or more of the registrant.
Revise Item 403(b) to permit omitting information for directors and executive officers who are no longer in their role on the date of the filing. Insiders' cooperation is necessary for registrants to accurately obtain information regarding their security ownership, both in the form of completing questionnaires and obtaining permission to speak with certain stock account administrators that may be
controlled by the insider. Registrants should not be burdened by pursuing security ownership information
from directors and officers who have departed prior to the date of the relevant filing containing the information, as those individuals have no obligation to cooperate and their share ownership does not provide meaningful information to investors. If the Commission determines to keep this requirement, the
Society recommends providing registrants with a safe harbor for registrants relying in good faith on the
latest Section 16 filing or the registrant's latest internal records.
Integrate interpretive guidance regarding certain matters into Item 403. Reliance on interpretive guidance creates significant uncertainty and inefficiency under Item 403, particularly Corporate Finance
Interpretations that are not reflected in the rule itself. As a result, registrants frequently provide extensive
footnotes to address expectations relating to attribution, shared voting or dispositive power, or the treatment of indirect ownership interests. Revising Item 403 to expressly incorporate key interpretive concepts into the rule and tabular disclosure framework would reduce ambiguity, promote consistency
across filings, and improve comparability for investors.
C. Item 407 – Corporate Governance
Both registrants and investors view certain corporate governance matters as material. Of Society registrants surveyed, 63% report frequent or occasional investor engagement. However, 76% of Society
registrants surveyed report that efforts associated with gathering, reviewing, and approving disclosures
required by Item 407 are unduly burdensome given the level of financial materiality and investor interest.
Aspects of Item 407 cited as most often resulting in immaterial disclosures include duplication of materials available on the registrant's website (97%), number of meetings held by the Board and committees (74%), and committee composition (56%). While Item 407 elicits disclosure that is material
to investors, the Society recommends several refinements to reduce disclosure volume, eliminate redundancy, and provide investors with the most current relevant information.
Eliminate the requirement to apply committee-specific independence standards to the full board when the registrant does not maintain separately designated audit, nominating, or compensation committees. Where the board performs audit, nominating, or compensation committee functions as a full
board, director independence under the applicable exchange standards should be sufficient. Requiring

registrants to apply committee standards to a governance structure that does not exist is confusing, redundant, and a recurring source of interpretive difficulty. Society members and their outside counsel further note this particular requirement creates meaningful interpretive difficulty in practice, as it compels them to mechanically apply a regulatory framework that was designed for a governance structure their boards do not use.

Eliminate the formal diversity policy disclosure requirement. The Society supports retaining the requirement to describe whether, and if so how, the nominating committee or board considers diversity (as defined by the registrant) in identifying director nominees, but eliminating the separate requirement to disclose whether the registrant has a formal diversity policy, how that policy is implemented, and how its effectiveness is assessed in Item 407(c)(2)(vi). The second layer often duplicates the underlying discussion of how diversity is considered, can lead to formalistic "policy" and process descriptions, and encourage defensive drafting.

Limit the role of executive officers in executive compensation to the CD&A. Item 407(e)(3)(ii) disclosure regarding the role of executive officers in determining or recommending executive compensation should be eliminated because it substantially overlaps with the Compensation Discussion and Analysis required by Item 402(b)(2)(xv). Investors already look to the CD&A as the principal explanation of compensation decision-making and the source for useful context. Requiring the same information to appear again elsewhere in the same filing adds repetition, not clarity.[28]

Permit Items 407(c)-(e) to be satisfied by cross-reference or hyperlink for the most current information. The Society recommends the Commission permit registrants to comply with Item 407(c) through (e) by providing a clear cross-reference or hyperlink to applicable committee charters or other publicly available governance documents, without formal incorporation by reference.[29] These narrative disclosures were cited by 96% of Society registrants surveyed as most often resulting in immaterial disclosures. A streamlined cross-reference mechanism would direct investors to the most current authoritative source while reducing duplication and disclosure volume.

Reassess scaled disclosures under Item 407(g). The Society recommends reassessing Item 407(g) to determine whether additional scaled disclosure or exemptions are appropriate for smaller reporting companies and emerging growth companies. The current accommodations are limited. Additional scaling in appropriate areas would better reflect the differences in size, complexity, and resources between those registrants and larger registrants and would align Item 407 more closely with the broader

28 This recommendation is consistent with the original design of the CD&A framework. When the Commission adopted the current executive compensation disclosure regime in its 2006 rulemaking, the CD&A was conceived as the comprehensive, integrated narrative for understanding all material aspects of compensation decision-making, including the role of management in that process. See Proposed Rule: Executive Compensation and Related Party Disclosure, Release No. 33-8655; File No. S7-03-06 (Jan. 27, 2006), available at https://www.sec.gov/files/rules/proposed/33-8655.pdf; see also Final Rule: Executive

Compensation and Related Party Disclosure, Release No. 33-8732A; File No. S7-03-06 (Sep. 8, 2006), available at
https://www.sec.gov/files/rules/final/2006/33-8732afr.pdf. The Society notes that it previously recommended that this
information be moved from the CD&A to Item 407(e)(3)(ii) in its comment letter on Item 402. Given the ability to comment on
potential revisions of Regulation S-K as a whole, on further reflection, the Society believes the proper location for this disclosure
is in the CD&A.
29 The Society does not propose that this mechanism constitute formal "incorporation by reference" within the technical meaning
of that term under the Securities Act of 1933, as amended (the "Securities Act") or the Securities Exchange Act of 1934, as
amended (the "Exchange Act") rules, which carries distinct legal consequences including with respect to liability. Rather, the
Society recommends a streamlined cross-reference or hyperlink mechanism that satisfies the informational purpose of the Item
407 narrative requirements without importing the legal consequences of formal incorporation by reference—which would better
align with the Commission's treatment of hyperlinked disclosures under, for example, Item 406(c)(2) and Item 407(b)(2).

scaling approach in Regulation S-K.30 This approach would reduce disproportionate compliance costs and
allow smaller registrants to allocate resources more efficiently.
D. Item 601 – Exhibits
Item 601 currently requires registrants to disclose exhibits in a manner that meaningfully increases the
costs of preparing filings and add unnecessary length to periodic reports, while providing little material
information to investors. Of Society registrants surveyed, 92% report rarely or never engaging with investors on Item 601 materials.
In addition to tangible costs, preparing exhibits requires substantial internal and external stakeholder time
and resources: over 80% of Society registrants surveyed report that accounting/finance and internal legal
must review, prepare, or sign off on exhibits, 77% report outside counsel must review exhibits, and approximately 70% report the process requires full board and/or disclosure committee review.
Approximately 10% of registrants surveyed consider exhibits' preparation time to be reasonable compared to the exhibits' financial materiality or investor interest, while over 90% reported that the processes and practices to support exhibit filings were burdensome to the business. Outside counsel
confirm this burden, with 77% reporting that they frequently advise clients on exhibit disclosures, and 78% perceiving the process to be a frequent or occasional burden for clients.
To decrease the burden and costs to registrants and limit exhibits to only those that provide material information, the Society recommends the following reforms.
Clarify "ordinary course" exception to material contract exhibit filing requirements. Of Society registrants surveyed, 94% report that prescriptive rule requirements or categories most often drove immaterial exhibit filings, and 52% and 40%, respectively, considered ordinary course contracts and non-
substantive agreements to frequently be immaterial. We therefore recommend the Commission revise

Item 601(b)(10) to better ensure that registrants do not need to file ordinary course contracts. Similarly, we recommend the Commission remove the presumption that executive officer or director compensation contracts or arrangements are material under Items 601(b)(10)(iii)(A) and (B). Of Society registrants surveyed, 73% report executive compensation agreements are often immaterial and 52% report executive compensation plan exhibits are unnecessary because their terms are described narratively elsewhere. Other areas of Regulation S-K already require that registrants provide certain key details about their director and executive compensation programs. The granular details of every compensation contract or arrangement do not meaningfully add to the total mix of information. Instead, registrants should be permitted to apply the same materiality standard applicable to other exhibits and to assess on a case-by-case basis which agreements would provide material information to investors. A full 94% of Society registrants surveyed report that eliminating executive compensation agreements and plans—the material terms of which are otherwise described in narrative disclosure—would reduce exhibits without reducing material information.

Eliminate certain exhibit requirements. We recommend removing the following exhibit requirements:

y Description of Securities Exhibit – Item 601(b)(4)(vi). This exhibit is unnecessary, as it duplicates information that is readily available to investors in a number of other documents, including the certificate of incorporation and bylaws, registration statements, periodic reports, and proxy statements.

30 See Items 101, 303, 305, 402 and 404.

y Clawback Policy Exhibit – Item 601(b)(97). This exhibit's contents are established by applicable stock exchange standards, resulting in substantially similar content across public companies' policies and no additional material disclosures to investors. The Society additionally notes that, to the extent relevant to registrants compensation programs, registrants describe their approach to clawback of executive compensation in their CD&As.

y Subsidiary Structure Exhibit – Item 601(b)(21). This exhibit does not provide investors with meaningful or material information and requires a disproportionate amount of time to prepare.

y Mine Safety Disclosure Exhibit – Item 601(b)(95). This highly specialized exhibit applies to a small group of public companies and should be removed and replaced with a standalone Form SD filing requirement.

y Insider Trading Policy Exhibit – Item 601(b)(19). See our detailed discussion in Section V.F.

In addition, we recommend that the Commission simplify or eliminate the fee calculation table in Item 601(b)(107). This exhibit can be complex to prepare and is, based on the experience of members, prone to errors and filing rejections and delays due to that complexity.

Eliminate or shorten exhibit lookback for newly reporting registrants. We recommend eliminating the two-year lookback period for newly reporting registrants in Item 601(b)(10)(i)(A). This change would reduce the reporting burden associated with public company registration and enable registrants to focus on the exhibits material to the business as of filing. In the alternative, the lookback should go back only one year rather than two years.

Clarify when legacy transaction agreements can be removed. The Society recommends clarifying that

agreements included in a Form 10-K under Item 601(b)(2) relating to a plan of acquisition, reorganization, arrangement, liquidation, or succession can be removed from the exhibit list after a reasonable period of time. The Item does not currently address when such agreements can be removed.

As a result, registrants have retained legacy merger agreements for years after the transaction is completed, adding outdated information to an already lengthy exhibit list. Of Society registrants surveyed, 70% of members report inoperative or legacy agreements to be among the most commonly immaterial in exhibit lists.

No Form S-3 eligibility loss due to untimely filed agreements under Item 601(b)(10)(iii). Instruction I.A.3(b) to Form S-3 should be amended to include Item 601(b)(10)(iii) among the enumerated exceptions, such that a registrant's failure to timely file management contracts or compensatory plans, contracts, or arrangements during the preceding twelve calendar months would not result in disqualification from the use of Form S-3. Under this approach, registrants would remain subject to liability under the Securities Act of 1933 ("Securities Act") for noncompliance with applicable disclosure requirements but would not incur the additional consequence of losing short-form registration eligibility solely as a result of such an omission, which can easily be due to administrative error. This change would align the treatment of Item 601(b)(10)(iii) with other disclosure items already excepted under Instruction I.A.3(b), reflecting a more calibrated approach to Form S-3 eligibility.

Modify treatment of supplemental materials. In connection with Items 601(b)(2)(ii) and 601(b)(10)(iv), the Commission should revise its policy under Rule 418 of the Securities Act and Rule 12b-4 of the Exchange Act regarding the treatment of supplemental materials submitted to the Staff. Specifically, rather than requiring the registrant to submit a request for such materials to be returned to the registrant, we suggest that the default treatment be that the materials are destroyed, or if requested by the registrant, returned to the registrant. This modification would better align how supplemental materials are

handled with modern information management practices and the confidential nature of the materials typically submitted under these provisions.

Permit post-filing redaction of inadvertently disclosed confidential information. Some Society members have shared informally that it can take significant time to determine and apply confidentiality redactions.31 Item 601 should be amended to permit post-filing redaction of confidential information that is inadvertently disclosed in filed exhibits if such information could have been redacted pursuant to Item 601(a)(6), Item 601(b)(2)(ii), or Item 601(b)(10)(iv). Additionally, we suggest that parallel provisions be incorporated into Item 601 to allow registrants, in limited circumstances, to delete from EDGAR any exhibits that were filed mistakenly or without the registrant's authorization. This approach would be consistent with the principles set forth in Rule 15(a) of Regulation S-T, which grant the Commission authority to prevent unauthorized EDGAR submissions and to take appropriate steps to promote the reliability and integrity of EDGAR submissions. It would also reduce the burden on smaller or newly reporting companies who may, as early filers, be more likely to experience these mistakes. The

Commission may set clear boundaries around this process, such as requiring the registrant provide a certification that the disclosure was inadvertent or unauthorized, limiting the number of times a registrant can use the process annually, and requiring the request for redaction be made promptly and in any event within a limited number of business days after the exhibit was filed.

E. Item 305 – Quantitative and Qualitative Disclosures About Market Risk

Item 305 requires registrants, regardless of industry or risk profile, to provide detailed quantitative information about material market risk using one of three prescribed methods, along with qualitative disclosure about market risk exposures and how they are managed. Although General Instruction 5.A includes a materiality threshold, registrants often feel under pressure to provide Item 305 disclosures every year regardless of whether it is material. Such pressure is the result of a variety of factors including, for example, peer company disclosure practices and fear of litigation.

The result is disclosures that most registrants view as immaterial and burdensome to prepare, with the exception of certain industries (e.g., the financial services or banking industries) where disclosures related to market risk are more likely significant. According to the Society surveys, approximately 73% of in-house counsel respondents report rarely or never engaging with investors on Item 305. The information is also considered duplicative as much of what Item 305 covers already appears in Item 105 (Risk Factors), Item 303 (MD&A), and the financial statements. Moreover, according to the Society surveys, if Item 305 disclosure were incorporated into another section, 90% of respondents report that their Item 305 disclosure would decline without losing financially material or investor-relevant information.

Rather than maintaining a separate, industry-agnostic and broadly applicable disclosure requirement, the Society recommends the Commission eliminate Item 305 and incorporate certain of its requirements in Item 303 for disclosure when material. Society registrants for whom Item 305 is material emphasize the importance of retaining the Item 305(d) safe harbor, if moved to Item 303. This structure would right-size the disclosure by continuing to require it, but only for those registrants that face material impacts from these risks. Item 303 could include an instruction that refers registrants to industry guidance, if any, to support companies' assessments as to materiality.

31 The pressure to quickly prepare redactions for material contracts has also increased following the SEC's guidance that "[r]egistrants are encouraged, as a best practice, to file [material contracts] as an exhibit to the Item 1.01 Form 8-K," noting that waiting for the next periodic report should be unnecessary given advances in electronic filing and the ability to redact documents "without submitting a confidential treatment request." See Exchange Act Form 8-K, Corporation Finance Interpretations, Question 102.05

V. Items Considered Immaterial by Survey Respondents that Require Substantial Revision, Elimination, or Consolidation Into Other Regulation S-K Items

A. Item 102 – Description of Property

Item 102 disclosures vary widely across industries. For some industries and businesses, physical properties, whether owned or leased, are material to an understanding of operations. For others, physical properties have little to no material effect on the business, including registrants that maintain small physical footprints through leasehold or other temporary interests that can easily be replaced, or that are technology-forward with little in the way of real estate holdings or occupancy.

Society registrants surveyed report including immaterial information in Item 102 disclosures due to disclosure of properties that are not material to the business (68%), boilerplate disclosure (68%), and ambiguity in applying the standard for "principal" or "materially important" physical properties (47%). Over 50% of respondents anticipate that their disclosure volume would decrease if the Item was relocated to the general business description required by Item 101(c) if material to the business.

Eliminate Item 102 and incorporate the physical property disclosures to Item 101(c) if material to the business. Including physical properties in the expansive list of topics for registrants to consider in Item 101(c) in the description of the business is consistent with the nature of that list of topics. We believe that for registrants for which physical properties are material, this change would also allow for greater consolidation and logical flow for the narrative discussion in the description of business section of reports, increasing readability for investors. For registrants without material physical properties, applying a clear materiality standard and removing the standalone disclosure requirement also removes a potentially inaccurate overemphasis on the importance of physical properties.

We also recommend revising the rule once it's relocated to Item 101(c), consistent with the general approach recommended for Item 101(c) above. Rather than calling for disclosure of location and character of property, which can provide information that has very little practical meaning for investors, we recommend that disclosure focus on information regarding physical properties that is material to investors. To accomplish this approach, we recommend removing the list of potential topics of disclosure in the text of the rule, while maintaining the current instructions to Item 102 and relocating those instructions to Item 101.

B. Item 106 – Cybersecurity

Eliminate Item 106 and incorporate material disclosures in other relevant Items. The Society recommends eliminating Item 106 because it unduly burdens registrants without benefit to investors. Where cybersecurity is material, registrants are already required to provide relevant information in Item 101 (Business), Item 105 (Risk Factors), Item 303 (MD&A), and Item 407 (Corporate Governance).32

Each of these sections permits registrants to discuss cybersecurity in a manner directly tied to their business. Requiring registrants to provide prescribed disclosures under Item 106 has paradoxically made

32 As suggested by CF Disclosure Guidance: Topic No. 2 (since withdrawn) and the Commission's interpretive release issued in February 2018, Release No. 34-82746, this disclosure requirement is duplicative of disclosure already required by Item 101 (under which disclosure of cybersecurity incidents or risks that materially affect a company's products, services, relationships with customers or suppliers, or competitive conditions is already required), Item 303 (under which

disclosure of material effects
of cybersecurity threats/incidents on results of operations or financial condition is already required), Item 105 (under which
disclosure of risks from cybersecurity threats that have affected or are reasonably likely to materially affect the registrant is
already required), and Item 407(h) (under which discussion of the board's role in overseeing management of cybersecurity risk is
already required to the extent cybersecurity risks are material to a company's business). In fact, in practice, many registrants
respond to the disclosure requirement by cross-referring to responsive disclosure elsewhere in their annual reports.
20
it more difficult for investors to identify whether cybersecurity truly is material to a registrant33 and what
aspects of cybersecurity disclosure are material.34
The Society's recommendation is supported by the following survey data:
x Overall, 65% of Society registrants surveyed report that investors rarely or never engage on this topic and an additional 27% report only occasional engagement. Only 8% of registrants surveyed report frequent investor engagement, likely reflecting the materiality of cybersecurity for those registrants.
x Nearly 86% of registrants surveyed report that Item 106 compliance efforts are disproportionately burdensome given the level of financial materiality and investor interest in the disclosure, and 65% report that Item 106 compliance results in modifying business practices, adopting or benchmarking policies, changing internal processes, or altering behavior in ways that the registrant otherwise would not. For example, some Society members report building controls, procedures, and practices to support required disclosures, even though the business does not otherwise benefit from those measures. They may also serve as an internal distraction from matters more material to the registrant's business.
x The majority of registrants surveyed report that on average eight separate groups, not uncommonly involving a total of 40 people or more, engage in the gathering, review, or approval of Item 106 disclosures.
x Nearly 73% of registrants surveyed confirm that Item 106 disclosures often result in duplicative disclosures, and 70% report these disclosures have become boilerplate.
x 89% of registrants surveyed report that if cybersecurity disclosures were incorporated into Item 101 and MD&A when cybersecurity matters are material to registrants, disclosure volume would decline without reducing material information provided to investors.
In addition to providing low value to investors and being burdensome to registrants, Item 106 disclosures
can push registrants to disclose information that is either premature and therefore potentially misleading
or at a level of detail that could be harmful to registrants. For example, Item 106(b)'s requirement that
registrants describe processes for identifying and managing cybersecurity risks "in sufficient detail" and
provide detail around previous cybersecurity incidents or risks of cybersecurity incidents and 106(c)(2)(ii)'s requirements regarding processes for monitoring "prevention, detection, mitigation and remediation" of cyber-incidents create concerns about disclosing sensitive information that could compromise businesses' cybersecurity protection and provide a roadmap to the very actors registrants are
trying to guard against, and therefore practically often result in high-level boilerplate disclosures that are
not investor-useful.

33 While Item 106(b) and (c) set forth non-exclusive lists of disclosure items that registrants should address, if applicable, in
practice most registrants feel compelled to address each item and rarely go beyond the specified items.
34 For example, Item 106(c)(2)(i) requires disclosure of management positions or committees responsible for managing
cybersecurity risks and the relevant expertise of such persons or members "in such detail as necessary to fully describe the nature
of the expertise[.]" Not only does this result in more disclosure regarding skills and expertise than are required of Chief
Executive Officers or Chief Financial Officers, the detail provided is rarely helpful to investors in assessing cybersecurity risks at
any given registrant.
21
To the extent the SEC seeks to retain certain elements of prescribed considerations included in Item 106,
the Society recommends including sub-bullets or instructions for Items 101, 103, 303, and 407 that remind registrants to consider whether to include cybersecurity information if material to the registrant.
Eliminate cybersecurity XBRL tagging. The Society recommends eliminating XBRL tagging for cybersecurity disclosures regardless of where they are located.35
Eliminate Item 1.05 from Form 8-K. The Society recommends eliminating Item 1.05 from Form 8-K.
This separate requirement pressures issuers to make rushed, high-stakes materiality judgments in the
immediate aftermath of a cybersecurity incident, before the facts are known. That dynamic can lead to
premature, incomplete, or overly cautious disclosures that do little to help investors but can complicate
incident response, create litigation risk, and divert management attention at the worst possible time.
Cybersecurity incidents can already be addressed under existing disclosure principles in Item 8.01 when
they are genuinely material, making Item 1.05 an unnecessarily prescriptive overlay that adds cost, risk,
and timing pressure without corresponding investor benefit.
C. Item 201 – Market Price of and Dividends on the Registrant's Common Equity and
Related Stockholder Matters
The Society recommends eliminating substantially all of Item 201, which would modernize disclosures,
acknowledge how investor information gathering has fundamentally changed, and better align registrant
burden with investor interests.
Eliminate Item 201(a)(1)(i) requirements. The requirements are duplicative of basic cover page
requirements and therefore should not be required for Form 10-K, Form S-11, Form S-4, or Form S-1.
Eliminate Item 201(b). This provision requires stating the approximate number of holders of each class
of the registrant's common equity; however, in today's markets, the vast majority of shares are held in
"street name" by broker-dealers or banks, rather than individual investors. Accordingly, this disclosure
does not accurately reflect the registrant's shareholder base and has now become largely irrelevant for

assessing ownership concentration.
Eliminate Item 201(c). This provision requires unnecessarily repeating past dividend payment information that is widely available and in practice elicits boilerplate language regarding the board of directors' discretion to approve future dividends, neither of which provide investors with meaningful insights.
Eliminate or revise Item 201(d). Much of the information required by Item 201(d) is already disclosed elsewhere in a registrant's public filings, often in greater detail. Substantially similar information regarding outstanding equity awards, dilution, and equity plan mechanics is disclosed in the share-based
compensation footnotes to the financial statements, compensation tables in the proxy statement, Form S-8
35 More generally, the Society recommends that the Commission undertake a broader review of eXtensible Business Reporting
Language ("XBRL") requirements. Over time, structured-data mandates have expanded beyond traditional financial statement
information into cover-page data, filing-fee data, and a growing set of specialized narrative disclosures. The SEC's technical
guidance has also continued to evolve through separate XBRL guides, taxonomy updates, and EDGAR release changes. The
result is a disclosure regime that often imposes significant vendor, legal, finance, and validation burdens without a commensurate
showing that investors meaningfully benefit from machine-tagging information that is not genuinely comparable, standardized, or
decision-useful. Additionally, in certain instances, failing to tag disclosure using XBRL tagging has significant consequences. It
can mean that a registrant is not "current" with its Exchange Act reports and thus not eligible to use Form S-3, Form S-8 and
other forms.
22
registration statements and, from time to time as needed, equity plan proposals in the proxy statement. As
a result, Item 201(d) frequently operates as a prescriptive reaggregation of data already publicly available,
increasing registrants' burdens without corresponding investor benefit.
If the Commission determines to retain Item 201(d), the Society recommends it be (i) restated to require
clear cross-reference to the location(s) where required elements are already presented in substantially
similar form (e.g., proxy equity plan table; financial statement note; Form S-8), provided the disclosure is
as of the same date, complete, and (potentially) presented in a comparable tabular format, or (ii) required
(as revised above) only in the context of a proposal for shareholder approval of an equity compensation
plan.
Eliminate Item 201(e). This provision provides little value to investors compared to the real-time resources that are available to them. The graph does not present any proprietary information, but forces
registrants to organize public data over which they have no control in a one-size-fits-all graph. This requirement imposes an unnecessary compliance burden and assumption of risk for registrants and fails to
provide investors with insights beyond publicly available data.

D. Item 404 – Related Person Transactions

Item 404 is designed to guard against the risk of self-dealing and genuine conflict of interest transactions.

Item 404 should focus on transactions that present meaningful conflicts of interest, governance concerns, or the potential for significant financial detriment. In practice, however, the Item imposes overly broad disclosure obligations on registrants that require extensive internal diligence across multiple departments36 to identify, analyze, monitor, and describe a wide range of transactions that are often routine, immaterial, or otherwise do not present a risk of unfairness or misconduct. The result is a system that can be time-consuming and costly for registrants while yielding immaterial disclosure for investors.

Of Society registrants surveyed, 88% report that they rarely or never engage with investors on Item 404.

Over 93% of Society registrants surveyed report that the effort required to gather, review, and approve Item 404 disclosures is burdensome as compared to the level of financial materiality and investor engagement. Indeed, 69% of Society law firms surveyed report advising clients frequently on Item 404 disclosures. All of this points to a rule that addresses a legitimate concern, but is insufficiently calibrated to distinguish between transactions that present real conflict risk and those that do not. The Society recommends the following revisions.

Affirm that transactions arising in the ordinary course of business do not need to be disclosed.

Over 71% of Society registrants surveyed report disclosing immaterial information related to arm's-length, ordinary-course transactions. The Commission should clarify Instruction 4(a) such that transactions involving purchases of goods and services subject to usual trade terms or bona fide arm's-length transactions entered into in the ordinary course of business (as well as for any indebtedness arising

36 It is not uncommon for quarterly related party transaction processes to include initial queries by the accounting or financial reporting group of multiple departments including human resources, accounts payable, accounts receivable, charitable contributions groups, procurement, and other business operations groups with a long list of potential "related parties" that have been identified through director and officer questionnaires. Once information is received, accounting or financial reporting manually compiles all of the sources into total transactions for each related party. That information is then passed to the legal or corporate secretary department to analyze interaction of the information with the registrant's related party transaction policy and Item 404 disclosure rules. Financial reporting/accounting simultaneously assesses that information in connection with ASC 850 and Regulation S-X requirements. Each of the legal/corporate secretary departments and accounting/financial reporting drafts any disclosures required by their respective rules and those are incorporated into the periodic report, which is then reviewed by the full financial reporting team, the internal audit department, external auditors, the full disclosure committee, the full audit committee of the board, and during certain quarters the full board of directors. It is not unusual, start

to finish, for more than 50
people to interact with the related party disclosure process.
23
from such transactions) do not need to be disclosed. A safe harbor for ordinary course transactions would
reduce the universe of immaterial transactions that registrants are required to track and report, reducing
burden for the full 404 compliance cycle without adversely affecting the registrant's disclosure of material information.
Narrow and refine the "related person" definition. Of Society registrants surveyed, 57% report
including immaterial disclosures because of an overly broad definition of "related person." The definition
of "related person" currently encompasses an extended list of family members, reflecting an unfounded
presumption that executives and directors are able to identify and assist a company in tracking entities and
transactions in which numerous relatives have a financial interest. This burden is particularly acute with
respect to siblings, siblings-in-law, and step relatives who are not part of an executive's or director's
household. For example, both an executive and her spouse may have numerous siblings who are
financially independent and are employed or have financial stakes in numerous entities which may change
from time to time, placing a burden on companies and their insiders to track and timely update
information on all such relations, all based on a questionable presumption that any transaction between
the registrant and those other entities might be relevant to investors. Instead, "immediate family member"
in Instruction 1(a)(iii) should be limited, at most, to an individual's spouse, parents, and children, as well
as family members residing in the executive's or director's household. For example, we do not believe
that disclosure of an employment relationship with a financially independent relative of an executive
officer is material information to investors.
In addition, the Society recommends adding an instruction excluding any transaction involving a
shareholder that has disclosed and certified its status as an institutional or passive investor under either
Rule 13d-1(b) or (c) under the Exchange Act. Transactions with passive investors generally do not create
the kind of relationship that can influence the registrant or its officers and directors because those
investors typically invest through broad, index-driven strategies rather than through registrant-specific
commercial, strategic, or personal arrangements. They ordinarily are not counterparties selected because
of a special relationship with management, and they do not engage in the kind of negotiated, conflict-
prone dealings that raise concerns about favoritism, reciprocal benefit, or self-dealing. At the same time,
these types of investors are large and omnipresent, creating a substantial likelihood that registrants will
engage in transactions with them or their affiliates in the ordinary course of business.
Further, because registrants do not control their investors or their willingness or ability to respond to
related-party inquiries, the Commission should provide a safe harbor for related person disclosures

regarding significant investors where the registrant acts in good faith based on information publicly available or otherwise known to it.

Increase the threshold for de minimis transactions. Originally set almost 20 years ago, the $120,000 threshold is too low. Over 94% of Society registrants surveyed report that this threshold results in immaterial disclosures. Society members report that a more investor-useful standard would be a two-
pronged approach with a defined dollar value as a first filter and disclosure required only when transactions exceed both the defined dollar threshold and are determined to be material. The Society
proposes an initial filter of $250,000, indexed for inflation going forward, below which registrants would
not be required to track or disclose transactions.

Clearly define “direct and indirect material interest” to serve the disclosure goals of Item 404. Two-thirds of Society registrants report including immaterial Item 404 disclosures because of ambiguity
regarding what constitutes a “material” interest. The Society proposes a construct that would better capture the intent of 404 by focusing disclosure on circumstances when a transaction (i) may unduly influence officers, directors, or others with the ability to direct the registrant to act other than in its best
interests; or (ii) results in material payments from the registrant to a related party that are other than on an
24
arm’s-length basis. To accomplish these goals, once a transaction reaches the initial threshold of $250,000 (indexed for inflation going forward), registrants would perform a second layer of analysis focused on the transaction’s financial relevance to the registrant, officer, director, or others with the ability to direct the registrant, as applicable.37

The Society recommends applying the $250,000 (indexed for inflation) safe harbor to officers’, directors’,
and other individuals’ interest in a transaction as well, as those in a position to direct registrants (e.g.,
directors and officers) are generally unlikely to be influenced by lower amounts. For example, a $275,000 transaction would trigger related party analysis, but if the transaction inures a benefit of only
$100,000 to a director, the transaction would fall within the safe harbor and need not be disclosed. However, if in the same transaction the benefit inuring to the director were $255,000, the transaction would exceed the safe harbor and a full materiality analysis would need to be conducted.

The second-level safe harbor for a registrant’s interest in a transaction should be significantly higher than the individual safe harbor level to accomplish the intent of Item 404. To recognize the variability in
transaction materiality depending on a registrant’s size, the Society recommends that the Commission
establish a safe harbor of $1 million or 2% of the registrant’s revenue for amounts involving the registrant
directly.

Disclosure should only be required when the amount inuring to the benefit of the registrant, officer, director, or others with the ability to direct the registrant (a) reaches the above-identified amounts (e.g.,
$250,000 for an individual and the greater of $1 million or 2% of the registrant’s revenue), and (b) is determined to be material to the registrant, officer, director, or others with the ability to direct the registrant who are receiving the benefit of the transaction, either directly or through an intermediary person, entity, or arrangement.

The Society additionally recommends the Commission provide guidance on what does and does not

constitute an “indirect” interest under Item 404. For example, the Society recommends a construct that
finds an indirect interest where there is a payment or benefit that inures to the benefit of the registrant or
its officers, directors, or significant shareholders through: (i) a third party or (ii) to an entity in which the
registrant, director, officer, or significant shareholder holds, directly or indirectly, a material ownership or
investment interest sufficient to give that entity or person a meaningful opportunity to participate in the
proceeds, profits, or other economic returns arising from the transaction, in each case in an amount of
$250,000 or more for an individual officer, director, or significant shareholder, and the greater of $1
million or 2% of the registrant’s revenue for the registrant. In contrast, small, passive investments in an
entity where the registrant or its officers, directors, or others with the ability to direct the registrant have
no control, no special economic rights, and no meaningful ability to benefit from the transaction in a
manner distinct from other passive investors should not constitute an indirect interest.
Apply the financial threshold on a fiscal year basis. Currently, the financial threshold applies for “any
transaction, since the beginning of the registrant’s last fiscal year, or any currently proposed transaction,
in which the registrant was or is to be a participant and the amount involved exceeds [the specified
amount].” This requirement complicates compliance, since most registrants’ financial recordkeeping
processes are otherwise based on their fiscal years. A common scenario arises in the context of disclosing
an at-will employment relationship of executive officers’ family members, in which a family member’s
annual compensation (including a year-end bonus) may be less than the reporting threshold, but tracking,
analysis, and disclosure might still be required due to the assessment encompassing all of the prior year’s
37 Transactions would not need to be tested as to whether they are material to third parties that cannot direct or substantially
influence the registrant. Even if a transaction were material to such third parties, if it is not material to the registrant or its
officers, directors, or others with the ability to direct the registrant, that information is not investor-useful.

compensation and all compensation paid to date during part of the current year. The burden could be
alleviated by revising Instruction 3 to Item 404(a) to provide that the amount involved in any transaction
is to be analyzed on a fiscal year basis.
Harmonize Item 404 requirements with ASC 850, AS 2410 (formerly Auditing Standard No. 18),
and Regulation S-X. The requirements of Item 404 somewhat overlap with, but do not mirror, the
requirements of ASC 850, AS 2410, and Regulation S-X that call for disclosures of related party
transactions in a registrant’s financial statements and related footnotes. As a result, registrants must
assess different disclosure standards requiring additional time and coordination, sometimes resulting in
different disclosures that could be confusing to readers.
Eliminate the requirement of Item 404(b)(1) that registrants describe their policies and procedures
for related person transactions. This requirement generates unnecessary and largely boilerplate

policies
that mirror Item 404 and disclosure describing those policies that is simply repeated year-to-year without
any additional information that is meaningful to investors. If the Commission determines to keep the policies and procedures disclosure requirement, the Society recommends flexibility to comply with disclosure by posting the policy on the registrant's website.

E. Item 405 – Compliance with Section 16(a) of the Exchange Act

Eliminate Item 405. Forms 3, 4, and 5 are already publicly available to investors on EDGAR in near real
time. Item 405 largely requires registrants to provide information that is already available and highlights
circumstances that frequently arise from technical or administrative filing delays rather than substantive
governance failures or insider misconduct. As such, Item 405 is not calibrated to investor significance
and can potentially overstate the significance of minor lapses.

At the same time, Item 405 imposes continuing burdens on registrants that are disproportionate to any
investor benefit. Registrants must maintain tracking systems, conduct annual diligence, and prepare narrative disclosure regarding events that are often immaterial, promptly corrected, and unrelated to financial performance. Those efforts consume management and legal resources that could be better directed to disclosures more relevant to investors.

Item 405 is also misaligned with the Commission's modern disclosure framework. The SEC has already
recognized that aspects of the rule are outdated by eliminating the Form 10-K cover-page checkbox and
modifying diligence requirements to reflect EDGAR's accessibility. Those changes acknowledge that technology has largely supplanted Item 405's original monitoring function.38

F. Item 408 – Insider Trading Arrangements and Policies

The Society recommends eliminating Item 408 because in practice it has largely not resulted in disclosure
of investor-useful information, unnecessarily burdens registrants, results in inconsistent application and

38 As a more general matter, the Society urges the Commission to undertake broader Section 16 reporting reform to simplify a
current regime that too often produces duplicative filings, technical traps, and investor confusion rather than clear, relevant
insight into insider trading activity. For example, requirements to file both a Form 144 and Form 4 on the same transaction
frequently create investor and other stakeholder confusion. While Form 4 already reports actual executed insider transactions
under Section 16(a), Form 144 is a notice of a proposed sale under Rule 144 and may never result in a completed trade. In
practice, Society members have seen circumstances where investors believe transactions reported on Forms 4 and 144 represent
separate and additive transactions. SEC guidance has long recognized that a Form 144 reflects intent at the time of filing and, if
the sale never occurs, no amendment is required to report that fact, which means the public record can suggest insider selling that
did not actually happen. The Commission should modernize Section 16 reporting to focus on executed transactions, eliminate
unnecessary overlap, and make the disclosure regime more accurate, comprehensible, and useful

to investors.
26
disclosures, and requires presenting information that can be confusing or incomplete for investors. Society member surveys found that 94% of registrants report that investors rarely or never engage on Item
408 disclosures, 69% of registrants view Item 408 as disproportionately burdensome compared to the
disclosure provided, and 75% of outside counsel surveyed view Item 408 compliance as frequently or
occasionally burdensome. The majority of Society members surveyed report that preparing, reviewing,
and approving each Item 408 disclosure includes: accounting/finance, legal/corporate secretary, external
auditors, outside counsel, disclosure committee, board committee, and the full board.
Eliminate Item 408(a). Item 408(a)'s stated purpose was already accomplished through the corresponding and easily understood amendment to Form 4, requiring disclosure of whether a disclosed
trade was pursuant to a 10b5-1 trading plan and, if it was, the date that plan was adopted.39 A full 91% of
Society registrants surveyed report that eliminating Item 408(a) requirements would reduce their disclosure burden without compromising information that is material to investors.
Eliminate Item 408(b). Item 408(b) is unnecessary as there are existing federal securities laws that prohibit insider trading, and the existence of a policy does not alter this obligation or add to investor understanding. Over a third of Society registrants surveyed report that required disclosure and exhibit
filing drives them to expand insider trading policies beyond business needs due to benchmarking concerns. Society registrants surveyed also report the addition of immaterial disclosure due to fear of
second-guessing (41%) and litigation risk (32%).
If, however, the SEC retains Item 408(b), the Society recommends amending it to require that registrants
comply by disclosing their insider trading policies and procedures using one of the following: (a) including a summary of material provisions in their Form 10-K or proxy statements; (b) filing an exhibit;
or (c) posting on the registrant's website.40 Society registrants surveyed report disclosure volume could
be reduced without compromising material information by: (i) eliminating Item 408(b) entirely (100% of
respondents), (ii) permitting compliance via the registrant's website (90% of respondents), or (iii) permitting compliance either by an exhibit or narrative description (78% of respondents).
G. Item 701 – Recent Sales of Unregistered Securities; Use of Proceeds from Registered Securities
Item 701 requires registrants to provide information about sales of unregistered securities within the past
three years and, as required by Rule 463, to provide information about a registrant's use of proceeds following an initial public offering. Item 701 disclosures in periodic reports require significant effort to prepare yet provide immaterial information to investors that is not additive to information otherwise available. Of Society registrants surveyed, 92% report investors rarely or never engage on information
disclosed in Item 701 and 59% view efforts to gather, review, and approve Item 701 disclosures as disproportionately burdensome relative to the level of financial materiality and investor interest in the information disclosed. Those respondents report that preparing, reviewing, and approving Item 701

disclosures span multiple groups, including accounting/finance, legal/corporate secretary, external auditors, outside counsel, disclosure committees, board committees, and the full board. Given the

39 In fact, with respect to the proposed optional checkbox to report non-Rule 10b5-1 trading plan transactions on Form 4 and
Form 5, the staff determined not to include the optional checkbox in the final rule after determining it would not provide
investors and other market participants with useful information because the details of the transaction will already be disclosed in
the form. For the same reason, disclosure of such transactions in a registrant's periodic reports also does not provide any useful
information beyond the information already disclosed in the form.

40 Permitting website posting, rather than filing, of insider trading policies would also alleviate registrant reluctance to amend
insider trading policies and would ensure that investors have access to current versions of registrants' insider trading policies.
Similarly, alternatively permitting registrants to provide narrative summaries of the material terms of their insider trading policies
would alleviate litigation-risk concerns over amending such policies.

imbalance between registrant burden and investor benefit, the Society recommends eliminating certain
Item 701 requirements as described below.

Eliminate the three-year lookback requirement. Approximately 62% of Society registrants surveyed report that Item 701's three-year lookback most often results in providing immaterial disclosures. Item
701's requirement to disclose information for the last three years is narrowed by the specific requirements
of Forms 8-K and 10-K.41 Because Form 8-K requires registrants to disclose sales of unregistered equity
securities in excess of 1% of the number of shares outstanding since a registrant's last Item 3.02 Form 8-
K or last periodic report, Forms 10-K and 10-Q effectively require registrants to disclose unregistered sales of equity securities that the registrant may consider immaterial (i.e., less than 1% or 5%, as applicable, of the registrant's outstanding shares). If the registrant does consider previously unreported
sales of unregistered equity securities to be material, they would likely be disclosed in other sections of
Form 10-K or Form 10-Q, such as in the MD&A or notes to the financial statements.
In most cases, the registrant's intended use of proceeds has already been disclosed in offering materials,
and any truly important change in the deployment of capital can be addressed through existing MD&A,
liquidity, and general materiality-based disclosure obligations. As a result, Item 701(f) often functions less as a meaningful investor protection measure than as a technical compliance requirement that adds
information tracking, cost, and drafting burdens without corresponding informational value.

While not an amendment to Item 701, the Society recommends that the Commission consider (i) amending Form 10-K and Form 10-Q to eliminate the requirement that a registrant provide disclosure
pursuant to Item 701(a) through (e), and (ii) clarifying that Item 701 disclosure must be provided for sales
of unregistered securities within the past three years unless otherwise provided by the applicable

form or
schedule.
H. Item 703 – Purchases of Equity Securities by the Issuer and Affiliated Purchasers
The Society recommends that the SEC eliminate Item 70342 because its disclosure requirements are
generally duplicative of information in the issuer's consolidated financial statements and related footnotes.43 Additionally, to the extent an issuer's share repurchase activity is reasonably likely to impact
liquidity, it would also be addressed in the MD&A, where the discussion would have a clearer nexus to
investment decision-making by providing investors with a more holistic understanding of how such activity relates to the issuer's cash flow and financial position. The only information Item 703 adds beyond this redundant information is disclosure related to immaterial share repurchase amounts that would not be reported in these other sections.
41 Item 3.02 of Form 8-K requires disclosure pursuant to Item 7.01 for sales of unregistered securities that exceed 1% (or 5% for
smaller reporting companies) of the number of shares outstanding since the registrant's last Item 3.02 Form 8-K or last periodic
report, whichever is more recent. Item 5 of Form 10-K and Part II, Item 2 of Form 10-Q require disclosure pursuant to Item 7.01
for unregistered sales of all equity securities by the registrant during the period covered by the report that were not previously
disclosed in a Form 10-Q or Form 8-K.
42 Item 703 requires tabular disclosure of issuer repurchases of equity securities, including total number of shares purchased
reported on a monthly basis, average price paid per share, the number of shares purchased as part of publicly announced plans or
programs, and the remaining dollar value of shares that may be repurchased in the future under any such plans or programs.
43 Under ASC 505-30 (Treasury Stock), issuers must account for and disclose treasury stock transactions, including the cost of
shares repurchased and held in treasury, typically presented as a contra-equity balance on the balance sheet as prepared pursuant
to ASC 210 (Balance Sheet) and further described in the footnotes to the financial statements under ASC 505-30-50. In addition,
ASC 215-10 (Statement of Shareholders' Equity) requires a reconciliation of beginning and ending equity balances, including
separate presentation of changes attributable to share repurchases, which may include both the dollar amount and share count of
treasury stock activity.

If Item 703 is retained, the Society alternatively recommends that the Commission:
x Replace the requirement to disclose repurchases by month with a requirement to disclose by quarter;
x Clarify that companies are not required to disclose the shares withheld for taxes in connection with equity compensation plans; and
x Clarify that registrants do not need to duplicate information regarding the total shares purchased in the quarter, the quarterly average purchase price, and/or the outstanding authorization if such is being disclosed elsewhere in the same report or was disclosed in a prior report and has not changed.
I. Rule 13p-1 – Conflict Minerals
Of Society registrants surveyed, 85% report that efforts to gather, review, and approve Conflict

Minerals
Rule disclosures are disproportionately burdensome compared to the materiality of the information. Preparing the required Conflict Minerals Report demands coordination across procurement, operations,
compliance, legal, finance, and senior management, frequently involving dozens of personnel and escalating through full disclosure committee and board-level review over a compliance cycle spanning
several months. Society members that are required to file Form SD report dedicating more than 30 hours
in some cases and over 125 hours in others to complete the process, with some reporting ongoing difficulty obtaining responses from suppliers. Society members largely believe that Form SD provides no
meaningful value to investors, a view reinforced by their investor relations teams' reports of little to no
investor inquiry regarding conflict minerals disclosures. The burden also falls on a substantial number of
non-reporting supply chain companies, cascading compliance costs well beyond companies directly subject to the obligation. The disproportionality of this burden is particularly acute where conflict minerals represent a trivial component of a registrant's products or operations.
The highly granular supply chain information mandated by the Conflict Minerals Rule rarely constitutes
material information for investors. To the extent that mineral sourcing risks are material to a registrant's
business, that information is more appropriately communicated through risk factors, MD&A, and business disclosures. Many registrants already address this topic in an accessible way through sustainability reports and other voluntary disclosures, and most affected registrants have already built
robust responsible sourcing programs through supplier codes of conduct, human rights policies, sanctions
screening, and anti-corruption controls.
The Society urges Congress to repeal Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank Act") or, at a minimum, for the Executive Branch to invoke the statutory off-ramps in Section 13(p) permitting the SEC to revise, waive, or terminate the rule. Absent such action, the Society urges the SEC to use all available authority to scale back the
Conflict Minerals Rule, including the following measures to reduce the significant cost and operational
burdens associated with the rule.
Adopt an exemption where disclosure is duplicative of other regulatory regimes. The Conflict Minerals Rule substantially overlaps with other domestic and international regimes, including sanctions
and anti-money laundering laws; the EU Corporate Sustainability Due Diligence Directive, the EU Conflict Minerals Regulation (Regulation (EU) 2017/821); the OECD Due Diligence Guidance for Responsible Supply Chains; and the Responsible Minerals Initiative's Responsible Minerals Assurance
Process. Companies subject to these overlapping regimes are largely repackaging substantially similar
information across multiple reporting channels at significant additional cost and with no incremental benefit to investors or to the communities the rule was designed to protect.

Permit good faith reliance on supplier representations. Society members believe one option to reduce

the significant cost and operational burden of the Conflict Minerals Rule could be permitting registrants to satisfy the reasonable country of origin inquiry ("RCOI") and due diligence requirements through good faith reliance on binding contractual representations from suppliers that, as of each sale or delivery, relevant products or materials do not originate from covered countries in a manner that would trigger disclosure. This approach would reduce reliance on extensive supplier surveys and iterative validation processes, while appropriately placing the compliance obligation on suppliers, who are best positioned to assess origin. The Society proposes this as a non-exclusive safe harbor; registrants relying on binding contractual representations from suppliers would be deemed to satisfy RCOI and due diligence requirements absent reason to doubt the representations, while remaining free to use traditional diligence processes.

Consider other amendments to alleviate the disclosure burden on registrants. The Society urges the SEC to consider all options to scale back the Conflict Minerals Rule, including (i) converting Form SD from "filed" to "furnished," (ii) eliminating the Conflict Minerals Report requirement, (iii) narrowing the scope of covered products, and (iv) adopting a de minimis threshold related to the amount of conflict minerals used by a registrant in a particular product or in its overall enterprise (e.g., if the cost of the conflict minerals in a registrant's products make up less than 5% of the registrant's consolidated total production costs, where the end product derived from conflict minerals reflects less than 5% of the value of the product, etc.).

J. Rule 13q-1 – Resource Extraction

The Society supports repeal of Section 1504 of the Dodd-Frank Act and, in the absence of legislative action, urges the SEC to use its available authority to reduce Rule 13q-1's compliance burden. 13q-1 mandates highly granular, project-level disclosure that is operational in nature and, in most cases, is not material to a registrant's financial performance, risk profile, or expected investment returns. Society members report minimal, if any, investor engagement with these disclosures. To the extent that payment-related information is material in a particular context, the Society believes it is more appropriately disclosed through MD&A, risk factors, or financial statement footnotes. Moreover, project-level disclosure can reveal commercially sensitive information—including the terms of confidential extraction agreements, the economics of individual projects, and competitive positioning in specific markets—that can be exploited by competitors.

Permit Rule 13q-1 disclosure by cross-reference to alternative report. Rule 13q-1 was designed in part to align with international resource extraction disclosure frameworks and permits registrants to satisfy U.S. disclosure obligations by submitting reports prepared under certain approved alternative regimes. However, for registrants operating across multiple jurisdictions, the rule nonetheless adds a compliance layer, with its own formatting requirements, XBRL tagging obligations, and SEC filing mechanics, without producing meaningfully different or more useful information.

Consider other targeted amendments to reduce the compliance burden. In the absence of legislative action, the Society urges the SEC to assess ways to reduce the compliance burden of Rule 13q-1, including by (i) expanding the categories of information eligible for exemptive relief, (ii) broadening recognition of alternative reporting regimes to further reduce duplicative compliance obligations for

registrants already reporting under international frameworks, and (iii) revisiting the threshold, granularity,
and scope of project-level reporting requirements, including the “not de minimis” threshold, the definition
of “payments” and the definition of “control.”

30

K. Item 104 – Mine Safety Disclosure

The Society recognizes that mine safety is a matter of significant public importance and believes that targeted amendments would reduce duplicative disclosure and alleviate undue burdens on registrants
without affecting investors’ receipt of material information.44 The Society recommends the following revisions.

Permit Item 104 disclosure by cross-reference. The information required by Item 104 is already generally publicly available through the Mine Safety and Health Administration’s (“MSHA”) Mine Data
Retrieval System, making quarterly disclosure duplicative and unnecessary. Registrants should be permitted to satisfy Item 104 by cross-referencing, without incorporation by reference, MSHA’s Mine Data Retrieval System in lieu of restating publicly available information in all periodic reports or, at minimum, in quarterly reports. If the Commission determines not to permit cross-reference to the MSHA’s Mine Data Retrieval System, the Society recommends relocating Item 104 disclosure into Form
SD and permitting registrants to satisfy Item 104 by cross-referencing to the registrant’s most recent Form
SD in all periodic reports, to better reflect the supplemental nature and alternative availability of this information.

Permit aggregation. The Society recommends permitting aggregated mine safety information by operating segment or business unit, consistent with how registrants organize and describe their mining
operations elsewhere in their periodic reports.

Refine citation and assessment reporting. The Society recommends permitting vacated and dismissed
citations to be omitted from the full dollar value of all proposed MSHA assessments and all citations and
orders received during the period, or alternatively allowing separate line-item reporting of contested versus uncontested amounts.

Clarify scope and provide scaled disclosures. The Society recommends: (i) clarifying the definitions of
“operator” and “subsidiary” under Item 104 and exempting registrants for which mining operations are
incidental to their primary business and not material to their operations, such as waste management companies, construction firms, quarry operators, and industrial manufacturers that operate sand or gravel
extraction sites; (ii) providing a scaled disclosure framework for smaller reporting companies; and (iii)
allowing wholly owned subsidiaries that independently file periodic reports to satisfy Item 104 by cross-
referencing the parent’s disclosure, without incorporation by reference.

Permit contextual disclosure. The Society recommends permitting, but not requiring, registrants to provide contextual disclosure alongside required mine safety data, including information about mine size,
type, and inspection frequency, to enable investors to assess the significance of citations and violations.

* * *
44 Section 1503(a) of the Dodd-Frank Act (as defined below) requires SEC reporting companies that operate mines subject to the
Federal Mine Safety and Health Act of 1977 to disclose certain mine safety information in their quarterly and annual periodic
reports on a mine-by-mine basis, including citations, orders, violations, proposed MHSA assessments, pending legal actions, and
mining-related fatalities. The SEC implemented this requirement through Item 104 of Regulation S-K and Exhibit 95 to periodic
reports.

The Society is grateful for this opportunity to provide the Commission with recommendations for revising
Regulation S-K "to focus on eliciting disclosure of material information and avoid compelling the disclosure of immaterial information."
Thank you for considering the Society's views. The Society welcomes the opportunity to continue engaging with the Commission on these recommendations.
Respectfully submitted,
Paul F. Washington
President & Chief Executive Officer
Society for Corporate Governance

Appendix A
Summary of Society Recommendations

Reg. S-K Item No.	Summary of Society Recommendation
101	Revise Item 101 to be more expressly principles-based. Specific recommendations: x Require information under 101(c)(1) only to the extent material to an understanding of the registrant's business taken as a whole, and permit additional disclosure helpful to an investor's understanding of the business. x Revise Item 101(c) to require disclosure on discrete topics that are not universally material only when such topics are material to the registrant. x Require Item 101 segment disclosure only to the extent it is material to an understanding of the registrant's business taken as a whole. x Eliminate 101(e)'s antiquated "available information" language.
102	Eliminate Item 102 and Instructions 1 and 2 thereto, and incorporate the physical property disclosures into Item 101(c) if, and to the extent, material to the business. Retain current instructions to Item 102 (other than 1 and 2) and relocate them to Item 101 instructions.
103	Revise Item 103 to be more expressly principles-based. Specific recommendations: x Require disclosure of material legal proceedings that have actually been filed or are known to be formally commenced and eliminate the "known to be contemplated" standard in Item 103(a). x Eliminate the separate disclosure thresholds under 103(c)(3)(ii)-(iii) in favor of the same principles-based materiality standard and safe harbors that govern disclosure of all other legal proceedings. x Clarify that a registrant is not required to disclose a legal proceeding at its inception if, based on the facts then known and a good-faith application of the traditional materiality standard, the matter is not material, and that disclosure may commence once the matter becomes material without implying that prior non-disclosure was improper.
104	Revise mine safety disclosure requirements due to disproportionate preparation burden

relative to low investor utility. Specific recommendations:
x Allow cross-referencing to MSHA's Mine Data Retrieval System in periodic reports to eliminate duplication or relocate disclosure to Form SD.
x Simplify disclosure requirements by permitting aggregation, excluding vacated/dismissed citations, narrowing definitions, enabling contextual disclosure, scaling disclosure for SRCs, and allowing subsidiaries to cross-reference to parent reports.
105 Revise Item 105 to limit liability for registrants and clarify risk factors' purpose. Specific recommendations:
x Adopt an introductory note or instruction establishing the illustrative, non-exhaustive, forward-looking nature of risk factors.
x Adopt a safe harbor from liability for risk factors that comply with that standard.
x Reinforce that risk effect descriptions should be concise.
x Eliminate the risk factor summary.
x Encourage reasonable disclosure lengths.
x Clarify the scope and type of general risk factors with illustrative examples.
A-1
106 201 303 305 403 Specific recommendations:
x Eliminate Item 106 and incorporate information if, and to the extent, it is material to a registrant in Items 101, 105, 303, and 407.
x Eliminate cybersecurity XBRL tagging, regardless of disclosure location.
x Eliminate Item 1.05 from Form 8-K.
Eliminate substantially all of Item 201 to modernize disclosures, reduce duplication, and better align registrant burden with investor needs. Specific recommendations:
x Eliminate Item 201(a)(1)(i), Item 201(b), and 201(c).
x Eliminate or revise Item 201(d). If retained, allow cross-references to existing disclosures, or require only in connection with shareholder approval of equity compensation plans.
x Eliminate Item 201(e).
Revise Item 303 to reinforce that MD&A disclosure is principles-based. Specific recommendations:
x Adopt explicit guidance that discussing immaterial line items is not required.
x Eliminate prescriptive sub-bullet items that require disclosure that is immaterial or duplicative or, if such sub-bullets are retained, make clear that registrants need only address topics material to their business.
x Eliminate 303(b)(3).
x Provide express, broad permission for registrants to cross-reference across sections of their periodic reports.
x Revise Regulation S-K as a whole to avoid redundant disclosures and harmonize Regulation S-K with Regulation S-X and other accounting standard setters' rules to reduce unnecessary duplication.
x Require year-to-date interim reporting only when it provides additive material information beyond quarter-end results.
x Expressly allow registrants to focus Item 303 disclosure on material updates since the last periodic report.
x Consider structural reforms that could reduce the chilling effects of litigation risk on MD&A disclosure, provide safe harbor for forward-looking statements in the MD&A, or revise Item 303 to suggest, rather than mandate, forward-looking disclosures.
Eliminate Item 305 as a standalone item. Incorporate into Item 303 the requirement to disclose, where material to a registrant, material market or other rate risks, their impacts, and efforts to manage those risks. Retain the Item 305 safe harbor in Item 303.

Revise Item 403 to reflect modern ownership reporting, reduce burden, and improve clarity and usefulness. Specific recommendations:
x Revise Item 403(a) to identify significant shareholders by name only or eliminate disclosure of non-insider significant shareholders entirely. Alternatively, if this requirement is kept, include safe harbor for registrant's good faith reliance on the most recent Form 13 filing or registrant's more recent records.
x Revise Item 403(b) timing standard to permit disclosures as of the end of the last fiscal year rather than "the most recent practicable date."
x Revise Item 403(b) table flexibility to allow supplemental columns to reflect insiders' total economic holdings to more closely align the table with the Section 16 reporting regime, rather than just Rule 13d-1 beneficial ownership.

404 405 407 408 x Eliminate group director and executive officer ownership disclosure.
x Permit omission of former directors and officers to allow exclusion of individuals no longer in the role as of the filing date. If retained, provide a safe harbor when relying in good faith on Section 16 filings or internal records.
x Integrate interpretive guidance into the rule text.
Revise Item 404 to require disclosure of only transactions that present real conflict risk. Specific recommendations:
x Clarify that disclosure is not required for transactions involving purchases of goods or services subject to usual trade terms or for transactions arising in the ordinary course of business and on an arm's-length basis.
x Revise the definition of "immediate family member" to include only the executive's or director's spouse, parents, children, and any family members residing in the related person's household.
x Exclude from disclosure transactions involving shareholders that have certified their status as an institutional or passive investor under either Rule 13d-1(b) or (c) of the Exchange Act.
x Increase the threshold for analysis of related parties from $120,000 to (i) $250,000 when analyzing relationships with a director or executive; and (ii) the greater of $1 million or 2% of the registrant's revenue when analyzing relationships with the registrant. Clarify that these amounts are tested at the point of interest of the director, executive, or registrant, as applicable.
x Clarify circumstances that give rise to "indirect" interest under Item 404.
x Apply the applicable financial threshold on a fiscal year basis.
x Harmonize Item 404 requirements with ASC 850, AS 2410 (formerly Auditing Standard No. 18), and Regulation S-X.
x Eliminate the requirement for registrants to describe their policies and procedures for related persons transactions.
Eliminate Item 405 in recognition that Forms 3, 4 and 5 are already publicly available to investors on EDGAR in near real time.
Revise Item 407 to better reflect modern governance practices, direct investors to the most current information, and reduce redundancy. Specific recommendations:
x Revise Item 407(a) to eliminate the requirement to apply committee-specific independence standards to the full board when the registrant does not maintain separately designated audit, nominating or compensation committees.
x Revise Item 407(c)(2)(vi) to eliminate the requirement to disclose whether the registrant has a formal diversity policy.
x Revise Item 407(e)(3)(ii) to eliminate the requirement to disclose the role of executive officers in determining or recommending executive compensation.
x Revise Items 407(c)–(e) to permit registrants to cross-reference or hyperlink to publicly available governance documents without formal incorporation by

reference.
x Revise Item 407(g) to reassess and expand scaled disclosure accommodations and exemptions for smaller reporting companies and emerging growth companies.
Eliminate Item 408. If 408(b) is retained, amend it to permit registrants to comply by one of the following: (a) including a summary of material provisions in their Form 10-K or proxy statements, (b) filing an exhibit, or (c) posting on the corporate website.
A-3
601 701 703 Conflict
Minerals
Revise Item 601 to make disclosures principles-based. Specific recommendations:
x Clarify and reinforce the ability to exclude ordinary course contracts.
x Eliminate Items 601(b)(10)(ii)(C), 601(b)(4)(vi), 601(b)(97), 601(b)(21), 601(b)(95) and 601(b)(19).
x Eliminate presumption that executive officer and director compensation contracts or arrangements are material under Item 601(b)(10)(iii)(A)-(B).
x Eliminate or simplify the fee calculation table in Item 601(b)(107)
x Eliminate or shorten exhibit lookback for newly reporting registrants in Item 601(b)(10)(i)(A).
x Clarify when legacy transaction agreements can be removed under Item 601(b)(2).
x Include Item 601(b)(10)(iii) among the enumerated exceptions in Instruction I.A.3(b) to Form S-3 so that failure to timely file management contracts or compensatory arrangements does not result in loss of Form S-3 eligibility.
x Permit the post-filing redaction of confidential information that is inadvertently disclosed in filed exhibits where such information would have been eligible for redaction under 601(a)(6), 601(b)(2)(ii) or Item 601(b)(10)(iv).
x Permit registrants, in limited circumstances, to delete from EDGAR exhibits that were filed mistakenly or without the registrant's authorization, subject to appropriate conditions.
x For Items 601(b)(2)(ii) and 601(b)(10)(iv), revise the default treatment of supplemental materials submitted to staff under Rule 418 of the Securities Act (§230.418) and Rule 12b-4 of the Exchange Act to provide that such materials are destroyed or, if requested, returned to the registrant, rather than requiring a return request.
Eliminate or significantly narrow Item 701 requirements due to disproportionate preparation burden relative to low investor utility. Specific recommendations:
x Eliminate the three-year lookback requirement.
x Reduce duplicative disclosure of use of proceeds.
x Clarify that Item 701 applies only when not otherwise addressed by the applicable form or schedule, and amend Forms 10-K and 10-Q to eliminate mandatory Item 701(a)–(e) disclosures.
Eliminate Item 703. In the alternative:
x Replace monthly disclosure of repurchases with quarterly disclosure.
x Clarify that companies are not required to disclose the shares withheld for taxes in connection with equity compensation plans.
x Clarify that registrants do not need to duplicate information regarding the total shares purchased in the quarter, the quarterly average purchase price, and/or the outstanding authorization if such is being disclosed elsewhere in the same report or was disclosed in a prior report and has not changed.
Address the rule's excessive cost and complexity by eliminating disclosure requirements through repeal or use of the available statutory off-ramps. Alternatively, significantly scale back the rule. Specific recommendations:

x Exempt companies subject to overlapping domestic and international regimes.
x Permit good faith reliance on supplier contractual representations.
x Convert Form SD from “filed” to “furnished.”
x Eliminate the Conflict Minerals Report requirement.

x Narrow the scope of covered products.
x Adopt a de minimis threshold (e.g., conflict minerals comprising less than 5% of consolidated production costs).
Resource
Extraction
Absent repeal of Section 1504, reduce compliance burdens. Specific recommendations:
x Permit disclosure by cross-reference to alternative report, rather than re-submission as an exhibit to Form SD.
x Revisit the threshold, granularity, and scope of project-level reporting requirements, including the “not de minimis” threshold, the definition of “payments” and the definition of “control.”

Appendix B
Proposed Redlines of Select Regulation S-K Items
Redline of Item 101(c)(1) of Reg. S-K
(c) Description of business. (1) Describe the business done and intended to be done by the registrant and
its subsidiaries, focusing upon the registrant’s dominant segment or, to the extent material to an understanding of the business taken as a whole, each reportable segment about which financial information is presented in the financial statements. When describing the business and each segment,
as applicable, only information material to an understanding of the business taken as a whole is required. Disclosure may include, but should not be limited to, the information specified in paragraphs
(c)(1)(i) through (vi) of this section, in each case to the extent material to an understanding of the business taken as a whole. Disclosure may include supplemental information that contributes to an understanding of the registrant’s business taken as a whole, without implying that such information is material when considered individually.
[…]
(iii) Resources material to a registrant’s business, such as:
(A) Sources and availability of raw materials; and
(B) The duration and effect of all patents, trademarks, licenses, franchises, and concessions held; and
(C) The registrant’s principal physical properties;
(iv) A description of any material portion of the business that may be subject to renegotiation of profits
or termination of contracts or subcontracts at the election of the Government;
(v) The material effects that compliance with government regulations and need for government licenses or permits may have upon the business of the registrant; and
(vi) The extent to which the business is or may be seasonal.; and
(vii) A description of the registrant’s human capital resources, including the number of persons employed by the registrant, and other human capital matters that are material to understanding the registrant’s business.

Redline of Item 101(e) of Reg. S-K
(e) Available information. Disclose the information in paragraphs (e)(1), (e)(2) and (e)(3) of this section in any registration statement you file under the Securities Act (15 U.S.C. 77a et seq.), and

disclose the information in paragraph (e)(3) of this section in your annual report on Form 10-K (§249.310 of this chapter). Further disclose the information in paragraph (e)(4) of this section if you are
an accelerated filer or a large accelerated filer (as defined in §240.12b-2 of this chapter) filing an annual
report on Form 10-K (§249.310 of this chapter):
[…]
(4) (i) Whether you make available free of charge on or through your Internet website, if you have one,
your annual report on Form 10-K, quarterly reports on Form 10-Q (§ 249.308a of this chapter), current
reports on Form 8-K (§ 249.308 of this chapter), and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Exchange Act (15 U.S.C. 78m(a) or 78o(d)) as soon as reasonably practicable after you electronically file such material with, or furnish it to, the SEC;
(ii) If you do not make your filings available in this manner, the reasons you do not do so (including, where applicable, that you do not have an Internet website); and
(iii) If you do not make your filings available in this manner, whether you voluntarily will provide electronic or paper copies of your filings free of charge upon request.
B-2
Redline of Item 102 of Reg. S-K
Instruction 1 to Item 101(c)(1)(iii)(C) 1 to Item 102:
This item requires information that will reasonably inform investors as to the suitability, adequacy, productive capacity, and extent of utilization of the principal physical properties of the registrant and its
subsidiaries, to the extent the described properties are material. A registrant should engage in a comprehensive consideration of the materiality of its properties. If appropriate, descriptions may be provided on a collective basis; detailed descriptions of the physical characteristics of individual properties
or legal descriptions by metes and bounds are not required and shall not be given.
Instruction 2 to Item 101(c)(1)(iii)(C) 2 to Item 102:
In determining materiality under this Item, the registrant should take into account both quantitative and
qualitative factors. See Instruction 1 to Item 101 of Regulation S-K (§ 229.101).
[Remaining instructions to be relocated to Item 101(c)]
Instruction 3 to Item 101(c)(1)(iii)(C) 3 to Item 102:
Registrants engaged in mining operations must refer to and, if required, provide the disclosure under §§229.1300 through 229.1305 (subpart 1300 of Regulation S-K), in addition to any disclosure required by
this section.
Instruction 4 to Item 101(c)(1)(iii)(C) 4 to Item 102:
A registrant engaged in oil and gas producing activities shall provide the information required by Subpart
1200 of Regulation S-K.
Instruction 5 to Item 101(c)(1)(iii)(C) 5 to Item 102:
The definitions in § 210.4-10(a) of Regulation S-X [17 CFR 210] shall apply to this Item with respect to
oil and gas operations.
Instruction 6 to Item 101(c)(1)(iii)(C) 6 to Item 102:
The attention of certain issuers engaged in oil and gas producing activities is directed to the information
called for in Securities Act Industry Guide 4 (referred to in § 229.801(d)).
Instruction 7 to Item 101(c)(1)(iii)(C) 7 to Item 102:

The attention of issuers engaged in real estate activities is directed to the information called for in Guide 5
(§ 229.801(e) of this chapter).
B-3
Redline of Item 103 of Reg. S-K
Item 103. Legal Proceedings.
(a) Describe briefly any material pending legal proceedings, other than ordinary routine litigation incidental to the business, to which the registrant or any of its subsidiaries is a party or of which any of
their property is the subject. Include the name of the court or agency in which the proceedings are pending, the date instituted, the principal parties thereto, a description of the factual basis alleged to underlie the proceedings and the relief sought. Include similar information as to any such proceedings
known to be contemplatedthat have been filed or are known to be commenced by governmental authorities. Information may be provided by hyperlink or cross-reference to legal proceedings disclosure
elsewhere in the document, such as in Management's Discussion & Analysis (MD&A), Risk Factors and
notes to the financial statements.
(b) No information need be given under this section for proceedings:
(1) That involve negligence or other claims or actions if the business ordinarily results in such claims or actions, unless the claim or action departs from the normal kind of such claims or actions; or
(2) That involve primarily a claim for damages if the amount involved, exclusive of interest and costs, does not exceed 10 percent of the current assets of the registrant and its subsidiaries on a consolidated basis. However, if any proceeding presents in large degree the same legal or factual issues as other proceedings pending or known to be contemplated, the amount involved in such other proceedings shall be included in computing such percentage.
(c) Notwithstanding paragraph (b) of this section, disclosure under this section shall include, but shall not
be limited to:
(1) Any material bankruptcy, receivership, or similar proceeding with respect to the registrant or any of its significant subsidiaries;
(2) Any material proceedings to which any director, officer or affiliate of the registrant, any owner of record or beneficially of more than five percent of any class of voting securities of the registrant, or any associate of any such director, officer, affiliate of the registrant, or security holder is a party adverse to the registrant or any of its subsidiaries or has a material interest adverse to the registrant or any of its subsidiaries;
(3) Administrative or judicial proceedings (including proceedings which present in large degree the same issues) arising under any Federal, State, or local provisions that have been enacted or adopted regulating the discharge of materials into the environment or primarily for the purpose of protecting the environment. Such proceedings shall not be deemed "ordinary routine litigation incidental to the business" and shall be described if:
(i) Ssuch proceeding is material to the business or financial condition of the registrant;
(ii) Such proceeding involves primarily a claim for damages, or involves potential monetary sanctions, capital expenditures, deferred charges or charges to income and the amount involved, exclusive of interest and costs, exceeds 10 percent of the current assets of the registrant and its subsidiaries on a consolidated basis; or
B-4
(iii) A governmental authority is a party to such proceeding and such proceeding involves potential monetary sanctions, unless the registrant reasonably believes that such proceeding will result in no monetary sanctions, or in monetary sanctions, exclusive of

interest and costs, of less than $300,000 or, at the election of the registrant, such other threshold that (A) the registrant determines is reasonably designed to result in disclosure of any such proceeding that is material to the business or financial condition is disclosed, (B) the registrant discloses (including any change thereto) in each annual and quarterly report, and (C) does not exceed the lesser of $1 million or one percent of the current assets of the registrant and its subsidiaries on a consolidated basis; provided, however, that such proceedings that are similar in nature may be grouped and described generically.

Instructions to Item 103.

1. Item 103(a) requires registrants to provide particular information regarding pending legal proceedings. Registrants are not required to disclose matters in preliminary stages where, based on the facts available, the registrant reasonably concludes that the matter is not material. If a registrant later determines that a previously undisclosed matter has become material it may commence disclosure at that time. Such disclosure shall not be deemed an admission or implication that the prior omission was improper.

2. Item 103(b)(2) states that disclosure is not required for proceedings that involve primarily a claim for damages if the amount involved, exclusive of interest and costs, does not exceed 10 percent of the current assets of the registrant and its subsidiaries on a consolidated basis. This requirement does not create a presumption in any way that a claim exceeding 10 percent of the current assets of the registrant and its subsidiaries on a consolidated basis is material.

Redline of Item 105 of Reg. S-K

Preliminary Note:

Certain basic principles are essential to understanding registrants' responsibilities when preparing, and investors' ability to rely on, the information required by this Item.

Risk factors are intended to identify examples of material factors that could make an investment in the registrant or the offering speculative or risky. A registrant is not required to identify every risk or to describe every aspect, manifestation, or potential consequence of a risk, or all circumstances under which a risk could arise or all potential impacts of such

1. risk.

2. 3. Information disclosed in response to this Item is forward-looking, and reflects the registrant's opinions about the material risks that could affect the registrant in the future. No such disclosure shall be deemed to constitute an express or implied assertion concerning any current or past fact.

If a registrant discloses examples of risk factors that have materialized in the past in response to this Item, such disclosures should be understood as illustrative examples only. Such disclosures should not be interpreted as a complete listing of every instance where a risk has materialized or a representation as to the likelihood of the risk materializing in the future.

4. 5. A registrant is not required, solely for purposes of this Item, to disclose whether a risk factor has occurred in the past, is currently occurring, or may occur in the future. Disclosure of such information may be required pursuant to other applicable provisions of this subpart, including Item 303 (§ 229.303).

A reasonable investor is presumed to understand that broadly publicized national or global events are reasonably likely to affect most companies, and a registrant need not provide disclosure under this Item regarding such events. Disclosure of such information may be required pursuant to other applicable provisions of this subpart, including Item 303 (§ 229.303).

(a) Where appropriate, provide under the caption "Risk Factors" a discussion of the material factors that

could make an investment in the registrant or offering speculative or risky. This discussion must be organized logically with relevant headings and each risk factor should be set forth under a

subcaption that
adequately describes the risk.
(b) The presentation of risks that could apply generically to any registrant or any offering is discouraged.
Generic risk factors can include failures in internal controls or disclosure procedures; stock market volatility; global or national economic events, such as recessions or financial crises; global public health events; and geopolitical events, such as wars and armed conflicts. , but to the extent generic risk factors are presented, disclose them at the end of the risk factor section under the caption "General
Risk Factors."
(b)(c) Provide concise examples of Concisely explain how each risk affects could materially affect [or is reasonably likely to materially affect] the registrant or the securities being offered. To the extent generic risk factors are presented, explain why the generic risks identified are material to the
B-6
registrant. If the discussion is longer than 15 pages, include in the forepart of the prospectus or annual
report, as applicable, a series of concise, bulleted or numbered statements that is no more than two pages
summarizing the principal factors that make an investment in the registrant or offering speculative or risky.
(d) If the risk factor discussion is included in a registration statement, it must immediately follow the summary section required by § 229.503 (Item 503 of Regulation S-K). If you do not include a summary
section, the risk factor section must immediately follow the cover page of the prospectus or the pricing
information section that immediately follows the cover page. Pricing information means price and price-
related information that you may omit from the prospectus in an effective registration statement based on
Rule 430A (§ 230.430A of this chapter). The registrant must furnish this information in plain English. See
§ 230.421(d) of Regulation C of this chapter.
(e) Safe Harbor.
(1) The safe harbor provided in Section 27A of the Securities Act of 1933 (15 U.S.C. 77z-2) and Section 21E of the Securities Exchange Act of 1934 (15 U.S.C. 78u-5) ("statutory safe harbors") shall apply, with respect to all types of issuers and transactions, to information provided pursuant to paragraphs (a) and (b) of this Item 105, provided that the disclosure is made by: an issuer; a person acting on behalf of the issuer; an outside reviewer retained by the issuer making a statement on behalf of the issuer; or an underwriter, with respect to information provided by the issuer or information derived from information provided by the issuer.
(2) For purposes of paragraph (e)(1) of this Item 105 only:
(i) All information required by paragraphs (a) and (b) of this Item 105 is considered forward looking statements for purposes of the statutory safe harbors, except for historical facts such as examples of past events demonstrating the nature of risk events that could occur; and
(ii) With respect to information required by paragraphs (a) and (b) of this Item 105, the meaningful cautionary statements prong of the statutory safe harbors will be satisfied if a registrant satisfies the requirements of paragraph (c) of this Item 105.
(3) Information provided in response to this Item 105 should not be deemed false or misleading based on the omission of a current or past fact. Notwithstanding the foregoing, if a registrant makes an affirmative factual representation about a current or past fact in

response to this Item 105, then the registrant could violate the federal securities laws if that representation is false or misleading.

Instructions to Item 105.

1. The registrant need not provide and is discouraged from providing an exhaustive list of all possible risks or effects the registrant may face or has faced.

2. Registrants are encouraged to avoid duplicative risk impact disclosure. Registrants may instead include a description of the potential impacts posed by a risk materializing only one time at the forefront of their risk factor discussion. Registrants that include risk impact disclosure in this manner will be deemed to have satisfied the disclosure requirements under paragraph [(c)] of this Item.

Redline of Item 303 of Reg. S-K

(Item 303) Management's discussion and analysis of financial condition and results of operations.

(b)

(2) Results of operations.

(i) Describe any unusual or infrequent events or transactions or any significant economic changes that materially affected the amount of reported income from continuing operations and, in each case, indicate the extent to which income was so affected. In addition, describe any other significant components of revenues or expenses that, in the registrant's judgment, would be material to an understanding of the registrant's results of operations.

(ii) Describe any known trends or uncertainties that have had or that are reasonably likely to have a material favorable or unfavorable impact on net sales or revenues or income from continuing operations.

If the registrant knows of events that are reasonably likely to cause a material change in the relationship between costs and revenues (such as known or reasonably likely future increases in costs of labor or materials or price increases or inventory adjustments), the change in the relationship must be disclosed.

(iii) If the statement of comprehensive income presents material changes from period to period in net sales or revenue, if applicable, describe the extent to which such changes are attributable to changes in prices or to changes in the volume or amount of goods or services being sold or to the introduction of new products or services.

(iv) To the extent material to an understanding of the registrant’s financial condition and results of operations, describe (A) (1) the registrant's primary market risk exposures and (2) how such risk exposures are managed and (B) the actual or potential changes in interest rates, foreign currency exchange rates, commodity prices, equity price risk or other relevant market rates or prices that have had or that are reasonably likely to have a material favorable or unfavorable impact on earnings, fair values, or cash flows from market risk-sensitive instruments. To the extent material, describe any changes to the registrant’s primary market risk exposures or how such risk exposures are managed, including any changes to models, assumptions and parameters or instruments, positions and transactions that had, or that are reasonably likely to have, a material impact on the sensitivity of the registrant’s earnings, fair values, or cash flows from market risk-sensitive instruments.

[Safe Harbor for Item 305 to be relocated to a new Item 303(d)]

(d) Safe harbor.

(1) The safe harbor provided in Section 27A of the Securities Act of 1933 (15 U.S.C. 77z-2) and Section 21E of the Securities Exchange Act of 1934 (15 U.S.C. 78u-5) ("statutory safe harbors") shall apply, with respect to all types of issuers and transactions, to information provided pursuant to paragraphs (b)(2)(iva), (b), and (c) of this Item 303305, provided that the disclosure is made by: an issuer; a person acting on behalf of the issuer; an outside reviewer retained by the issuer making a statement on behalf of the issuer; or an underwriter, with respect to information provided by the issuer or information derived from information provided by the issuer.
(2) For purposes of paragraph (d) of this Item 305 only:(i) All information required by paragraphs (b)(2)(iv)(A)(1) and (B) (a), (b)(1)(i), (b)(1)(iii), and (c) of this Item 303305 is considered forward looking statements for purposes of the statutory safe harbors, except for historical facts such as the terms of particular contracts and the number of market risk sensitive instruments held during or at the end of the reporting period; and

(ii) With respect to paragraph (a) of this Item 305, the meaningful cautionary statements prong of the statutory safe harbors will be satisfied if a registrant satisfies all requirements of that same paragraph (a) of this Item 305.
(3) Critical accounting estimates. Critical accounting estimates are those estimates made in accordance with generally accepted accounting principles that involve a significant level of estimation
uncertainty and have had or are reasonably likely to have a material impact on the financial condition
or results of operations of the registrant. Provide qualitative and quantitative information necessary to
understand the estimation uncertainty and the impact the critical accounting estimate has had or is reasonably likely to have on financial condition or results of operations to the extent the information is material and reasonably available. This information should include why each critical accounting estimate is subject to uncertainty and, to the extent the information is material and reasonably available, how much each estimate and/or assumption has changed over a relevant period, and the sensitivity of the reported amount to the methods, assumptions and estimates underlying its calculation.
[Note to centralize critical accounting estimate discussion in financial statements.]
Instructions to paragraph (b):
2. If the reasons underlying a material change in one line item in the financial statements also relate to
other line items, no repetition of such reasons in the discussion is required and a line-by-line analysis of
the financial statements as a whole is neither required nor generally appropriate. Discussion of immaterial line items, in particular, is not required. Registrants need not recite the amounts of changes from period to period if they are readily computable from the financial statements. The discussion must not merely repeat numerical data contained in the financial statements.
3. Provide the analysis in a format that facilitates easy understanding and that supplements, and does not
duplicate, disclosure already provided in the filing. For critical accounting estimates, this disclosure must
supplement, but not duplicate, the description of accounting policies or other disclosures in the notes to
the financial statements.
12. Information may be provided by hyperlink or cross-reference to disclosure elsewhere in the document, such as in Item 101 (Description of Business), Item 103 (Legal Proceedings), Item 105 (Risk Factors) notes to the financial statements, and other portions of Item 303 (MD&A).
(c) Interim periods. If interim period financial statements are included or are required to be included by 17 CFR 210.3 [Article 3 of Regulation S-X], a management's discussion and analysis of the

financial
condition and results of operations must be provided so as to enable the reader to assess material changes
in financial condition and results of operations between the periods specified in paragraphs (c)(1) and (2)
of this section. The discussion and analysis must include a discussion of material changes in those items
specifically listed in paragraph (b) of this section.
(1) Material changes in financial condition. Discuss any material changes in financial condition from the end of the preceding fiscal year to the date of the most recent interim balance sheet provided. If the
interim financial statements include an interim balance sheet as of the corresponding interim date of the preceding fiscal year, discuss any material changes in financial condition from that date to the date
of the most recent interim balance sheet provided also must be discussed. If material to an understanding of the interim period, discuss any material changes in financial condition from the end of the preceding fiscal year to the date of the most recent interim balance sheet provided. If discussions of changes from both the end and the corresponding interim date of the preceding fiscal year are required, the discussions may be combined at the discretion of the registrant.

(2) Material changes in results of operations.
(i) Discuss any material changes in the registrant's results of operations with respect to the most recent fiscal year-to-date period for which a statement of comprehensive income is provided and the corresponding year-to-date period of the preceding fiscal year.Discuss any material changes in the registrant's results of operations with respect to either the most recent quarter for which a statement of comprehensive income is provided and the corresponding quarter for the preceding fiscal year or, in the alternative, the most recent quarter for which a statement of comprehensive income is provided and the immediately preceding sequential quarter. If the latter immediately preceding sequential quarter is discussed, then provide in summary form the financial information for that immediately preceding sequential quarter that is subject of the discussion or identify the registrant's prior filings on EDGAR that present such information. If there is a change in the form of presentation from period to period that forms the basis of comparison from previous periods provided pursuant to this paragraph, the registrant must discuss the reasons for changing the
basis of comparison and provide both comparisons in the first filing in which the change is made.
(ii) If material to an understanding of the interim period, discuss any material changes in the registrant's results of operations with respect to the most recent fiscal year-to-date period for which a statement of comprehensive income is provided and the corresponding year-to-date period of the preceding fiscal year.
Instructions to paragraph (c):
3. Registrants are expressly permitted to focus discussion on material changes since the last annual report or prior interim disclosure, including developments in results of operations, liquidity, capital resources, and known trends and uncertainties, while incorporating prior background or foundational disclosure by reference.

Redline of 403 of Reg. S-K
(a) Security ownership of certain beneficial owners.45 Furnish the following information, as of the most recent practicable date, substantially in the tabular form indicated, with respect to any person (including any “group” as that term is used in section 13(d)(3) of the Exchange Act) who is known to the
registrant to be the beneficial owner of more than five percent of any class of the registrant's voting securities. The address given in column (2) may be a business, mailing or residence address. Show

in column
(3) the total number of shares beneficially owned and in column (4) the percentage of class so owned. Of the
number of shares shown in column (3), indicate by footnote or otherwise the amount known to be shares with
respect to which such listed beneficial owner has the right to acquire beneficial ownership, as specified in Rule
13d-3(d)(1) under the Exchange Act (§ 240.13d-3(d)(1) of this chapter).
(1) Title
of class
(2) Name and address
of beneficial owner
(3) Amount and nature
of beneficial
ownership*
(4) Percent
of class*
(b) Security ownership of management. Furnish the following information, as of the end of the registrant's most recently completed fiscal year endmost recent practicable date, in substantially the tabular form indicated, as to each class of equity securities of the registrant or any of its parents or subsidiaries, including directors' qualifying shares, beneficially owned by all directors and director nominees, naming them, each of the named executive officers as defined in Item 402(a)(3) (§ 229.402(a)(3)), and directors and executive officers of the registrant as a group, without naming them.
Show in column (3) the total number of shares beneficially owned, and in column (4) the percent of the class
so owned. Of the number of shares shown in column (3), indicate, by footnote or otherwise, the amount of
shares that are pledged as security and the amount of shares with respect to which such persons have the
right to acquire beneficial ownership as specified in § 240.13d-3(d)(1) of this chapter.
(1)
Title of
class
(2)
Name of beneficial
owner
(3) Amount and nature of
beneficial ownership
(4)
Percent of
class
(c) Changes in control. Describe any arrangements, known to the registrant, including any pledge by any
person of securities of the registrant or any of its parents, the operation of which may at a subsequent date
result in a change in control of the registrant.
Instructions to Item 403: 1. The percentages are to be calculated on the basis of the amount of outstanding
securities, excluding securities held by or for the account of the registrant or its subsidiaries, plus
securities deemed outstanding pursuant to Rule 13d-3(d)(1) under the Exchange Act 17 (CFR 240.13d-

3(d)(1)). For purposes of paragraph (b), if the percentage of shares beneficially owned by any director or
nominee, or by all directors and officers of the registrant as a group, does not exceed one percent of the
class so owned, the registrant may, in lieu of furnishing a precise percentage, indicate this fact by means
of an asterisk and explanatory footnote or other similar means.
45 Alternatively, delete Item 403(a) in its entirety.

2. For the purposes of this Item, beneficial ownership shall be determined in accordance with Rule 13d-3
under the Exchange Act (§ 240.13d-3 of this chapter). Include such additional subcolumns or other appropriate explanation of column (3) necessary to reflect amounts as to which the beneficial owner has
(A) sole voting power, (B) shared voting power, (C) sole investment power, or (D) shared investment power. At its election, the registrant may include additional information as to a beneficial owner's holdings determined without regard to the standard of beneficial ownership provided in § 240.13d 3(d)(1) of this chapter in one or more supplemental columns to the table.
3. The information required by Item 403(a)(1) will not be deemed to be incorporated by reference into any filing under the Securities Act or the Exchange Act, except to the extent that the registrant specifically incorporates it by reference. The registrant shall be deemed to know the contents of any statements filed with the Commission pursuant to section 13(d) or 13(g) of the Exchange Act. When applicable, a registrant may rely upon information set forth in such statements unless the registrant knows
or has reason to believe that such information is not complete or accurate or that a statement or amendment should have been filed and was not.
4. For purposes of furnishing information pursuant to paragraph (a) of this Item, the registrant may indicate
the source and date of such information.
4.5. Where more than one beneficial owner is known to be listed for the same securities, appropriate disclosure should be made to avoid confusion. For purposes of paragraph (b), in computing the aggregate
number of shares owned by directors and officers of the registrant as a group, the same shares shall not be
counted more than once.
5. Information need not be furnished pursuant to paragraph (b) of this Item for any director, named executive officer, or officer who is no longer serving in such capacity as of the date the registrant files the applicable report or proxy statement containing the disclosure required
by this Item.
6. Paragraph (c) of this Item does not require a description of ordinary default provisions contained in the charter, trust indentures or other governing instruments relating to securities of the registrant.
7. Where the holder(s) of voting securities reported pursuant to paragraph (a) hold more than five percent of any class of voting securities of the registrant pursuant to any voting trust or similar agreement, state the title of such securities, the amount held or to be held pursuant to the trust or agreement (if not clear from the table) and the duration of the agreement. Give the names and addresses of the voting trustees and outline briefly their voting rights and other powers under the trust or agreement.

Redline of Item 404(a) of Reg S-K.
Transactions with related persons. Describe any transaction, since the beginning of the registrant's last
fiscal year, or any currently proposed transaction, in which (i) the registrant was or is to be a

participant,
and (ii) the amount involved exceeds $250120,000, (iii) the registrant's interest in the transaction exceeds the greater of $1,000,000 or 2% of the registrant's consolidated revenues as of the end of the most recently completed fiscal year, and in which and (iv) any related person had or will have a direct or indirect material interest that exceeds $250,000. Disclose the following information regarding
the transaction:
(1) The name of the related person and the basis on which the person is a related person.
(2) The related person's interest in the transaction with the registrant, including the related person's position(s) or relationship(s) with, or ownership in, a firm, corporation, or other entity that is a party to, or
has an interest in, the transaction.
(3) The approximate dollar value of the amount involved in the transaction.
(4) The approximate dollar value of the amount of the related person's interest in the transaction, which
shall be computed without regard to the amount of profit or loss.
(5) In the case of indebtedness, disclosure of the amount involved in the transaction shall include the largest aggregate amount of principal outstanding during the period for which disclosure is provided, the
amount thereof outstanding as of the latest practicable date, the amount of principal paid during the periods for which disclosure is provided, the amount of interest paid during the period for which disclosure is provided, and the rate or amount of interest payable on the indebtedness.
(6) Any other information regarding the transaction or the related person in the context of the transaction
that is material to investors in light of the circumstances of the particular transaction.
Instructions to Item 404(a). 1. For the purposes of paragraph (a) of this Item, the term related person means:
a. Any person who was in any of the following categories at any time during the specified period for which disclosure under paragraph (a) of this Item is required:
i. Any director or executive officer of the registrant;
ii. Any nominee for director, when the information called for by paragraph (a) of this Item is being presented in a proxy or information statement relating to the election of that nominee for director; or
iii. Any immediate family member of a director or executive officer of the registrant, or of any nominee
for director when the information called for by paragraph (a) of this Item is being presented in a proxy or
information statement relating to the election of that nominee for director, which means any child, stepchild, parent, stepparent, spouse, sibling, mother-in-law, father-in-law, son-in-law, daughter-in-law,
brother-in-law, or sister-in-law of such director, executive officer or nominee for director, and any person
(other than a tenant or employee) sharing the household of such director, executive officer or nominee for
director; and
b. Any person who was in any of the following categories when a transaction in which such person had a
direct or indirect material interest occurred or existed:

i. A security holder covered by Item 403(a) (§ 229.403(a)), provided that a security holder covered by Item 403(a) will not be deemed a related person if it discloses its ownership on Schedule 13G pursuant to section 13(g) of the Exchange Act and Rules 13d-1(b) or (c) (§ 240.13d-3(b) and (c) of this chapter) thereunder; or

ii. Any immediate family member of any such security holder, which means any child, stepchild, parent,
stepparent, spouse, sibling, mother-in-law, father-in-law, son-in-law, daughter-in-law, brother-in-law, or
sister-in-law of such security holder, and any person (other than a tenant or employee) sharing the household of such security holder.
2. For purposes of paragraph (a) of this Item, a transaction includes, but is not limited to, any financial
transaction, arrangement or relationship (including any indebtedness or guarantee of indebtedness) or any
series of similar transactions, arrangements or relationships.
3. The amount involved in the transaction shall be computed by determining the dollar value of the amount involved in the transaction in question. For an ongoing or completed transaction such amounts shall be computed based on the amount involved during the registrant's most recently completed fiscal year, which shall include:
a. In the case of any lease or other transaction providing for periodic payments or installments, the aggregate amount of all periodic payments or installments due on or after the beginning of the registrant's
last during the fiscal year with respect to which disclosure is required, including any required or optional payments due during or at the conclusion of the lease or other transaction providing for periodic
payments or installments during the fiscal year with respect to which disclosure is required; and
b. In the case of indebtedness, the largest aggregate amount of all indebtedness outstanding at any time
during since the beginning of the registrant's last fiscal year and all amounts of interest payable on it during the last fiscal year.
4.a. In the case of a transaction involving indebtedness Disclosure need not be provided of:
i. ordinary-course purchases or sales of goods or services subject to usual trade terms; or
ii. arm's-length transactions in the ordinary course of business (as well as for any indebtedness arising from such transaction).
The following items of indebtedness may be excluded from the calculation of the amount of indebtedness
and need not be disclosed: Amounts due from the related person for purchases of goods and services
subject to usual trade terms, for ordinary business travel and expense payments and for other transactions
in the ordinary course of business;
b. Disclosure need not be provided of any indebtedness transaction for the related persons specified in
Instruction 1.b. to paragraph (a) of this Item; and
c. If the lender is a bank, savings and loan association, or broker-dealer extending credit under Federal
Reserve Regulation T (12 CFR part 220) and the loans are not disclosed as past due, nonaccrual or troubled debt restructurings in the consolidated financial statements, disclosure under paragraph (a) of this
Item may consist of a statement, if such is the case, that the loans to such persons:
i. Were made in the ordinary course of business;

ii. Were made on substantially the same terms, including interest rates and collateral, as those prevailing
at the time for comparable loans with persons not related to the lender; and
iii. Did not involve more than the normal risk of collectibility or present other unfavorable features.

5.a. Disclosure of an employment relationship or transaction involving an executive officer and any related compensation solely resulting from that employment relationship or transaction need not be provided pursuant to paragraph (a) of this Item if:
i. The compensation arising from the relationship or transaction is reported pursuant to Item 402 (§ 229.402);
ii. The executive officer is not an immediate family member (as specified in Instruction 1 to paragraph (a)
of this Item) and such compensation would have been reported under Item 402 (§ 229.402) as compensation earned for services to the registrant if the executive officer was a named executive officer
as that term is defined in Item 402(a)(3) (§ 229.402(a)(3)), and such compensation had been approved, or
recommended to the board of directors of the registrant for approval, by the compensation committee of
the board of directors (or group of independent directors performing a similar function) of the registrant;
or
iii. The transaction involves the recovery of erroneously awarded compensation computed as provided in
17 CFR 240.10D-1(b)(1)(iii) and the applicable listing standards for the registrant's securities, that is disclosed pursuant to Item 402(w) (§ 229.402(w)).
b. Disclosure of compensation to a director need not be provided pursuant to paragraph (a) of this Item if
the compensation is reported pursuant to Item 402(k) (§ 229.402(k)).
6. A person who has a position or relationship with a firm, corporation, or other entity that engages in a
transaction with the registrant shall not be deemed to have an indirect material interest within the meaning
of paragraph (a) of this Item where:
a. The interest arises only:
i. From such person's position as a director of another corporation or organization that is a party to the
transaction; or
ii. From the direct or indirect ownership by such person and all other persons specified in Instruction 1 to
paragraph (a) of this Item, in the aggregate, of less than a ten percent equity interest in another person
(other than a partnership) which is a party to the transaction; or
iii. From both such position and ownership; or
b. The interest arises only from such person's position as a limited partner in a partnership in which the
person and all other persons specified in Instruction 1 to paragraph (a) of this Item, have an interest of less
than ten percent, and the person is not a general partner of and does not hold another position in the partnership.
7. Disclosure need not be provided pursuant to paragraph (a) of this Item if:
a. The transaction is one where the rates or charges involved in the transaction are determined by B-15
competitive bids, or the transaction involves the rendering of services as a common or contract carrier, or
public utility, at rates or charges fixed in conformity with law or governmental authority;
b. The transaction involves services as a bank depositary of funds, transfer agent, registrar, trustee

under a
trust indenture, or similar services; or
c. The interest of the related person arises solely from the ownership of a class of equity securities of the
registrant and all holders of that class of equity securities of the registrant received the same benefit on a
pro rata basis.
8. A registrant will be deemed to have complied with this Item if it relies in good faith upon publicly available information or information otherwise known to it in determining whether a transaction exists with a related person that requires disclosure.
B-16
Redline of 407(a) of Reg. S-K
(a) Director independence. Identify each director and, when the disclosure called for by this paragraph is
being presented in a proxy or information statement relating to the election of directors, each nominee for
director, that is independent under the independence standards applicable to the registrant under paragraph (a)(1) of this Item. In addition, if such independence standards contain independence requirements for committees of the board of directors, identify each director that is a member of the compensation, nominating or audit committee that is not independent under such committee independence standards. If the registrant does not have a separately designated audit, nominating or
compensation committee or committee performing similar functions, the registrant must provide the disclosure of directors that are not independent with respect to all members of the board of directors applying such committee independence standards.
[Instruction] 3. The description of the specific categories or types of transactions, relationships or arrangements required by paragraph (a)(3) of this Item must be provided in such detail as is necessary to
fully describe the nature of the transactions, relationships or arrangements.
Redline of 407(b)(2) of Reg. S-K
(b) Board meetings and committees; annual meeting attendance. […]
Instruction to Item 407(b)(2). In lieu of providing the information required by paragraph (b)(2) of this Item in the proxy statement, the registrant may instead provide the registrant's Web site address where
such information appears.
Redline of 407(c)(2)(vi) of Reg. S-K
(c) Nominating committee. […]
(2) Provide the following information regarding the registrant’s director nomination process: […]
(vi) Describe the nominating committee’s process for identifying and evaluating nominees for director,
including nominees recommended by security holders, and any differences in the manner in which the
nominating committee evaluates nominees for director based on whether the nominee is recommended by
a security holder, and whether, and if so how, the nominating committee (or the board) considers diversity
in identifying nominees for director. If the nominating committee (or the board) has a policy with regard
to the consideration of diversity in identifying director nominees, describe how this policy is implemented, as well as how the nominating committee (or the board) assesses the effectiveness of its
policy;

Redline of 407(e)(3)(ii) of Reg. S-K
(ii) Any role of executive officers in determining or recommending the amount or form of executive and
director compensation;
Redline of 407(c)-(e) of Reg. S-K
[Add new instruction:] “A registrant may satisfy any narrative description required by paragraphs (c), (d) or (e) of this Item by providing a clear cross-reference or hyperlink to the applicable committee charter or other publicly available governance document, provided that the referenced document clearly
sets forth the information required by the applicable paragraph. A cross-reference or hyperlink provided

pursuant to this Instruction shall satisfy the disclosure requirement of the applicable paragraph and shall
not, solely by reason of such cross-reference or hyperlink, be deemed incorporated by reference into any
filing under the Securities Act or the Exchange Act, except to the extent the registrant specifically incorporates the document by reference.”

Redline of Item 601(b) of Reg. S-K
(b) Description of exhibits. Set forth below is a description of each document listed in the exhibit tables.
[…]
(2) Plan of acquisition, reorganization, arrangement, liquidation, or succession.
(i) Any material plan of acquisition, disposition, reorganization, readjustment, succession, liquidation, or arrangement and any amendments thereto described in the statement or report.
(ii) The registrant may redact specific provisions or terms of exhibits required to be filed by paragraph (b)(2) of this section if the registrant customarily and actually treats that information as private or confidential and if the omitted information is not material. If it does so, the registrant should mark the exhibit index to indicate that portions of the exhibit or exhibits have been omitted and include a prominent statement on the first page of the redacted exhibit that certain identified information has been excluded from the exhibit because it is both not material and is the type that the registrant treats as private or confidential. The registrant also must include brackets indicating where the information is omitted from the filed version of the exhibit. If requested by the Commission or its staff, the registrant must promptly provide on a supplemental basis an unredacted copy of the exhibit and its materiality and privacy or confidentiality analyses. Upon evaluation of the registrant's supplemental materials, the Commission or its staff may require the registrant to amend its filing to include in the exhibit any previously redacted information that is not adequately supported by the registrant's analyses. The registrant may request confidential treatment of the supplemental material submitted under this paragraph (b)(2)(ii) pursuant to § 200.83 of this chapter while it is in the possession of the Commission or its staff. After completing its review of the supplemental information, the Commission or its staff will return or destroy it if the registrant complies with the procedures outlined in § 230.418 or 240.12b-4 of this chapter.
(ii) The registrant may omit the exhibits otherwise required to be filed by paragraph (b)(2) of this section if the relevant acquisition, disposition, reorganization, readjustment, succession, liquidation, or arrangement was completed more than two full fiscal years prior to the statement or report being filed.
(4) Instruments defining the rights of security holders, including indentures.
(vi) For each class of securities that is registered under Section 12 of the Exchange Act,

provide the information required by Item 202(a) through (d) and (f) of Regulation S-K (§ 229.202 of this chapter).
Instruction 1 to paragraph (b)(4)(vi). A registrant is only required to provide the information called for by Item 601(b)(4)(vi) if it is filing an annual report under Exchange Act Section 13(a) or 15(d).
Instruction 2 to paragraph (b)(4)(vi). For purposes of Item 601(b)(4)(vi), all references in Item 202 to securities to be or being registered, offered, or sold will mean securities that are registered as of the end of the period covered by the report with which the exhibit is filed. In addition, for purposes of this Item, the disclosure will be required for classes of securities that have not been retired by the end of the period covered by the report.

Instruction 3 to paragraph (b)(4)(vi). The registrant may incorporate by reference to an exhibit previously filed in satisfaction of Item 601(b)(4)(vi) of Regulation S-K, as applicable, so long as there has not been any change to the information called for by Item 202 (§ 229.202 of this chapter) since the filing date of the linked filing. Such hyperlink will be deemed to satisfy the requirements of Item 601(b)(4)(vi) for the current filing.
(10) Material contracts.
(i)
(A) Every contract not made in the ordinary course of business that is material to the registrant and is to be performed in whole or in part at or after the filing of the registration statement or report. In addition, for newly reporting registrants, every contract not made in the ordinary course of business that is material to the registrant and that was entered into not more than two years before the date on which such registrant:
(1) First files a registration statement or report; or
(2) Completes a transaction that had the effect of causing it to cease being a public shell company
(B) The only contracts that need to be filed are those to which the registrant or a subsidiary of the registrant is a party or has succeeded to a party by assumption or assignment or in which the registrant or such subsidiary has a beneficial interest.
(ii) If theA contract is such as ordinarily accompanies the kind of business conducted by the registrant and its subsidiaries, it will be deemed to have been made in the ordinary course of business and need notmust be filed unlessif it falls within one or more of the following categories, in which case it shall be filed except where immaterial in amount or significance or made in the ordinary course of the business: […]
(B) Any contract upon which the registrant's business is substantially dependent, as in the case of continuing contracts to sell the major part of registrant's products or services or to purchase the major part of registrant's requirements of goods, services or raw materials or any franchise or license or other agreement to use a patent, formula, trade secret, process or trade name upon which registrant's business depends to a material extent; […]; or
(C) Any contract calling for the acquisition or sale of any property, plant or equipment for a consideration exceeding 15 percent of such fixed assets of the registrant on a consolidated basis; or
(CD) Any material lease under which a part of the property described in the registration statement or report is held by the registrant.
(iii)
(A) Any management contract or any compensatory plan, contract or arrangement, including but not limited to plans relating to options, warrants or

rights, pension, retirement or deferred compensation or bonus, incentive or profit

sharing (or if not set forth in any formal document, a written description thereof) in which any director or any of the named executive officers of the registrant, as defined by Item 402(a)(3) (§ 229.402(a)(3)), participates shall be deemed material and shall be filed; and any other management contract or any other compensatory plan, contract, or arrangement in which any other executive officer of the registrant participates shall be filed unless immaterial in amount or significance.

(B) Any compensatory plan, contract or arrangement adopted without the approval of security holders pursuant to which equity may be awarded, including, but not limited to, options, warrants or rights (or if not set forth in any formal document, a written description thereof), in which any employee (whether or not an executive officer of the registrant) participates shall be filed unless immaterial in amount or significance. A compensation plan assumed by a registrant in connection with a merger, consolidation or other acquisition transaction pursuant to which the registrant may make further grants or awards of its equity securities shall be considered a compensation plan of the registrant for purposes of the preceding sentence.

(AC) Notwithstanding paragraph (b)(10)(iii)(A) above, theThe following management contracts or compensatory plans, contracts or arrangements need not be filed:

(1) Ordinary purchase and sales agency agreements.

(2) Agreements with managers of stores in a chain organization or similar organization.

(3) Contracts providing for labor or salesmen's bonuses or payments to a class of security holders, as such.

(4) Any compensatory plan, contract or arrangement which pursuant to its terms is available to employees, officers or directors generally and which in operation provides for the same method of allocation of benefits between management and nonmanagement participants.

(5) Any compensatory plan, contract or arrangement if the registrant is a foreign private issuer that furnishes compensatory information under Item 402(a)(1) (§ 229.402(a)(1)) and the public filing of the plan, contract or arrangement, or portion thereof, is not required in the registrant's home country and is not otherwise publicly disclosed by the registrant.

(6) Any compensatory plan, contract, or arrangement if the registrant is a wholly owned subsidiary of a company that has a class of securities registered pursuant to section 12 or files reports pursuant to section 15(d) of the Exchange Act and is filing a report on Form 10-K or registering debt instruments or preferred stock that are not voting securities on Form S-1.

(19) Insider trading policies and procedures. Any insider trading policies and procedures, or amendments thereto, that are the subject of the disclosure required by § 229.408(b) (Item 408(b) of Regulation S-K).

(21) Subsidiaries of the registrant.

(i) List all subsidiaries of the registrant, the state or other jurisdiction of incorporation or organization of each, and the names under which such subsidiaries do business. This list may be incorporated by reference from a document which includes a complete and accurate list.

(ii) The names of particular subsidiaries may be omitted if the unnamed subsidiaries, considered in the aggregate as a single subsidiary, would not constitute a significant

subsidiary as of the end of the year covered by this report. (See the definition of "significant subsidiary" in Rule 1-02(w) (17 CFR 210.1-02(w)) of Regulation S-X.) The names of consolidated wholly-owned multiple subsidiaries carrying on the same line of business, such as chain stores or small loan companies, may be omitted, provided the name of the immediate parent, the line of business, the number of omitted subsidiaries operating in the United States and the number operating in foreign countries are given. This instruction shall not apply, however, to banks, insurance companies, savings and loan associations or to any subsidiary subject to regulation by another Federal agency.
(95) Mine Safety Disclosure Exhibit. A registrant that is an operator, or that has a subsidiary that is an operator, of a coal or other mine must provide the information required by Item 104 of Regulation S-K (§ 229.104 of this chapter) in an exhibit to its Exchange Act annual or quarterly report. For purposes of this Item:
(1) Paragraph tools not available for sections that do not have unique paragraph numbers. The term coal or other mine means a coal or other mine, as defined in section 3 of the Federal Mine Safety and Health Act of 1977 (30 U.S.C. 802), that is subject to the provisions of such Act (30 U.S.C. 801 et seq).
(2) The term operator has the meaning given the term in section 3 of the Federal Mine Safety and Health Act of 1977 (30 U.S.C. 802).
(3) The term subsidiary has the meaning given the term in Exchange Act Rule 12b-2 (17 CFR 240.12b-2).
(97) Policy relating to recovery of erroneously awarded compensation. A registrant that at any time during its last completed fiscal year had a class of securities listed on a national securities exchange registered pursuant to section 6 of the Exchange Act (15 U.S.C. 78f) or a national securities association registered pursuant to section 15A of the Exchange Act (15 U.S.C. 78o-3) must file as an exhibit to its annual report the compensation recovery policy required by the applicable listing standards adopted pursuant to 17 CFR 240.10D-1.
(107) Filing fee table. The filing fee table and related disclosure required by Item 16.(c) of Form S-1 (§ 239.11 of this chapter), Item 16.(b) of Form S-3 (§ 239.13 of this chapter), Item 8.(b) of Form S-8 (§ 239.16b of this chapter), Item 36.(c) of Form S-11 (§ 239.18 of this chapter), Item 21.(d) of Form S-4 (§ 239.25 of this chapter), Item 8.c of Form F-1 (§ 239.31 of this chapter), Item 9.(b) of Form F-3 (§ 239.33 of this chapter), Item 21.(d) of Form F-4 (§ 239.34 of this chapter), Item 14.(b) of Form SF-1 (§ 239.44 of this chapter), and Item 14.(b) of Form SF-3 (§

239.45 of this chapter). This exhibit must be submitted as required by § 232.408 of this chapter (Rule 408 of Regulation S-T), provided, however, that if the exhibit is submitted pursuant to Item 14(b) of Form SF-1 (§ 239.44 of this chapter) or Item 14(b) of Form SF-3 (§ 239.45 of this chapter), it is permitted but not required to be submitted as otherwise required by Rule 408.
[Add new instruction:] If a registrant could have redacted confidential information from an exhibit pursuant to Items 601(a)(6), 601(b)(2)(ii), or (b)(10)(iv), but inadvertently failed to do so prior to filing that exhibit, the registrant may seek post-filing redaction of such confidential information pursuant to [insert process to be determined by the Commission].
[Add new instruction:] A registrant may seek to delete any exhibits that were filed mistakenly or without the registrant's authorization pursuant to [insert process to be determined by the Commission].

Redline of Item 701 of Regulation S-K
Recent sales of unregistered securities; use of proceeds from registered securities.
Furnish the following information as to all securities of the registrant sold by the registrant within the past
three years, unless another time period is specified by the applicable form or schedule, which were not registered under the Securities Act. Include sales of reacquired securities, as well as new issues, securities issued in exchange for property, services, or other securities, and new securities resulting

from
the modification of outstanding securities.
B-24
Redline of Instruction I.A.3(b) to Form S-3
I. Eligibility Requirements for Use of Form S-3 […]
A. Registrant Requirements. Registrants must meet the following conditions in order to use this Form S-3 for registration under the Securities Act of securities offered in the transactions specified in I. B. below: […]
3. The registrant: […]
(b) has filed in a timely manner all reports required to be filed during the twelve calendar months and any
portion of a month immediately preceding the filing of the registration statement, other than a report that
is required solely pursuant to Item 1.01, 1.02, 1.04, 1.05, 2.03, 2.04, 2.05, 2.06, 4.02(a) or 5.02(e) of Form
8-K (§249.308 of this chapter) or an exhibit required to be filed pursuant to Item 601(b)(10)(iii) of Regulation S-K (§229.601 of this chapter). If the registrant has used (during the twelve calendar months
and any portion of a month immediately preceding the filing of the registration statement) Rule 12b-25(b)
(§240.12b-25(b) of this chapter) under the Exchange Act with respect to a report or a portion of a report,
that report or portion thereof has actually been filed within the time period prescribed by that rule.
B-25
Redline of Rule 418(b) of the General Rules and Regulations, Securities Act of 1933
§ 230.418 Supplemental information. […]
(b) Supplemental information described in paragraph (a) of this section shall not be required to be filed with or deemed part of and included in the registration statement, unless otherwise required. The information shall be destroyed, or, if requested, returned to the registrant upon request, provided that Tthe destruction or return of such information is consistent with the provisions of the Freedom of Information Act [5 U.S.C. 552].:
(1) Such request is made at the time such information is furnished to the staff;
(2) The return of such information is consistent with the protection of investors;
(3) The return of such information is consistent with the provisions of the Freedom of Information Act [5 U.S.C. 552]; and
(4) The information was not filed in electronic format.
B-26
Redline of Rule 12b-4 of the General Rules and Regulations, Securities Exchange Act of 1934
§ 240.12b-4 Supplemental information.
The Commission or its staff may, where it is deemed appropriate, request supplemental information concerning the registrant, a registration statement or a periodic or other report under the Act. This information shall not be required to be filed with or deemed part of the registration statement or report.
The information shall be destroyed, or, if requested, returned to the registrant upon request, provided
that Tthe destruction or return of such information is consistent with the provisions of the Freedom of Information Act [5 U.S.C. 552].:
(a) Such request is made at the time such information is furnished to the staff;
(b) The return of such information is consistent with the protection of investors; and
(c) The return of such information is consistent with the provisions of the Freedom of Information Act (5
U.S.C. 552).

July 6, 2026
Secretary Vanessa A. Countryman
U.S. Securities and Exchange Commission
100 F Street, N.E.
Washington, D.C. 20549-1090
Re: File No. S7-2026-15; Release Nos. 33-11414; 34-105368; 39-2563; IC-36140; Semiannual Reporting
Dear Secretary Countryman:
We respectfully oppose the Securities and Exchange Commission's (SEC) proposed amendments that would allow public companies to elect each year whether to file quarterly or semiannual reports ("the Proposal"). We write as academics in the Accounting Department of the Wharton School, University of Pennsylvania. Our research collectively examines the interplay between corporate disclosure and the capital markets, investors' information processing, and managerial decision-making. Because the Proposal's economic analysis turns on exactly these questions, our comments focus there. These comments reflect our individual views and we do not represent the views of the Wharton School or the University of Pennsylvania.
The Proposal's economic analysis suggests that the Proposal, if adopted, will generate net economic benefits stemming from allowing each company to tailor their reporting frequency to "best serve the company and its investors." (Section III, p. 16). We disagree with this conclusion. The Proposal overstates the benefits to investors, understates the costs to investors, and ignores the substantive pitfalls of delegating the frequency decision to company management. Too many firms, acting independently, will choose semi-annual reporting even though doing so is not in the collective interest of market participants.
Our assessment of the benefits and costs of the proposed amendment is grounded in the SEC's mission, which is to: (1) protect investors, (2) maintain fair, orderly, and efficient markets, and (3) facilitate capital formation. We first discuss the potential benefits highlighted in the Proposal and then consider the costs.
The benefits of the Proposal are claimed to be two-fold. First, semi-annual reporting would reduce firms' compliance costs, easing access to public capital markets. Reducing those costs, in turn, can facilitate capital formation for more companies, broaden the set of public companies available to investors, and allow company managers to focus more resources on managing the day-to-day operations of their business. Second, reducing reporting frequency would mitigate short-termism in corporate decision making, facilitating longer-term investments, particularly for research and development (R&D), advertising, and human capital.
We believe that the Proposal overstates the compliance cost reductions that will result from eliminating quarterly reporting. The Proposal's economic analysis assumes that compliance costs scale with filing frequency. An accounting system capable of producing semi-annual statements can generate quarterly ones at modest additional cost, as most of the infrastructure (including

audits) is fixed. Most companies already prepare quarterly financial statements for internal use or for other suppliers of capital (e.g., banks), regardless of what they file publicly. In fact, the absence of a structured quarterly filing may increase the burden on management by replacing a predictable, structured process with ad hoc investor communications over six months.
Furthermore, we believe the Proposal will do little to alleviate the problem of short-termism in corporate decision making. A shift from quarterly to semi-annual reporting merely changes the horizon from three to six months, still far from the long-term investment horizons that matter for

R\&D or capital investment decisions. Moreover, any recurring problem of short-termism is arguably not a reporting frequency problem; it is a communication and incentive problem. Instead of reducing reporting frequency, boards have the motive and means to fix the short-termism issue by improving communication with the marketplace or restructuring management's incentives. The academic evidence on reporting frequency and investment short-termism is mixed, likely because firms that would face significant costs overcome the capital market pressures with communication and/or incentive mechanisms.

Finally, we believe a registrant's switch to semi-annual reporting will increase costs associated with information asymmetry to a greater extent than anticipated in the Proposal, not only for the company in question, but for other companies as well due to information spillovers. The Proposal suggests that substitute mechanisms, such as 8-K filings, will mitigate any information loss associated with less frequent reporting, but we believe the Proposal overstates the effectiveness of substitute mechanisms. The increase in information asymmetry will manifest in lags in market monitoring activities, increased transaction costs (i.e., spreads), and reduced liquidity. Those changes will result in less retail investor protection and will increase perceptions of information environment complexity and less fair markets, all of which will likely inhibit capital formation.

Due to information spillovers, these adverse impacts will also extend to companies that continue with quarterly reporting.

While the Proposal overstates the benefits and understates the costs, our greatest concern is perhaps

that the Proposal delegates the disclosure frequency decision to firm managers on a year-by-year basis. The reasoning appears to be that managers are best positioned to assess the relevant costs and benefits, and, given their assessment, they will make a decision that maximizes shareholder value each year. That decision, in turn, is presumed to be the decision that best aligns with the SEC's mission. This reasoning falters on multiple dimensions. First, it is not clear that the managers making the decision each year will have an incentive to understand its implications for information asymmetry and transaction costs in the market for their own securities, much less those attributes for other firms' securities. Second, even if managers making the decision each year have the fullest understanding of the implications of their decision, a great deal of academic research regarding agency conflicts between managers and shareholders suggests that managers will not generally make the decision that maximizes shareholder value, particularly a decision that can be changed over a relatively short horizon. The irony is not lost on us that the short-termism problem the Proposal endeavors to fix is at its core an agency problem itself. If managers cannot be relied upon to make the right investment decisions over a shorter horizon, what makes it likely that they will make the right disclosure frequency decision for a short horizon? Finally, even if each firm manager seeks to maximize the value of their own firm's shares, the resulting set of decisions is unlikely to align with the set of decisions that best fulfills the SEC's mission for the marketplace. For example, managers seeking to maximize their own firm's value would generally not consider

the beneficial spillover impact of their disclosure decisions on the information asymmetry in other firms' markets, or on the perception investors have regarding the fairness of the capital market.

Our final comment relates to the alternative rules that would achieve a higher cost-benefit trade-off (see the Proposal's Section F, p. 134). While we do not support the Proposal, we acknowledge that compliance costs can be onerous, particularly for smaller or emerging companies. The Proposal itself expects smaller and emerging companies to be the primary adopters of semi-annual reporting. The Proposal dismisses the idea of a more targeted approach to reducing compliance costs by reducing lengthy narrative disclosures required in quarterly reports, especially for smaller companies. We believe such an approach could meet the Proposal's objective without jeopardizing the SEC's broader mission. This final comment is in no way an endorsement of proposed rules 17 and 18, which were introduced shortly after this reporting frequency proposal. Given their concurrent issuance with this Proposal, those rules require more thoughtful review by investors and an extended review period that is longer than the current short 60-day comment period.

The analysis underlying each of these views is developed fully in our white paper, “Comments on the Economic Analysis in the SEC’s 2026 Proposal on Quarterly Reporting” (Fischer, Lambert, Li, Schrand, and Zhu, 2026), which will be available shortly on SSRN linked 7067399]. We respectfully refer the Commission to that paper for the detailed arguments and the related academic literature.
We appreciate the Commission’s consideration of our comments.
Sincerely,
Paul Fischer

Paul Foster AI Architect, AVRide — Jul 6, 2026
Subject: File No. S7-2026-15 From: Paul Foster I oppose allowing companies to scale back from quarterly reporting. This proposal comes right when automation is making reporting easier, and large companies are making sudden changes with AI, meaning even more can happen in a short time period. The proposal gives an advantage to insiders with little benefit in return, and even despite companies being quite successful on the current system. Please do not allow this proposal to pass.

Paul Murray Accounting Manager, Frontiers USA — Jul 6, 2026
Subject: File No. S7-2026-15 From: Paul Murray I am deeply worried about the shockwaves this move would have on our US financial markets. As a CPA hopeful, I believe our accounting profession is up to the task of maintaining these quarterly reporting requirements. This move ultimately hurts investors and the American people with retirement portfolios.

Paula Hickey — Jul 6, 2026
Subject: File No. S7-2026-15 From: Paula Hickey I strongly oppose the elimination of quarterly reports. This undermines transparency which is the point of quarterly reports. A move to six-month reporting would mean that information would be available less often. Reducing reporting frequency creates a dangerous data void that benefits corporate insiders, harms everyday retail investors, and allows financial fraud to go undetected. Investors do not need to see less information about the companies in which they are investing. Companies are using investors' money and need to be accountable.

Paula Stutts Retired teacher — Jul 6, 2026
Subject: File No. S7-2026-15 From: Paula Stutts I am a retired teacher living on my pension, my social security and my 401k. It is shameful for the SEC to consider dropping their responsibility to citizens in favor of large corporations when doing the oversight of these corporations for the citizenry is your actual job. I request that you maintain quarterly oversight for my protection. The government currently has a notorious reputation for integrity with a majority of American citizens for exactly this reason.

Pauline Appleby Retired CPA/Financial Reporting Executive (Price Waterhouse/Citibank/Capital One — Jul 6, 2026
Subject: File No. S7-2026-15 From: Pauline Appleby I strongly disagree with the proposal to reduce the level and frequency of reporting. This is a retrograde step in terms of disclosure and accountability. Having lived through the Enron era and other cases of fraud I fear for the impact on individual investors. This is particularly the case now where there appears to be fewer and fewer deterants to insider trading and other market manipulation. We needs stronger reporting and increased investigation and enforcement - not less.

pegpolitics@hotmail.com — Jul 6, 2026
Subject: File No. S7-2026-15 From: pegpolitics@hotmail.com Since I'm making the investment and taking the risk, every three months seems a short period. Six months is way too long.

Peni Havir — Jul 6, 2026
Subject: File No. S7-2026-15 From: Peni Havir I strongly feel that the original quarterly reporting, codified in the same 1934 act which created the SEC, should be maintained, and not changed to biannual. The entire purpose of the original act is clear from its title, which includes, “to prevent inequitable and unfair practices on such exchanges and markets.” It is these quarterly reports that help protect investors from a company's failure to communicate relevant information to investors. * Bi-annual reporting allows fraud to develop and mature longer without any oversight. Since fighting is one of the core reasons for the creation of the SEC, reducing the Effectiveness of fraud detection, and increasing the likelihood of investors being defrauded. This is just plain wrong. * Transparency is critical when making investments. Taking away half of the information which has been provided to investors blinds them to the fluctuations taking place within a company. Smoothing out these fluctuations by hiding them from investors can hide the fact that a company has made a major mistake. * Since providing information only twice yearly blindfolds the average investor to the stability of those in whom they wish to invest, this can result in a less stable market, with investors reacting to rumors instead of facts. And it definitely creates a less fair market for the average investor, which should be a major concern to the SEC. Fairness is the reason the SEC exists, and should be baked into every decision. * Life decisions aren’t made only twice a year. Without having adequate information, determining how to manage portfolio savings and retirement accounts becomes more than problematic. This becomes an exercise in putting on a blindfold, holding one’s nose with crossed fingers, and jumping. This can have dire repercussions, especially during times of high inflation, such as we’ve been having.

Peter Brunner — Jul 6, 2026
Subject: File No. S7-2026-15 From: Peter Brunner I am a private investor. The loss of quarterly reports means I won't be able to accurately decide on my investments. Transparency is important in publicly traded companies and in government. This is will be lost if you change the reporting time and the way the reports are done. The reports should be as transparent and clear as possible for the public to understand what is going on with the company and how it affects investors.

Peter L. Smith Retired Market and Competitive Analyst, Boeing Commercial Airplanes — Jul 6, 2026
Subject: File No. S7-2026-15 From: Peter L. Smith This proposed rule should be canceled. Quarterly reporting of corporate financial results must be retained! Individual investors like myself (as well as funds that invest in equities) rely on quarterly reports to manage our investment portfolios. Converting to semiannual reporting would 1) impede investors' ability to invest in quality companies, and 2) therefore reduce the incentive for companies to perform well, by weakening the link between their stock prices and corporate performance. This proposed rule should be canceled.

Philomena Rimo Citizen stockholder — Jul 6, 2026
Subject: File No. S7-2026-15 From: Philomena Rimo Please keep quarterly reporting! Do what is right! Thank you P.M Romo

PricewaterhouseCoopers LLP — Jul 6, 2026
July 6, 2026
Vanessa A. Countryman
Secretary
Securities and Exchange Commission
100 F Street NE
Washington, DC 20549-1090
RE: File Number S7-2026-15
Dear Ms. Countryman:
PricewaterhouseCoopers LLP appreciates the opportunity to comment on the proposed rule, Semiannual Reporting (the “Proposal”). We are pleased to provide our perspectives, which are informed by our experiences working with the SEC’s reporting requirements as independent auditors.
We support the Commission’s broader objective of facilitating capital formation and reassessing aspects of the public company reporting framework. In connection with this evaluation of the broader public company reporting framework, we support the Commission’s efforts to explore whether greater flexibility in the frequency of interim reporting could appropriately balance the informational needs of investors with the operational and compliance burdens faced by registrants.
The appropriate frequency of reporting, however, is just one aspect to consider regarding disclosure effectiveness. In recent years, the financial reporting environment has evolved significantly, and we commonly hear concerns from preparers that existing disclosure requirements may be overly burdensome. As such, we support the Commission’s evaluation of reforming Regulation S-K1 and its holistic evaluation of other disclosure requirements. We also believe it is appropriate for the FASB to continuously evaluate its disclosure requirements for relevance and to ensure they are aligned with the needs of users. Given the significant expansion of interim disclosure requirements over time, we encourage ongoing consideration of whether certain interim disclosures continue to

provide decision-useful information and whether the overall effectiveness of interim reporting could be enhanced through targeted simplification or modernization efforts.
As auditors, our role in the capital markets is to support the reliability of financial

information rather than to determine the appropriate frequency or timing of financial information provided to investors. Accordingly, our comments herein are intended to highlight key considerations for the Commission's evaluation of the Proposal.

Potential diversity in interim reporting practices and auditor involvement

In our view, the Proposal raises a number of important implementation and operational questions that extend beyond the cadence of SEC filings. For example, many existing market conventions, contractual arrangements, regulatory frameworks, and professional standards have evolved around a quarterly reporting model. As a result, even if the Commission permits registrants to file on a semiannual basis, we anticipate that market or investor expectations may continue to drive many companies to prepare and publicly communicate quarterly financial information in some form, as contemplated by the reference to "hybrid reporters" in the Economic analysis section of the Proposal. In certain circumstances, a registrant may determine that continuing to prepare quarterly financial statements—whether filed, furnished, or maintained offline—remains necessary or appropriate to support investor relations objectives, debt covenant compliance, securities offerings, or other capital markets activities.

We believe the ultimate impact of the Proposal will depend not only on whether companies elect semiannual reporting but also on the reporting models that emerge in practice. Registrants may continue to prepare and communicate quarterly financial information in a variety of forms, including full quarterly financial statements, earnings releases, selected financial metrics, or other interim disclosures. As a result, the Proposal may lead to a broader spectrum of interim reporting practices rather than a simple transition from quarterly to semiannual reporting, which could affect the comparability, transparency, and perceived reliability of information available to investors.

Another practical implication of the Proposal relates to the potential emergence of differing forms of quarterly reporting and varying levels of auditor involvement. Under the current framework, interim financial information included in Form 10-Q is subject to a review by an independent public accountant under PCAOB standards. By contrast, there is currently no standardized framework governing auditor involvement in earnings releases or other forms of quarterly financial information provided outside of interim financial statements filed with the SEC. As a result of the Proposal, we have observed that certain stakeholders, including audit committees, have inquired whether the auditor would be able to perform and report on review procedures on interim financial information that is in a form other than a complete set of financial statements, including footnote disclosures. If the Proposal were to move forward, we recommend the Commission work together with the PCAOB,

and possibly the FASB, to establish a path forward to provide clarity as to how auditors can be voluntarily engaged to conduct a review on interim financial information that is less that a complete set of financial statements.

Diversity in interim reporting practices could create confusion among investors and other stakeholders regarding the nature and extent of auditor involvement associated with various forms of quarterly information. In addition, we encourage the Commission to evaluate the risks associated with permitting registrants to furnish on Form 8-K interim financial statements that are less than a complete set of financial statements. We recommend the Commission monitor this area to ensure that the various forms of interim reporting practices continue to meet the needs of investors.

* * * * *

The appendix includes our responses to certain questions in the Proposal. We appreciate the Commission's efforts to re-evaluate the public company reporting framework and to consider whether additional flexibility may facilitate capital formation and improve the attractiveness of the public markets while maintaining investor protections.

We would be pleased to discuss our observations and recommendations with the

Commission or its staff. Please contact Thomas Barbieri (thomas.barbieri@pwc.com) or Brian Croteau (brian.t.croteau@pwc.com) regarding our submission.

Sincerely,

PricewaterhouseCoopers LLP

Appendix

Responses to specific questions

Question 2. We are proposing amendments that would permit, but not require, all Exchange Act reporting companies that file Form 10-Q today to file semiannual reports. Should we instead require all companies to file semiannual reports? What would be the benefits and costs of such a mandatory approach? Would mandatory semiannual reporting, with the option to file quarterly reports, lead to more companies electing to forgo quarterly reporting?

We believe there is value in exploring optionality with respect to interim reporting frequency in recognition of the differing circumstances, investor bases, and information needs of registrants. However, we also observe that the Proposal may introduce inconsistencies in reporting practices and reduce comparability across registrants.

Under the Proposal, one potential outcome is that a registrant wishing to continue providing financial information to investors on a quarterly cadence may elect semiannual reporting on Form 10-S while continuing to furnish first- and third-quarter financial information on Form 8-K. Because interim financial statements included in Forms 10-Q and 10-S are prepared within a reporting framework that includes management certifications and review procedures performed by the auditor, the processes and controls supporting that information may differ from those applied to quarterly financial information furnished through other means, such as Form 8-K.

While certain registrants may choose, as a matter of policy or practice, to involve the auditor in connection with such information, others may not. This may create risk of confusion for investors regarding the level of assurance associated with such information.

We believe it is possible that some registrants may continue to file a Form 10-Q because the process management follows in preparing and filing the quarterly report, and the associated auditor involvement, are well understood in the marketplace.

In practice today, auditors often perform certain procedures in connection with an earnings release, such as reading the information for consistency with the results of interim review procedures performed to date. While those procedures do not constitute a completed interim review and are typically performed while review procedures remain in process, they are nonetheless grounded in the auditor's ongoing involvement in the quarterly reporting process. Under the Proposal, there may be limited or no corresponding interim review procedures performed in connection with first- and third-quarter financial information. As a result, the gap between investor expectations regarding auditor involvement and the actual procedures performed could widen if quarterly financial information continues to be routinely disseminated outside the current periodic reporting framework.

If the Proposal is adopted, we believe it will be important for the Commission to monitor whether different interim reporting practices will meet the needs of investors.

Appendix

Responses to specific questions

Question 11. Do companies that have newly become a public company (e.g., through an initial public offering, de-SPAC transaction, or direct listing) need to have greater flexibility for switching interim reporting frequency within a fiscal year?

For example, a private company that elected semiannual reporting in a Form S-1 for an initial public offering could subsequently decide that quarterly reporting is preferable (e.g., to promote greater trading liquidity by increasing the frequency of

its interim reporting) and wish to switch to quarterly reporting for the rest of the fiscal year. Should we allow such newly public companies to switch the interim reporting frequency within a fiscal year?

Under the Proposal, a company pursuing an initial public offering would indicate its election with respect to semiannual reporting on the cover page of its registration statement, such as Form S-1. We understand that election would affect the financial statements required to be included in the registration statement and would continue to apply to the company's interim reporting obligations for the remainder of the fiscal year following the offering. We note that the content and timing of financial information presented in offering documents is often influenced by discussions among market participants, including issuers, underwriters, legal counsel, and investors.

As a practical matter, we observe that an election to adopt semiannual reporting may effectively extend beyond a single fiscal year. Under the Proposal, if a registrant elects semiannual reporting and subsequently determines that quarterly reporting is preferable in the following fiscal year, the registrant would generally be required to present comparative quarterly financial information for the prior fiscal year. As a result, a registrant may need to prepare, maintain, and in some cases subject prior-year quarterly financial information to procedures and internal controls that support quarterly reporting even though it elected semiannual reporting for that earlier period.

More broadly, we support allowing a registrant to change its reporting election over time. However, we believe the Commission and preparers should understand and consider the practical implications associated with such changes, particularly when a registrant elects semiannual reporting and later seeks to return to quarterly reporting. In those circumstances, the need to provide comparative quarterly information for prior periods may significantly reduce the practical flexibility afforded by the proposal and may influence how a registrant evaluates the initial election.

Question 15. As an alternative to the proposal for optional semiannual reporting, should we instead revise the disclosure requirements of Form 10-Q to reduce the burden on reporting companies of filing this form, such as amending the current rules for the required interim financial statement review by an independent public accountant, XBRL data tagging, MD&A, information about unregistered sales of registrant securities pursuant to 17 CFR 229.701 (Item 701 of Regulation S-K), or

year-to-date comparisons involving financial statements and MD&A? How should these requirements, or any other requirements of Form 10-Q, be revised? What aspects of Form 10-Q's current reporting framework are most burdensome for reporting companies?

We support the Commission's efforts to evaluate whether aspects of the current Form 10-Q reporting framework can be modernized or streamlined while continuing to provide investors with material, decision-useful information. We believe such efforts should continue to focus on balancing the costs of preparing and reviewing interim disclosures with the importance of maintaining investor confidence in the quality and reliability of interim financial reporting.

We believe the current requirement for interim financial statements included in Form 10-Q to be reviewed by the auditor continues to provide important investor protection benefits. Auditor involvement in interim financial reporting enhances the reliability and consistency of financial information provided to investors and supports confidence in the overall reporting framework. In addition, among other things, interim review procedures often facilitate the timely identification and resolution of accounting, financial reporting, and internal control matters prior to year-end reporting. Accordingly, we do not support

eliminating the interim review requirement for Form 10-Q or proposed Form 10-S.
As discussed in our response to Question 2, the Commission should also consider whether there should be greater consistency in the treatment of interim financial information disclosed outside the periodic reporting framework.
More broadly, we support the Commission's ongoing efforts to evaluate and modernize Regulation S-K disclosure requirements. We also support the Commission's continued focus on improving disclosure effectiveness by emphasizing a focus on disclosing material information and reducing disclosures that are duplicative, immaterial, or not decision-useful to investors. In connection with the optional framework introduced by this Proposal, we would support efforts to improve disclosure effectiveness by re-assessing whether all existing Form 10-Q and proposed Form 10-S disclosure requirements remain necessary and decision-useful in an interim reporting context.
Question 20. In connection with any adoption of the proposal, should there be a new requirement for semiannual filers that announce or release earnings for the first or third quarters of their fiscal year (i.e., the periods that would later be subsumed in Forms 10-S and 10-K but for which there would be no quarterly report filed with the Commission) - that financial information in any first or third quarter earnings releases be reviewed by an independent public accountant? If so, would any changes to current auditing standards (e.g., governing reviews) be required?
A3
Appendix
Responses to specific questions
As discussed in our responses to Questions 2 and 15, there is currently diversity in both the nature and extent of financial information provided by registrants through earnings releases furnished on Form 8-K. In addition, there is diversity in practice regarding the extent of auditor involvement associated with those disclosures. Under the current reporting framework and existing auditing standards, the independent auditor is not required to perform review or other procedures on information included in an earnings release.
The applicable professional standard for auditors of SEC registrants performing reviews is PCAOB AS 4105, Reviews of Interim Financial Information. Under PCAOB AS 4105, a review engagement applies to a complete set of interim financial statements prepared in accordance with the applicable financial reporting framework (e.g., US GAAP), including the related footnote disclosures. While we do not believe it is necessary to mandate auditor involvement with summarized financial information such as earnings releases or more detailed information, we recommend the Commission work together with the PCAOB, and possibly the FASB, to establish a path forward to provide clarity as to how auditors can be voluntarily engaged to conduct a review on interim financial information that is less than a complete set of financial statements.
Question 24. Would the nature and extent of procedures that an independent public accountant performs during a review change depending upon whether the independent public accountant is performing a review over a fiscal semiannual period or a fiscal quarterly period? Would independent public accountants conducting reviews do the same amount of work for a fiscal semiannual period as they currently do for two quarterly fiscal periods on a combined basis? Would an independent public accountant experience any impact on efficiency or economies of scale when conducting reviews and annual audits under semiannual reporting versus under quarterly reporting for the same company? Would any changes to independent public accountants' review or audit procedures or any impact on efficiency or economies of scale result in changes in costs to companies? If so, describe the impact and whether the impact could vary depending upon the size of the registrant subject to the review.

The nature of the procedures performed by the independent public accountant in a review of interim financial information would not be expected to differ solely because the review covers a semiannual period rather than a quarterly period. The requirements of PCAOB AS 4105 would continue to apply, including inquiries, analytical procedures, and other review procedures designed to provide the accountant with a basis for communicating whether material modifications should be made to the interim financial information. However, the extent of effort required for performing a semiannual review would likely be greater than the effort required for an individual quarterly review because the review would

cover a longer period and a larger volume of activity. For example, the auditor would need to consider a greater volume of transactions and activity, more cumulative financial information, and additional matters arising during the period, such as significant new or amended contracts and agreements, board and committee meeting minutes, internal audit reports, and other relevant developments.

At the same time, we would not expect the effort required for performing a semiannual review to be equivalent to the combined effort of two separate quarterly reviews in most cases. Certain procedures may be performed more efficiently over a six-month period than through two separate quarterly review cycles, and electing to not file a Form 10-Q in the first and third quarters could yield certain efficiencies. The extent of efficiencies would depend on the registrant's size, complexity, systems, internal controls, and the nature and volume of significant transactions during the period.

We also note that certain estimates in the Proposal regarding reductions in audit and review costs may not fully reflect how interim review procedures are performed in practice. Procedures performed in connection with quarterly reviews are often leveraged in the year-end audit. The understanding of developments impacting the company's business and industry as well as the phasing of audit work throughout the year are important components of a quality audit, and quarterly review procedures can support the timely identification and resolution of accounting, financial reporting, and internal control matters. In addition, even if a registrant elects semiannual reporting, the auditor may continue to perform certain procedures throughout the year as part of its risk assessment, audit planning, and phased execution of annual audit procedures. As a result, reductions in review-related effort and cost may not be proportional to the reduction in the number of required interim reporting periods. The actual cost impact is likely to vary significantly based on company-specific factors, including but not limited to the size and complexity of the registrant, its internal control environment, capital markets activities, and investor expectations.

Question 26. For semiannual filers, what impact would a shift to semiannual reporting have on: (1) companies' disclosure controls and procedures, (2) companies' internal control over financial reporting, and (3) independent public accountants' strategy and approach for the annual audit of companies' internal control over financial reporting or financial statements? With semiannual reporting, is there a potential for a material increase in the risk that material misstatements (either due to error or fraud) or control deficiencies are not timely detected by or communicated to the independent public accountant thereby limiting potential remediation of these issues by the issuer? Please provide any data related to these questions.

We believe a shift to semiannual reporting could affect the timing of the identification and

communication of certain accounting, financial reporting, and internal control matters, because many controls are designed to operate on a quarterly basis. In addition, the current quarterly reporting framework reinforces a regular cadence of control execution, monitoring, and evaluation throughout the year. If financial reporting occurs less frequently under a semiannual reporting model, there is an increased risk that misstatements may not be prevented or detected timely since certain controls may operate less frequently or may not be executed with the same level of rigor or consistency. Under the current reporting framework, quarterly review procedures often facilitate the timely identification of errors, unusual transactions, disclosure matters, and potential internal control deficiencies during the course of the fiscal year. If review procedures occur less frequently under a semiannual reporting model, there may be an increased risk that material misstatements or internal control deficiencies are not identified and communicated on a timely basis, thereby reducing the amount of time available for management to investigate, remediate, and evaluate the impact of such matters prior to year-end reporting.

In addition, interim review procedures are often integrated with the independent public accountant's overall audit strategy and approach for the year-end audit. The phasing of audit work throughout the year is an important component of an effective, quality audit, and procedures currently performed in connection with quarterly reviews are frequently leveraged as part of the year-end audit process. Accordingly, while certain audit procedures would continue to be performed throughout the year regardless of interim reporting frequency, reducing the cadence of interim reporting and review procedures may increase the risk that material misstatements and internal control deficiencies are not detected, evaluated, and communicated on a timely basis.

Question 27. Would there be reduced securities analyst coverage of Exchange Act reporting companies that elect the semiannual reporting option as compared to quarterly filers? Would underwriters' requests for independent public accountants to provide "comfort letters" in securities offerings (to support potential due diligence defenses) lead semiannual filers to continue to retain independent public accountants to conduct quarterly financial statement reviews? If so, are changes needed to PCAOB Auditing Standards (regarding reviews by independent public accountants)? For example, to comport with semiannual reporting, are changes needed to PCAOB Auditing Standard 6101, Letters for Underwriters and Certain Other Requesting Parties, to permit independent public accountants to provide comfort letters expressing negative assurance on changes subsequent to the date and period of the latest financial statements included (or incorporated by reference) in the registration statement? If semiannual filers would continue to prepare quarterly financial information or to retain independent public accountants to conduct quarterly reviews, should the Commission make any rule changes or take any other steps to address this issue?

Responses to specific questions

We do not believe changes to PCAOB Auditing Standard 6101, Letters for Underwriters and Certain Other Requesting Parties, are necessary to accommodate the proposed semiannual reporting framework. The current standard already accommodates the issuance of comfort letters for issuers that prepare financial statements on a semiannual basis, as is common for many foreign private issuers. We believe the question as to whether semiannual reporting would reduce securities analyst coverage is best addressed by investors, analysts, and other market participants.

As Question 27 highlights, a potential implication of a change to semiannual reporting relates to the auditor's ability to provide "negative assurance" regarding subsequent changes to periods within 135 days of the end of the most recent period for which the

auditor has performed an audit or review, as stated by PCAOB AS 6101.46. For periods beyond that window, the auditor may report only procedures performed and findings obtained (PCAOB AS 6101.47). Accordingly, the practical question is not whether the existing standards permit the issuance of comfort letters, but rather whether underwriters and issuers will determine that additional interim financial information and auditor review procedures are necessary to obtain the level of comfort desired in a particular transaction. We have observed similar considerations in the market under the existing reporting framework. In practice, issuers and underwriters frequently evaluate whether information beyond the minimum requirements of the SEC's rules is appropriate in the context of a particular transaction. For example, in an initial public offering, offering materials may include financial information for periods that are not otherwise required by Commission rules when market participants believe such information would be helpful to investors or facilitate the offering process. Additionally, foreign private issuers often prepare interim financial information for periods not otherwise required by SEC reporting rules, either as part of their regular reporting practices or in connection with specific capital markets transactions.

These examples illustrate that the amount and nature of financial information included in an offering is often influenced by transaction-specific facts and circumstances, investor expectations, and the level of comfort sought by transaction participants. We believe the existing regulatory and professional standards framework provides an appropriate baseline from which those determinations can be made. Accordingly, we do not believe changes to PCAOB AS 6101 or broader amendments to the Commission's rules are necessary to accommodate the proposed semiannual reporting framework. Rather, issuers, underwriters, and investors should continue to determine, based on the circumstances of a particular transaction, whether additional interim financial information or auditor involvement is warranted.

Question 28. Would our proposal have any impact on a semiannual filer's application of relevant accounting standards to prepare financial statements in

accordance with U.S. GAAP, IFRS, or home-country GAAP? How? Are any changes to accounting standards, including U.S. GAAP or IFRS, necessary or appropriate to effectuate semiannual reporting (e.g., changes to the guidance on annual impairment testing, lag reporting, earnings per share, or other topics of authoritative guidance)?

We believe the proposed optional semiannual reporting framework would have implications to the application of existing accounting standards because a number of areas within current accounting guidance either explicitly reference quarterly reporting or otherwise operate in practice based on a quarterly reporting model. As a result, if the Commission proceeds with the Proposal, amendments to certain accounting standards and related interpretive guidance would be necessary.

Examples of areas in US GAAP that may warrant further evaluation include the following:

• Subsequent events (ASC 855) — Existing guidance requires an SEC filer to evaluate subsequent events through the date financial statements are "issued,
" with ASC 855-
10-S99-2 providing the SEC staff's views as to when financial statements are considered "issued." Under a semiannual reporting framework, if a registrant was to prepare, but not issue, a complete set of quarterly financial statements for internal purposes, questions would exist as to when the subsequent events evaluation process is completed for such financial statements and, consequently, whether an auditor would be able to conclude an interim review under existing PCAOB standards. We

note that an entity that is not an SEC filer is required to evaluate subsequent events through the date that the financial statements are “available to be issued” (ASC 855-10-25-2). We would support the Commission obtaining feedback, including through coordination with the FASB, as to whether the guidance in ASC 855-10-S99-2 should be amended to accommodate semiannual reporting.

• Earnings per share (ASC 260-10-55-3) — Existing guidance contemplates annual and quarterly EPS computations and disclosures.

• Segment reporting (ASC 280-10-50-33) — Interim segment disclosure requirements currently contemplate quarterly reporting periods.

• Interim reporting (ASC 270-10-50-2) — Current disclosure requirements include references to fourth-quarter matters within annual financial statements.

These examples are not intended to be comprehensive. We expect there may be additional areas throughout US GAAP, IFRS Accounting Standards, and related interpretive guidance for which conforming changes or clarifications would be appropriate to support consistent application under a semiannual reporting framework.

Responses to specific questions

Accordingly, we recommend that the FASB, and international accounting standard setters as appropriate, perform a broader assessment of existing accounting and reporting requirements to identify practice implications and determine whether targeted amendments or interpretive guidance would be necessary to facilitate implementation of semiannual reporting.

Public Citizen — Jul 6, 2026

July 6, 2026

Paul Atkins,

Chair

Honorable Members

Securities and Exchange Commission

100 F St NE

Washington DC

Re: Semiannual Reporting; RIN 3235-AN58

Dear Commissioners,

On behalf of more than one million members and supporters of Public Citizen, we provide the following comment in opposition to the Securities and Exchange Commission (SEC) proposal to allow companies to file semiannual reports on new Form 10-S in lieu of quarterly reports on Form 10-Q to meet their interim reporting obligations under the Securities Exchange Act of 1934. Members of Public Citizen hold investments in the stock market and depend on regular, frequent, official reports from companies where we are invested, and therefore take great interest in such a momentous change.

Our markets thrive on transparency. Transparency breeds confidence. As corporate governance expert Charles Elson argues, “The more material information that investors have, the greater confidence they will have in investing. Less information means less investor confidence, more speculation and, ultimately, less public investment.”

Timely and accurate financial information serves as the lifeblood of the capital markets and, therein, the world's economy. American markets lead the world, and frequent disclosure serves as a vital element of that status. Reducing by half the frequency of official reporting would be the most monumental change by the SEC in decades and, consequently, could threaten the nation's vaunted prestige.

Evaluating any firm depends on information. In practice, the market values an enterprise with every trade. Some of these trades turn on new information, some of which may be real, such as weather patterns that impact an agricultural firm, but some of which may be speculative, such as a rumor of a merger. The best source of information comes from the firm itself in SEC-reviewed disclosures. Reducing the frequency of official firm reports will lead to less accurate market pricing. Semiannual reporting will lead to greater price volatility. Investors may follow rumors more intensely. Quarterly reporting provides a "reality check."

Some consequential market-moving information may come from firm management itself, such as in comments to reporters. Governance expert Nell Minow observes, "Corporate executives, who may think they will be less exposed to scrutiny and liability with fewer disclosures, have every incentive to exaggerate." With fewer official reports checking their inflated comments, executives may be encouraged to exaggerate even more, she concludes.

Investment professionals do not support less frequent reporting, as evidenced by comments the last time the SEC explored this option. One survey of 160,000 members of the CFA Institute found "almost no support."

Less frequent official reporting would disadvantage smaller investors. Institutional investors, with resources to analyze market trends and microeconomic data related to individual firms, already enjoy an outsized advantage. Even so, as noted, institutional investors oppose this semiannual reporting proposal.

Proponents of less frequent disclosure argue that collecting and reporting results burdens companies. In the information age, where computer technology allows firms to record operational results instantaneously, reducing public disclosure hardly relieves any burden. A giant retailer understands its sales with every bar code scan. Responsible companies already report more frequently than the mandated quarterly report, with earnings guidance and other information disclosures.

Nor will less frequent disclosure generate more public companies. The rise of private equity results from inadequate investor protections in this sector, not reporting requirements.

Some advocates of less reporting argue disingenuously that this would lead to less pressure to produce short-term results at the expense of long-term planning and investment. Empirical analysis shows no causal relation between reporting and short-termism, according to the Council of Institutional Investors.

If policy makers seriously hope to address short-termism, firms can adopt a more direct approach in how incentives shape focus, namely reforming executive compensation. In the last half-century, executive compensation increased dramatically with no discernable increase in firm productivity. Leaving aside issues of equity, the pay for simply the five named executives has occasionally absorbed

nearly 10 percent of Fortune 500 profits. Compensation structures shape corporate results, ideally for
the best, but sometimes not. Companies can focus their management on long-term results with appropriate long-term incentive arrangements as many already do.
In conclusion, we oppose the proposal to eliminate quarterly reporting because it deprives investors of
vital information, will lead to greater market volatility, relieves no burdens on companies, does little to redirect managements that inappropriately focus on short-term results, and ultimately threatens the nation's status as world financial market leader.
For questions, please contact Bartlett Naylor at bnaylor@citizen.org
Sincerely,
Public Citizen

R. M — Jul 6, 2026
Subject: File No. S7-2026-15 From: R. M I am against you changing the reporting from quarterly to six months. I want more information not less on my investments. Any changes you are making for the public's benefit . The corporation and their leaders are rich enough trying to cheat us of our money

---

R. Turner — Jul 6, 2026
Subject: File No. S7-2026-15 From: R. Turner I oppose replacing quarterly reporting with a semiannual-only framework. Quarterly disclosure is essential to market integrity, investor protection, and timely oversight, for the following reasons: - Timely transparency: Regular reporting gives investors and analysts reliable, ongoing visibility into financial performance. - Early risk detection: Frequent disclosures surface liquidity problems, operational deterioration, or accounting irregularities before they escalate. - Reduced information asymmetry: Quarterly reporting narrows the gap between insider and public knowledge, protecting retail investors. - Less rumor-driven volatility: Regular official data reduces reliance on speculation and informal channels. - Analytical comparability: Quarterly data underpins most financial models, credit ratings, and sector benchmarks. - Lower cost of capital: Reduced transparency raises perceived risk and financing costs for issuers. I urge the Commission to preserve quarterly reporting requirements and reject a semiannual-only disclosure regime.

Rachel Johnson — Jul 6, 2026
Subject: File No. S7-2026-15 From: Rachel Johnson My name is Rachel Johnson, and I have invested my savings in the stock market for decades, ever since I was old enough to open an IRA, with my parents supervision. Through the years I have planned carefully and responsibly for retirement. Quarterly reporting by the companies I invest in, and that my retirement accounts invest in, creates the foundation of trust necessary for the kind of investing I do, as an average American. I am planning for my future and the future of my family, like every responsible American should, who has the means to do so. As an individual citizen, I must advocate for quarterly reporting on behalf of each and every member of the public. Transparent and timely reporting is vital to informed financial decisions and to maintain accountability and public trust. The SEC is by law deeply invested in protecting the average citizen, which includes robust requirements for regular reports and disclosures. Please do not undermine the public's visibility into the financial health of their investments.

Rachel P Lewis — Jul 6, 2026
Subject: File No. S7-2026-15 From: Rachel P Lewis Reporting twice a year will hurt individual investors. This is a bad idea

---

Rachel Rich — Jul 6, 2026
Subject: File No. S7-2026-15 From: Rachel Rich There needs to be more transparency, The more money that's at stake, the more the corruption.

Vanessa Countryman
Secretary, Securities and Exchange Commission
100 F Street, N.E.
Washington, D.C. 20549-1090
Re: File Number S7-2026-15 (Semiannual Reporting) ("Proposing Release")
Dear Ms. Countryman:
Fenwick & West LLP is pleased to submit to the Securities and Exchange Commission ("Commission") comments on the proposed rules ("Proposed Rules") under the Securities Act of 1933, as amended ("Securities Act"), the Securities Exchange Act of 1934, as amended ("Exchange Act"), and the Trust Indenture Act of 1939 relating to semiannual reporting by public reporting companies. We represent and have represented over the years a large number of publicly held technology and life science companies, including companies that have completed initial public offerings ("IPOs"). The comments we provide in this letter derive from our experience with these companies.
As indicated in our comments below, we support the intent of the Proposed Rules to allow public companies to elect to file interim reports with the Commission on a semiannual rather than quarterly basis. We believe that the Proposed Rules present a pragmatic and effective framework within which companies may choose to report semiannually and implement their choice. Accordingly, we encourage the Commission to approve the Proposed Rules substantially in the form proposed.
We provide our responses below to certain questions contained in the Proposing Release. Where we felt that it would make for a more expedient review of our comments, we have responded to multiple questions collectively.
Questions 1, 3 and 4
We believe that all reporting companies should have the option to report semiannually.
The Proposing Release identifies the most important potential advantages to many companies of reporting on this basis, including, in particular, cost saving, the freeing up of management time and attention to focus on company operations, and the potential to shift the attention of participants in the equity markets from the short-termism discussed in footnote 44, and the surrounding text, of the Proposing Release toward a longer-term perspective. While these

advantages may be more important to some types of reporting companies than to others, we believe that each reporting company is in the best position to analyze the benefits of semiannual reporting for itself and its investors. While we are hesitant to speculate broadly
Docusign Envelope ID: 5DD44130-107C-8946-804C-D6714B0A1887

about which companies will be most likely to elect semiannual reporting, we believe that founder-led companies that are focused on, and prioritize, long-term goals and growth and companies whose businesses are still in the developmental stage are most likely to benefit. In our experience, the cost and administrative burdens of being a public company, as well as the current short-termism of the equity markets, are disincentives to many private companies from going public and to some public companies of staying public. If adopted, the Proposed Rules would help to alleviate these disincentives.

Question 2

We do not perceive any meaningful benefit to public companies and their investors at large of requiring that all companies report on a semiannual basis. We do not think that retaining the opportunity for some companies to continue to report quarterly will be a meaningful deterrent to other companies selecting semiannual reporting. With quarterly reporting having been mandated for the last 55 years, many longstanding reporting companies may determine that market expectations and investor relationships would be unduly disrupted by a shift to semiannual reporting. At the same time, because companies may elect annually whether to report quarterly or semiannually, they would be free to choose over time to move away from quarterly reporting. It is possible, and perhaps likely, that, if adopted, the Proposed Rules will help to change market perceptions of the optimal frequency of reporting, and companies that initially elect quarterly reporting might switch to semiannual reporting.

Question 5

We respectfully suggest a longer period for the filing of Form 10-S than Form 10-Q in light of the longer period covered by the financial statements that will be included in Form 10-S. While our clients of course have no experience with the time that will be required by semiannual reporting companies to complete the preparation and auditor review of financial statements for six-month periods, we believe that semiannual reporting companies will be better positioned to make timely and complete filings of Form 10-S with a later deadline than for Form 10-Q. We believe that filing deadlines of 60 days after the period-end for large accelerated filers and 75 days for all other filers would facilitate timely filings and continue to provide information to investors on a timely basis.

Questions 8 and 9

We support providing for the check box on the forms indicated in the Proposed Rules as the means for companies to make their election for semiannual reporting. We believe that the timing of making the semiannual reporting election in Form 10-K is appropriate. In our opinion, existing public companies electing to report on a semiannual basis will carefully consider whether to publicly announce this election at an earlier date than the filing of the Form 10-K.
Docusign Envelope ID: 5DD44130-107C-8946-804C-D6714B0A1887

However, we do not believe that the Proposed Rules should be revised to require such earlier notice of this election.

Questions 10 and 11

We support requiring companies to report in the manner elected in their Form 10-K, or IPO registration statement, throughout the year for which the election was made, with one exception. We believe that a newly public company should be permitted a one-time ability to

switch from semiannual reporting to quarterly reporting during its first fiscal year as a reporting company. This is a reasonable accommodation for a registrant that has recently entered the reporting system and is still evaluating the appropriate reporting cadence for its business.

Question 12

We support the process provided in the Proposed Rules for the correction of errors with respect to the timing of periodic reporting. Our support for this process is based in part on the simplified procedure set forth in footnote 82 in the Proposing Release for amending the Form 10-K for this specific purpose.

Questions 13 and 14

We believe that the creation of a new form for semiannual reports, as Form 10-S would be, is desirable to assist investors in knowing the scope of information that will be provided in the particular interim report. We do not perceive any meaningful benefit in requiring different information in the Form 10-S from what is required in Form 10-Q and given the market's familiarity with this presentation believe it is appropriate to require the same information under each form.

Question 15

We believe there are meaningful opportunities to simplify Form 10-Q without affecting the delivery of material information to investors. However, we do not support the pursuit of that goal, which of course is not the subject matter of the Proposing Release, at the expense of, or as an alternative to, providing companies with the option to report semiannually.

Questions 16 and 17

Most of our clients that have completed an IPO in the last 15 years have had a substantial runway as a private company before going public. This has allowed them time to evaluate the benefits and costs of going public. We cannot predict at this time if the flexibility to report semiannually will have a meaningful impact on companies considering an IPO.

Nonetheless, we believe that the flexibility of semiannual reporting, along with other proposed rules recently released by the Commission such as streamlining the filing statuses and making capital formation more streamlined, make entry into the public markets more attractive. In a similar vein, we believe having the opportunity to adopt semiannual reporting may induce current public companies to stay in the reporting system. Finally, while we are unable to assess with any precision the impact on business opportunities, growth or business strategies of semiannual reporting, we believe that reducing the number of interim reports will enable management to allocate more time and resources to these important matters.

Question 18

We believe it is likely that many companies that elect semiannual reporting will continue to provide some kind of voluntary disclosure regarding quarterly operating results. Such disclosure may include earnings releases furnished on Form 8-K, quarterly earnings calls, quarterly financial statements furnished on Form 8-K, quarterly investor decks furnished on Form 8-K, full or partial quarterly financial information filed on Form 8-K to be incorporated into the disclosure package for delayed or continuous offerings, and/or other forms of quarterly disclosures.

Questions 19 and 20

We do not believe that the valid logic underlying the provision that Form 8-K Item 2.02 information be "furnished" and not "filed" is impacted by a company's decision to report on a semiannual basis. In addition, we do not believe that semiannual reporting companies should be required to have first or third quarter financial statements reviewed by their independent public accountant if any such company elects to voluntarily provide that information.

It seems to us that the basic premise of the Proposed Rules is that providing information

semiannually can for many companies be sufficient to provide material current information to investors. If a company that reports semiannually elects to report some financial information quarterly, we do not think that such a company should be penalized by either (i) having this information, and its other Item 2.02 filings, deemed “filed” under the Securities Act and the Exchange Act or (ii) requiring that such information be reviewed by an independent public accountant. We think there is the potential that deeming Item 2.02 information to be “filed,
” or
requiring such financial statements to be reviewed, could be disincentives to companies to provide information that they might otherwise believe could be valuable to their investors. We note that companies are well aware of the exposure for misstatements and omissions in their earnings releases under Exchange Act Section 10(b) and Rule 10b-5, and that deeming this information “filed” would not meaningfully impact the amount of care applied to the preparation of this information. Similarly, these companies would be very focused on producing quarterly financial statements that are fully GAAP-compliant. We further note that many
Docusign Envelope ID: 5DD44130-107C-8946-804C-D6714B0A1887

companies include guidance in their earnings releases and that companies would be discouraged from doing so if that information were deemed “filed” rather than “furnished.”
Question 21
We have not yet received sufficient feedback from our clients on the timing of earnings releases that are not based on financial statements included in a filed periodic report to predict the timing of such releases. Our expectation is that the timing of such releases would be unlikely to change significantly from current practice. We believe that semiannual reporting companies electing to release quarterly information would likely engage in a similar internal process, including audit committee review, to their current processes.
Questions 22 and 23
We do not expect that the option of semiannual reporting will result in a meaningful reduction in material information for investors. Because public companies operate within an integrated disclosure framework that requires the prompt public dissemination of material developments outside of Forms 10-K and 10-Q (and Form 10-S, if adopted), the most important information regarding such companies is and will continue to be disclosed on a current basis. Most significantly, the disclosure requirements of Form 8-K and Regulation FD, stock exchange requirements, the insider trading laws, and securities offering disclosure updating requirements, will continue to incentivize timely and accurate disclosure of material information, as well as mitigate the risk that investors would face less transparency of company developments. Reporting companies also will continue to face external pressures – such as competitive capital markets environments and contractual, commercial and governance-related obligations – that encourage regular communication with their investors.
Similarly, we do not expect that creation of a semiannual reporting alternative will result in investors failing to hold the companies in which they invest to the high standards of disclosure necessary to support their investment decisions. In analyzing the option to report semiannually or quarterly, we believe that it is extremely unlikely that a company would consider the cost and time savings of semiannual reporting to be worth the price of any measurable decrease in the universe of investors willing to purchase the company’s securities due to a perceived insufficiency of public disclosure by the company. Accordingly, we believe that companies will be very highly motivated to provide sufficient information to satisfy investors in their periodic reports, Forms 8-K and voluntary disclosures, regardless of the frequency with which they file their periodic reports. Further, as noted above in response to questions 19 and 20, companies are very aware of potential liability under Exchange Act section 10 and Rule 10b-5 for failing to provide complete and accurate information to the market. All of

this being the case, we would not expect that the election of some companies to report

semiannually will have a meaningful effect on the delivery of material information to their investors.

For companies that elect semiannual reporting, we do not expect that less frequent management certifications of internal controls over financial procedures or less frequent disclosures of changes in disclosure controls and procedures will materially affect investors.

Question 25

We believe it is likely that some companies that elect to report semiannually will retain their independent public accountants to review quarterly financial statements for the potential reasons noted in the question. Companies may also have their independent public accountants perform quarterly reviews to support financial information provided in a Securities Act registration statement.

Question 30

We do not believe that it would be more difficult for investors to back out second semiannual period financial information than it is to back out fourth quarter financial information. Accordingly, we do not support the addition to the Proposed Rules of a requirement that the second semiannual period financial information be included in the Form 10-K, or, for that matter, to add as part of this rule making process a requirement for quarterly filers to include fourth quarter financial information in their Forms 10-K. Requiring semiannual filers to break out financial statements into two three-month periods seems to us to be inconsistent with the logic of the Proposed Rules. If a company determines that it can provide sufficient information to investors by reporting on a semiannual and not quarterly basis, we do not understand the rationale for then requiring that company to report three-month financial information in its Forms 10-S and 10-K.

Question 31

Our clients are just beginning to evaluate the potential impact on their insider trading policies, or insider trading plans, of the adoption of semiannual reporting. In our view, it is likely that some companies reporting on a semiannual basis would determine that the results of the semiannual period to be reported upon would typically come into focus further in advance of the end of the period than in the case of quarterly reporting. In those cases, we think the insider trading policies would close the trading window further in advance of the end of the semiannual period than had been the case when reporting quarterly. Of course, the specifics of each company will vary, depending, upon other things, on whether the company voluntarily reports any quarterly financial information or if the status of the company's development is such that operating results are even the most important metric being followed by investors (as

opposed, for example, in the case of a life science company to the progress of a drug through regulatory approval). We do not foresee a meaningful impact on insider trading plans, other than to operate in conformity with the company's prevailing insider trading policy, of the adoption of semiannual reporting.

The one aspect of insider trading plans that likely would be materially impacted by the adoption of optional semiannual reporting involves the cooling-off period for insider trading plans of officers and directors under Rule 10b5-1(c)(1)(ii)(B)(1). The amendments to Rule 10b5-1 adopted in 2022 included a cooling-off period, following the adoption or amendment of an insider trading plan by an officer or director, before which trading under the plan could not

commence for purposes of claiming the affirmative defense. The Commission originally proposed a period of 120 days. However, in the adopting release for the final rules the Commission remarked: “We agree that, in some cases, a full 120-day cooling-off period would be longer than needed to prevent the opportunistic trading with which we are concerned. Therefore, we have shortened the cooling off period for officers and directors from 120 days to the later of 90 days or the second business day following disclosure of the issuer’s financial results for the fiscal quarter in which the plan was adopted.” As adopted then, the 120-day maximum cooling off period applies only if disclosure of financial results for the relevant quarter has not occurred within 120 days of plan adoption or amendment.

The Proposed Rules would amend subsection (B)(1)(ii) to include a reference to the filing of a Form 10-S, along with the existing references to Form 10-Q and Form 10-K, as a trigger that start the two-business day measurement period for the cooling-off period. Unfortunately, we believe that the functional result of this provision will be that the cooling-off period for semiannual filers will be the 120-day maximum, because in most cases the semiannual reporting company’s Form 10-K or Form 10-S containing operating results for the fiscal quarter in which the plan was adopted will not be filed for more than 120 days after the plan’s adoption. We believe that this result will be viewed as an important negative feature of semiannual reporting that disadvantages directors and officers of semiannual filers, and that may discourage issuers from electing semiannual reporting as a result.

One potential way to address this issue is to include the filing or furnishing of a Form 8-K in subsection (B)(1)(ii), as well, such that a semiannual reporter may voluntarily file or furnish an earnings release for quarterly results in order to trigger the start of the two business day measurement period for the cooling-off period. This change would eliminate an aspect of the Rule 10b5-1 framework that would discourage companies from electing semiannual reporting, and still satisfy the disclosure requirements that protect investors.

Question 32

We do not foresee a meaningful increase in the risk of illicit insider trading by insiders of companies that adopt semiannual reporting. As noted above, a company that expects its semiannual period results to be determinable at an earlier date than was the case for quarterly results would likely provide a longer closed window prior to the end of the period. Given that, insider trading liability will not change with the adoption of semiannual reporting. We believe companies and their insiders will continue to be motivated to allow trades, and to trade, when insiders are not in possession of material nonpublic information, as is the case with quarterly reporting.

Question 34

We recommend that the Commission permit a nine-month transition period for implementation of the final rules. Specifically, compliance with the final rules should be required for fiscal years ending nine months or more after adoption of the final rules. This transition period would provide reporting companies with the necessary time to decide whether to adopt semiannual reporting and, for those that do, to adjust their reporting calendars, disclosure controls and procedures, internal controls over financial reporting, auditor workflows, and investor-relations practices, while ensuring that investors begin receiving semiannual reporting on a prompt and predictable schedule.

Similarly, we suggest that companies be required to comply with the final rules with respect to Securities Act registration statements for initial public offerings that become effective nine months or more after the rules are adopted. This approach avoids forcing changes in IPO registration statements that are currently close to being declared effective, yet ensures that companies with a longer runway to effectiveness will comply with the final rules

reasonably shortly after their adoption.
In any case, we believe that early compliance with the final rules should be permitted for issuers, provided that they apply the new requirements in full and on a consistent basis.
Questions 35-36
We support adopting the proposed changes to Regulation S-X to incorporate semiannual reporting.
Specifically, we believe that the proposed revisions are necessary to take into account and implement semiannual reporting. If the proposed changes to Regulation S-X were not made and the current rules remained structured around quarterly reporting, we think it would have a negative effect on semiannual reporters and their ability to raise capital and solicit proxies.

In addition, we agree with the proposed consolidation of Rules 3-01 and 3-12, as we believe that conforming changes for registration and proxy statements are necessary to ensure that reporting companies are provided a clear and certain disclosure framework. In our opinion, such revisions will reduce interpretive uncertainty and compliance costs for companies that choose a semiannual cadence, which will encourage capital formation.
In connection with the adopting release and/or the drafting of related interpretive guidance, we recommend that the Commission provide illustrative timelines (for example, for June 30 and December 31 semiannual period ends) that demonstrate how the rules will apply at filing and at effectiveness/mailing. We believe this is likely to further streamline application of the adopted rules.
Question 37
We expect the Proposed Rules to facilitate capital formation by allowing companies to align interim reporting in Securities Act registration statements with their interim reporting elections. While some issuers may continue to include quarterly information in offering documents, that decision should be voluntary and driven by market forces, as opposed to being mandated by regulation.
In addition, we anticipate that the practices of companies that elect semiannual reporting likely will evolve over time. For example, such companies may choose to provide quarterly information in Securities Act registration statements and prospectuses until the market and their investors acclimate to a semiannual reporting framework, and thereafter provide semiannual information.
Questions 38-40
We support the manner of aligning the age of financial statements in a registration statement with the Exchange Act reporting deadlines for quarterly and semiannual filers, as well as consolidating Rule 3-12 into Rule 3-01, as proposed. We believe that such integration and harmonization will create a clearer framework for both quarterly and semiannual filers and better synchronize the Securities Act and Exchange Act regimes.
Question 41
We support eliminating the 135-day provisions in the current rules, as permitting mid-period financial statements promotes inconsistency, complexity and incomparability between registrants. The flexibility afforded by the current rules to file mid-period financial statements is used very infrequently, in our experience.

Question 43
We support adopting the proposed amendments to Rule 10-01 and Rule 8-03 regarding

the contents of interim financial statements, as clarifying and harmonizing this framework will both preserve historical comparability for quarterly filers and provide semiannual filers with clear guidance on appropriate presentation and disclosure for interim periods.
Question 44
We encourage amendments to the current rules that will align the required disclosure of financial information regarding an acquired company with the reporting cadence elected by the acquiring company.
If the Staff would like to discuss any of the comments that we have provided in this letter, please feel free to contact Ran Ben-Tzur or Amanda Rose of this firm at 650-335-7613 or 206-389-4553, respectively.
Sincerely,
FENWICK & WEST LLP
Ran D. Ben-Tzur

Randall Brinkley — Jul 6, 2026
Subject: File No. S7-2026-15 From: Randall Brinkley Nay to semi-annual reporting. Quarterly reports are like pillars of trust that investors (great and small) rely on. . .and a foundation is made more firm with four, than with two pillars. Also, reducing a burden of responsibility does not absolve accountability, it merely shifts it elsewhere; service without standards is merely a scam. NO to S7-2026-15

Randall Cupp — Jul 6, 2026
Subject: File No. S7-2026-15 From: Randall Cupp This response is in regard to the proposed rule for optional semi-annual financial reporting S7-2026-15. I strongly urge you to continue with the required quarterly reporting. This information is invaluable to individuals with an investment portfolio to better understand and evaluate the financial reports of companies. This also creates less oversight by the SEC, investment funds and others reviewing the integrity of the information, which creates trust on the reporting. With computerization this reporting is less onerous than in previous decades, utilizing information already being created by the company, and does not create additional burdens that need to be lessened. I encourage you to NOT implement this proposed change.

Randall Syfert — Jul 6, 2026
Subject: File No. S7-2026-15 From: Randall Syfert Quarterly reporting provides investors like myself with timely transparency, helps prevent fraud, enables informed decision-making, and maintains market integrity. Reducing mandatory disclosure frequency serves the interests of corporations, to the detriment of individuals and investors. Please retain quarterly reporting requirements.

Randolph Reinwasser Investment Advisor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Randolph Reinwasser I rely on quarterly information from public companies to make my sound investment decisions for my clients and myself. This proposal takes away vital information from the most important markets in the world. This proposal will also radically increase volatility when companies report surprises. Europe has tried your proposal and it is a massive failure. You wouldn't let schools report grades half as often and this is an equally terrible

idea. Please save the 10Q. Randall Reinwasser

Razel Remen None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Razel Remen I am strongly opposed to the SEC proposal that company reporting be switched from quarterly to semiannually. This policy has been shown in other countries such as the UK to increase insider trading and increases market volatility and decreases consumer confidence.

Rebecca Downs — Jul 6, 2026
Subject: File No. S7-2026-15 From: Rebecca Downs Since 2002, every CEO must personally certify their numbers every quarter, with federal prison on the line for signing a lie. With the recent history of stock market crashes due to CEO's cooking the books it is absurd the SEC is proposing 'semi-annual' reporting, cutting those certified filings to twice a year. In what world does reducing accountability improve outcomes? Accountability is not creating a problem. The companies we trade are not being damaged by the obligation to file four reports a year. The entire S&P 500 files a 10-Q every quarter, and the S&P 500 is doing very well. Arguably, losing quarterly reporting is what will cause damage. It is difficult to feel confidence when investing in something that is opaque and risky. And investor confidence is a key element of stock market health.

Regenia Sims NA — Jul 6, 2026
Subject: File No. S7-2026-15 From: Regenia Sims I am strongly opposed to changing the reporting period to 6 months instead of quarterly. I managed the Financial Reporting department for a public company and understand the issues that can arise over a 3-month period. The quarterly reporting requirement gives both the company and the investors a clear picture of the current financial position of a company and gives both time to make adjustments as necessary. If this snapshot is not made except every 6 months, many investors will be blindsided by decisions being made at the company that negatively affects earnings. Quarterly reporting is not so cumbersome since you have more current financial data to review, while waiting six months for comparisons can cause issues of data collecting. Do Not change the reporting requirements.

Remy Jurenas — Jul 6, 2026
Subject: File No. S7-2026-15 From: Remy Jurenas Keep quarterly reporting for publicly traded firms. This policy has ensured transparency since 1970 for investors, incentivized firms toward accountability, and created the world's largest and most actively traded stock markets. The argument that this requirement encourages firms to engage in short-termism falls short when looking at the evidence. Though the CATO Institute questions the importance of frequent reporting, its review shows that "US financial markets and corporate investment (research and development) have grown significantly since the modern introduction of quarterly reporting in 1970. Although that relationship is surely overly simplistic, a 2018 review of the empirical literature finds that the macro predictions of the short-termism hypothesis are "largely undemonstrated, implausible, or untrue." " [https : / / www . cato . org / blog / doing-away-quarterly-reporting-right-step-wrong-reason] Warren Buffett supports quarterly reporting. His beef is with companies using the occasion to offer earnings guidance. Companies do not have to offer guidance – leave it to them to decide. But the quarterly reporting requirement ensures transparency, maintains trading liquidity, increases market efficiency, and

lowers companies' expense in accessing capital – to the benefit of insiders as well as investors. Keep America great by keeping quarterly reporting!

Reyburn — Jul 6, 2026
Subject: File No. S7-2026-15 From: Reyburn Save the Quarterly Reporting!

Rhonda Headley None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Rhonda Headley Longer gaps create an unfair advantage to corporations. SEC do your job and protect individual investors.

Richard A Schroeder Staff Experimenal Test Pilot and Investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Richard A Schroeder As an investor, I do not support this proposal to allow management the opportunity to report semiannually vs. quarterly. It goes against transparency in the capital market and hurts investors. I would support any requirement for more frequent reports, I.e., monthly rather than quarterly.

Richard Sodon The Motley Fool Community — Jul 6, 2026
Subject: File No. S7-2026-15 From: Richard Sodon Why mess with success? I like quarterly filings and I would argue that monthly would be better. Imagine if you had to report your work progress to your bosses only twice a year. How would they know if you were in the right track? AI should be making things more transparent to investors. Let's not create another MCI worldcom meltdown.

Richard Tawadros — Jul 6, 2026
Subject: File No. S7-2026-15 From: Richard Tawadros I am submitting this comment as a retail investor relying on SEC-mandated disclosure requirements to manage my investment portfolio and retirement savings. While I appreciate the proposed flexibility for issuers, mandatory quarterly reporting should remain the baseline requirement for three reasons grounded in securities law, market structure, and investor equity: 1. Statutory Mandate Requires Proactive Investor Protection Under Section 14(b) of the Securities Exchange Act, the Commission's core mission includes protecting "the investing public"—which encompasses millions of retail participants lacking institutional research infrastructure. Eliminating mandatory quarterly reporting fundamentally alters the risk profile faced by smaller investors who depend on standardized, predictable disclosure schedules. The Supreme Court has long held that federal agencies must not implement rules that depart from prior policy without "examining the relevant data and articulating a satisfactory explanation for [the] action." Motor Vehicle Mfrs. Ass'n v. State Farm Mutual Automobile Ins. Co., 463 U.S. 29, 43 (1983). Shifting to optional semiannual reporting represents such a departure, requiring rigorous justification that considers differential impacts across investor types. 2. Information Asymmetry Creates Structural Disadvantage Institutional investors possess analytical resources—including dedicated equity research teams, analyst relationships, and direct management access—that compensate for reduced public disclosure frequency. Retail investors do not share these advantages. Quarterly reports serve as critical touchpoints enabling non-professional investors to: Detect deteriorating fundamentals before insiders may trade on unpublished adverse information

Monitor management execution against publicly stated guidance Make informed decisions about portfolio allocation and risk exposure Allowing voluntary opt-outs effectively grants corporations discretion to select their investor constituency based on desired transparency levels—a development inconsistent with the Commission's investor protection mandate under Section 2(a) of the Securities Act of 1933. 3. Market Quality Benefits Outweigh Compliance Costs While issuer compliance costs merit consideration, empirical evidence demonstrates that more frequent disclosure improves price discovery, tightens bid-ask spreads, and enhances market liquidity—benefits that flow proportionately more to retail investors with limited diversification options. The opportunity for companies to reduce reporting burden must be weighed against systemic market quality degradation and concentrated harm to passive retail capital providers. Recommended Alternative Framework Rather than eliminating mandatory quarterly reporting, the Commission should consider: Permitting abbreviated quarterly filings for qualifying smaller reporting companies (maintaining four annual disclosures) Strengthening continuous disclosure obligations under Form 8-K for material adverse developments occurring between scheduled reporting periods Enhancing machine-readable formatting requirements to reduce processing costs for automated analysis tools accessible to retail participants Conclusion Please preserve quarterly reporting as the default requirement for Exchange Act registrants. Any relaxation of existing disclosure frequency mandates requires explicit findings addressing disproportionate effects on retail investors and demonstrating that investor protection objectives remain satisfied under alternative frameworks. Respectfully submitted, Richard

---

RJ — Jul 6, 2026
Subject: File No. S7-2026-15 From: RJ Strongly advocate for keeping the quarterly reporting system so that the public and relevant stakeholders can receive data in a time frame that preserves the ability to determine if corporations are acting in good financial faith. Historical trends have shown that corporations that are not legally obligated to have financial transparency obscure real-time operational narratives and engage more heavily in self-dealing practices, many of which can seriously harm public investors. In an age of electronic recordkeeping and near instantaneous access to internal data, there shouldn't be a significant larger burden for quarterly reporting than semi-annually. Therefore, the current quarterly reporting system should stand.

Robert Boehmer — Jul 6, 2026
Subject: File No. S7-2026-15 From: Robert Boehmer I strongly urge the SEC to reject this proposal and continue with quarterly reporting. As a private investor it is very important to me that companies continue to report their results on a quarterly basis so I can monitor performance and change my investments in a timely fashion. Increasing the time between reports will do nothing but increase uncertainty.

Robert Cavalier Retired — Jul 6, 2026
Subject: File No. S7-2026-15 From: Robert Cavalier I do NOT support S7-2026-15 changing the reporting requirements for corporations. As an investor with my entire retirement account dependent on accurate performance information, quarterly reports are necessary to provide clear guidance into corporate performance.

Robert Schroeder Investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Robert Schroeder As an investor, I do not support this proposal to allow management the opportunity to report semiannually vs. quarterly. It goes against transparency in the capital market and hurts investors.

Robert White None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Robert White Don’t change current rules

---

Roberta Miller — Jul 6, 2026
Subject: File No. S7-2026-15 From: Roberta Miller As a citizen and an investor, I strongly urge the SEC to keep the quarterly reporting requirement for all publicly traded companies. Retail investors like myself will be placed at a disadvantage if companies can opt out of half of the current reporting dates at their own discretion. Industry insiders who have other channels of information will benefit disproportionately, potentially even to an extent which encourages illegal insider trading. As a former IT professional in publicly traded companies, I have observed first hand the time, effort and money that goes into quarterly filings. Even so, I believe that it is important that requirements apply to all companies equally. Smaller companies may opt for semiannual filing because the cost of producing quarterly reports is relatively more burdensome to them. However, these are precisely the companies whose business conditions and performance can change the most quickly. With less information available to the investor, their stocks will become riskier than they have to be. This has the potential to bias the choices of retail investors, and the institutional funds that cater to them through 401(k) plans and the like, toward more established companies. The resulting disadvantage for small or newly public companies in raising capital may outweigh the cost savings in the long run. Finally, in a world where financial dealings get steadily more complex while the commonly accepted ethical guidelines that govern them become more and more murky, it seems like a particularly bad time for the SEC to opt for less transparency rather than more. While efficiency is an important goal for an agency that has to impose requirements on businesses, retaining public trust is paramount. Without it, investors, companies, and our country as a whole all lose.

Robin Adams — Jul 6, 2026
Subject: File No. S7-2026-15 From: Robin Adams I believe changing financial reporting requirements from quarterly to semi-annually will adversely affect consumers, investors and the public at large. By requiring only semiannual financial reporting, corporate leadership and those close to the inner workings of corporations will have less timely visibility into structural changes and financial and operational performance that affect consumption and investment decisions. It will facilitate C-suite and insider activities that will disadvantage general investors and/or consumers. Do not take away the current safeguards!

Robin Holly — Jul 6, 2026
Subject: File No. S7-2026-15 From: Robin Holly Quarterly reporting is important to ensure that information on publicly traded companies is available to all shareholders and potential buyers or sellers. Reducing reporting to semi-annually will remove transparency and increase risk across the market.

Robyn Taylor NA — Jul 6, 2026
Subject: File No. S7-2026-15 From: Robyn Taylor Please keep quarterly filings and not semi-annually to allow the everyday person to stay informed and able to make the best decisions for their personal finances and investments.

Rodney L Arent None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Rodney L Arent I am writing to express my wish that the quarterly report system be retained. Anyone with invested funds deserves to know what is transpiring with their investments. It is my understanding that this rule was imposed after after an unsuccessful trial of the semi-annual reports and that the whole purpose of requiring this transparency was to protect the investors. The quarterly report system has been helpful and functional and it has been a reasonable response to a safety concern. Thank you.

Ronald Lenox — Jul 6, 2026
Subject: File No. S7-2026-15 From: Ronald Lenox I do not want to see less information! This gives companies time to hide bad news from the investor and then it can become a nasty surprise! This is simply a ploy by companies to save a couple of dollars by providing less service to the owners (shareholders) of the company.

Ryan Meder — Jul 6, 2026
Subject: File No. S7-2026-15 From: Ryan Meder I am in favor of this proposal. I think the current 4-quarter model leads too many companies to make short-sighted decisions to make their numbers look better for the next filing. These decisions can include layoffs, purchases, sales, and projects that ultimately hurt the long-term success of the company, its employees, and investors. By switching to a semi-annual filing model, it would allow companies to invest more in their long-term strategic vision without having to make trade-offs for perceived short-term gain.

Ryan Willis Toppan Merrill — Jul 6, 2026
Subject: File No. S7-2026-15 From: Ryan Willis Dear SEC Commissioner, While I completely understand the goals and perspective the SEC is undertaking to help increase IPO activity and reduce the burden for public filings I don't believe a reduction in reporting will ultimately help improve the public markets. I think individual investors will be hurt with less information and it will make the data less comparable. I work as an XBRL consultant and believe the XBRL data will be impacted and we'll have less apples to apples comparisons with inconsistent reporting. Additionally, given the advancements in AI, I think public companies have far less difficulties than in the past and additionally many outsource tasks to third-party companies like Toppan Merrill which can help create efficiencies without needing to completely revamp internal processes. I thank you for reading this comment and for your ongoing commitment to better our public markets which I truly believe are the best in the world. Best regards, Ryan Willis

---

Salvatore Caputo None, retired journalist — Jul 6, 2026
Subject: File No. S7-2026-15 From: Salvatore Caputo As a small, private investor, I want to know what I'm investing in. Business changes almost daily, and in this fast-paced environment, loaded with information both bogus and real, even a quarterly report seems too little, so I'd say requiring reports only semiannually is very much counter to the pace at which information is needed. The rule should be speeding up the reporting cycle, it seems to me, but I'd be happy with it staying at the current status quo of quarterly filings.

Samir Rustagi — Jul 6, 2026
Subject: File No. S7-2026-15 From: Samir Rustagi Please keep quarterly reporting intact. Do not change to 6 month reporting.

Samuel Kane Creative Design — Jul 6, 2026
Subject: File No. S7-2026-15 From: Samuel Kane My name is Samuel Kane. I work as a creative designer for a company that frequently shares their financial situation with all employees and has created a culture of trust and confidence in doing so. Restricting moments of public transparency to only twice a year will offer no benefits but for those looking to loot companies of their wealth while degrading the services and products they provide, and will exacerbate the climate of distrust we already live in, decreasing consumer confidence and business's success in the process.

Sandra Korbelik Retired — Jul 6, 2026
Subject: File No. S7-2026-15 From: Sandra Korbelik I am retired and depend on my investments to live. This requires timely quarterly tepprting. Don't change what works- you'll risk my ability to live adequately.

Sarah Ackerman — Jul 6, 2026
Subject: File No. S7-2026-15 From: Sarah Ackerman I feel this would cause issues with transparency, increase the risk of fraud, and have a huge impact on public trust of the market itself. I oppose this motion for semi annual filings.

Sarah Balkovek IL CPA member-student membership — Jul 6, 2026
Subject: File No. S7-2026-15 From: Sarah Balkovek It is abhorrent that this administration wants to make it easier to ignore the rules the way the Enron executives did. There is a reason these rules exist. This does not benefit the average American and it makes it easier for those at the very top to serve themselves and not the public or the stockholders in their companies. I respectfully ask for the rules to stay unchanged as they are needed in this world where the 1% feels they are immune from regulation and rule enforcement, starting with the President who has done everything in his power to consolidate as much wealth as he has been able to for himself and those closest to him. This is not beneficial to Americans at large.

Sarah Gray None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Sarah Gray This proposal is not in the best interest of the public. Since all working class American's have been sold the idea that they must save and invest in the stock market for retirement, this proposal will hurt them the most. Approximately 40% of the money in the market is retirement savings. Most American's are not paying attention to this or their 401(k) - unless they're looking at the 401(k) for a loan - they are trying to keep up with the inflation that has eaten away at all financial gains they've made since 2020 and figure out how to pay the bills, be healthy, eat healthy, and feed themselves and their families. This proposal should have never been made. It's clearly a move to benefit corporations and will do nothing to improve the access to information of the working class.

Sarah Spinler None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Sarah Spinler I am opposed to the change allowing for optional semi-annual rather than quarterly reporting as it would make it more difficult for seniors to manage their retirement accounts.

Savina Imrhan — Jul 6, 2026
Subject: File No. S7-2026-15 From: Savina Imrhan Please keep this reporting quarterly. Going to semiannual reporting would make it that much easier to conceal financial misconduct whole keeping the public even less informed than it is now. There's no reason for this other than to make things more convenient for corporations, and that doesn't seem like a good enough reason to make this change

---

Scarlett N Upchurch Certified Public Accountant — Jul 6, 2026
Subject: File No. S7-2026-15 From: Scarlett N Upchurch Dear Commissioners: I am writing to encourage the Securities and Exchange Commission to continue requiring public companies to file quarterly financial reports. Regular quarterly reporting is an essential part of the U.S. disclosure framework because it gives investors, analysts, employees, creditors, and the broader public timely information about a company’s financial condition and operating results. Quarterly reports help promote transparency and market confidence. Without reliable interim reporting, investors would have to wait too long to understand material changes in performance, liquidity, risk exposure, or management’s outlook. The current Form 10-Q framework provides a consistent cadence of information that allows market participants to compare companies across periods and industries, evaluate emerging risks, and make better-informed decisions. Maintaining quarterly reporting also supports fair and efficient capital markets. When financial information is disclosed at regular intervals, it reduces information asymmetry between company insiders and outside investors. This is especially important for individual investors, who may not have access to private channels of information and rely heavily on public filings to assess the value and risks of their investments. I recognize that preparing quarterly reports requires time and resources. However, the benefits of timely disclosure outweigh those burdens. Quarterly reporting encourages accountability, supports discipline in financial controls, and gives the Commission and the public more frequent insight into developments that may affect investors and the integrity of the markets. For these reasons, I respectfully urge the Commission to preserve the requirement that public companies file quarterly financial reports. Continued quarterly reporting helps protect investors, strengthen confidence in U.S. markets, and uphold the SEC’s mission of maintaining fair, orderly, and efficient markets. Thank you for considering my views.

Scott Clyde — Jul 6, 2026
Subject: File No. S7-2026-15 From: Scott Clyde Re: File No. S7-2026-15 I respectfully oppose the proposed amendments permitting public companies to satisfy interim reporting obligations through semiannual reporting in lieu of quarterly reporting. The federal securities laws are intended to promote transparency, market efficiency, and investor protection. Quarterly reporting provides investors, analysts, employees, retirees, and other stakeholders with timely access to material financial and operational information. Reducing the reporting frequency from three quarterly reports and one annual report to a single semiannual report and one annual report will diminish transparency and increase information asymmetries between corporate insiders and public investors. The proposal may disproportionately affect retail investors, like me, who generally lack access to the alternative information channels available to institutional investors. More frequent public disclosures help ensure that all investors operate from a common information base and support confidence in U.S. capital markets. The Commission states that the proposal would reduce compliance costs and increase flexibility for issuers. While those goals are important, the benefits should be balanced against the core mission of investor protection. The proposal does not appear to demonstrate that current quarterly reporting requirements impose costs substantial enough to justify a significant reduction in disclosure frequency. Quarterly reporting has been a foundational component of U.S. securities regulation for decades. It promotes market discipline, facilitates price discovery, and enables investors to identify potential risks on a timely basis. Delays of up to six months between periodic reports may limit investors' ability to evaluate changing financial conditions, governance concerns, and emerging operational risks. For these reasons, I urge the Commission to retain quarterly reporting requirements or, alternatively, limit any semiannual reporting option to narrowly defined categories of issuers where investor protection concerns can be adequately addressed.

Scott Jones Individual investor — Jul 6, 2026
Subject: File No. S7-2026-15 From: Scott Jones As an individual investor, I absolutely rely on quarterly reports to monitor investments. There are too many things that can effect an investment in six months or a year. Please leave the quarterly reporting requirement in place.

semi-retired member of The Motley Fool Community — Jul 6, 2026
Subject: File No. S7-2026-15 From: semi-retired member of The Motley Fool Community Good day and thank you for reading my comments AGAINST S7-2026-15, Semiannual Reporting. Briefly, my comments are to tell you who I am and why S7-2026-15 is a VERY BAD idea for my financial future security. I am a semi-retired divorced female, solely financial responsible for myself and demographically a member of the seriously endangered middle class. I am very worried about my retirement income in my future. I will eventually receive a pension of a few hundred dollars a month. I have a Social Security benefit in a decade that is 11 times the pension, but HOW can I realistically expect that "benefit" Social Security income after 2035? a "benefit" that I worked five decades years to EARN, a "benefit" critically vital to me in my final decades when I will really need it? THUS I am VERY involved in investing because as far as I can tell MY INVESTMENTS IN MY 401K IS NEARLY ALL of my future financial security. THUS I am asking you to REJECT S7-2026-15 -- it's adoption will DEPRIVE me of VITALLY IMPORTANT information! On the other side of this coin, it's adoption is NOT necessary to save American businesses from being crushed. As Reddit's 18 million-strong WallStreetBets community said "If quarterly reporting is crushing American capitalism, American

capitalism is hiding it well." - https : / / www . sec . gov / comments / S7-2026-15 / s7202615-775527-2368994 . html My future financial well being is at stake. I need all the information I can get to make the best investing decisions that I possibly can, thus Quarterly reporting is VITALLY IMPORTANT to me! I take my future financial well being very seriously and ask that you also take it seriously and REJECT S7-2026-15.

SG Mitchell — Jul 6, 2026
Subject: File No. S7-2026-15 From: SG Mitchell Keep quarterly reporting. Twice a year is too in frequent.

Shari Brezinsky — Jul 6, 2026
Subject: File No. S7-2026-15 From: Shari Brezinsky I am opposed to this new proposed policy, as less transparency in our financial systems is a dangerous thing. The quarterly report ruling was created in the first place in response to the Enron corporation's corruption. We need more transparency in our financial systems, not less. Thank you, Shari Brezinsky

---

Sharon Ann Cauchi Retired — Jul 6, 2026
Subject: File No. S7-2026-15 From: Sharon Ann Cauchi I vehemently objecto to the Proposed reduction of Form 10Q reporting. The SEC’s valued primary mission is to protect investors and maintain fair, orderly, and efficient markets. This proposal does the opposite by reducing the information velocity required to make safe, prudent investment decisions. To safeguard the retirement savings of millions of ordinary Americans who depend on transparent markets to build their futures, I urge the Commission to withdraw File Number S7-2026-15 and maintain the mandatory quarterly reporting framework. Thank you for your time and consideration of these comments. Respectfully, Sharon Cauchi

---

Sharon Miller Retired Travel Consultant — Jul 6, 2026
Subject: File No. S7-2026-15 From: Sharon Miller Do not allow a 6 mth hiding of corporation’s books. Working people are already paying more in taxes to “help” the billionaires.

Shaun Wayawotzki Consultant / Project Management Professional — Jul 6, 2026
Subject: File No. S7-2026-15 From: Shaun Wayawotzki As a long time retail investor (my dad got me interested in when I was still in High School in the late 90s) I want to voice my strong opposition to this proposal. We have precious few windows into our investments / potential investments and in a market that has become increasingly irrational, these hard fact based “windows” are critical. This change should not be approved, and the fact that it’s even being considered is disturbing.

Sheri Bozic — Jul 6, 2026
Subject: File No. S7-2026-15 From: Sheri Bozic To the Securities and Exchange Commission: I write to oppose the proposed amendments permitting public companies to file semiannual reports on

Form 10-S in place of quarterly reports on Form 10-Q. Though framed as optional flexibility, this change would erode the transparency ordinary investors rely on. I urge the Commission not to adopt it. 1. Investors would be informed half as often. Interim financials, MD&A, risk-factor updates, and legal-proceedings disclosures would arrive twice a year instead of four times, opening six-month gaps in which material changes go unreported. 2. Earnings releases are no substitute for a 10-Q. They are voluntary in content, curated by management, not subject to the same review, and lack the liability protections of a filed report. Substituting management's highlight reel for standardized filings lowers the reliability of what reaches the public. 3. It widens the gap between insiders and everyday investors. Public filings are one of the few places retail investors stand on equal footing. Cutting their frequency deepens the information asymmetry the securities laws exist to counteract, at the expense of those least able to absorb it. 4. "Optional" doesn't cure the harm. A company-by-company election leaves investors with an inconsistent patchwork that undermines comparability, and the companies likeliest to reduce disclosure are often those whose investors most need continued scrutiny. 5. It impairs price discovery. When material information surfaces only twice a year, prices grow less accurate between filings and more prone to sharp corrections, harming long-term investors, including the millions holding these securities through retirement funds. The modest compliance savings for issuers do not justify degrading the transparency, comparability, and timeliness that protect investors and support efficient markets. I urge the Commission to withdraw the proposal and preserve quarterly reporting. Regards, Sheri Bozic

---

Sherrie — Jul 6, 2026
Subject: File No. S7-2026-15 From: Sherrie I support quarterly reporting as it provides the financial health of the companies 4 times per year. This allows the public to be informed to make better decisions. Semi-annual or 6 months is too long to wait for a report on how a company is doing. As a result, a person might hold off their investing decision longer since less information would be available.

Sherry Renfro N/A — Jul 6, 2026
Subject: File No. S7-2026-15 From: Sherry Renfro I ABSOLUTELY RELY on quarterly reports to determine buy/sell/hold decisions in my retirement portfolios. "Optional" six-month reports will quickly become the norm. Please vote NO on this. Imagine if Enron only had to fake their books 2X a year?!

Siraj Omar — Jul 6, 2026
Subject: File No. S7-2026-15 From: Siraj Omar Dear Commissioners, The quarterly reports have been working well for us. There's no reason to changing to a six-month report. Please keep it the way it is. Thank you.

Small Business Investor Alliance — Jul 6, 2026
BY ELECTRONIC TRANSMISSION
July 6, 2026
Vanessa A. Countryman, Secretary
U.S. Securities and Exchange Commission
100 F Street, N.E.
Washington, DC 20549

Re: Request for Comment on Semiannual Reporting, Release Nos. 33-11414; 34-105368; 39-2563; IC-36140; File No. S7-2026-15 (the "Release")

Dear Ms. Countryman:

The Small Business Investor Alliance ("SBIA") appreciates the opportunity to submit this comment letter to the Securities and Exchange Commission (the "SEC") regarding the SEC's proposal to permit companies subject to reporting obligations under Sections 13(a) or 15(d) of the Securities Exchange Act of 1934, as amended (the "Exchange Act") that currently file quarterly reports on Form 10-Q to elect to file semiannual reports on new Form 10-S in lieu of quarterly reports on Form 10-Q (the "Proposed Rules").1 The Proposed Rules also would amend Regulation S-X and related rules and forms to facilitate semiannual reporting and to address the age of financial statements in registration statements, proxy statements and other SEC filings.2

SBIA is a national association that develops, supports, and advocates on behalf of policies that benefit investment funds that provide growth capital to small and mid-size businesses in the lower middle market, as well as the institutional investors that provide capital to these funds. Our membership consists of the advisers of traditional 3(c)(1) and 3(c)(7) private funds, small business investment companies, rural business investment companies, funds registered as business development companies ("BDCs") under the Investment Company Act of 1940 (the "1940 Act"), and the investors that invest in these funds including banks, family offices, and fund of funds.

At the outset, we applaud the SEC for investing its limited resources to reshape the regulatory and reporting landscape of Exchange Act reporting companies. SBIA takes no position on whether the SEC should permit Exchange Act reporting companies to elect semiannual reporting in lieu of quarterly reporting. We write only to encourage that, if the SEC adopts an elective semiannual reporting framework, BDCs should be eligible to elect semiannual reporting on the same terms as other Exchange Act reporting companies.

The Release requests comment on whether any types of companies that currently file Form 10-Q should be excluded from the semiannual reporting option, including BDCs.3 We do not believe BDCs should be excluded from an otherwise elective framework available to other Exchange Act

1 See Release, at 7.

2 Id. at 8.

3 Id. at 33, 85.

reporting companies. The Proposed Rules are premised on the principle that reporting companies should have the flexibility to choose the frequency of reporting that best fits their unique circumstances and the preferences of their investors.4 That principle should apply with equal force to BDCs, which, like other Exchange Act reporting companies, vary in size, investor base, trading characteristics and capital markets activity.

A BDC exclusion would be difficult to reconcile with the broader regulatory landscape for investment companies subject to regulation under the 1940 Act. Registered investment companies subject to the 1940 Act reporting framework, including open-end funds, closed-end funds and exchange-traded funds, currently report to investors on a semiannual basis through Form N-CSR and are exempt from Form 10-Q filing requirements under Exchange Act Rules 13a-13 and 15d-13.5 BDCs are the one category of company subject to regulation under the 1940 Act for which quarterly Exchange Act reporting remains a binding obligation. If the SEC determines that operating companies may elect semiannual reporting, extending the same option to BDCs would simply bring them into closer alignment with the reporting cadence that already applies to other companies subject to regulation under the 1940 Act.

This anomaly is particularly difficult to justify given how closely BDCs resemble the registered vehicles that already report semiannually. Non-traded BDCs, in particular, share the defining structural features of non-traded closed-end funds and interval funds—continuous or periodic offerings, periodic net asset value ("NAV")-based repurchases, and an investor base that

participates on the basis of NAV rather than exchange-traded market prices. Permitting BDCs to elect semiannual reporting would simply put them on equal footing with the economically comparable registered vehicles that already report to investors on a semiannual basis, rather than subjecting BDCs to a more frequent Exchange Act reporting obligation solely by reason of their election of BDC status.

Importantly, BDC investors would not be placed at a relative informational disadvantage compared to investors in other companies that elect semiannual reporting, as all investors in semiannual filers would receive the same periodic disclosure on the same schedule. In many respects BDC investors would be better situated, because existing regulatory and market practices provide many BDC investors with access to critical valuation data outside the SEC periodic reporting process. Many non-traded BDCs, for example, conduct continuous offerings with periodic repurchases and, as a function of the repurchase mechanics, strike and communicate the NAV on a monthly or quarterly cadence that is independent of the Exchange Act reporting cycle. These channels would help ensure that such investors would continue to receive timely NAV information under a semiannual periodic reporting frequency.

4 Id. at 66.

5 See 17 C.F.R. § 270.30e-1 (2025) (requiring registered investment companies to transmit reports to shareholders at
least semi-annually); See also 17 C.F.R. § 249.331 (2025) (certified shareholder report for registered management
investment companies filed within 10 days after the transmission to stockholders of any annual or semi-annual report).
See also 17 C.F.R. §§ 240.13a-13, 240.15d-13 (2025) (exempting investment companies, foreign private issuers and
asset-backed issuers from quarterly reporting on Form 10-Q).

Finally, because the Proposed Rules are elective, a BDC that determines quarterly reporting better serves its investors would remain free to continue filing quarterly reports on Form 10-Q. The election preserves optionality without imposing any change on BDCs for which the existing quarterly cadence remains appropriate. Excluding BDCs as a class, by contrast, would deny that optionality to BDCs for which semiannual reporting would provide a more efficient balance of disclosure and cost.

As noted above, SBIA takes no position on whether the SEC should permit Exchange Act reporting companies to elect semiannual reporting in lieu of quarterly reporting. However, if the Proposed Rules are adopted, we respectfully urge the SEC not to exclude BDCs from the semiannual reporting option. BDCs should be permitted to elect semiannual reporting on the same basis as other Exchange Act reporting companies.

* * *

We would welcome the opportunity to meet with the SEC and discuss these issues further. Please contact SBIA's Chief Advocacy Officer, Tonnie Wybensinger, at (202) 628-5055 or tonnie@sbia.org if we can provide additional assistance.

Sincerely,
Brett Palmer
President
Small Business Investor Alliance

Stacey Mensching — Jul 6, 2026

Subject: File No. S7-2026-15 From: Stacey Mensching Good day, There is no reason to extend the

financial reporting time for public companies. Quarterly reporting is a regulation. This regulatory process was not created for the sake of flexibility, efficiency and easing compliance burdens. This process is in place to protect the average investors who do not have insider information. Extending the reporting period will only benefit the corporate insiders. I personally have had enough of this corporate corruption. Do not change the reporting time schedule. Considering we are in this modern age of AI, reporting should be a simple task and if any change should be made, it should be for more frequent reporting. I appreciate your consideration and action to do the right thing.

Stacy Peters — Jul 6, 2026
Subject: File No. S7-2026-15 From: Stacy Peters Please do not change the quarterly report requirement to semiannual. This will disadvantage the everyday investor. Insider trading is already a huge problem and this will allow for more of it because those in the know will have info for six months that the rest of us don't and can make trades. Transparency is critical in a fair stock market. Please do the right thing and maintain quarterly reporting.

Stan Raines Retired teacher — Jul 6, 2026
Subject: File No. S7-2026-15 From: Stan Raines I'm Stan Raines, a retired teacher from Brownsville, Texas. My wife and I are dependent on the Texas Teachers Retirement fund, most of which is a portfolio of stocks and bonds. It's a well run fund, but I believe cutting corporate financial reports in half to twice a year, will adversely affect our retirement. I urge the Securities Exchange Commission to hold the line and continue to require quarterly reporting for corporations. Thank you for your time. Sent from AOL on Android

---

Stephanie Eichenberg — Jul 6, 2026
Subject: File No. S7-2026-15 From: Stephanie Eichenberg To Whom it May Concern: While this rule may seem IPO friendly, it would cause me concern investing in any upcoming IPO. As a personal investor, it would hamstring my ability to learn enough to feel confident in an investment. Additionally, having previously worked for a very large registered firm listed on multiple exchanges in an industry with ongoing bankruptcies among competitors and suppliers, the quarterly pressure may feel intense, but it helps people to understand when a firm's annoucements don't make sense period over period rather quickly. Providing a company with more time to delay disclosure when they are struggling could lead to an acceleration of failures- not just their investors' but their clients' could be fooled with a cascading impact upon the customer companies. SOX is not fun, but it exists for a reason, I don't think we should tinker with it like this.

Steve Dove None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Steve Dove In my opinion This move by the SEC only benefits illegal activity. Scenario 1- Insider Trading. In a downward trending economy, if you are guilty of insider trading, you benefit from the public NOT having current information because you can use your personal connections to know when it is time to sell. You minimize your losses and the public gets screwed. Scenario 2- Pump and Dump Pump and Dump is when so much hype is deliberately made about a company/fund/security that people will buy impulsively and send a stock price much higher than the company/stock/security is actually worth then the major holders sell all their stock for profit leaving everyone who bought late to eat the losses. In my opinion, with reporting cut from

every 3 months to every 6 months more profits can be made and more harm can be done. 6 Months is a very long time. Needless to say I am not in favor of this and I will encourage people to educate themselves on Social Media.

Steve Hays — Jul 6, 2026
Subject: File No. S7-2026-15 From: Steve Hays Please vote against reducing quarterly reporting requirements. I am a small individual investor and rely on company transparency to make timely rational decisions. Institutional and large investors already have unfair advantages over individuals in access to information. Change to reduce quarterly reporting will increase that unfair advantage. Corruption will increase because insider information will become even more valuable. Public trust in the stock market will decrease because insiders will have even more advantage. Please vote no.

Steve Metzger, General Counsel, Two Sigma — Jul 6, 2026

Securities and Exchange Commission
100 F Street NE
Washington, DC 20549-1090
Re: Semiannual Reporting, File Number S7-2026-15
Dear Ms. Countryman:
Thank you for the opportunity to comment on the Securities and Exchange Commission's ("SEC" or "Commission") proposal on Semiannual Reporting ("Proposal").1
Two Sigma2 is an active member of the Managed Funds Association and the Alternative Investment Management Association and fully supports the letters they have submitted regarding the Proposal, but we are writing separately today as we have grave concerns that the Proposal will have a significant negative impact on investors by removing standardized quarterly reporting for public companies and replacing it instead with an unpredictable and inconsistent choice for management of public companies between semiannual and quarterly reporting with no input required from the shareholder owners of those companies.
Two Sigma was founded 25 years ago on the conviction that innovative technology and data science could help us discover value in the world's data. In today's increasingly data-rich markets, we believe that our scientific approach enables us to better manage assets on behalf of our clients. As a result, we place enormous value on frequent, reliable, and comparable reporting of financial and non-financial data by public companies. While we support the Commission's goal of removing barriers to companies becoming public and reducing the cost associated with remaining public, we strongly encourage the SEC to maintain a quarterly cadence for the reporting of key information.
1 Semiannual Reporting, 91 Fed. Reg. 24968 (May 7, 2026) [hereinafter Proposal].
2 Two Sigma is a leading quantitative investment management and trading firm with more than $70 billion in assets
under management. The company applies a scientific approach to investing, combining cutting-edge technology,
artificial intelligence, data science, and quantitative research with rigorous human inquiry to capitalize on market
opportunities and deliver alpha for investors. Founded in 2001, Two Sigma employs over 1,700 employees at its
headquarters in New York and in offices around the globe.

The US Equity Markets Work Exceptionally Well Today, But That Can Change Quickly

We agree with the Proposal's assessment that "[a] robust public capital market—with more emerging companies and small businesses choosing to become public companies through initial public offerings or other paths—benefits companies and investors alike."3 We assert that the United States has that type of robust public capital market today. At Two Sigma, we actively trade the world's major equity exchanges and believe that the US equity market is the gold standard with unparalleled liquidity and rich data. While even the best public market in the world can be improved, the SEC should not move forward with changes that could diminish the strengths that make the US equity market so great today.

At Two Sigma, we take a data-centric approach to investment. As a result, we understand that the correlation of depth of liquidity and depth of data in the United States public market is not coincidental. The SEC's rules requiring quarterly reporting of timely, consistent, and comparable data are a key part of this success. The current SEC requirements to file Forms 10-K annually and 10-Q quarterly provide investors in US public equity markets with each company's financial statements, overviews of the business management discussion of performance, analysis of performance, disclosures about risks, legal proceedings, and updates on internal controls and procedures each quarter. This level of data encourages investment from a wide range of market participants, which makes the US market so liquid.

Academic research supports this conclusion too. A recent analysis of liquidity on the Vienna Stock Exchange since quarterly reporting mandates ended in 2013 found "the termination of quarterly reporting or a substantial reduction of the content in quarterly reports is associated with a significant reduction in liquidity."4 US researchers have found that the "persistence of [a] link between greater disclosure frequency and lower bid-ask spreads . . . strongly suggests that quarterly reporting reduces information asymmetry, as measured by bid-ask spreads."5

The SEC's requirements have helped to create a robust ecosystem that encourages analysis and investment. A high-quality information environment supported by a high level of analyst coverage is associated with increased liquidity, lower cost of raising equity capital, and ultimately creates value for firms.6 The inverse is also true. The Proposal acknowledges that after the UK relaxed quarterly reporting in 2014, companies that did not supplement with

3 Proposal, supra note 1, at 24976.

6 See Abandoning the Quarterly Reporting, supra note 4.

voluntary quarterly reports "experienced a reduction in analyst coverage," and that investors were "unable to successfully offset the information loss arising from low reporting frequency."7 The evidence is clear, both in the success of the US market and in the analysis done of European markets that have taken a different path, that quarterly reporting is a key tenet of market liquidity, transparency, and vibrancy.

The Contemplated Changes Will Harm Investors

In addition to harming liquidity, the move away from standardized quarterly reporting will also significantly deter data-driven investment in the US public market. For investors like Two Sigma who rely on complex quantitative analysis to guide many of our investment decisions, the unpatterned variability between companies choosing to report quarterly or semiannually will complicate research processes and introduce structural barriers that will hinder capital formation.

The SEC is seemingly aware of this concern, as it asks in Question 7 about the effect on investors' ability to compare the relative financial performance of a quarterly filer to a semiannual filer.8 Data reported at disparate cadences and with different time horizons will likely degrade investors' ability to perform timely and well-founded cross-market analyses. The Proposal's own Economic Analysis concedes that reduced comparability "could lead to lower liquidity, lower investor engagement, larger analyst forecast errors, greater analyst forecast dispersion, and less institutional ownership"9 but then underestimates the ultimate impact by focusing myopically on the timing of fiscal year end dates as if the seasonal comparability of historic data were the sole problem arising from the Proposal. Instead, the Commission should contend with the impact that semiannual reporting will have on investors' ability to analyze corporate performance on a timely basis. Under the Proposal, the management teams of an idiosyncratic set of issuers will be allowed to cease providing quarterly reports, creating arbitrary blind spots for investors that will handicap their ability to analyze changes in industry sectors and supply chains. As the margin of error for forecasts of corporate performance widens, investors will have less conviction in their investments and liquidity will drain from the market.
Beyond timeliness, the Proposal would cause an outright loss of information. Semiannual financial statements aggregate two quarters into a single figure, eliminating the ability to observe quarter-over-quarter dynamics and seasonality. Remarkably, the Proposal concedes this point in quantitative terms, invoking the Nyquist–Shannon Sampling Theorem: "in order to measure a periodic event, one must measure at least twice per period," so semiannual reporting "could not capture both the high and low portions" of a half-year seasonal pattern.10 For data-driven investors, this is not a marginal concern—it is the permanent destruction of a signal that no

7 Proposal, supra note 1, at 24998 n.251.
8 Id. at 24979.
9 Id. at 25002.
10 Id. at 25002 n.280.

amount of subsequent aggregation can reconstruct. With time, the degradation of data on corporate financial performance will become a structural barrier that will limit the ability of investors to allocate capital to its most productive uses.

Insider Trading Will Become More Prominent and More Effective

Data-driven investors also may lose out to another group of investors in a semiannual reporting regime—those with inside information. The Proposal acknowledges that semiannual reporting may extend periods of information asymmetry between insiders and outside investors and thereby increase the value of inside information and the risk of insider trading.11 It then essentially defers the issue, suggesting companies "could choose to incorporate, preserve, or extend such blackout periods"12 but provides no requirement, monitoring mechanism, or analysis of whether voluntary adoption would actually occur. Bluntly, when less information is made available to the public, inside information becomes more valuable. Deferring this issue in the Proposal runs counter to the SEC's core missions to protect investors and maintain fair, orderly, and efficient markets.

Owners of Public Companies Should Need to Approve Any Change to Reporting Cadence to Keep Management and Ownership Interests Aligned

The Proposal also does not give shareholders a direct ability to determine whether a company shifts to semiannual reporting. While Question 10 asks whether investors need more notice of a company's shift to semiannual reporting13, the Proposal does not contemplate giving the owners of companies any say in this process. This must change even if various state corporate laws make such an approach complex.

Throughout the Proposal, the Commission refers to companies selecting the reporting cadence most appropriate for their investors, but leaves all the decision making with the management of publicly listed companies with no need to justify their decision. While one could argue that investors can "vote with their feet" and not continue to invest in companies that move away from

quarterly reporting, such an approach is ripe for abuse. As the SEC's own Investor Advisory Committee notes, "the firms with the most useful information for investors—those experiencing performance deterioration, emerging risks, or governance problems—are precisely the firms least likely to voluntarily opt in to quarterly reporting. . . . This is precisely the type of selective disclosure dynamic that the federal mandatory disclosure regime was designed to prevent."14

13 Id. at 24979.

14 SEC Inv. Advisory Comm., Draft Recommendation of the Investor as Owner Subcommittee of the SEC Investor
Advisory Committee Regarding Quarterly vs. Semi-annual Reporting at 4 (2026), https://www.sec.gov/files/draft-
recommendation-iaosubcommittee-quarterly-semi-annual-reporting-052026.pdf [hereinafter IAC Recommendation].

Where a company is experiencing problems, it seems obvious that its management will want to provide less information to the owners of the company.

This Proposal's broad grant of discretion regarding reporting frequency with no direct shareholder input incentivizes company management to conceal negative information for a longer period of time. Similar to how the reduction in frequency of reporting will incentivize the utilization of inside information, giving company management a free option to delay the publication of negative information distorts the true value of a company, which diminishes the integrity and efficiency of the market. The Proposal recognizes the market-failure problem at the heart of this proposed change: the externalities of reduced reporting "may not be fully internalized by individual companies when choosing semiannual reporting."15 If managers' incentives are not aligned with shareholders, the true owners of the company, then granting managers the choice on how frequently to report is not providing shareholders the optimal reporting frequency.

The Proposal further concedes that a significant migration to semiannual reporting "could decrease the informational efficiency of share prices even for companies that would continue to file quarterly reports".16 Despite the recognition of misaligned incentives and the potential for management to disregard the externalities borne by investors and the economy, the Proposal's Economic Analysis waffles through various scenarios with the hope that the impact will be muted. But US capital markets deserve a better response, one that provides a structural assurance that major externalities are not ignored.

We would suggest the Commission revise this Proposal to require shareholders for companies eligible for semiannual reporting to approve any move away from quarterly reporting. At a minimum, if the Commission declines to require a shareholder vote, it should require advance notice via Form 8-K well before the Form 10-K election becomes effective, so that owners are not first informed of a switch only when quarterly reporting has already ceased.

Semiannual Reporting Will Not Cure "Short-Termism"

The Proposal indicates the transition away from quarterly reporting will meaningfully improve the long-term viability of companies. The Commission writes, "[t]o the extent that companies could not previously do so due to quarterly reporting, companies electing semiannual reporting may employ business strategies that may help ensure these companies' long-term viability."17 We believe such a sweeping conclusion must be sufficiently supported by evidence, but in this case the opposite outcome seems equally likely. As Professor John Coffee noted when the SEC last explored this issue, "[i]f we shift to six-month reporting, financial managers may face even greater pressure to meet their earnings target (or the consensus forecast). After all, impatient

15 Proposal, supra note 1, at 24989–90.

16 Id. at 25008.

17 Id. at 24974.

investors will have waited longer and faced greater uncertainty. The failure to 'meet your forecast' would cast even a greater cloud on management's reputation and competence."18 As a result, semiannual reporting places even greater stakes on every financial report by a company and is unlikely to change the behavior of company management with regards to short-termism. The Proposal seems to imply that the management of companies would change significantly, and for the better, if financial results were only available twice a year, but there is no real evidence that would justify moving away from quarterly reporting in hopes that managers will suddenly focus on the long-term viability of their companies.

At the same time, the Proposal estimates only 20% of companies would elect to switch to semiannual reporting. However, the evidence from overseas does not indicate 80% of companies will voluntarily maintain quarterly reporting. Today, only 10% of the largest UK public companies by market cap voluntarily report on a quarterly basis and quarterly reporting is virtually nonexistent for smaller public companies listed in the UK.19 We would expect US public companies to follow a similar path with semiannual reporting becoming the new, yet less effective, standard approach in the market.

Quarterly Reporting Should Not Be Problematic For Most Companies

We appreciate the Commission's objective "to encourage more companies to go and remain public by reducing the costs and burdens associated with Exchange Act reporting."20 However, technological advances that are happening now should reduce the burden of reporting on companies significantly.

Advances in technology are allowing companies to harness advanced tools to simplify reporting, but that change is just beginning. A recent McKinsey study found that while some companies are using artificial intelligence ("AI") to "speed up reporting cycles", adoption is still low with "nearly two thirds of respondents sa[ying] their organizations have not yet begun scaling AI across the enterprise."21 As a company on the forefront of the use of AI, we expect the broad application of AI to financial reporting in the coming years to significantly reduce the burden associated with that activity.

The Proposal also concedes that the promised savings may not materialize. Many issuers will continue to incur quarterly costs because of debt covenants, lending arrangements, bank-regulatory requirements, underwriting, auditing standards, and state-law provisions that reference

18 John C. Coffee, What Really Drives "Short-Termism"?, CLS Blue Sky Blog (Aug. 27, 2018), https://clsbluesky.law.columbia.edu/2018/08/27/what-really-drives-short-termism/.

19 IAC Recommendation, supra note 14, at 5.

20 Proposal, supra note 1, at 24976.

21 Alexander Sukarevsky et al., How Finance Teams Are Putting AI to Work, McKinsey & Co. (Nov. 3, 2025), https://www.mckinsey.com/capabilities/strategy-and-corporate-finance/our-insights/how-finance-teams-are-putting-ai-to-work-today.

the Form 10-Q.22 More generally, public companies would still need to maintain accurate financial information as part of their ordinary operations, including for purposes of day-to-day business management.23 As the Commission's Investor Advisory Committee observed, companies will need to maintain accurate financial information for day-to-day management regardless, so the cost of producing complete, accurate, and reliable financials would persist even without a quarterly mandate.24 The net savings are thus likely far smaller than the headline figure, while the informational harms—borne by investors and by the market as a whole—go entirely unmeasured.

The Proposal's Economic Analysis monetizes only the benefits of the Proposal—estimating roughly $198,000 in net annual compliance savings per switching issuer and approximately $394 million in aggregate annual benefits under an assumed 20% switching rate25—while expressly

declining to quantify any of the informational costs it acknowledges. That asymmetry must be rectified before any change is finalized.

If a Change is Made, Limit It

In Question 3 of the Proposal, the SEC asks if “only emerging growth companies or smaller reporting companies be allowed to report semiannually”.26 We believe the answer should be yes if the SEC were to move forward with any changes to corporate financial reporting.

For such a significant change to the reporting framework, the change should be limited to the companies the change is primarily intended to benefit. The Proposal cites the burdens particularly felt by small and newly-listed public companies. Yet, the Proposal does not distinguish between the vast differences in the size and reporting capabilities of public companies with its proposed change.

With roughly 50% of the weight in Nasdaq and 40% of the weight in the S&P 500 each coming from only 10 companies, these companies that have an extraordinary impact on the global economy are being treated in the same manner as a small firm that has decided to go public. The Proposal’s cost-benefit analysis does not address this issue and such an omission renders the Proposal inadequate.

The market for initial public offerings in 2026 also reflects a healthy pipeline where larger private companies seem quite willing to go public, so limiting this change to only smaller firms seems prudent. The first quarter of 2026 had 35 initial public offerings, which raised $9.9

22 Proposal, supra note 1, at 25003.

26 Id. at 24978.

billion, the best start to a year since 2021.27 In the second quarter of 2026, a number of the most valuable private companies in the United States have made clear they intend to become public companies in the near future.28

Conclusion

The US public equity markets are the deepest, most liquid, and most data-rich in the world, and that strength is inseparable from the standardized, frequent, and comparable disclosure that quarterly reporting provides. The Proposal's own Economic Analysis concedes that optional semiannual reporting would increase information asymmetry, destroy seasonal and quarter-over-quarter granularity, reduce comparability and analyst coverage, drain liquidity from the market which will increase transaction costs, increase insider-trading risk, and generate externalities that investors will bear and will have broader economic impacts. And yet, surprisingly, the Commission sets aside those negative consequences for a gamble that the Proposal might save $198,000 a year for approximately 1,195 issuers. This one-sided analysis is not befitting for the Commission or the greatness of US capital markets.

In sum, the Commission should revise the Proposal to:

- Preserve quarterly reporting as the standard for all but the smaller issuers the change is intended to benefit, limiting any semiannual option to emerging growth companies and smaller reporting companies;
- Require shareholder approval before any eligible company moves from quarterly to semiannual reporting, and, at a minimum, require advance notice of any such change;
- Quantify the informational costs it has identified—including effects on liquidity, cost of capital, comparability, and information asymmetry—before adopting any final rule, rather than monetizing only compliance savings; and
- Preserve data comparability by disallowing reporting on divergent cadences.

Respectfully submitted,

Steve Metzger

Steve None — Jul 6, 2026
Subject: File No. S7-2026-15 From: Steve I'm writing as an individual investor to oppose this proposal in its current form. I don't manage a hedge fund or run a public company. I manage a retirement account and a portfolio that's supposed to fund a future I can't get back if it goes wrong. Quarterly reporting is one of the only tools I have to actually see what's happening inside the companies I trust with that money. Cutting that in half doesn't reduce risk, it just delays when I find out about it. A six-month reporting gap is a long time for a company under stress to paper over problems. Fraud and financial deterioration don't wait for reporting deadlines. They compound. The shorter the interval between checks, the sooner red flags surface and the less damage accumulates before anyone outside the company notices. Stretching that interval to six months gives problems more time to grow before they have to be disclosed. Several of the accounting scandals that did the most damage to investors took as long as they did to surface partly because the reporting gaps around them were already wide enough to hide things in. I'd also expect this to make prices more volatile, not less. Markets price in uncertainty. If real information arrives half as often, the gaps between reports become guessing periods, and stock prices will react more violently to whatever news does arrive, because there's more pent-up uncertainty behind it. Investors like me end up bearing that volatility risk in exchange for a benefit that flows almost entirely to company management. Transparency isn't just a paperwork requirement. It's the actual mechanism that makes a public market fair to someone who isn't in the boardroom. I don't get management calls, analyst briefings, or a seat at the table. My only window into these companies is what they're required to disclose, on a schedule I can count on. Making that window open half as often doesn't modernize disclosure, it narrows what everyday investors are allowed to see, while insiders and institutional players still get more frequent signals through other channels. I understand this is optional per company, but "optional" doesn't help me if I own an index fund or a diversified portfolio. I can't opt out of holding companies that opt in. This shifts real risk onto retail investors without giving us any real say in the decision. I'd ask the Commission to preserve mandatory quarterly reporting, or at minimum to ensure that any semiannual option comes with real safeguards, meaningful interim disclosure requirements, and a requirement that companies clearly justify the change to their own shareholders, rather than leaving retail investors to simply absorb a longer blackout. Thank you for considering my comment.
